? All load should be required to take service under the WestConnect tariff;

? Interconnection issues should be deferred until completion of the Commission's generic proceeding on this topic; and

? Since a for-profit Transco has an inherent incentive to maximize transmission revenue, there are certain RTO functions that an entity such as WestConnect should not perform.

I am indebted to Karen Shea of Dynegy and Glenn Martin of Mirant for their very helpful assistance. Our draft also draws upon concepts contained in the EPSA filing that Gary Ackerman provided. The filing is due at FERC on Thursday the 15th. I therefore need any comments from you no later than early that morning. Thanks!

Dan

Scott,

Apologies on behalf of Jeff re: not responding to you to date; I have been assured, however, that you will hear from him as soon as he can "get his head above water"! I know that he has been extremely busy preparing for travel to and meetings in Houston next week, and we both appreciate your patience.

Jeff will respond to your inquiry as soon as possible.

Thanks again for your understanding,

Joseph Alamo Sr. Admin. Assistant Government Affairs - The Americas San Francisco CA

File	dasovich-j/mba_program/23.

=>=>=>UC Berkeley Entrepreneurs Forum<=<=<=<

*****Thursday, November 18, 1999*****

6:30 - 8:30 PM - Haas School of Business - Andersen Auditorium

Topic: Angels in the Infield: Start-up Financing for Entrepreneurs

Panel: Bob Bozeman, Nat Goldhaber, Bob Leppo, Erickson Shirley

This panel of currently investing angels will discuss what types of ventures they are backing and how they choose their deals.

There are special rates for faculty and staff and a reduced fee of \$5 for students currently enrolled at any Cal school or college. Pre-registration is encouraged. You may sign up in room F449 weekdays 9-12 AM and 1-4 PM or by e-mail to lester@haas.berkeley.edu. Remember to include your school or department and -for students- your year of graduation.

Preregistration for students closes at 5PM on Tuesday, November 16, or earlier if it is sold out. NOTE: THIS IS A DAY EARLIER THAN USUAL. WE EXPECT THIS PROGRAM TO SELL OUT. REMEMBER TO PRE-REGISTER.

Faculty and staff are encouraged to register by e-mail. Students can register by e-mail and then either pay at the door or at Room F449. IF THIS PROGRAM SELLS OUT, STUDENTS WILL BE ASKED TO CONFIRM THEIR ATTENDANCE BY PREPAYING AT ROOM F449.

For more information on the series, see <<<http://www.haas.berkeley.edu/~lester/bef.html>>> On this program, see <<<http://www.haas.berkeley.edu/~lester/nov99.html>>> -- Stephanie J. Report on ARM Press Conference 6-26-01 in Sacramento

Sender	susan.mara@enron.com
Recipients	['richard.shapiro@enron.com', 'mark.palmer@enron.com', 'james.steffes@enron.com']
File	dasovich-j/all_documents/28170.

Monday, last week, I urged our retail coalition, Alliance for Retail Energy Markets (AReM), to hold a press conference this week to draw media attention to the CPUC's vote on Thursday to suspend direct access. AReM and its PR Firm agreed. After a lot of work to line up customers, the press conference was held Tuesday morning in Scaramento.

We had excellent turnout from customer groups. Public statements of support for continuing direct access were made by the California Chamber of Commerce, CA Manufacturing and Technology Association, CA Large Electric Consumers Association, CA Retailers Association, School Project for RR (SPURR - forget the whole acronym but the org purchases gas and electricity for aggregated elementary and high schools), QUALCOM, City of Palm Springs, NYMEX, and the ESPs of Green Mountain, New Energy , Enron (me), and Strategic Energy. All the major papers were there, San Jose Mercury News, SF Chronicle, LA Times, SD Union, OC Register, Wall Street Jr. Also there were the energy trade press, Bloomberg, Public Radio and a capitol TV station. All had the opportunity to ask questions of the customers.

As planned, we let the customers take the limelight. They made forceful cases for why the CPUC should not suspend DA and stressed that the Treasurer's concerns have been addressed in legislation (that has not yet been acted on) and are actively being negotiated at the Capitol. They urged the CPUC not to take this action. I'll forward any media that results from this

Best, Jeff ----- Forwarded by Jeff Dasovich/NA/Enron on 02/27/2001 10:44 AM -----

Catherine McKalip-Thompson@ENRON COMMUNICATIONS 02/26/2001 09:14 PM

To: Jeff Dasovich/NA/Enron@ENRON cc: Subject: question for you

Jeff, I'd meant to stop in your office today to ask you about this in person, but you seemed rather busy whenever I went by. Now I'll be out for awhile so am sending you this note instead.

I got a call from KKSF who is putting on an Earth Day Jazz concert at the Chronicle (Concord) Pavillion on 4/29 asking if we are interested in sponsoring the vent, expected to draw 20,000 Northern Calif consumers with a high income/education demographic. In addition to signage, display opportunities, etc. there is the opportunity for a feature story on CNET Radio for promotion of companies' involvement in the community (energy efficiency, quality of life whatever). Previous sponsors of interst are PG&E, Green Mountain, and the Renewable Energy Marketing Board.

My question for you is whether Enron would be interested in the opportunity for positive PR here in CA, or whether we are trying to keep a low profile. Is an opportunity like this something any part of Enron (EES included) would be interested in?

Thanks for advising. Catherine

Catherine McKalip-Thompson Manager, Environmental Responsibility Enron Corp. 101 California Street, Suite 1950 San Francisco, CA 94111 Tel: 415.782.7842 Fax: 415.782.7854

I was approached last week by the Pacific Research Institute for Public Policy, a conservative think tank, to have WPTF help fund a study they are undertaking by well-known economist Ben Zucher. I thought I would just give you this heads up that a formal proposal will be forthcoming, that I will copy you all on it, and we should discuss it at our July Board meeting. Ben's paper will be entitled The Economics and Politics of Electricity Deregulation, and it will be a substantial body of work.

To All California Power Exchange Participants:

Notice is hereby provided pursuant to Section 19.3.4 of the California Power Exchange Tariff that the California Public Utilities Commission (CPUC), as part of an ongoing investigation of California markets, has requested information that may be confidential under Section 19.3.2 of the Tariff. The CPUC has requested the California Power Exchange to provide such information no later than Wednesday, October 4, 2000. If you desire to assert a claim of privilege or confidentiality pursuant to legal authority, the California Power Exchange will include your written assertion of that claim together with its submittal to the CPUC, provided that it is timely received. Your written statement should be directed to the CPUC as follows:

Sean H. Gallagher California Public Utilities Commission 505 Van Ness Avenue San Francisco, CA 94102

You may deliver your statement to the California Power Exchange as follows:

Karen Koyano California Power Exchange 1000 S. Fremont Avenue Unit 20 Alhambra, CA 91801 626.537.3173 facsimile

Any written statement must be received by Ms. Koyano no later than Friday, September 29, 2000, 5:00 p.m. PDT, to be included with any information delivered to the CPUC. You are also free to take any other legal action you may deem appropriate in the circumstances of this investigation. A copy of the subpoena is attached for your reference.

Thank you.

I am very, very sad to report that Dave Engelbrecht, EvMBA '00, passed away on June 4. Dave had a heart attack two weeks ago and was in a coma until he passed away. Dave was a wonderful, fun, giving, and active person, who's commitment to charitable works was enormous. Dave was a Vice President at Schwab and the EvMBA Social Chair for two years while he was in the program. He will be sorely missed.

For those of you who knew him, I have attached, below, an announcement that comes from Schwab.

Regards,

Diane

It is with great sadness that we mourn the passing of Dave Engelbrecht, our colleague and friend. A memorial service will be held next Tuesday, June 12 at 4 PM at The First Unitarian Universalist Church at 1187 Franklin Street in San Francisco. A reception will follow the service from 5 to 7 PM at the St. Francis Yacht Club, On the Marina, San Francisco. Directions to follow. Dave's family has requested that, in lieu of flowers, contributions be made to the Schwab Fund for Charitable Giving (Dave Engelbrecht Memorial Fund). The Memorial Fund will establish an endowment to support scholarships at the Haas School of Business at the University of California at Berkeley where Dave earned his MBA last June. As you may know, Dave was instrumental in the creation of the Schwab Fund for Charitable Giving and served as an officer to the Fund, in addition to his other responsibilities at Schwab. Contributions can be sent to: Schwab Fund for Charitable Giving (Dave Engelbrecht Memorial Fund) 101 Montgomery Street San Francisco, CA 94104 attn: Ann Insley For questions please call 800 746-6216

Current word is that the draft decision will be held over at least to the June 21 meeting. Enron, along with the members of the Alliance for Retail Energy Markets, are launching an all-out campaign to get the decision changed. Commissioner Bilas has indicated that he may draft an alternate that deletes the language. Of course, we are still flying blind. The draft has not been released to the public.

I wanted to make sure that everyone involved with the CA New Product was aware that the CPUC may consider at its next public meeting (6/14) the implementation of the Direct Access suspension established in AB1x1.

We are hearing that the CPUC may not have 3 votes in favor of such suspension, but the topic is on the agenda. It is very difficult to get any clarity on this issue given the politics and ex parte restrictions.

Even if the CPUC does not take action on this language at the next meeting, until that provision of the law is modified by the General Assembly, the CPUC could take action at a later time.

Please call me if anyone has any questions.

To: 86464@WCTOPICS.djnr.com cc: Subject: Utilities, Electric: Deregulation: Electricity deregulation brings on crisis in California

Electricity deregulation brings on crisis in California ? 09/25/2000 API EnCompass: News (c) Copyright Elsevier Engineering Information, Inc. All rights reserved.

From: Petrostrategies --

California's power generators blame the 'rigid nature' of the deregulated energy sector for the prevailing electricity crisis, which has seen wholesale power prices jump by as much as \$500/Mwhr from \$150/Mwhr in summer 1999 even as retail prices have been frozen until March 2002. Meanwhile, since demand has grown by a mere 3% from mid-1999, some consumers fear that the crisis has arisen, not from Californian deregulation, but from power generators who are taking advantage of the crisis to earn more. Tasked to act on the problem, FERC is to announce the results of its probe on the energy crisis by 11/1/2000.

From: Dayna Haugh [mailto:haugh@Haas.Berkeley.EDU] Sent: Thursday, September 20, 2001 10:35 AM To: eveningmba@haas.berkeley.edu Subject: An Invitation to Attend Financial Reporting Conference

Dear Evening MBA Students:

The Center for Financial Reporting and Management in the Haas School is hosting its Twelfth Annual Conference on Financial Reporting on Monday, November 5, 2001 at the San Francisco Marriott Hotel, 55 Fourth Street.

As a special offer to Evening MBA Program students, we are offering one seat to each student at the discounted price of \$145 per seat. This can be used by you or by a person in your firm whom you wish to designate.

A copy of the program is attached. If you or an associate wish to attend, please register on-line at: <http://www.haas.berkeley.edu/accounting/cfrm/registration.htm> . When filling out the registration form, please write: "EVENING PROGRAM" in the "additional registrants" space on the form. I will contact you regarding payment. If you prefer to pay by check, you may print the registration form and mail it or leave it in Dayna Haugh's mailbox in the student services building mailroom with a check.

If you have questions, feel free to contact me at 642-6334. We hope you or one of your colleagues will be able to attend.

FYI - This was announced today. Steve Burns

SUMMARY: The Rural Utilities Service (RUS) announces a new loan program and the availability of loan funds under this program to finance the construction and installation of broadband telecommunications services in rural America. The President of the United States and the United States Congress have made \$100 million in treasury rate loan funds available, through a one-year Pilot Program, to encourage telecommunications carriers to provide broadband service to rural consumers where such service does not currently exist. This program will provide loan funds, on an expedited basis, to communities up to 20,000 inhabitants to ensure rural consumers enjoy the same quality and range of telecommunications services that are available in urban and suburban communities. Loan funds are available immediately and applications will be processed and approved on a first-come, first served basis throughout FY 2001 until the appropriation is utilized in its entirety.

From: Dasovich, Jeff Sent: Tuesday, July 17, 2001 1:19 PM To: Tycholiz, Barry Subject: Re: Regulatory / Commercial Focus Q3/Q4 2001

Sounds good. You can reach me at 415.782.7822. Because my schedule is a mess (thanks to the mess California has created), if you don't reach me on my office line, please try 415.505.6633. Also, I think that it would be very useful to have Leslie Lawner on, since she's involved a lot in California gas matters, but it's your call. Just let me know.

Best, Jeff

Barry Tycholiz/ENRON@enronXgate 07/17/2001 08:30 AM To: Jeff Dasovich/NA/Enron@Enron, Stephanie Miller/ENRON@enronXgate, Jane M Tholt/ENRON@enronXgate, Mike Grigsby/ENRON@enronXgate cc: Jessica Presas/ENRON@enronXgate Subject: Regulatory / Commercial Focus Q3/Q4 2001

Jeff, for the meeting on Thurs a.m. 9:30 (Houston Time), we should keep our group to the list I have identified. I would like to start with a simple plan and work out from there. We are working towards an action plan for handling PUC issues (from a commercial perspective) in california and other states, prior to anybody addressing the PUC we need agreement as to what it is we want to put forward.

We will call you on thurs a.m. Can you please verify your contact phone number.

Thanks in advance.

Jessica, pls reserve a room.

Independent Institute Price Cap Protest Letter from Economists

Sender	rob.bradley@enron.com
Recipients	['steven.kean@enron.com', 'richard.shapiro@enron.com', 'janel.guerrero@enron.com', 'jeff.dasovich@enron.com']
File	dasovich-j/deleted_items/440.

David Theroux at the Independent Institute in Oakland, California became concerned over Enron's involvement in this project, so he has decided to fund the project internally.

He anticipates that the letters will go out to economists around the country when the school year starts (just several weeks away in some places) and hopes to complete the project by October. They got around 540 economists for their health care price cap letter. It will be interesting to see how many signatures they get for electricity price caps. I sent him our draft letter, and he is massaging the language between wholesale price decontrol and the use of real-time pricing at retail.

I offered the use of our university contacts to help gather signatures, but I don't know if he will even want in-kind help. Anyway, we can do something else with the \$30,000 that we were going to try to funnel to them.

- Rob

Read this before responding to the Outlook Mail Notification emails

Sender	april.hrach@enron.com
Recipients	[rob.bakondy@enron.com', 'victor.browner@enron.com', 'kelly.brodbeck@enron.com']
File	dasovich-j/notes_inbox/11629.

Please use the following instructions for the four Outlook emails.

1-URGENT: Please read (Do not delete emails, because of the lawsuit) 2-URGENT: Please read 3-URGENT: Click the Save My Data button 4- URGENT: Please read, but you do not have to fill in this info (All this info has already been submitted to Wilma Bleshman, who will be here next week for our conversions)

Important Note: Due to the lawsuit we should not be deleting any emails. When our lotus notes are transferred to outlook we will still have access to read all of our old notes. Eventually notes will go away, but because of the lawsuit nothing can be deleted until a later date. Also, I know everyone has concerns about the size restriction, and purge process in outlook. (Please remain calm; breath in through the nose, out through the mouth.) Until the lawsuit is cleared up the SF office will not be bound by Enron's Outlook rules. However, there will come a day when we will have to adhere to the policies.

Extra Cool Note: In outlook you can save an entire email, headings & attachments too, as a word document. It is very, very exciting. This will be the feature that helps us keep our in-boxes, and outlook folders fairly empty. I will show everyone how easy it is once we have been completely converted.

I think everyone is going to like outlook. Please give it a chance. I promise Wilma and I will address all of your concerns.

Thanks, April Hrach Administrative Coordinator Phone: 415-782-7825 Fax: 415-782-7851

I apologize, but I won't be in SF Monday evening, and this week coming up will be a grinder. I have a lot of time to work on it over the weekend, though. I can provide a fax number tomorrow where the materials can be sent to me. And I assume that they are on the Izio site, too. I'm going to go there now. Tomorrow, I'll try to crunch some numbers and outline the one-pager and distribute to folks by the end of the day. Then perhaps we can email each other on Monday and try to make some progress on the memo by the end of the day. That should put us in pretty good shape to finish it up Tuesday and Wednesday. If I can't get the materials off of Izio, I'll let you know. I'll report back in the AM tomorrow with a proposed game plan, once I've collected all the materials and pondered things a bit. Sound reasonable? Thoughts? Just let me know.

Mark, I hope that if you're in Denver, that means you're skiing.

Best, Jeff

attached is a word doc of some basic articles from the web re: the coke/oat almost deal it seems that pepsi took coke by surprise in announcing an offer for oat at 14.8 billion, which oat rejected thinking it was worth at least 15 billion

then coke put together a deal for 15.75 billion which was nixed at the last minute by the coke board (buffet, etc.) although it was not formally voted on

french co. danone also contemplated a bid for oat oat accepted a bid by pepsi for 13.4 billion (or more depending on pepsi's stock price) but can still walk away if pepsi's stock drops below 40/share

everyone wanted the gatorade brand, which accounts for 1/2 of oat's earnings - are going to expand its distribution in both the us and especially overseas

given that there were so many parties bidding on oat over a short period of time, perhaps our project could focus on: - oats business strategy - how we would value oat - what advice we would give to one or all of the companies (oat, coke, pepsi or danone) - how the market reacted to this deal (look at the stock prices of oat, coke, pepsi and danone during this time)

CLECA, CIU and the Silicon Valley Manufacturing Group have also come out with all guns blazing against the draft decision dealing with the DWR revenue requirement. They decry the lack of hearings, state that there are fundamental untruths in the decision and conclude that, "The DWR has made it clear that it needs to have a decision on its revenue requirements quickly so that it can successfully issue bonds to generate revenue to re-pay the general fund. No one has been permitted to test that proposition, but it seems to be accepted as fact by decision makers. The problem is that this record does not support approval of any particular revenue requirement for DWR and it certainly does not support the allocation proposed in the DD. If the Commission must act quickly, then it must act provisionally and set forth the hearings the many questions identified here and, we suspect, in the comments of many other interested parties concerning the basis of the allocation among the utilities." =20 Dan =20 Law Offices of Daniel W. European Financial Markets - New course, Spring 00

Sender	portes@haas.berkeley.edu
Recipients	[eveningmba@haas.berkeley.edu', 'mba00@haas.berkeley.edu']
File	dasovich-j/mba_program/27.

I am visiting Haas this year and will be teaching 'European Financial Markets' (BA 296-7, E 296-5) in the spring. Since this is a new course, I thought I should draw it to your attention. The move to monetary union (EMU) in Europe has created a newly integrated financial area comparable to the US, with consequences that anyone doing business or advising businesses in Europe needs to understand. Just consider:

'The dollar's supremacy has been challenged in the global debt markets.' (FT, 6/14/99). 'The large funds have indulged in a frenzy of cross-border buying...with the volume of paper launched by European companies rising five-fold over 1998.' (FT 10/28/99) '...a doubling of European-based staff at Lehman Brothers, a 50% increase at SSB, and up to 20% at other banks...follows Europe overtaking the US in M&A activity...' (FT 10/25/99)

I shall address questions such as: How does the European Central Bank differ from the Fed? Will the euro compete with the dollar as an international currency? Can European capital markets challenge the US for international portfolio managers and for non-European issuers? Will Europe soon have serious venture capital and junk bond sectors? Will the European banking sector experience a deep wave of cross-border restructurings? Will there be a shift from domestic to cross-border M&A in Europe - and will competition authorities try to restrain it? How will the East European emerging markets fit into the picture?

If these issues interest you, I look forward to seeing you in January.

Yes, we should have anticipated it. No head's up. We have little recourse legally. Lisa and I are recommending to exit gracefully.

-----Original Message-----

From: Dasovich, Jeff Sent: Monday, November 12, 2001 9:50 AM To: Tribolet, Michael Subject: RE: Revised appointment 11/9/01 PG&E Official Creditors Committee

Hi Michael: Few questions:

Is this something that we anticipated? Were we given any sort of "head's up?" Is it something that we can object to? The combination is far from consummated and we're still owed a heckuva lot of money? Do we have any recourse?

Best,

Jeff

Tamara Johnson@EES 07/16/2001 04:19 PM

To: JMB <JBennett@GMSSR.com>, Harry Kingerski/Enron@EnronXGate, Jeff Dasovich/NA/Enron@Enron, Leslie Lawner/Enron@EnronXGate, James D Steffes/NA/Enron@Enron, Diann Huddleson/HOU/EES@EES, Mary Lynne Ruffer/HOU/EES@EES cc: Subject: trying to locate PX Credit information

PG&E has changed the method of calculating the PX Credit recently. Prior to June they appeared to be using a market based price for power, but in June the credit dropped to about \$40/MWh which looks like utility-owned gen.

We want to make sure we are not missing a utility-levied charge in our forward curves (e.g. CTC charge that will be applied to DA) so we're trying to verify the utilities' method of calculating PX credits.

I talked to the PG&E accounting person who said that their Regulatory group has sent Enron's regulatory group information on the way the PX Credit is calculated. Can someone locate this information and forward it to me as soon as possible? Given that our customers are all switching to DA we don't want to discover there's a charge we don't know about.

Thanks, Tamara.

Argus Company Report on OAT

Sender	cvavrek@deloitte.com
Recipients	['guinney@haas.berkeley.edu', 'anil.sama@intel.com', 'dasovich@haas.berkeley.edu']
File	dasovich-j/notes_inbox/4500.

See attached pdf that I mentioned last night. Lots of goodies in there about synergies, cost savings and EPS accretion. I have no idea who Argus Company is - got the file through my Fidelity brokerage acct. No reason to believe it is not reputable.

Here are the highlights: - with the merger Pepsi will have 25% of non-carbonated drink market vs. coke's 10% share; non-carb drinks are growing at 8% annually - Pepsi mgt is projecting revenue and cost savings increase of \$230 million in operating income by 2005; half from distribution system and half from reduced procurement costs and SGA savings - Pepsi mgt forecasts a restructuring charge of \$400 million after finalization of deal; not accretive to EPS in 2001 - earnings will increase by \$.02 in 2002 b/c of the merger

I also attached another report with lots of industry comps and ratios for OAT. Hope this helps. - cv

Dear Energy Researchers:

Richard Green and I are editing a special issue of the Journal of Industry, Competition and Trade on recent experience with energy markets in California. If you have something you would like to contribute, please see the call for papers below.

Sincerely,

Carl Blumstein Energy Policy Analyst UC Energy Institute

Call for Papers on the California Energy Crisis

The Journal of Industry, Competition and Trade (<http://www.wkap.nl/journalhome.htm/1566-1679>) will be publishing a special issue on the California Energy Crisis. We are seeking papers on any aspect of the crisis, but particularly papers that seek to bring out the policy lessons, or the implications for other countries engaged in electricity restructuring. The journal aims to bridge the gaps between theory and empirical analysis, and between academic and policy-oriented economists in the field of microeconomic policy.

Papers should be between 10 and 20 sides of double-spaced A4 paper. Please send an outline of one or two pages by September 30th to:

r.j.green@hull.ac.uk blumstei@socrates.berkeley.edu andre.sapir@cec.eu.int Karl.Aiginger@wifo.ac.at

Carl Blumstein and Richard Green are editors for the special issue; Karl Aiginger and Andre Sapir are the editors of the journal

Conditional acceptances will be based upon these outlines. Full papers will be required by December 15, and final versions (after receiving referees' comments) by February 28th, 2002.

Professor Richard Green Department of Economics University of Hull Hull HU6 7RX UK R.J.Green@hull.ac.uk Tel: +44 1482 465720 Fax: +44 1482 466216

Call for Papers for POWER Research Conference

Sender	pwpens@socrates.berkeley.edu
Recipients	[]
File	dasovich-j/notes_inbox/892.

CALLFORPAPERS

University of California Energy Institute

Sixth Annual POWER Research Conference on Electricity Industry Restructuring

The University of California Energy Institute's Program on Workable Energy Regulation (POWER) invites interested researchers to submit papers for a one day conference to be held in Berkeley on March 16, 2001. The purpose is to bring together outstanding researchers from around the world to exchange ideas and research results on topics related to electricity industry restructuring.

Topics will include any relevant analytic question associated with electricity industry restructuring including, but not limited to, the following subjects:

* Transmission management, pricing, and access * Operation of wholesale and retail electricity markets * The interaction of forward and spot electricity markets * International comparisons of electricity markets * Market power * Political economy of restructuring * Demand responsiveness and real-time pricing * Conservation, R&D, and low income programs after restructuring * Future role of regulation in electricity * Environmental effects of restructuring

Draft papers should be sent by December 1, 2000 to:

POWER Research Conference University of California Energy Institute 2539 Channing Way Berkeley, CA 94720-5180

Authors will be notified concerning acceptance for the Conference by January 2, 2001. Final papers will be due by February 28, 2001.

For inquiries concerning this Call for Papers contact: Severin Borenstein (510) 642-5145. email: borenste@haas.berkeley.edu James Bushnell (510) 642-9588. email: jimb@ieor.berkeley.edu

From: "Global Change Associates" <pfusaro@nirvanasoft.com> To: <edasilv@enron.com> Sent: Friday, July 27, 2001 9:13 PM Subject: Enron's Secrets Revealed

How has Enron managed to achieve such success while other energy firms have struggled to deal with the changing market landscape?

Global Change Associates is pleased to announce the publication of a new corporate profile entitled, "Enron 2001: An Inside View". This objective study takes an insider's look at Enron, specifically, how the firm operates and the keys to its success. Much of the information provided comes from first hand accounts and covers areas such as:

? The firm's structure and operations ? The recruitment and training of new employees ? How Enron empowers and compensates its employees ? The keys to structuring Enron type "risk free" transactions ? How to negotiate with Enron ? Why Enron occasionally forgives counterparty obligations ? Is the Enron model right for your organization?

Enron 2001: An Inside View is a unique publication. It provides valuable insight into the firm's operations and analyzes its successes and failures. For those firms dealing directly with Enron, or thinking about adopting some of Enron's business practices, it is an invaluable, must have tool.

This innovative study is available for purchase at \$995.00.

For a detailed Table of Contents please open the attached file, Enron2001TOC. To order please go to www.global-change.com, click on "Reports" or complete the attached order form and fax to 212-625-8810.

For more information on this product please contact Alan M. Herbst at 212-625-1711 or via email at info@global-change.com.

To be removed from this distribution list, please reply with the word REMOVE in the subject line.

Update on Dunn Witch Hunt Hearings

Sender	jmunoz@mcnallytemple.com
Recipients	[andybrwn@earthlink.net, 'abb@eslawfirm.com', 'cabaker@duke-energy.com']
File	dasovich-j/notes_inbox/12541.

Senator Dunn conducted a press briefing earlier today in regards to his "Select Committee to Investigate Price Manipulation of the Wholesale Energy Market." ?

Following is a summary of what was discussed:

Today's hearing: Where: ?Room 3191, 1pm Who: Carol Coy, South Coast Air Quality Management District SCE was invited but unable to attend due to the bankruptcy issue which apparently ?????consumes all of ?their time and resources.... Topic: ?The "laundering" of air emissions credits. ??Apparently the cost of air emissions credits is pushed up due to the laundering of credits by generators, and as a result should not be used to justify high electricity prices. ?

Upcoming Hearings: When: ?Friday, June 22 Topic: ?Plant operations Who: ?TBD

When: ?Friday, June 29 Who: ??GENERATORS TESTIFY

Other items discussed:

Documents requests issued to LADWP and DWR. ?LADWP has apparently been very very very "very cooperative" with the request. ? Subpoenas have been issued to Duke, Dynegy, AES, NRG, Enron, Reliant, Williams A subpoena was issued to SCE requesting the following information: ?1. ?Internal documents related to the surveillance of market competitiveness. ?2. ?Maintenance records and 3. ?Internal documents related to the sale of California generation assets. A subpoena was issued to Morgan Stanley, who was retained to prepare documents related to the sale of some of California's generation assets.

????????????? ?NOTE: ?The point is that the price paid for generation assets was "much higher" than many experts anticipated. ?The committee will be looking into whether generators purchased these assets at significantly higher prices because they knew they would have market power -- and the ability to set prices high.

Subpoenas will be issued to PG&E and SDG&E

Please feel free to call if you have any other questions. ?Thanks - Jean

-- Jean Munoz McNally Temple Associates, Inc. 916-447-8186 916-447-6326 (fx)

File	dasovich-j/deleted_items/1713.

Haas students:

We all know that recruiting is going to be a challenge this year and utilizing all available resources will heighten our chances for success. Haas students bring a wealth of contacts to the program and we in the Career Center want to be sure to tap into it to benefit your fellow classmates.

If you have a contact that you think would be interested in hearing about the ways that a company can connect with Haas students through either formal or informal recruiting events (on-campus presentations and interviews, job fairs, job postings, student club firm nights, etc.), please send us the person's contact info. It might be a hiring manager you worked with or for. It might be someone within the company's human resources department that has not interacted with Haas. It might be a personal contact that has a small business looking for that one key person. Regardless, we would appreciate the opportunity to pursue the potential recruiting contact. Please provide the following if available:

Contact name, company, title, phone number, email address, any additional recruiting-related info (type of position (s)he may be interested in recruiting MBA's for, past Haas/MBA hiring, etc.)

Depending on which industry your contact is in, please email your response to the appropriate account manager as follows:

Rich Wong - technology and entertainment/media - rwong@haas.berkeley.edu Jenny Rowe - consulting, consumer products, healthcare/biotech/medical devices, education, not-for-profit - rowe@haas.berkeley.edu Mark Friedfeld - finance/investment banking, real estate - friedfel@haas.berkeley.edu

On behalf of your Haas schoolmates, thanks for any leads you can provide.

Regards, The Haas Account Managers

Harry Kingerski 05/10/2001 12:31 PM

CORRECTION - last line, Monday, May 14

Harry Kingerski 05/10/2001 01:16 PM

2 proposed decisions were released last night by the California PUC - one by the Judge and one by Chairman Lynch.

Direct access customers are exempt from the surcharge. Each customer class is allocated an equal 3 cents, plus an amount to cover the shortfall from having residential usage up to 130% of baseline exempt from the surcharge (as required by law). Each decision allocates a substantial portion of the subsidy to non-residential classes, although Lynch does this to a lesser extent. The new rates become effective June 1, and the shortfall from the actual effective date of the increase, March 27, through June 1 will be amortized over 12 months. Residential rate design - 5 tiers will be put in place; the 5th tier (300+% of baseline) gets a 35 cent per kwh rate. Non-residential rate design - recommendations to put all of the increase into summer on-peak were rejected. About 60% of increase put into summer. Real Time Pricing was endorsed - will further explore in workshops starting later in May. Voluntary program will be started. In a vindictive outlash, Lynch decision requires federal facilities to pay market prices under new schedules to be developed by the utilities. Judge's decision seems to require surcharge to show up as a separate line item; Lynch's decision requires that it not be shown separately.

Oral argument occurs Friday and final decision is expected to be voted out Monday, June 14.

To: 86464@WCTOPICS.djnr.com cc: Subject: Utilities, Electric: Deregulation: PG&E moves to end rate freeze by 2002
PGO moves to end rate freeze by 2002 ? 09/25/2000 The Energy Report (c) Copyright 2000 Pasha Publications, Inc. All Rights Reserved.

Pacific Gas and Electric (PG&E) plans to raise additional capital to offset the mounting costs of wholesale energy in the California market and complete the divestiture of its generation assets, allowing it to charge its retail customers market rates, according to filings the company has made at the Securities and Exchange Commission (SEC).

In an 8-K filing, PGOCorp. told the SEC that its utility subsidiary may issue long-term debt to finance the high costs of wholesale electricity that plagued California's deregulated market this summer. In addition, PGO filed an application with the California Public Utilities Commission (PUC) on Sept. 8 requesting the authority to raise an additional \$1.4 billion in short-term financing, it told the SEC. This would be in addition to \$1.7 billion in short-term financing that the PUC has allowed PGO to raise, as well as an existing \$1 billion revolving credit facility the company has used to support commercial paper issuance.

Proposed Rule Changes: STATIONARY INTERNAL COMBUSTION ENGINES

Sender	lgoldseth@svmg.org
Recipients	['lgoldseth@svmg.org']
File	dasovich-j/all_documents/28098.

On 6/20/01, I attended a Bay Area Air Quality Management District (BAAQMD) hearing regarding stationary internal combustion engines (including Diesel Standby Generators).

The proposed regulation was "framed" in the following context: BAAQMD is the only district in CA not now requiring permits for standby engines 3-5k units are estimated in Bay Area, Avg. 350hp

While the previous hearings (5/11) had promised the final draft by 5/20/01, the newest revisions were posted on Tuesday (6/19). Evidently there were last minute changes and a conclusion that the appropriate California Environmental Quality Act (CEQA) document needs changes. They may have another workshop, possibly before the August 1st meeting, although it wasn't clear if they can get the proper notices and input prior to that time.

The item was continued - Possible Final Action To Be Taken on August 1, 2001, although it may be continued again.

The new revisions are attached: <<r0908dr5.pdf>> <<r0201dr6.pdf>> They can be found at:
<http://www.baaqmd.gov/ruledev/reg-pmt/r0201ph1.htm>

MY CONCLUSIONS AND QUESTIONS/CONCERNS THAT REMAIN * It is doubtful that any rule change would be approved in time to provide relief for this summer (2001). * We remain under the old rule exemption for fixed standby generators that has a limit of 200 hours per year emergency runtime and 100 hours testing maximum. * In Regulation 2, Rule 1 - 114.2 - 2.3 states exemption for "Portable internal combustion engines and standby internal combustion engines which are at a location for less than 72 consecutive hours". Does this mean the previous guideline of BAAQMD not regulating mobile sources unless in place a year is now just 72 hours?

I am reviewing the proposed changes further and plan to participate in future workshops and the hearing on August 1, 2001.

Dear TSC community,

I know what you=01,re wondering; =01&When is everything going to turn arou= nd?=018

Everyone is wearing that question on his or her face. I call it THE LOOK: The look of disillusionment, of lethargy, of confusion. Of when will =01+the good times=01, return?

And everywhere I am, whether on CNBC, at my desk, or on Wall Street, I=01,m asked the same thing, =01&Cramer, when will the market turn around?= =018

And I say, =01&That=01,s not the question you should be asking. The question to be asked is =01+How are YOU are going to make money in THIS mar= ket?=018

Join me Monday evening, August 6 in New York City and I will show you how to choose winning stocks, steer clear of the losers, and identify the sectors that will side step the market=01,s volatility, and much more! All to make you money!

Don't look for a magic bullet to solve everything. It doesn't exist. Take action. I will show you how.

Register today! Save \$100 by registering before July 23rd !

I=01,m looking forward to seeing you in August.

FW: EPUC Comments re DWR Decision

Sender	jeff.dasovich@enron.com
Recipients	['harry.kingerski@enron.com', 'susan.mara@enron.com', 'michael.tribolet@enron.com']
File	dasovich-j/sent_items/51.

-----Original Message-----

From: Dan Douglass [mailto:douglass@energyattorney.com] Sent: Tuesday, September 11, 2001 10:46 PM To: ARM; Vicki Sandler; Tamara Johnson; Mara, Susan; Steve Huhman; Roger Pelote; Rob Nichol; Randy Hickok; Nam Nguyen; Jim Crossen; Dasovich, Jeff; Janie Mollon; Jack Pigott; Greg Blue; George Vaughn; Gary Ackerman; Ed Cazalet; Denice Cazalet Purdum; Curtis Kebler; Curt Hatton; Corby Gardiner; Charles Miessner; Carolyn Baker; Bill Ross; Karen Shea; Max Bulk Subject: EPUC Comments re DWR Decision

Attached are EPUC's comments opposing the draft decision. They argue that, "The DD implicitly overstates the Commission's obligation under these provisions and, consequently, risks the public interest. While the Commission must assure recovery of the costs incurred by DWR, the statute does not require the Commission to assure full recovery of a fixed value in the face of variable assumptions. Failing to address these variables could lead to unnecessary rate increases and further injury to the state's economy. Moreover, while the Commission must adopt a "stop gap" allocation of DWR costs among utilities to determine who will make the payments, there is statutory requirement or practical need for a final, absolute allocation to be adopted before a more careful examination can be made."

EPUC concludes by saying that it, "urges the Commission to tailor narrowly its decision adopting a DWR revenue requirement. The Commission should adopt a mechanism, as described herein, that would limit or eliminate the difference between DWR actual costs and utility remittances. The Commission should also adopt only an interim inter-utility allocation, to be reconciled with a final methodology pending a careful and thorough examination of cost responsibility."

From: Dan Douglass [mailto:douglass@energyattorney.com] Sent: Tuesday, September 11, 2001 10:30 PM To: Vicki Sandler; Tamara Johnson; Mara, Susan; Steve Huhman; Roger Pelote; Rob Nichol; Randy Hickok; Nam Nguyen; Jim Crossen; Dasovich, Jeff; Janie Mollon; Jack Pigott; Greg Blue; George Vaughn; Gary Ackerman; Ed Cazalet; Denice Cazalet Purdum; Curtis Kebler; Curt Hatton; Corby Gardiner; Charles Miessner; Carolyn Baker; Bill Ross; Karen Shea; Max Bulk; ARM Subject: TURN Comments on DWR Decision

As you know, a draft decision was issued a few days ago by ALJ Pulsiver regarding the DWR revenue requirement. Attached are TURN's comments. The introduction gives a cogent summary of the consumer group's view of DWR's demands:

"TURN continues to believe that CDWR has grossly inflated its revenue requirement by billions of dollars through the use of extremely high gas prices and ridiculously high ancillary service costs that are unrelated to current market conditions. We understand that CDWR has the right under the Water Code to completely ignore consumer interests, recognize that it has done so in this case, and have come to expect that the Department will continue to do so. CDWR, not the Commission, is the cause of a revenue requirement that is probably bloated by as much as \$2 billion of unnecessary costs."

TURN also concludes that the Draft Decision places too much of a burden on PG&E and advocates that the "Commission should also adopt TURN's weighted load method of allocating ancillary services among utilities so that PG&E's extensive self-provision of ancillary services is not siphoned off to benefit other utilities." Its suggested rates are shown on the following table:

EvMBA Seminar in Int. Business 2001 - Spam Update	
Sender	owner-eveningmba@haas.berkeley.edu
Recipients	[eveningmba@haas.berkeley.edu]
File	dasovich-j/all_documents/8190.

Dear EvMBA students,

Please ignore this message if you did not apply for the summer international program.

Unfortunately, very few of the 56 people who applied managed to provide me with their e-mail addresses, hence the need for this spam message.

For those of you who applied, please note that you were asked for some specific information. Without this information your participation in the program can not be decided:

1. The semester level that you are currently (January 2001) enrolled in. (47 out of 56 provided this.) 2. Your e-mail address (25 out of 56 provided this.) 3. Your preferences for program (53 indicated a first preference, 27 indicated a second and only 8 indicated a third.) At a minimum please indicate your first preference. If no second preference is indicated you will ONLY be considered for the first preference.

In order to proceed I would like those of you who did not provide complete information to do so as soon as possible. Once I have complete information we will establish a priority list for each program.

A total of 5 people who have participated previously have applied to participate again.

Each program will enroll a maximum of 15 participants, for a total of 30. With 56 applicants we will thus not be able to accommodate everyone. We will, however, establish a waiting list. In 2000, we moved a total of 9 applicants from the initial

waiting list into actual participation.

We have not yet made a determination between the Latin America and Pacific destinations. Demand exceeds places for both. Given the recent (over the last few weeks) increase in unrest in Jakarta we are reconfirming the reasonableness of this destination.

Future messages will be sent to a specific e-mail alias.

Regards,

Sebastian

Sebastian Teunissen Director of International Affairs Haas School of Business University of California, Berkeley Berkeley, California 94720-1900 USA Tel: (510) 643-4999 Fax: (510) 642-8228

File	dasovich-j/all_documents/27843.

Date 7/4/01 Location Chronicle Pavilion in Concord Event American Independent Celebration with fireworks RSVP Due 6/29/01

Hello everyone, Hope the summer is going well and you are fully enjoying your time off. To once again help you with your recreation activities, we've planned another summer social event. On July 4th at the Chronicle Pavilion in Concord is the American Independent Celebration with fireworks. It's a patriotic family event with the California Symphony performing all your favorite American tunes (from Star Wars to the William Tell Overture). They also have appearances from kids choirs and individual singing artists. Last year they brought a horse and cowboy on stage during one of the Lone Ranger songs. It's a great event for kids and the family, and the finale with fireworks and real cannon fire will bring a patriotic tear to even the most masculine of men.

The prices are \$29 for lower reserved seats and \$24 for general admission. General admission for this show includes lawn seating and the upper seats. Ages 13-18 are only \$14 for general admission and children under 12 are free. The show starts at 8:00 pm, so it leaves plenty of time to celebrate at a friend's BBQ and then mosey over to the Pavilion to finish the night off. And best of all, there will be a section in the center lower lawn (prime spots!) reserved for the Haas group, so you don't need to arrive early for good seats. This spot will be staked out by Cindy - as she will be there early as part of the symphony. Her family and friends shoot the cannons in the finale. Depending on security, she may also be able to give tours of the authentic turn-of-the-century cannons to the children of the group.

Reply to Tony with RSVP's by 6/29/01. Again, we would appreciate if you buy your tickets directly through the Chronicle Pavilion at (925) 676-8742, or through Ticketmaster at (925) 685-8497. However, please do RSVP so that we may help with carpools, general organization and know how large a spot to reserve on the lawn.

Cindy Best & Tony Tai

Dear Energy Bar Association-Houston Chapter Member:

Attached is a notice of our first EBA Houston Chapter luncheon of 2001, scheduled for Wednesday, February 14th. We are pleased to have Brent Bailey, General Counsel of Duke Energy North America, and Jeff Dasovich, Director of Regulatory Affairs for Enron's California operations, joining us to share their perspectives on the energy crisis in California. This should be an interesting and timely discussion.

Please print out and return the attached notice to confirm your seat for the luncheon at the Hyatt Regency-Downtown. The notice will be distributed by mail as well.

See you there!

FERC Affirms ISO's Underscheduling Charge-- no BEEP Split -- Grants

Sender	susan.mara@enron.com
Recipients	['steve.walton@enron.com', 'mike.swerzbin@enron.com', 'tim.belden@enron.com', 'michael.driscoll@enron.com', 'l...
File	dasovich-j/all_documents/12656.

FERC issued three CA orders today. Ray Alvarez sent out a summary on the order related to increasing Generation and Transmission in the west. The report below came from IEP's attorney.

Underscheduling -- Enron has been on both sides on this issue -- here's what's happened

One CA order rejects the requests by PG&E, SoCal Edison and the CAISO to suspend the underscheduling penalty adopted in the December 15th Order. The Commission is currently reviewing data filed by the CAISO in conjunction with a request to waive the underscheduling and will address the underscheduling penalty in a future order. The Order does accept the CAISO's proposal to split the BEEP stack into Operating Reserves and Imbalance Energy.

QFs -- Ridgewood Complaint

The second order address QF issues. Granting, in part, Ridgewood and CCC's request for emergency relief, the Commission ruled that when QFs sell excess power or make third party sales as authorized by a court, the California utilities must provide interconnection and transmission service to make those sales. The Commission deferred decision on whether QFs that have not been fully paid can make third party bilateral sales.

Obstacles -- Subject of Ray's earlier e-mail

The third order addresses obstacles to increased energy supply. The Commission takes a number of actions, including allowing premium returns on equity (200 basis points) and accelerated depreciation (10 years) for projects that increase transmission capacity in the short term (July 1, 2001). The basis points go down if the project comes on later. The order also allows rolled-in treatment of interconnection and upgrade costs for new supply, broadens and extends QF waivers of operating and efficiency standards, waives prior notice requirements and grants market-based rate authority for sales from back-up and self-generation in WSCC, authorizes certain demand side sales and management programs, and encourages pipeline construction projects.

More to follow when we review the orders.

PDF Attachment-Request for Confidential Information by the GAO

Sender	terri_l_ponce_de_leon@calpx.com
Recipients	['market_participant_cd2@calpx.com', 'px_marketing_services@calpx.com', 'market_participant_ab1@calpx.com']
File	dasovich-j/notes_inbox/761.

A PDF version of the original letter is attached below.

To All California Power Exchange Participants:

Notice is hereby provided pursuant to Section 19.3.4 of the California Power Exchange Tariff that the United States General Accounting Office (GAO), as part of the ongoing investigation of California markets, has requested the same information to be provided to the Federal Energy Regulatory Commission (FERC). Such information may be confidential under Section 19.3.2 of the Tariff. The manner in which the GAO will treat such confidential information is outlined in the attached letter. The GAO states that it has authority under 31 U.S.C. 717 to evaluate programs or activities of the Federal Government, in this case, deregulation of the electricity markets initiated by FERC.

The GAO has requested the California Power Exchange to provide such information no later than Thursday, October 5, 2000. If you desire to assert a claim of privilege or confidentiality pursuant to legal authority, the California Power Exchange will include your written assertion of that claim together with its submittal to the GAO, provided that it is timely received. Your written statement should be directed to the GAO as follows:

Mr. Jim Wells Director, Energy Resources, and Science Issues United States General Accounting Office Washington, DC 20548

You may deliver your statement to the California Power Exchange as follows:

Karen Koyano California Power Exchange 1000 S. Fremont Avenue Unit 20 Alhambra, CA 91801 626.537.3173 facsimile

Any written statement must be received by Ms. Koyano no later than Wednesday, October 4, 2000, 5:00 p.m. Pacific Daylight Time, to be included with any information delivered to the GAO. You are also free to take any other legal action you may deem appropriate in the circumstances of this investigation.

Thank you.

Hi Christine:

Yes, forwarded the email you sent last week. Here's where folks came out. First, we think that the folks in your first group are mean. Second, it's a real challenge managing a group of four and there's concern that five will break the camel's back. Suggestion came up that it might be much more manageable if you could try to link up with a smaller group first. If there's a problem finding a smaller group, then we could try to do five and hope the ship don't sink?

Sound reasonable?

Best, Jeff

Christine Piesco <christine.piesco@oracle.com> 10/02/2000 01:14 PM

To: Jeff.Dasovich@enron.com cc: Subject: Re: Teams

Jeff,

Have you had a chance to convey what I said to the group, and can I join? Professor Aceves was aware that I talked to you about joining your group, and he sent me an email asking to confirm that I was now in a group. I'd certainly like to be! As you know, I want to make sure I am in one to do the next assignment with. Please let me know, so that if I am joining your group I can make the meetings and contribute to the next case. I do really appreciate your help. :)

Thanks, Christine

Jeff.Dasovich@enron.com wrote:

Christine: My apologies. My schedule melted down after we talked on Monday. Here's where folks came out. There's some concern about size. We're supposed to be no larger than 3, but we lobbied Aceves and he apparently Ok'd our "oversized" group. The other folks in the group--who talked to him originally--are pretty sure that five will violate the rules. Folks wondered if there were other groups that are smaller than ours that you could hook up with. Sorry about that---it's a wrinkle that I didn't think about when we spoke. If it gets real ugly trying to find a smaller group, let me know. Fortunately there's not another team case due for two weeks. Best, Jeff

To: 86464@WCTOPICS.djnr.com cc: Subject: Utilities, Electric: Deregulation: Electric Utilities Ask U.S. Agency for Help
Metropolitan Desk; Section B Electric Utilities Ask U.S. Agency for Help By Joseph P. Fried ? 09/29/2000 The New York Times Page 6, Column 5 c. 2000 New York Times Company

Consolidated Edison and Orange and Rockland Utilities urged federal energy regulators yesterday to reform New York State's wholesale electricity market to reduce energy prices.

The utility companies, blamed by many of their customers for this summer's high electricity bills, contended that they were not responsible for the higher charges, which they called the result of excessively high wholesale energy costs in the state's deregulated electricity market.

The utilities' request came in papers filed with the Federal Energy Regulatory Commission in a proceeding involving the New York State Independent System Operator, which administers the wholesale energy market in the state.

Among the changes the two utilities urged was revision of Independent System Operator "market rules and procedures that discourage economically efficient imports" of electricity from other regions, like New England. They also called for changes in rules power generators must follow, to avoid severe day-to-day fluctuation in electricity prices. Joseph P. Fried

Attached for your review and comment is a revised draft of the application for rehearing to be filed on Friday the 28th. There are two primary changes. The California Chamber of Commerce has been added to the application and an argument has been added that the Decision contradicts the most recent legislative intent expressed in ABX2 9 that direct access continue, at least for aggregation and community choice purposes. Any and all comments will be very much appreciated. Also, I would appreciate it if Sue Mara would forward the document to her contact at the Chamber so that they can also review the draft. Thanks! Please read this e:mail carefully, detailed information to follow.

The next Government Affairs-The Americas department meeting is quickly approaching us. The meeting will take place at:

The Ritz-Carlton Tyson's Corner 1700 Tyson's Boulevard McLean, VA 22102 Phone# 703-506-4300 Guest Fax# 703-506-2694

Attached to this e:mail you will find a document with the listed confirmation #'s for each of you who require an overnight stay. Please note, another hotel has been contacted for reservations for several individuals because the block of rooms at The Ritz-Carlton ran out. The document does show who will be staying at the other hotel (The DoubleTree, Tyson's Corner, please note address on attachment). Also, please confirm the arrival/departure date on the rooming list. It is very important that this information be correct. For those staying at the Doubletree Hotel, I have requested shuttle service for the morning of the 13th at 7:15am for travel to The Ritz Carlton hotel.

Tuesday, September 12 ---- The first item on the agenda is dinner on September 12 (day of arrival). Dinner will take place at Maggiano's Little Italy Restaurant at 7pm. The restaurant is located in the Mall at Tyson's Corner which is connected to The Ritz Carlton. The dress for this restaurant is casual to business casual. Please confirm your attendance with me again. I'd like to get an accurate head count.

Wednesday, September 13 ----- Department Meeting: Meeting will begin at 8:00am with a continental breakfast available starting at 7:15am. The location of the meeting will be in Salon I (located on the 5th floor). Lunch will take place at 12:00 (noon) and end at 1:30pm. The extra time for the lunch hour will allow for checking messages. The breakout sessions will start at 2:15pm and conclude by 4:00pm. The sessions will take place in the Consulate Room and The Plaza Room which are both located on the 6th floor. An agenda is attached to this e:mail for your viewing. Dress for the meeting will be casual to business casual.

Thanks and please call if you have any questions.

File	dasovich-j/all_documents/28338.

Enron notes to discuss tomorrow...

Background: 1. Late March - we met with members of GSS (Global Strategic Sourcing group) and the CIO from ETS (Enron Transportation Services) 2. Mid May - we showed a demo to a mix of EES (Enron Energy Services), GSS (John Gillespie, John Will, Craig Brown), and ETS contacts 3. EES and ETS were interested, mentioned DealBench as too costly for their needs, we followed with a proposal to GSS for a Pilot, response was that we need to get a divisions on board 4. Late June (6/28) - met with 2 contacts from EES (Procurement Mgrs who were in the May mtg, they suggested we show how our system can help their upstream counterparts who structure the "deals" (since the Proc. Mgrs are simply the downstream execution piece), they also mentioned that GSS is busy with SAP/C1 ibuyit rollout right now

Questions: 1. Who are the "deal makers", what is their function, what tools do they use, how do we best position our solution with them? 2. How are decisions made? Should we target a solution to a particular division e.g. EES? Our contacts have said solutions are purchased both through GSS as a "gatekeeper" and by a single division on its own (as there seems to be a number of maverick projects going on at the moment)

File	dasovich-j/notes_inbox/11952.

Below are the notes from our lobbyist who attended the meeting today of opponents for the language to change the requirements for those getting e-signatures for selling products and services to small customers. From the diversity of the group opposing the bill and the fact that the Attorney General and Peace are involved, I recommend that we stay on the sidelines and monitor this. The bill applies to small customers so it does not effect us at present. What are your thoughts?

Sue Mara Enron Corp. Tel: (415) 782-7802 Fax:(415) 782-7854 ----- Forwarded by Susan J Mara/NA/Enron on 07/12/2001 10:39 PM -----

"Scott Govenar" <sgovenar@govadv.com> 07/12/2001 04:59 PM Please respond to sgovenar

To: "Jeff Dasovich" <jdasovic@enron.com>, "Susan J Mara" <smara@enron.com> cc: Subject: AB 256

As I mentioned earlier this week, my associate Cliff Berg, representing AOL, co-sponsored a meeting in our office today regarding AB 256 (Wayne). The meeting was run by Kay Caldwell on behalf of the Internet Alliance. Kay was the one who contacted Jeff Dodd in Houston who I believe contacted one or both of you.

The bill is being opposed by AOL, Microsoft, Charles Schwab, CMTA, Chamber, GTE/Verizon, AEA, Retailers, Financial Services Association and the Internet Alliance. All of those parties are scheduled to meet with Assembly Member Wayne at different times on Wednesday to try and get him to drop the bill which is being sponsored by the Attorney General. In the event that fails, the group is also trying to get the bill double-referred to the Senate Banking Committee where they

have a much better chance of stopping it versus the Senate Judiciary Committee. The bill will be heard by the Judiciary Committee on August 21.

With respect to Enron's participation in any opposition effort, there was some concern that the Judiciary Committee may not be the best place because Peace is on that committee and would likely do anything to get at Enron (support?). Regardless of anyone's concerns we could submit a letter of opposition so long as someone provides me with the general framework.

Please advise.

Scott

EnronOnline	
Sender	sarah.novosel@enron.com
Recipients	['richard.shapiro@enron.com', 'linda.robertson@enron.com']
File	dasovich-j/all_documents/28343.

As you may recall, Portland General submitted a request to FERC for authorization to use EnronOnline. Due to FERC's affiliate restrictions, PGE currently is not able to use EnronOnline and is concerned that it is being excluded from parts of the market due to the restrictions. We made a similar filing on behalf of EPMI, proposing to remove the affiliate restrictions for those transactions that EPMI enters into with PGE through EnronOnline.

The PGE and EPMI filings are on FERC's July 11 agenda. Although the FERC staffers conducting the inquiry into EnronOnline have told us that their inquiry is not related to the PGE and EPMI applications, FERC's order will be the first pronouncement from FERC on EnronOnline since this new inquiry began.

We'll keep you posted and will send out the order as soon as we receive it. Please let me know if you have any questions.

Sarah

File	dasovich-j/notes_inbox/5458.

Lexis-Nexis has been a trusted source of real-time and archival information for 28 years. Continuing the Lexis-Nexis tradition of providing the most comprehensive and credible information in the marketplace, the nexis.comSM Web interface was released to our corporate subscribers in Fall 2000. To determine the applicability of this interface for graduate schools of business, Lexis-Nexis has entered into a pilot program with select leading business schools. As a pilot program participant at The University of California - Berkeley, Haas School of Business, Lexis Nexis has provided you with unlimited access to its nexis.com service. All they want in return is your opinion on how well the nexis.com service meets your expectations.

To best understand how the nexis.com service meets your needs, Lexis-Nexis has chosen an independent market research firm, Shugoll Research, to conduct a research study with pilot program participants like yourself. This is strictly market research and there is absolutely no sales effort involved. The research will be used to identify ways that the nexis.com service can be improved.

We urge you to participate in this research. Focus group research has been scheduled for:

February 12, 2001 at 4 PM In the Haas School of Business

All qualified participants will receive an honorarium as a token of our appreciation for their time and opinions. All of your answers will be kept strictly confidential.

If you are interested in participating, or simply learning more about this important research, please contact Shugoll Research one of two ways:

1. E-mail Shugoll Research at research@shugollresearch.com. Please include your first name, a telephone number and the best time of day to reach you so a representative from Shugoll Research can contact you. 2. Call Shugoll Research toll free at 800-322-4499 and identify yourself as someone who has been invited to participate in the nexis.com research.

Thank you in advance for your participation in this very important research.

Dear Jeff and Sue:

Sorry to be a broken record on this one....but I don't know what you want to do about the Affiliates case. There is a PHC tomorrow and comments were filed. SCE's comments make a nasty jab at Enron for proposing the rules in the first place. I see that AREM is participating as well. If your plan is to participate in this proceeding only through AREM, that's fine but please let me know so that I can remove my appearance. I will be at the PHC for Wild Goose but would like to be very clear about who I am representing in the docket in order to avoid confusion.

Thanks,

Town Hall Meeting	
Sender	lgoldseth@svmg.org
Recipients	['lgoldseth@svmg.org']
File	dasovich-j/all_documents/13276.

ENERGY COMMITTEE MEMBERS: (Please pass on as appropriate)

Congresswoman Anna Eshoo has organized a town hall meeting to bring everyone together to talk about what residential and commercial customers can do during the current energy crisis, and to promote energy efficiency and conservation.

The event will be held 9:00 - 11:00am, on Saturday, June 2, 2001, at the Menlo Park campus of the USGS at 345 Middlefield Road, Menlo Park. Directions are attached below.

Panel speakers will focus on recent Federal and State action and energy efficiency and conservation. Speakers include Ambassador Dick Sklar, Assemblyman Joe Simitian, Ralph Cavanagh of NRDC and local business owner Larry Hassett.

Please join us on Saturday for Congresswoman Anna Eshoo's Town Hall Meeting. If you have questions, please call the Congresswoman's Palo Alto office at 650-323-2984

DIRECTIONS: The USGS campus is actually on Survey Lane, a short road (1 block long) south of Middlefield Road between Marsh Rd and Willow Rd in Menlo Park.

US 101: take the Willow Road exit. Take Willow Road south / west towards Menlo Park about one mile, and turn right onto Middlefield Road. Take the second left onto Survey Lane.

I-280 from the South: Take I-280 N to Highway 85 N (towards Mountain View). Take US-101 N to the Willow Road exit. Take Willow Road about a mile, and turn right onto Middlefield Road. Take the second left onto Survey Lane.

To Use Public Transportation on the Peninsula: Take Caltrain to the Menlo Park Station. Caltrain schedules can be obtained at www.caltrain.com or by calling 1-800-660-4287. Thanks to SamTrans, a special shuttle will be available at the Menlo Park station starting at 8:20am to take those arriving by train to the USGS campus. The special shuttle will also be available after the townhall meeting to return to the Menlo Park station. The shuttle is ADA accessible. Also note, the train station is less than a mile to the USGS campus. To bike or walk to the campus, head south from the train station about 100 yards to Ravenswood Avenue. TURN LEFT (east) and go down Ravenswood Avenue about a half a mile to Middlefield Road, turn right (south) and the campus is on the right side of the street.

Summer Seminars in Political Economy (July 9-13 & August 13-17)	
Sender	cclose@independent.org
Recipients	['jeff.dasovich@enron.com']
File	dasovich-j/notes_inbox/12516.

Dear Jeff,

SUMMER SEMINARS IN POLITICAL ECONOMY: July 9-13 & August 13-17

How sound an economics education are American students getting? If a recent study of high school history textbooks is indicative, the answer is very discouraging. The economists who authored that study examined 12 history texts for their treatment of the Great Depression. Only two of the texts correctly identified the fall in the money supply as a cause of the Great Depression, while ten blamed "overproduction" or "excess capacity" in various industries -- hypotheses that mainstream economic researchers rejected decades ago.

The bottom line? Even when a student is lucky enough to have a teacher that teaches valid economic principles, that student is likely being taught an interpretation of history that contradicts those principles.

To help high school and college-age students learn to reason about economics, history and politics, The Independent Institute is sponsoring two Summer Seminars in Political Economy. These dynamic seminars will help students learn what economics is, how it affects their lives, and how understanding its laws can help them achieve the things they care about.

TOPICS INCLUDE -- Economics and Liberty: How the West grew richer and politically freer -- Market Chaos or Hidden Order? How markets coordinate people's plans -- Monopoly or Competition? How market incentives improve the quality of life -- Market Failure or Government Failure? Inflation, recession and government policy

INSTRUCTOR -- Joseph Fuhrig, Professor of Economics and Finance, Golden Gate University

TIME -- 8:30 AM - 12 NOON, July 9-13 or August 13-17 (choice of session depends on availability)

TUITION -- \$175

Room and board and one unit of college credit through Holy Names College in Oakland, Calif., are also available at extra cost.

WHERE The Independent Institute 100 Swan Way Oakland, CA 94621-1428

More information, see <http://www.independent.org/tii/students/SummerSeminar.html> or contact Carl Close, Academic Affairs Director at The Independent Institute at cclose@independent.org or (510) 632-1366.

Hi Team,

I ran my own numbers this morning, and verified what you guys have sent out. I think we can use Mark's or Jeff's write-up as is. Just have one clarification re: Q2 - my?spreadsheet shows that if we increase ad expenses for five years only '94-'98 (as opposed to in perpetuity), then the stock price ends up being 22.73 v/s Mark's 22.20. I do get 22.20 if?I also increase the 6th year ('99) expenses to 27% - perhaps this was an oversight - can someone pls confirm?

For Q5, merely changing terminal growth to 4%, and WACC to 10% gets us to an \$80 stock price.?But?4% in perpetuity is probably unrealistic?

Re: the last question, I agree with Mark's analysis - firms that have huge R&D cycles and patent protection over 17 years etc. e.g. pharmas would be good candidates for foreacsting over a longer term horizon.

Rest looks great - you guys are awesome!!

-Anil

Corbett Press Conference

Sender	cmicheli@carpentersnodgrass.com
Recipients	['steven@iepa.com', 'smccabe@mccabeandcompany.net', 'smara@enron.com']
File	dasovich-j/notes_inbox/3595.

This morning Assemblywoman Ellen Corbett held a press conference on her AB 128x.? Several print journalists and 3 TV cameras were present at the conference.? Also of interest is that the Senate tax consultants and Burton's staff were at the event.? Assemblywoman Hannah-Beth Jackson showed up late and gave a few quotes to the media present.? A spokesman from Mirant also gave a few interviews after the press conference. According to Corbett's staff, they expect to handout the bill amendments at the hearing. Among Corbett's comments to the media present: "This bill is not a negotiating tool.? I'm very serious about this bill.? I want to see it through the process.? The Governor will sign a bill like this." The following?amendments are to be presented at the committee hearing today as follows: AB 128X 1) Creates a Tax on Excess Gross Receipts from Electrical Energy Distribution?(called a "tax on excess greed") 2) Imposes a tax on the first sale of electricity by generators and middlemen. 3) Establishes as the measure for the tax, the amount by which the gross receipts exceed a specified price ("the base price").? The measure of tax is called the excess gross receipts. 4) Creates a 3-tier system of rates as follows: a) Sales price more than the base price but not more than 150% of the base price, tax rate = 50% b) Sales price more than 150% of the base price but not more than 200% of the base price, tax rate = 70% c) Sales price more than 200% of the base price, tax rate = 90% 5) Creates a rebuttable presumption that the base price represents a fair sales price. 6)? Adds a mechanism to require withholding of the tax by purchasers. Residential consumers and small business are exempt. 7)? Requires sellers to file annual tax returns to report the tax on excess gross receipts and pay any remaining tax due. 8)? The measure sunsets after five (5) years. There will be a report after today's Assembly Rev & Tax Cmte hearing. As opposed to SB 1x that returns the taxes raised to ratepayers, AB 128x would "repay" the State's General Fund.

FW: AReM's 2nd draft of comments responding to Carl Wood

Sender	d..steffes@enron.com
Recipients	['jeff.dasovich@enron.com']
File	dasovich-j/inbox/1497.

FYI -----Original Message----- From: Steffes, James D. Sent: Thursday, November 01, 2001 8:42 PM To: Mara, Susan; Williams, Robert C.; Smith, Mike; Wu, Andrew Subject: RE: AReM's 2nd draft of comments responding to Carl Wood

Sue --

My thoughts on the filing.

1. Pretty hard line with Comm Wood. I don't have any problems with it as written, but comments like "CYA not Calif Youth Admin" is not appropriate. 2. We don't deal with the requirement to submit contracts? Should AReM address this? My understanding is that for contracts with customers below 20kw we need to submit something (maybe with the price and term blacked-out)? Is this correct? 3. In the conclusion, don't we want to ask the PUC to take some affirmative action - tell the industry that they will never implement retroactive suspension, that there is no cost shifting, and that DA customers can extend without penalty? The filing simply asks for no harm.

Thanks,

Jim

Gang,

Here is a current draft of AReM's comments due tomorrow. Let me know if you have comments. Enron will not be submitting comments separately.

Sue -----Original Message----- From: Dan Douglass [mailto:douglass@energyattorney.com] Sent: Thursday, November 01, 2001 1:37 PM To: ARM; Gary Ackerman; Bob Anderson; Curt Hatton Subject: SECOND DRAFT OF TOMORROW'S COMMENTS Importance: High

Attached for your review and comment is a second draft of tomorrow's comments on the Wood ACR. I have added a significantly expanded section dealing with how the Commission's inaction and subsequent action contributed to the flow of customers back and forth between DA and bundled service. My thanks to Aaron Thomas for his assistance on this section.

Also, I have deleted the "CYA - not the California Youth Authority" quip -- I had to have some fun while writing this on Halloween night!

File	dasovich-j/notes_inbox/12287.

CONFIDENTIAL -- FERC SETTLEMENT DISCUSSIONS

I have proposed quite a few changes and additions to the list. I also ask some questions re some of the items listed. I added a section on Retail Reforms -- we cannot settle with the state unless we settle everything -- otherwise we know the outcome to expect.

regarding your question on hourly day ahead markets -- I assume you're referring to the energy market that the PX used to run, because the CAISO already has day-ahead markets for congestion and ancillary services. I discussed this proposal with Tim in March because the ISO's filing at FERC for market reforms had the ISO setting up such a market -- essentially putting the former PX inside the ISO (and for all you historians, finally creating the dream of POOLCO for California). Tim asked us to oppose that proposal -- his view at the time was that we didn't want the ISO running energy markets, because

private third parties could do a much better job of that. So, we opposed that in our filings commenting on the ISO's proposal in March.

I'll be in the office Wednesday (Oops! Today). Can we discuss this list and where we are headed?

Recipients	['mark_guinney@watsonwyatt.com']
File	dasovich-j/sent/4236.

Not a problem. My concern is less about you and me---we both have views and are comfortable with the back and forth banter.

I'm actually concerned about Carolyn. She has worked hard on this, and I think wants to be involved and participatory. I had the sense that she was feeling that she'd done a bunch of work that was ending up on the cutting room floor and that she wasn't getting a real opportunity to participate in the shaping of the analysis, the presentation, or responsibility for taking a piece of the presentation for Thursday. I was sensing that she was frustrated.

Anil is also less extroverted, but based on discussions with him, I think that he is less concerned because he has some other pretty cosmic things on his plate right now.

My real concern is that everyone feels comfortable, understanding that working in groups is all about compromise, and that one should really expect to get about 70% or less of one's views included in a final product, given the nature of group dynamic.

I think we're getting close to something that everyone will good about, which is a pretty good goal to go after.

Thanks a bunch for the note.

Best, Jeff

FW: Draft Application for Rehearing

Sender	susan.mara@enron.com
Recipients	['harry.kingerski@enron.com', 'richard.shapiro@enron.com', 'd..steffes@enron.com']
File	dasovich-j/deleted_items/1638.

I'm taking a look at this now. Dan says we need to file this Friday to make sure we meet the 10-day requirement in the statute. Will be trying to get individual customers to sign on as well. Already have call in to UC/CSU attorney. -----Original Message----- From: Dan Douglass [mailto:douglass@earthlink.net] Sent: Sunday, September 23, 2001 12:08 AM To: ARM; Gary Ackerman; Vicki Sandler; Anderson, Robert; Marilyn Ferrara; Max Bulk; John Yurkanin; Steve Huhman Subject: Draft Application for Rehearing

Attached for your review and comment is a draft application for rehearing of the Commission's Thursday Decision 01-09-060 suspending the right of direct access. Although we have prevailed (at least for now) on the issue of retroactivity, the decision still violates various provisions of state and federal law. If any party wishes to preserve the right to legally challenge this decision, it must file an application for rehearing within ten days. The attached draft is tentatively dated September 28, meaning that it would be filed next Friday.

The primary reasons cited for why rehearing should be granted are as follows:

The Decision violates procedural due process guarantees.

The failure to hold hearings violates Public Utilities Code section 1708.5(f).

The Commission's reliance on material outside the record violates due process.

The Decision violates the Commerce Clause of the United States Constitution.

The threatened retroactivity is contrary to law and in excess of the Commission's authority.

The Commission acted contrary to law and in excess of its authority.

The Decision's purported findings are not supported.

The Commission has impermissibly converted a ratemaking proceeding into a quasi-legislative proceeding.

Although WPTF members have not had an opportunity to consider whether they wish to support such a filing, WPTF is included as a named party in the attached because of the fact that AREM and WPTF have jointly made numerous other filings in this proceeding. WPTF members will need to determine if they wish to support this effort.

I look forward to seeing your comments. Thanks, and have a good weekend!

Dan

Jim:

Attached is a fairly distilled summary of the projects Enron's offered to the utilities, DWR and the ISO over the past 9-12 months, or so. With respect to the power contracts offered to the IOUs, only the offers accepted by PG&E and Edison are included---the desk doesn't keep records of offers rejected, only offers accepted. However, I'm fairly confident that I can dig deeper and get more info on the other power deals offered to Edison, PG&E and SDG&E if folks would like that information. Just let me know. Prices are included for the offers that had prices attached when submitted.

Best, Jeff

FW: Action Needed for Veto on Workers' Comp Bill (SB 71)

Sender jeff.dasovich@enron.com

Recipients ['susan.mara@enron.com', 'richard.shapiro@enron.com', 'd..steffes@enron.com']

File dasovich-j/sent_items/25.

FYI. -----Original Message----- From: Geri L. Royer [mailto:groyer@cmta.net] Sent: Friday, September 07, 2001 5:57 PM
To: undisclosed-recipients Subject: Action Needed for Veto on Workers' Comp Bill (SB 71) Importance: High

To: CMTA Members

From: Jack M. Stewart

Date: September 7, 2001

Re: Action Needed for Veto on Workers' Comp Bill (SB 71)

The Senate concurred in the Assembly amendments to the workers' compensation benefits bill on September 6 . The bill is now on its way to the Governor. The bill, SB 71 (Burton), would cost employers

\$3.6 billion over 5 years with no substantive changes to help offset the increased cost. The quick passage of the bill by the Senate ends any speculation that Senator Burton may be in a negotiating mood.

There was some hope that some negotiation would ensue after the Governor

entered the fray on Thursday, August 30 by revealing a \$1.5 billion proposal that was significantly less expensive and onerous to employers. However, the proposal caused Senator Burton and his co-author, Assemblyman Calderon, to call a hasty press conference where the governor's proposal was characterized as a slap in the face to labor. Senator Burton predicted that a veto of SB 71 would spark a ballot initiative (that could double employers' costs). He also thought the veto would be an invitation for injured workers to vote for former Los Angeles Mayor Dick Riordan or someone else.

Steve Smith, Director, Department of Industrial Relations and the governor's point person on workers' compensation said, "the governor's plan became public only after it was presented to a group of labor leaders and it was intended to stimulate discussion about how best to get a workers' compensation bill that the governor is comfortable with." Smith dismissed the threat of labor turning to someone else in the next election because the governor has stood with working Californians on issue after issue and he would be shocked if they were considering endorsing someone else.

Now that the bill is on the Governor's desk, it is imperative that employers write the Governor requesting a veto. For information on SB 71 go to the CMTA web site at <http://www.cmta.net/issues/index>.

The address for the Governor's Office is:

The Honorable Gray Davis Governor of California State Capitol Sacramento, CA 95814

Phone: 916.445.2841 Fax: 916.445.4633

Message below from Professor Levine regarding E201B:

Dear Macro class,

This message concerns the first macroeconomics class, which will be held next week October 21, 22 in C210. Please read in the textbook "The Science of Macroeconomics" and "The Data of Macroeconomics," Mankiw Chapters 1 and 2.

You should start receiving the Financial Times a few days before class begins. If you do not receive your first copy before class begins, please contact Shawn Allison (allison@haas).

Homework zero. Please do before first class, but do not hand in:

1. List three ways in which GDP over- or understates a nation's typical standard of living. 2. List 2 reasons why the CPI might over- or understate the true inflation rate. 3. What are 3 reasons why it matters if the CPI is accurate? 4. Please look in the Financial Times and find a story that fits your name. A) If your first name begins with A-D, find a story concerning why living standards and output per capita differ so much between one or more richer and poorer countries. B) If your first name begins with E-K, find a story concerning persistently high or low unemployment and inflation. C) If your first name begins with L-O, find a story concerning interest rates and central bank policies. D) If your first name begins with P-S, find a story concerning exchange rates and one or more of trade deficits, the current account, or capital mobility. E) If your first name begins with T-Z, find a story concerning government macroeconomic policy and/or corruption.

I look forward to meeting you all in a few days. Good luck on your finals this week. Please remind classmates to sign onto the email alias e201b-1 or e201b-2 (they are identical), as only 39 people total have signed up.

Till soon,

- David

To: 86464@WCTOPICS.djnr.com cc: Subject: Utilities, Electric: Deregulation: USA: Calif. utilities seek ISO power price cap cut to ...

Reuters USA: Calif. utilities seek ISO power price cap cut to \$100. ? 10/04/2000 Reuters English News Service (C)
Reuters Limited 2000.

SAN FRANCISCO, Oct 4 (Reuters) - Pacific Gas and Electric Co (PG&E) said Wednesday it is joining with Southern California Edison and a California consumer group to seek a reduction of the Independent System Operator (ISO) price cap for electricity to \$100.00 per megawatt hour (MWh) from the current \$250.00 cap.

PG&E, the utility subsidiary of San Francisco-based PGOCorp. , proposed the lower price cap as part of a broader package of steps it is taking to "make sure the California power market can operate more efficiently," a company official told reporters at a briefing here.

Southern California Edison is the utility subsidiary of Edison International , based in Rosemead, Calif.

PGOsaid the request was backed by The Utility Reform Network (TURN), a San Francisco-based consumer group that has protested against soaring electricity prices as a result of California's bid to deregulate its electricity industry.

The California ISO, established as part of the deregulation effort, oversees the operation of about 75 percent of the state's power grid, serving some 27 million people.

The move by PGOand Edison follows a summer of chaos in the California power market, where a shortage of electricity generated within the state and open market power pricing sent the cost of wholesale power to nearly twice its historical average, frequently trading above the proposed \$100.00 cap.

Re: problem set mix-up and brief feedback

Sender	xzhang@haas.berkeley.edu
Recipients	['jeff.dasovich@enron.com']
File	dasovich-j/all_documents/108.

Dear Jeff: Thank you very much for your feedback. I will try to facilitate future discussions and keep the class on track. Some of the discussion we had yesterday are not quite closely related to the course material (such as valuation of internet stocks), but I decided to spend some time talking about that just to enhance students' understanding regarding application of the model. I don't think I received the e-mail from your girlfriend. Please ask her to send it to me again today. I will pass it on to the grader. Regards,

At 10:56 AM 10/26/99 -0500, you wrote:

professor zhang: first, as i mentioned during the break, i apologize for having forgot to bring my homework to class, but my girlfriend (who coincidentally is in the day program) should have e-mailed it to you on my behalf during class last evening, which i hope meets the deadline. if not, i understand. and if, for some reason, you have not received it, please let me know. (in addition, i apologize for having mis-labeled the homework as "macroeconomics." i do know the difference between financial accounting and macro, so don't be alarmed.) i assure you that such mix-ups will not happen again. second, since i'm writing, i thought i would take the opportunity to offer a very minor piece of feedback. first, let me say i'm very much enjoying the course, and from my perspective, it is fine that you choose to distribute the notes for a class after the class has taken place. with that in mind, i think we as a class would benefit if you were a bit more "aggressive" in facilitating class discussion. it is a fascinating

group of individuals with very interesting questions and points of view. and i have already benefited immensely from my association with my classmates. but you happen to be fairly interesting as well, and some times the discussion can wander or go on for some time, which takes away from your instruction. finally, some of us have many questions, while others have fewer. striking a balance between the two is clearly a challenge, but attempts to do so may have some benefits. again, i think the course is going very well and this is a minor piece of feedback. best, jeff

Introducing NASDAQ-100 Index TIERS (sm)

Sender	bes.prod@schwab.com
Recipients	['jdasovic@enron.com']
File	dasovich-j/all_documents/10682.

Introducing NASDAQ-100 Index TIERS (sm) Principal-Protected* Trust Certificates

TIERS Nasdaq-100 Principal-Protected* Trust Certificates are securities whose return is linked to the performance of the Nasdaq-100 Index. At maturity, the Trust is scheduled to repay the entire principal amount of the certificates, plus an amount based on the return of the Nasdaq-100 Index subject to a quarterly appreciation cap of 12%.

Payment to the trust will be guaranteed pursuant to the terms of a financial guaranty insurance policy issued by Ambac Assurance Corporation.

Expected to be Aaa rating by Moody's and AAA rating by Standard & Poor's.

Expected to be priced April 11, 2001. Expected offering price is \$10 per certificate.

For more information and a copy of the prospectus, please go to:

<http://www.schwabnet.com/tiers/>

or

Speak with a Specialized Product Representative at 1-800-551-1001 ext. 33 from 5:30 a.m. to 3:00 p.m. PDT.

* When held to maturity.

A registration statement relating to these securities has been filed with the Securities and Exchange Commission but has not yet become effective. These securities may not be sold nor may offers to buy be accepted prior to the time the registration statement becomes effective. This communication shall not constitute an offer to sell or the solicitation of an offer to buy nor shall there be any sales of these securities in any jurisdiction in which the offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of any such State.

To All California Power Exchange Participants:

Notice is hereby provided pursuant to Section 19.3.4 of the California Power Exchange Tariff that the United States General Accounting Office (GAO), as part of the ongoing investigation of California markets, has requested the same information to be provided to the Federal Energy Regulatory Commission (FERC). Such information may be confidential under Section 19.3.2 of the Tariff. The manner in which the GAO will treat such confidential information is outlined in the attached letter. The GAO states that it has authority under 31 U.S.C. 717 to evaluate programs or activities of the Federal Government, in this case, deregulation of the electricity markets initiated by FERC.

The GAO has requested the California Power Exchange to provide such information no later than Thursday, October 5, 2000. If you desire to assert a claim of privilege or confidentiality pursuant to legal authority, the California Power Exchange will include your written assertion of that claim together with its submittal to the GAO, provided that it is timely received. Your written statement should be directed to the GAO as follows:

Mr. Jim Wells Director, Energy Resources, and Science Issues United States General Accounting Office Washington, DC 20548

You may deliver your statement to the California Power Exchange as follows:

Karen Koyano California Power Exchange 1000 S. Fremont Avenue Unit 20 Alhambra, CA 91801 626.537.3173 facsimile

Any written statement must be received by Ms. Koyano no later than Wednesday, October 4, 2000, 5:00 p.m. Pacific Daylight Time, to be included with any information delivered to the GAO. You are also free to take any other legal action you may deem appropriate in the circumstances of this investigation.

Thank you.

Enron Support from OC Register Editorial "...side with the law

Sender	susan.mara@enron.com
Recipients	['steven.kean@enron.com', 'karen.denne@enron.com', 'mark.palmer@enron.com']
File	dasovich-j/all_documents/28858.

In case you didn't see it 7/16/01 -- Palmer quoted Senate power play jolts Enron 'The whole thing stinks to high heaven.' That was the assessment Adrian Moore, executive director of Reason Public Policy Institute, gave of a state Senate committee's recent move to hold Enron Corp. in contempt for refusing to hand over subpoenaed documents. We're inclined to agree. The Texas-based energy merchant has filed a countersuit in Sacramento Superior Court, arguing that the Senate has no right to wield influence beyond state borders and that putting the documents into public view "jeopardized confidential business information," the Register reported Thursday. The court should order the Senate either to make its document request more specific or to drop the contempt charge and subpoena altogether. Robert Levy, a constitutional law expert at the Cato Institute, told us that Enron's point about disclosing confidential information will be its strongest argument in court. While Enron can't hide behind state borders, Levy says the Senate's request is not tailored narrowly enough to ensure information that could damage Enron's market viability is not released. He said the Senate should have to let a judge decide whether releasing the documents is necessary for its investigation and avoids unfairly harming Enron. Instead, the full Senate just has to approve the committee's recommendation for Enron's executives to become criminals. "It seems to me that's a scary proposition," Levy said. "Why should the Senate have such plenary power?" Good question. Moore told us it's because the energy crisis has created an "all-bets-are-off" situation in Sacramento, where anything goes so long as it's attacking the energy companies. Because Enron is just a merchant, not a producer, of energy, it couldn't have had much at all to do with manipulating the market. "It's impossible," Enron spokesman Mark Palmer told us Friday. "We don't have anything to withhold. We don't have an interest in high prices in California. We're just interested in a marketplace that works." Added Moore, "It's pretty hard to spin a realistic scenario where they (Enron) engaged in gouging." Moore said a judge's recent ruling that criticized Davis' allegations against energy producers gives hope the Sacramento court very likely could side with the law rather than the witchhunt. Here's hoping he's right.

File	dasovich-j/all_documents/11134.

FYI, this was ISO's response on Friday to the Credit Worthiness issue

Katie Kaplan Manager of State Policy Affairs Independent Energy Producers Association (916) 448-9499

-----Original Message-----

From: Happ, Susan [mailto:SHapp@caiso.com] On Behalf Of Fuller, Don Sent: Friday, April 13, 2001 4:22 PM To: ISO Market Participants Subject: CAISO Notice: Market Notice re: Credit Issues Importance: High

Market Notice re Credit Issues

In response to the FERC order of April 6, 2001 re the issue of creditworthiness, the California Department of Water Resources (DWR) has authorized the ISO to make the following statement. To the extent (and only to the extent) that a purchase is not otherwise paid by any party or payable by another party meeting the credit standards set forth in the ISO Tariff (another "Qualified Party"), DWR will assume financial responsibility for all purchases by the ISO in its ancillary

services and imbalance energy markets based on bids or other offers determined to be reasonable. Such determination of reasonableness will be made by DWR on a case by case basis and communicated to the ISO. All bids into the ancillary services and imbalance energy markets will be deemed to be contingent on the acceptance of financial responsibility by DWR, to the extent not paid or payable by another Qualified Party. Unless a supplier is otherwise notified, any bid accepted by the ISO will be deemed to have the financial support of another Qualified Party or DWR as specified in this notice. In addition to the foregoing, DWR will assume financial responsibility for all purchases resulting from the issuance by the ISO of emergency dispatch instructions, to the extent not paid or payable by another Qualified Party. Payment for such purchases shall be made according to the rate specified in the ISO Tariff for emergency dispatch instructions. The ISO and/or DWR reserve the right to rescind or modify the foregoing arrangements at any time and for any reason, including a successful rehearing or appeal from the April 6 order.

As the FERC determined in its February 14 order that DWR is a creditworthy counterparty, the ISO believes that the foregoing arrangements meet the requirements of FERC's April 6 Order. Accordingly, the ISO expects that suppliers will honor their obligations under the ISO Tariff and related agreements to respond to ISO dispatch instructions.

File	dasovich-j/all_documents/10843.

Dear RealMoney.com Subscriber,

Biotech, hey, you know I am a skeptic. I have railed against it, called it a bubble, thought it was way overvalued. But the sector has come down to where their might be values. Won't you join me in finding out?

Perhaps more than any other financial sector, Biotechnology is a testament to human ingenuity & financial rewards. I have received numerous emails asking my advice on how to invest profitably in this sector.

As an answer to your needs, TheStreet.com has teamed up with The Wall Street Transcript to create, "Investing in the Second Biotechnology Revolution" conference, June 7th, in New York City at the University Club.

We have assembled a star line-up of biotech experts, professional investors & leading Wall Street analysts who will show you how to: -- Choose Biotech stocks that are poised for dramatic growth -- Select companies positioned to exploit & quickly profit the new therapeutic technologies -- Utilize investment techniques on how to hedge & manage investments in this volatile sector -- Keep tabs on who could be the next Biogen or Amgen

You will be guided through the ever changing biotechnology investment landscape & have networking opportunities to interact with the panelists. In short, after attending this 1-day event, you will have gained the tools and techniques to invest profitably in the Biotechnology industry -- today. Also, if you book before May 1st, you will receive \$100 off the registration price!

Register today by calling Customer Service at (800) 562-9571 between the hours , 8am-8pm, EST Monday-Friday, or visit our online registration center at

<http://www.twst.com/register>

I look forward to meeting with you June 7th in New York City.

Regards,

Jim Cramer Co-founder/Chief Markets Commentator TheStreet.com

File	dasovich-j/all_documents/2072.

Attached is a revised IEP draft FERC Filing related to CAISO amendment no. 31. Based on comments from the members, we have revised the document in two primary areas: (1) added language emphasizing the position of FERC as articulated in the Morgan Stanley decision as to the nature of the purchaser price caps, (2) sought Commission clarification as to the temporary nature of any purchaser price caps, and referenced MSC comments to that effect, (3) urged FERC to direct the CAISO to develop their market power criteria by November 30, 2000, and establish a term for the extension of the price caps for one year from that date (which will allow the MSC market reforms to be implemented and tested next summer).

IEP needs to file this document at FERC tomorrow (i.e. Thursday). Accordingly, please provide any comments on this latest draft no later than 9:00 a.m. on Thursday, October. 5. Forward comments to me and Andy Brown [abb@eslawfirm.com]. Thank you,.

Final Version-Manifesto

Sender	jeff.dasovich@enron.com
Recipients	['schub@socrates.berkeley.edu', 'tyson@haas.berkeley.edu']
File	dasovich-j/all_documents/8536.

Mary Beth:

For what it's worth, I've read this, and if Laura Tyson or Larry Summers sign it, I have serious concerns about the effect it would have on their ability to play the role that we envision in moving our proposal forward (understanding that our odds of success are somewhat meager). While I don't disagree with the language, it is strong and therefore very likely to make the Governor and his staff very uncomfortable. I would recommend that they do not sign.

Best, Jeff ----- Forwarded by Jeff Dasovich/NA/Enron on 01/24/2001 11:32 AM -----

Subject: Re: Affiliate Relook case [PLEASE RESPOND TODAY]

Greetings:

Hope all is well in beautiful Southern California.

I'm on the call with all the EES lawyers as I write. Trying to get folks to reconsider going forward in the complaint----the landscape could not be worse, i.e., the judge despises us and is a lunatic; Wood's the assigned judge; UC/CSU is getting nasty (as we predicted) in the press (see today's LA Times). Having some success with getting them to reconsider. Will keep you posted.

Best, Jeff

Dear Jeff and Sue:

Sorry to be a broken record on this one....but I don't know what you want to do about the Affiliates case. There is a PHC tomorrow and comments were filed. SCE's comments make a nasty jab at Enron for proposing the rules in the first place. I see that AREM is participating as well. If your plan is to participate in this proceeding only through AREM, that's fine but please let me know so that I can remove my appearance. I will be at the PHC for Wild Goose but would like to be very clear about who I am representing in the docket in order to avoid confusion.

Thanks,

EMISSIONS CONTROLS TECHNOLOGY CONFERENCE July 23-25, 2001 Crowne Plaza Hotel at the Crossings
Providence, Rhode Island

Ray Ganga The McBurney Corporation Communication, Education and Outreach Committee Chairman

Ronald C. Lutwen SFT, Inc Conference Chairman

Have you had a chance to consider the potential impacts of pending new regulations on industrial powerplant facilities, what you might have to do and what your alternatives may be? The Boiler Maximum Achievable Control Technology (MACT) Standards to be proposed this year; the Regional Haze Standards that will begin to be implemented; the consideration of short term SO2 standards again; and, the implementation process for the Fine Particulate National Ambient Air Quality Standards (PM NAAQS) will all impact existing sources, big and small. The permitting process for any new or existing facility is demanding Best Available Control Technologies (BACT) or Lowest Achievable Emission Rates (LAER) on almost all sources for Particulate, Sulfur Dioxide, Mercury, Chlorine, and a host of other emissions. How will this impact your company and your job?

If you are an industrial corporate environmental or energy engineer or manager with the responsibility to make sure there is sufficient energy to run the company and comply with environmental regulations, you should be represented at this conference. If you are an Architect/Engineer or energy/environmental consulting firm, you should be represented. If you are an equipment supplier with interest in the industrial market place, you should be represented. And, if you are a state regulator with interest in what can actually be accomplished in the industrial sector, you should be represented. CIBO conferences have been noted for bringing the full range of stakeholders together for practical discussions and education on energy and environmental issues to promote progress on environmental issues and secure a competitive and strong energy future for the United States.

The time is now for the consideration of what will be required over the next two to ten years. What you learn from attending this conference could save you countless hours of frustration, provide a foundation for current and future planning and open a host of alternatives not before considered.

Have you had a chance to consider the potential impacts of pending new regulations on industrial powerplant facilities, what you might have to do and what your alternatives may be? The Boiler Maximum Achievable Control Technology (MACT) Standards to be proposed this year; the Regional Haze Standards that will begin to be implemented; the consideration of short term SO2 standards again; and, the implementation process for the Fine Particulate National Ambient Air Quality Standards (PM NAAQS) will all impact existing sources, big and small. The permitting process for any new or existing facility is demanding Best Available Control Technologies (BACT) or Lowest Achievable Emission Rates (LAER) on almost all sources for Particulate, Sulfur Dioxide, Mercury, Chlorine, and a host of other emissions. How will this impact your company and your job?

If you are an industrial corporate environmental or energy engineer or manager with the responsibility to make sure there is sufficient energy to run the company and comply with environmental regulations, you should be represented at this conference. If you are an Architect/Engineer or energy/environmental consulting firm, you should be represented. If you are an equipment supplier with interest in the industrial market place, you should be represented. And, if you are a state regulator with interest in what can actually be accomplished in the industrial sector, you should be represented. CIBO conferences have been noted for bringing the full range of stakeholders together for practical discussions and education on energy and environmental issues to promote progress on environmental issues and secure a competitive and strong energy future for the United States.

The time is now for the consideration of what will be required over the next two to ten years. What you learn from attending this conference could save you countless hours of frustration, provide a foundation for current and future planning and open a host of alternatives not before considered.

ISC - Symposium - Wings of Excellence Awards

Sender	teunisse@haas.berkeley.edu
Recipients	['mba03@haas.berkeley.edu', 'mba02@haas.berkeley.edu', 'undergrd@haas.berkeley.edu']
File	dasovich-j/inbox/1558.

Interested in meeting students, business leaders, politicians and decision makers from around the world in a setting that fosters dialogue and communication? Why not apply/compete for a place in the 32nd ISC symposium at University of St. Gallen, Switzerland. The symposium takes place from May 23 to 25 (Note that this conflicts with the Haas IBD program) 2002.

Full details are available at:

<http://www.isc-symposium.org/isc/31stsymposium/32ndsymposium.htm>

Application requirements are described below:

Topic: "Pushing Limits - Questioning Goals"

Applicants' qualifications Undergraduate and postgraduate students in all fields of study enrolled at regular universities throughout the world, born in 1972 or after.

Substance We ask you to contribute your visions and entrepreneurial ideas.

Your contribution can be an essay, a scenario, a project report or proposal, a multimedia presentation, an entrepreneurial concept or any other form of professional work which you would like to present to the audience of the 32nd ISC-Symposium. It should be constructive, provocative or instructive, inspiring thoughts and actions and introducing a new approach or unconventional ideas. It has to be the original work of the author.

Format 5 to 7 pages, max. 2100 words (excl. bibl.) No name on the front page or any subsequent page. Accompanied by a 3.5" high density disk containing the whole essay (no manual hyphenation).

Disk The disk label should contain your name, operating system (MS Windows or MacOS) and the application used.

Video VHS max. 15 minutes, label shall contain your name.

Language English, German or French

Deadline February 15, 2002 (date of postmark)

Copies Please submit 2 copies of your contribution, accompanied by the attached application form, proof of current enrollment, a 3.5" high density disk containing the whole essay (no manual hyphenation), a signed letter of confirmation that your contribution is your own work and 1 passport-size photograph. The material will not be returned and may be used for ISC publication and/or included in the ISC website.

Sample Essays You find last year's winner essay of the ISC Wings of Excellence Award in our Archive under the menu point Symposium and Past Symposium.

FW: EL01-68-000 Request to Make a Statement

Sender	susan.mara@enron.com
Recipients	['Alan; Steffes', 'James D.', 'Comnes', 'jeff.dasovich@enron.com']
File	dasovich-j/inbox/645.

-----Original Message-----

From: Comnes, Alan Sent: Wednesday, October 17, 2001 2:31 PM To: Mara, Susan; Perrino, Dave; Walton, Steve; Alvarez, Ray; Kaufman, Paul; Crandall, Sean; Belden, Tim Subject: FW: EL01-68-000 Request to Make a Statement
Importance: High

FYI,

In the next day or so I will draft talking points on the assumption our request to speak will be granted.

At this point, I am aware of the following other speakers: Mike Naeve (former FERC Commissioner) for PGE and Richard Tabors for Powerex. Transaction Finality Group (TGF) or a subset thereof will also ask for an opportunity to speak using Tabors as their spokesperson. I will be coordinating with Tabors but we decided to get Enron's name in solo to preserve our opportunity to take a different view.

Alan Comnes -----Original Message----- From: Frank, Robert Sent: Wednesday, October 17, 2001 1:41 PM To: David.Boergers@ferc.fed.us Cc: Comnes, Alan; Steffes, James D. Subject: FW: EL01-68-000 Request to Make a Statement Importance: High

RE: Docket EL01-68-000 Investigation of Wholesale Rates of Public Utility Sellers of Energy and Ancillary Services in the Western Systems Coordinating Council.

Dear Mr. Boergers:

Enron Power Marketing Inc. (EPMI) respectfully requests the opportunity to make a statement during the October 29, 2001 technical conference in the above-referenced proceeding. EPMI would appreciate the opportunity to allow the following representative to make a statement on its behalf:

G. Alan Comnes, Director, Government Affairs Enron Corp. 121 SW Salmon Street Portland, OR 97204 email: AComnes@enron.com telephone: 503-464-8129

EPMI operates as a marketer of electric power and natural gas in markets throughout the Western Systems Coordinating Council (WSCC). EPMI has been an active participant in this and related dockets and has submitted written comments pertaining to Westwide price mitigation on both May 7, 2001 and August 20, 2001. In addition to identifying problems created by continued price mitigation in the WSCC, EPMI will identify problems that will be created if the Commission were to inconsistently apply price mitigation in the WSCC or make rule changes that create further uncertainty in the marketplace. Because of EPMI's unique position as a power marketer that operates throughout the WSCC, it has a unique perspective to provide the Commission and workshop participants.

A letter making the same request, along with Mr. Comnes' credentials, will be filed with the Commission tomorrow. If you have any questions regarding this matter, please contact me at 713-853-3180.

Sincerely,

Robert J. Frank

From: ROADwomen [mailto:roadway@roadwomen.com] Sent: Sunday, November 05, 2000 10:43 AM To: Undisclosed-Recipient;; Subject: Bush's Inaugural Speech

From our buddy Jeffrey in Indiana.

Bush's Inaugural Speech (to the tune of "What a Wonderful World This Will Be" by Sam Cooke)

Don't know much about history Don't know much foreign policy Don't remember how I got through school I'm sure I didn't break the rules But what's it matter 'cause my granny says "Boy, if you want to you can be the prez And what a wonderful world this will be"

Don't know much about the women's vote Don't know much about the bill I wrote Don't know much about the foreign vets I've never voted for 'em yet But I do know if your dad tries hard He can get you in the National Guard And what a wonderful place that can be

Now I never claimed to be an A student But what's wrong with C's? And maybe by knowing the names of my cabinet I can win their love for me

Don't know much about air pollution Don't know much about the constitution Don't know much about th' economy It never much affected me

But there's one thing that I know for sure If the rich stay rich and the poor stay poor What a wonderful world this will be

Don't know much about the national debt I've never had to pay one yet If we need to we can sell the States To the Japanese at discount rates But I do know if things get bad Dick and I can always call my dad And what a wonderful world

this will be.

Still laughing and praying he never gets to give it! Jeffrey ++++++ "What do they think Social Security is, some kind of federal program?" - George W. 11/1/00 -- are we sure he is sober? ;-)

Subject: fuel switching in california

besides electricity, there is an equal and related upcoming meltdown on gas in california. our assessment is that the current high prices are largely a result of intrastate constraints that will be exacerbated as gas use for power generation increases. for this summer it is possible that there will be generating constraints due to inadequate gas delivery capacity. a more likely outcome is that power generators will get the gas they need at the expense of storage injection for winter heating load. this will create supply problems and higher residential gas problems next winter. summer prices for industrial gas users will also be higher.

a possible solution is to take advantage of fuel switching. many of the california plants are old oil/gas plants and have the capacity to switch fuels. they are currently limited by environmental limits. it might be in california's broader interests to allow some flexibility on switching this summer to ensure power reliability and adequate gas storage for the winter.

reasons for possible interest for enron - better power reliability this summer, possible gas/oil trading opportunities, emissions trading opportunities?, other?

since oil is much cheaper than the currently high california gas prices, this option would also increase the profitability of the plants that switch fuels. it's not clear whether this helps Enron. one option would be to require very clean oil since the market will bear significant cost.

there are a few questions related to this: how tight will gas be this summer? what are the likely impacts without switching? are the plants still oil-capable?

let me know if this is something you are interested in discussing.

National Post Business Magazine Fuel for thought ? 10/01/2000 National Post 18 (c) National Post 2000. All Rights Reserved.

The common response to neighbourhood landfill? "Not in my backyard." But waste may soon grow more attractive -- as an alternative way to light your home and heat your furnace.

This energy will come from methane gas, collected through vertical wells and horizontal trenches in landfill sites. Suncor Energy Inc., the Alberta oilsands giant, has signed a five-year agreement with Conestoga Rovers and Associates (CRA) of Waterloo, Ont., which specializes in tapping this gas from landfills. Over five years, Suncor will pour up to \$60 million into the project. Suncor vice-president Gerry Manwell says individual sites will cost up to \$10 million to develop, making a profit within about five years. Only six of Canada's 392 landfills are being reviewed for development, but if the public embraces the new gas, its commercial viability should inspire other companies to follow suit.

In the past, such a venture would not have been profitable, says Rick Mosher, project leader at CRA. But that may be about to change. Come November, when Alberta and Ontario deregulate their electricity industries, power will be a marketable commodity like natural gas. Conventional electricity may get pricier, opening the door for alternatives. Toronto Hydro Corp. has already announced plans to buy 130 million kilowatt hours produced from green energy, including methane.

So those decaying kitchen scraps and lawn cuttings may soon provide both fuel, for heating and generating electricity, and carbon dioxide, which will be sold to nurture seedlings in greenhouses. That's good news for consumers, who will be empowered to help reduce the noxious smell and greenhouse gas emissions from the landfill in their "backyard."

FW: Draft Application for Rehearing

Sender	jeff.dasovich@enron.com
Recipients	[eve@a-klaw.com]
File	dasovich-j/sent_items/295.

-----Original Message-----

From: Dasovich, Jeff Sent: Wednesday, September 26, 2001 4:27 PM To: 'eve@a-klaws.com'; "Bill Dombrowski" Subject: FW: Draft Application for Rehearing

Greetings Eve and Bill: This has been forwarded to Delainey and Dorothy. It's originating with AreM. Delainey's distributing to some, I'm distributing to others. The Chamber's already agreed to join. If we're to have any hope of a) maintaining DA and b) eliminating any chance of a retroactive date, seems that we'll need as many folks signing on as possible. Please see attached. We hope that you can join.

All the best, Jeff -----Original Message----- From: Dan Douglass [<mailto:douglass@earthlink.net>] Sent: Sunday, September 23, 2001 12:08 AM To: ARM; Gary Ackerman; Vicki Sandler; Anderson, Robert; Marilyn Ferrara; Max Bulk; John Yurkanin; Steve Huhman Subject: Draft Application for Rehearing

Attached for your review and comment is a draft application for rehearing of the Commission's Thursday Decision 01-09-060 suspending the right of direct access. Although we have prevailed (at least for now) on the issue of retroactivity, the decision still violates various provisions of state and federal law. If any party wishes to preserve the right to legally

challenge this decision, it must file an application for rehearing within ten days. The attached draft is tentatively dated September 28, meaning that it would be filed next Friday.

The primary reasons cited for why rehearing should be granted are as follows:

The Decision violates procedural due process guarantees.

The failure to hold hearings violates Public Utilities Code section 1708.5(f).

The Commission's reliance on material outside the record violates due process.

The Decision violates the Commerce Clause of the United States Constitution.

The threatened retroactivity is contrary to law and in excess of the Commission's authority.

The Commission acted contrary to law and in excess of its authority.

The Decision's purported findings are not supported.

The Commission has impermissibly converted a ratemaking proceeding into a quasi-legislative proceeding.

Although WPTF members have not had an opportunity to consider whether they wish to support such a filing, WPTF is included as a named party in the attached because of the fact that AReM and WPTF have jointly made numerous other filings in this proceeding. WPTF members will need to determine if they wish to support this effort.

I look forward to seeing your comments. Thanks, and have a good weekend!

Dan

Sue Mara Enron Corp. Tel: (415) 782-7802 Fax:(415) 782-7854 ----- Forwarded by Susan J Mara/NA/Enron on 07/30/2001 02:11 PM -----

JBennett <JBennett@GMSSR.com> 07/30/2001 02:07 PM

To: "Sue Mara (E-mail)" <smara@enron.com> cc: Subject: Workshop on DWR Revenue Requirement --Please Forward to Applicable Enron Individuals

The workshop conducted by the Energy Division on Friday on the DWR revenue requirement submitted to the Commission on July 23rd was basically a question and answer session. A representative of DWR was present as were several representatives of the consulting firm Navigant which assisted DWR in constructing its revenue requirement request. The representatives of Navigant fielded most of the questions.

Not much new information was garnered. A little more clarity was shed on certain areas. Of interest to Enron would be that in determining the net short for each of the UDCs for which DWR was purchasing it assumed no change in the current direct access levels (which is approximately 2% of the load in the state) through 2002.

Other points of clarification included:

(1) A question exists with respect to whether DWR is responsible for the ISO costs billed to the UDCs for the period of January through June of 2001.

(2) Any payments which were made to DWR to date by the UDCs would be netted against the revenue requirements requests for the first and second quarter of this year. PG&E indicated that DWR's numbers for the revenue received from PG&E to date do not match its own accounting.

(3) The net short calculation for each UDC was derived by using the net short forecasts provided by each of the UDCs an modifying them to take into account (1) a 4% reduction in load due to conservation efforts; (2) a 2% reduction in load due to price elasticity increasing to 3% by January 2001; (3) estimated impacts of the 20/20 program (assuming also a similar program for next summer); (4) the impact of the UDCs curtailment programs. Once again, PG&E indicated its belief that DWR's net short projection for PG&E was erroneous.

(4) DWR explained that the basis for the projection that they would need 1.65 cents out of the three cents rate increase was that for sales made by DWR they already receive the UDC generation rate (i.e., approximately 6.8 cent for PG&E and 7.2 cent for SCE). On top of that, they need the 1.65 cents.

SCE submitted four pages of written questions to DWR on their revenue request. DWR is to respond in writing (and serve on all people on the service list) by Tuesday the 31st. To the extent that the questions are applicable to PG&E, they will answer the question with respect to both UDCs.

Please call if you have any questions.

-----Original Message----- From: Michele Manahan Sent: Wednesday, September 26, 2001 4:55 PM To: # All Robert Mondavi Subject: Art Exhibit At RMW PLEASE POST FOR ALL EMPLOYEES WHO DO NOT HAVE ACCESS TO E-MAIL. September 12, 2001 Contact: Julie Prince Robert Mondavi Winery P.O. Box 106 For Immediate Release Oakville, CA 94562 (707) 968-2203 Oakville, California... Artist, Denney Curtis Hemens will open an exhibit of paintings at Robert Mondavi Winery on October 6, 2001. Mr. Hemens was born in Syracuse, New York. His life in the arts began at an early age. After running away from a military academy, he arrived in New York's Greenwich Village where he lived and worked with prominent members of the Beat Generation. He migrated to San Francisco in 1970, where he continued to live and work in North Beach and other 'Bohemian' enclaves. Mr. Hemens studied briefly with the late Joan Brown, original member of the Bay Area Figurative school, and with Wally Hedrick, founder of the famous Six Gallery, where Alan Ginsberg first recited Howl. He worked with legendary 'underground' filmmaker, painter, musicologist, anthropologist, Harry Smith, in New York, learning the craft of hand painted film and collage. He also spent extended periods of time with mentors, Ginsberg, Jack Kerouac and William Burroughs. He has participated in and contributed to several art movements including the Bay Area Neo Dada movement, Correspondence Art, Xerox Art, Rubber Stamp Art and other conceptual and performance pieces. He has had numerous group exhibitions and one man shows. His paintings can be found in the collections of the late Joanne Dru (Mrs. Robert Wood), Angela Lansbury, the late Ernest Hemingway and wife Mary, Mr. and Mrs. Randolph Hearst, Henri Lenoir, Mrs. Robert Mondavi and other prominent collections in the United States and Europe. Mr. Hemens is currently completing a non-fiction narrative about Jack Kerouac and America, entitled The Other Side of Denial-Memoirs of a Second Generation Desolation Angel ?, and a collection of remembrances of time spent with his friend, the poet Bob Kaufman, entitled Percodan Summer ?. A profoundly creative individual, who has worked as a painter, performer, poet, writer and filmmaker, Mr. Hemens' reclusive lifestyle took him to Mendocino County in 1984, where he continues to live with and work. We invite you to look at Denney Curtis Hemens exhibit in our Vineyards Room gallery from October 6 to December 20, 2001. It is suggested that the Robert Mondavi Winery be called at (707) 968-2213 or 2203 to determine the best time to view the show. Margrit Biever Mondavi Curator **

President Lynch's draft decision was voted out today.? The CPUC currently has the attached version posted on its website, although the final version may differ somewhat.? The decision continues to provide (see p. 29) that Direct Access?customers will not be subject to the surcharge, as AReM has advocated. ? Based on some of the discussion which occurred at oral argument on Friday, the decision now has wording indicating that although the utilities are authorized to include the load of DA customers in calculating the revenue requirement associated with the surcharge, DA customers do not have to pay the surcharge for the same reasons AReM expressed repeatedly in the proceeding.? Any shortfall in utility revenues due to including DA demand in the revenue requirement will be allocated on an equal cents/kWh basis to all non-exempt sales.? It is noted that this may shift costs to residential customers "since the majority of direct access demand, and thus the majority of the resulting shortfall, is non-residential." ? The decision also makes clear that DA customers will not be entitled to include the surcharge under the current direct access credit system and that the Commission intends to reexamine and restructure the current direct access credit system "to reflect current structural reality." ? Hopefully, this will mean movement to a "bottoms-up" calculation methodology, as AReM has also advocated.? My understanding from Peter Bray is that Commissioner Bilas made some remarks indicating that he would support instituting a proceeding to restructure DA pricing. ? This is the result we wanted with regard to exempting DA customers from the surcharge.? We now need to see if TURN or any other consumer advocacy group chooses to challenge the allocation methodology for any shortfall.? ? Dan - 5-16-01 Proposed Decision of President Lynch.doc

SBX 9 (Elimination of Standby Charges)

Sender	sgreenberg@realenergy.com
Recipients	['tocchionero@agcc.org', 'aalmgren@capstoneturbine.com', 'ablovins@rmi.com']
File	dasovich-j/all_documents/10050.

The Distributed Energy Resources industry won a major battle yesterday.? The California Senate Energy and Utilities Committee passed on a 7-0 bipartisan vote, Sen. Morrow's (and while her name wasn't on this bill,?it was as much Sen. Alpert's) bill on eliminating any tariff that discriminates against DER.? SBX 9 was derived from the omnibus DER bill SBX 35 which is still alive and contains many important provisions fro removing additional barriers.? Yesterday's vote represents a major win because even if the bill ultimately does not get enacted, a very important statement has been made by the committee.? I'm sure the CPUC will take notice in their proceedings. ? The DER community owes much

thanks to Sen.'s Morrow and Alpert, and the Utilities Committee Members and their staffs: Sen. Bowen (Chair) Sen. Alarcon Sen. Battin Sen. Dunn Sen. Murray Sen. Poochigian Sen. Sher Sen. Speier Sen. Vasconcellos Sen. Vincent ? Also much thanks to everyone who worked incredibly hard and diligently on this effort. ? From the business, consumer advocacy, environmental, government, manufacturing, and real estate communities. ? Here are the highlights of yesterday's actions: ?

For IOU's- No discriminatory tariffs for new DER installed between May 1, 2000 and June 1, 2003 if DER is in combined heat and power mode.? If you have a peaking unit with gen only, then you have until??July 1 2001, to get it installed.? DER installed within the window gets the exemption until June 1, 2011. The maximum capacity of the DER is 5 MW in aggregate per site. The DER must have emissions levels of 9 PPM or better until the ARB established new guidelines and standards, expected late this year or early next year. Customers with DER are still required to pay interconnection, public purpose charges, and obligations incurred under the Dept. of Water Resources energy purchases program. The CPUC shall require the electrical corporations to include non-utility owned DER in its planning process. The CPUC is required to establish a firewall so that in the event that the implementation of DER results in net costs to the system, those costs stay within the customer class. The CPUC shall require the utilities to establish new rates for DER that are non-discriminatory and take into account the benefits as well as the costs. Muni's are required to review their tariffs for barriers to entry and hold public meetings to solicit comment for recommended changes.

Now we have momentum, but there is still a tremendous amount of work to do on the Assembly side and with Governor's office.? We need the continued (increased) support of all of you as we move this forward.

File	dasovich-j/all_documents/11772.

ALL ARE WELCOME TO ATTEND

Post MBA, Post Internet Start-Up Career Decisions 2001 Joint program Univ. Mich. alumni, Haas alumni

\$25 at the door. Please RSVP r_cmohan@pacbell.net

Panel topic questions: o What short and long-term trends can be expected in Bay Area job market for director level and above, executive candidates? o What are up and coming industries or fields in the Bay Area job market. How can those jobs best be accessed? o Assume a job candidate has experience at Internet start-up companies, perhaps several over the past 2 years. How should Internet start-up experience be leveraged towards next career decision? How should this experience be presented to next potential employer, especially if the companies went out of business? Will candidates be penalized if they have jumped from Internet start-up to Internet start-up over the past several=20 years? o How does the job market of San Francisco compare to that of Silicon Valley/South Bay? Is it worth it for residents of San Francisco to commute or relocate to Silicon Valley/South Bay? o What skills or experiences are necessary to make the jump from senior director level to vice president? From vice president to COO? o In the past few years there was a glut of senior job titles at start-up companies. Do you believe some people will have to downgrade their title in their next career moves? o Assume a job candidate has received an MBA degree from a top ranking school 5 years ago and has successfully progressed up an executive level management career. At that point, what is the relative importance of the MBA on the resume, versus the experience and accomplishments?

Target Audience: MBA Graduates and soon to be graduates From University of Michigan, Haas School of Business, Kellogg, UT Austin, Tuck. Other MBA alumni clubs invited. Director to Vice President Career Level, mostly high tech and software related fields

Panel Members: o John Morel, Associate Director alumni Career Services Haas School of Business o Craig Smith, Consultant, Heidrick & Struggles, o Brian McDugal, Vice President, Management Solutions, o Margaret Steen, Careers Reporter, San Jose Mercury News, o Moderator: Gretchen Alarcon, Director of Human Resources, Icarian, Inc. (UMBS MBA 1997),

Date and Time: Wednesday, May 2nd Networking reception 6:00 p.m. Panel presentation 7:00 pm

Location: Scores Restaurant Conference Center 2200 Bridgepointe Parkway in San Mateo 650-357-1998

Directions: Take Highway 101(or 280) to Highway 92 East before the San Mateo Bridge. Exit Mariner=01,s Island Blvd. ramp. Make a right turn at the light onto Mariner=01,s Island Blvd. Make a right at next light onto Fashion Island Bl= vd. Follow into Bridgepointe Center at 2200 Bridgepointe Parkway. Free parking.

While I, too, am frustrated at how things turned out, I'm glad your content overall with the course. Definitely one of the best--if not THE best--classes I've taken. I really think that we need to get together tomorrow nite to finalize, but I don't feel like pushing it too much. Your thoughts?

Best, Jeff

"Vavrek, Carolyn (US - San Francisco)" <cvavrek@deloitte.com> 04/23/2001 07:08 PM

To: Jeff.Dasovich@enron.com cc: Subject: RE: PowerPoint info

Apology not necessary! However, you are very kind to consider my perspective on the group and project. I am certainly a bit frustrated with how this project is turning out. We should have "white boarded" our ideas and reached consensus in the very beginning I think. It would have saved all of us time. I'm counting on Mark to drive this home for us smoothly.

But, at the end of the day, I am pleased with how much I learned in Tasker's class, which is the ultimate point anyway.

Carolyn M. Vavrek Manager - Human Capital Advisory Services Deloitte & Touche 50 Fremont Street San Francisco, CA 94105

From: Jeff.Dasovich@enron.com [mailto:Jeff.Dasovich@enron.com] Sent: Monday, April 23, 2001 10:05 AM To: Vavrek, Carolyn (US - San Francisco) Subject: Re: PowerPoint info

Carolyn:

I wanted to apologize for the way the group dynamic has shaped up. It's clear to me that you're a bit frustrated, and if I've contributed, I apologize.

You've done the most work on this project, your contribution has been very significant, and I personally am not satisfied about the way that the stuff you've pulled together (and your views) have been included. At some point, though, it gets tough beating one's head against the wall. Seems to me that, in a group, everyone should have some of their views

included---that's what groups and compromises are all about. After all, it's school. We've made a lot of sacrifices to do it, and the point is to learn.

Anyway, I hope you'll still comment on the presentation, and I'm glad that you've agreed to do part of it on Thursday. For my part, I felt that I pushed yesterday about as much as I'm prepared to push and at this point, I'll put the ratios tables together, offer a few edits, but don't see much use going to the mat.

Overall, I think it'll be an okay presentation, though getting there has been, well, bumpy.

But thanks very much for all the work you did. It was important, and the presentation is better off for it.

Best, Jeff

Subject: FW: Diesel generator info.

Hello Environmental and Energy Committee Members:

Please see the following request from Dr. Kenneth Lim of the BAAQMD. The information he seeks is in support of a petition for additional State funding for BAAQMD programs. I understand how short the notice is, but if you can provide Dr. Lim some information, I think he and the BAAQMD would be very appreciative. If you would like to send me your data, I will forward it to Ken Lim without your company information.

Sincerely,

Margaret Bruce Director, Environmental Programs Silicon Valley Manufacturing Group

-----Original Message-----

From: klim@baaqmd.gov [mailto:klim@baaqmd.gov] Sent: Tuesday, October 30, 2001 1:30 PM To: mbruce@svmg.org
Subject: Diesel generator info.

Ms. Margaret Bruce: SVMG

Hi Margaret:

I had sent this message to Justin Bradley last week, but have not heard back from him. I should have sent it to you also.

I hope that things are going well with you.

I'm trying to assess the emissions impact of increased Back-Up Generator (BUG) diesel fuel use from 2000 to 2001. I need real data to support an effort to get state funds to help mitigate the additional emissions in the Bay Area. This is NOT for compliance, enforcement, or rulemaking, etc. purposes. I could use your help.

I would need 2000 and 2001 data for diesel fuel use or hours of BUG operation:

BUG engine, hp, fuel use 2000 and 2001 to date. One comparison might be 10/1/99-9/30/00 fuel use versus 10/1/00-9/30/01 use.

We want to verify, if it is true, that business and industry felt compelled by the energy situation to operate their diesel BUGs more hours and burn more fuel (fuel readiness testing and emergency backup power) than in past comparable periods.

I was hoping that you could provide some actual use data for the back-up diesel engines at your SVMG member companies. I would need specific engine information as indicated above. The data information can be as simple as total diesel fuel use for the first 9 months of 2000 versus the first 9 mos. of 2001. Ideally, we would prefer 10/1/99-9/30/00 fuel use versus 10/1/00-9/30/01 use.

I'm seeking this information at your earliest convenience (by the end of the day Wednesday). Please telephone or e-mail me if you have any questions. My apologies for this short notice (I did send in an inquiry to Justin on 10/22/01). Thanks very much for your consideration.

Ken

File	dasovich-j/inbox/1542.

-----Original Message-----

From: Aaron Thomas [mailto:aaron.thomas@aesmail.com] Sent: Monday, November 05, 2001 8:58 PM To: 'Dan Douglass'; ARM Subject: RE: Prehearing Conference Statement - COMMENTS NEEDED

Dan

Responses to your questions:

I think Enron would like to exclude the PX Credit issue from this case. I am comfortable taking the lead from Enron on this issue and would support not advocating it be included in this case. I think SCE is going to push for its inclusion, so Sue will need to provide you with some ammunition on why it doesn't belong in this case before Wednesday.

On the second question, no. I don't think we want to re-raise the rev req and tres letter leading to the end of DA.

I not sure we should push the bottoms up issue in this case. It is not at all clear what the ALJ is trying to pull into the case with the reference to post px credits. There is no pending matters on this, but for advice letters and protests. We are much better fighting in that forum given the current decisions rather than getting some nasty decision from Barnett that messes up the victory we got in the rate increase decisions.

I strongly urge that we NOT push this into this proceeding. It will be all downside. Changes to the PE Credit (i.e. reductions) may end up here, but we should not be calling for it.

Lastly, how can we say that the commission doesn't have authority to implement exit fees without changes in law given prior filings of ARM that said they should implement a whole host of exit fees rather than end DA. I don't think we can take this position without explaining the flip flop, which we certainly don't have room to do in the PHC statement. Maybe we can get away with referencing other parties strong position on this and support the requirement of hearings if any such attempt is going to be made to establish exit fees.

Thanks

Aaron

From: Dan Douglass [mailto:douglass@energyattorney.com] Sent: Monday, November 05, 2001 12:47 PM To: ARM Subject: Prehearing Conference Statement - COMMENTS NEEDED Importance: High

Attached for your review and comment is a very rough first draft of the prehearing conference statement that we must bring to the hearing on Wednesday afternoon. It outlines, with some substance, the issues you have indicated we want to bring up, it identifies a few questions and seeks guidance from AReM members.

Please review and get back to me with comments by the close of the day, if possible. I am running to the airport (which is why this is not in as finished a form as versions normally sent to you) and will be looking for comments in my hotel room this evening.

Also, do we want to invite WPTF to join with us again, as it did in the comments last Friday on the Wood Ruling?

thanks!

Dan

To: dasovich@haas.berkeley.edu; msmith@haas.berkeley.edu Subject: Do you know your costs?

Gentlemen; While I pretend to know something about wine, I must admit I know nothing about costing. Would you be so kind as to offer your opinions on the following: (1) Plastic rings- the 10K capital investment should not be considered in the marginal cost, as it is an investment to be depreciated over useful life of equipment (T/F) To cover my bets I did it both excluding the 10K, and including the 10K, making different assumptions in each case (1b) For incremental (marginal) costs, we should not look at overhead and period costs (ie in Vortec problem the S&A component was held constant; is that true here as well even though these are allocated based on direct labor)? I broke things down into variable overhead (.8direct labor) and fixed, and assumed the fixed component didn't matter since the way in which it was being allocated was somewhat arbitrary and hence shouldn't guide decision making. (1c) Variable overhead costs- are these in addition to the fixed overhead costs (Mfctring + S&A), or should they be subtracted from one or both? I interpret the controller's statement to mean that he missed them in the schedule provided, and that we need to add them, in addition to the other two. I interpreted it as part of total overhead, not in addition to. (2) For next 34500 steel rings, materials are sunk cost and not included as a cost(T/F) T (2B) same as (1B) incremental costs do not include Overhead costs? I included the variable component of overhead (.8 direct labor) but not other overhead.

Note trick for problem 2: Since the conversion to steel rings would be done in the summer at a 100% direct labor rate, and since workers in the summer would otherwise be getting paid at 70% rate for doing nothing, one might interpret that the incremental cost of direct labor is only 100%-70%=30% the rate it would otherwise be. This makes the incremental cost of doing the steel to steel ring conversion much cheaper than it would otherwise be.

(3) Differential cost means what? Difference in cost between Finished Goods inventory and the WIP inventory? It seems to me that it was undefined and hence you need to state explicitly what a relevant comparison is and make it. In this case I interpreted it as the difference in cost between producing the steel rings and a like number of plastic rings, and assumed that the cost of producing the steel rings in inventory is 0 since its already sunk.

Your comments are greatly appreciated! Jonathan

From: Jack M. Stewart, President

Date: July 16, 2001

Re: FERC Commissioners to Keynote CMTA Energy Conference

http://www.cmta.net/archive/2001_tahoe_conference.shtml

For all manufacturers who will ultimately pay the price for California's

energy crisis and for all those individuals involved with energy policy,

the only place to be from August 1-3 will be the CMTA Energy Conference at Harvey's Hotel-Casino in South Lake Tahoe.

Headlining the Conference as Keynote Speakers are two of the five Federal Energy Regulatory Commissioners (FERC).

Commissioner Nora Brownell will keynote the Thursday, August 2 session and Commissioner Bill Massey will open the Friday session.

Commissioner Nora Brownell was nominated by President George W. Bush to serve on the Federal Energy Regulatory Commission (FERC) on April 30, 2001 and was confirmed by the U.S. Senate on May 25. Prior to joining the Commission, Ms. Brownell served as a member of the Pennsylvania Public Utility Commission (PUC). During her tenure at the PUC, Ms. Brownell took an active role in the roll out of electric choice in Pennsylvania. In addition to her work in establishing the framework for

one of the most successful retail electric markets in the country, Ms. Brownell was a leader in the administration of Pennsylvania's Electric Choice Consumer Education Program.

William L. Massey was nominated by President Clinton and was confirmed by the Senate in 1993. He was renominated and confirmed for a second five-year term ending June 30, 2003. Commissioner Massey was the only Clinton-appointed FERC commissioner to support Governor Davis' demand for electricity price controls in the western states earlier this year.

The CMTA energy Conference agenda will include the latest information on

energy legislation making its way through the state capitol, an update of pending CPUC decisions as well as a review of the various financial proposals aimed at returning Edison and PG&E creditworthiness and restoring direct access to California's electricity consumers.

We have scheduled panels of government and industry experts to discuss Natural Gas Prices, Supply and Infrastructure; Managing High Prices and Blackouts; Environmental Impacts and Trade-Offs; and two panel discussions on present and future energy markets.

Please check our website at http://www.cmta.net/archive/2001_tahoe_conference.shtml to learn more about these critical issues and to register for CMTA's 2001 Energy Conference at Harvey's in South Lake Tahoe.

Thanks so much for responding. This is very strange. I have no idea what's gone wrong. I'm attaching the emails that I sent. Please let me know if you receive this. And no need to apologize; appears to be a technical glitch somewhere.

The most important note (and my reason for concern when I didn't hear back) was the one explaining that I had to miss the second quiz due to biz travel and offering alternatives for your consideration. Finally, are you comfortable with our proposed project?

Best, Jeff

Sent on 3.19.2001

Greetings:

Sent you a project proposal last Thursday on behalf of Dasovich, Guinney, Sama and Vavrek and just wanted to make sure that you received it. Could you let me know? Thanks very much.

Best, Jeff

Sent on 3.16.2001

Greetings Professor:

Our group consists of Jeff Dasovich, Mark Guinney, Anil Sama and Carolyn Vavrek.

We propose to examine the recently failed acquisition by Coke of Quaker Oats: Why merge? What was the value? Upside? Downside? Why did it go bust? Should it have gone through? What's up with this Buffet guy, anyway?

If you have any concerns with this proposal, please let us know.

Finally, if possible, we'd like to present on Thursday, April 26th.

Best, Jeff

Greetings. Apologies for cluttering your email, but I've been having email problems and wanted to ensure that you received the original note.

Best, Jeff

Gary Ackerman <foothill@lmi.net> 04/23/2001 08:23 PM Please respond to foothill

To: webmaster <charlotte@wptf.org> cc: Subject: Western Power Trading Forum Press Release

PRESS RELEASE Menlo Park, CA April 23, 2001 TRADE GROUP BLASTS ISO PLAN TO STABILIZE MARKETS The Western Power Trading Forum (WPTF), last week sent federal regulators a stern warning that the California Independent System Operator's (CAISO) plan to "stabilize" the California market will cause more blackouts in the West, chase away much-needed new generation, and jack up wholesale power costs. WPTF warned the Federal Energy Regulatory

Commission (FERC) that the CAISO proposal will have an extremely detrimental impact on power markets in California as well as other electricity markets throughout the Western Region. "Their plan imposes price caps and curtailment of power exports," said Gary Ackerman, executive director of the group. If approved, the CAISO plan, called the Market Stabilization Plan, will create disincentives for the development of additional generation capacity, precisely the wrong signal that needs to be sent at this time. As a result, in addition to leading to higher costs, the Plan will impair reliability in California and throughout the West. WPTF found that the CAISO's proposal to curtail exports is particularly troublesome and potentially interferes with interstate commerce in violation of the Federal Power Act ("FPA"). "This plan is yet another attempt to heap more rules on an already overruled market. This is the kind of misguided thinking that got California into its current mess. Their plan is too complex, academic, and does absolutely nothing to address the real issues of low supply and high demand. Consequently, the plan will have exactly the opposite effect," Ackerman commented. The WPTF supports the FERC's pro-competitive policies under Order No. 2000 for regional approaches to interstate electricity markets. The membership of WPTF includes power marketers, scheduling coordinators, power exchanges, generators and other active participants in the restructured California electric market. The members share a common mission of enhancing competition in electric markets. WPTF actions are focused on supporting the development of competitive electricity markets throughout the region and developing uniform operating rules to facilitate transactions among market participants.

To: 86464@WCTOPICS.djnr.com cc: Subject: Utilities, Electric: Deregulation: USA: U.S. electric utilities want new depreciation rules ...

[IMAGE] USA: U.S. electric utilities want new depreciation rules. ? 09/26/2000 Reuters English News Service (C) Reuters Limited 2000.

WASHINGTON, Sept 26 (Reuters) - U.S. utilities want federal tax laws changed to allow electric generation facilities to be depreciated over seven years instead of the current 15-20, an industry trade group told a House subcommittee on Tuesday.

Officials from the Alliance of Energy Suppliers, the energy supply division of the Edison Electric Institute, said rapid deregulation and consolidation in the industry made the old depreciation rules obsolete, and hurt the sector's ability to attract investment for new plant construction.

Under the old school, regulated market structure, dividend payments to utility investors were more or less predictable, but that was no longer the case in openly competitive markets.

"Previously applicable rules regarding the recovery of capital simply do not apply any longer," said Theodore Vogel, vice president and tax counsel for DTE Energy Co , a member of the industry alliance.

"Investors will demand a return of, and a higher return on, their investments in building and maintaining power plants over a much shorter period of time," he said.

Some 24 states and the District of Columbia have enacted laws to open their retail markets to competition. Wholesale markets have been gradually deregulated by the federal government.

Vogel said demand for power is great and growing, noting that 16 percent of U.S. energy consumption could be attributed to increases in information technology and telecommunications.

U.S. demand for power is expected to grow at a rate of more than 5 percent a year, he said.

New supply is lagging, however, notably in states where deregulation has seen consumers pay market rates for power for the first time, like in California, where price caps had to be introduced in San Diego this summer after electric bills tripled and caused a public outcry.

"Congress should legislate incentives to encourage the construction of new or more efficient electric generation facilities," Vogel said.

The Edison Electric Institute is the trade group for the nation's shareholder-owned electric utilities.

To: Jeff.Dasovich@enron.com cc: Subject: Re: Teams

Jeff,

Sorry, I should have mentioned when we spoke that Prof Aceves already said it would be OK to join a group with 4, making it 5. He knew that would be the case. He suggested I pick a group, rather than him just randomly choosing one to assign me to. You seemed nice based on my initial reaction to meeting you, which is why I approached you about it.

If the group has reservations based on my past group's experience, please let them know that the situation arose because I was out of the country for a week and a half without email access, and therefore wasn't able to contribute to two weeks of assignments. I had let Prof Aceves know about this planned business-related absence even before the course started, so he didn't penalize me. He forgot that I was the person who had sent him that note when my group approached him to let him know I hadn't contributed to two assignments. He said based on that, he would speak to the group to put me back in it if I wanted, or I could join another group. I hadn't had any conflicts whatsoever with the other group, I just had been out of communication, but I felt that given what had happened starting with a fresh group would be easier. In my opinion, it was just unfortunate that this trip happened two weeks into the class, before I could prove myself to my old group.

If you can communicate both of these things to your other group members, I really would like to join you all. My alternative at this point would be to do the next assignment individually, since I wouldn't be able to find another group until two weeks from now, and then have the professor assign me to one.

I greatly appreciate your help. If I can join you all, please let me know as soon as possible so I can make sure I contribute to the next assignment.

Thanks, Christine

Jeff.Dasovich@enron.com wrote:

Christine: My apologies. My schedule melted down after we talked on Monday. Here's where folks came out. There's some concern about size. We're supposed to be no larger than 3, but we lobbied Aceves and he apparently Ok'd our "oversized" group. The other folks in the group--who talked to him originally--are pretty sure that five will violate the rules. Folks wondered if there were other groups that are smaller than ours that you could hook up with. Sorry about that---it's a wrinkle that I didn't think about when we spoke. If it gets real ugly trying to find a smaller group, let me know. Fortunately there's not another team case due for two weeks. Best, Jeff

Sent: Wednesday, October 17, 2001 9:38 AM Subject: WPTF Principles for RTO Formation

Based on the amendments and comments made at yesterday's Board meeting, the following RTO principles are hereby adopted per yesterday's vote.

a.. The Western States should have a single RTO eventually, but initially there could be two entities (the California ISO and an RTO for the rest of the Region). FERC has a unique opportunity to mediate between RTO West and the newly formed WestConnect (the proposed successor agent for the now defunct Desert STAR) to form a single RTO for the non-California portion of the West. b.. The RTO Governing Board should be truly independent, and be absent of any "stakeholders". The Board should have at its disposal a meaningful stakeholder advisory committee for the purpose of airing technical issues, and identifying different viewpoints. The seats on the advisory committee should be equally split between load serving entities and suppliers 50/50. However, within each subgroup, there can be different representative classes as determined by the Board. c.. The RTO should maintain separation of the operation of any energy market from the parties that own the transmission assets. d.. The RTO should provide a real-time imbalance energy market, allow for self-provision of ancillary services, and operate a real-time market for each congestion zone within the RTO when transmission congestion is present. e.. The RTO should provide demand response mechanisms in its Tariff, and the Tariff and Operating Procedures should either promote and enable retail competition, or not discourage retail competition. If you

have any editorial comments or changes, please send them to me. This is a working document. Dan Douglass will utilize this document to review the WestConnect filing, and in combination with members' comments on the same, prepare a briefing to the Board in a special teleconference Board Meeting that we will hold on Wednesday morning, October 31 (Halloween) at 11 a.m.

I think ABAG has a good point and the principle is one we are also trying to establish - if you weren't using DWR power, you shouldn't have to pay for it. But I wonder if Enron's endorsement of ABAG's petition wouldn't contaminate it. I think we should let them win on the merits of their own argument and use their success (if it occurs) as precedent for our position on similar issues.

Also, there is some downside if they win. Our customers were on the utility for those 3 months, and are now off - the direct opposite of the situation ABAG is in. So if they escape the burden of the 3 month surcharge, it would (should) be reimposed on customers who were on the utility at that time - which in theory could include our customers, even though they are back on DA and otherwise exempt from the surcharge.

So while I think we want them to win, like always, its hard to figure if that's good or bad so let's just stay out.

[mailto:IMCEANOTES-JBennett+20+3CJBennett+40GMSSR+2Ecom+3E+40ENRON@ENRON.com] Sent: Monday, July 16, 2001 11:43 AM To: Kingerski, Harry; Jeff Dasovich (E-mail); Jim Steffes (E-mail); Sue Mara (E-mail) Subject: FW: A.00-11-038 et al. ABAG POWER Petition for Modification of D. 01-05-064 Importance: High

Attached is a petition for modification of Decision 01-05-064 (the rate design decision) filed by the Association of Bay Area Governments. The Petition requests that the decision be modified to exempt customers which were direct access for the period of March through May 2001 from the 12 month procurement surcharge which is designed to allow the utilities to collect the three cent increase authorized by the March decision which then did not go into effect until June (i.e., collect the revenues foregone due to the time lag in implementation).

Given the fact that most of Enron's customers were on bundled service during the March-June time frame, I do not believe that the requested modification would provide them any benefit. Let me know if I am wrong on this and if Enron wants to chime in in support of ABAG's petition.

Re: Dirk vanUlden

Sender	jim.badum@enron.com
Recipients	['andrew.wu@enron.com', 'jeff.dasovich@enron.com']
File	dasovich-j/all_documents/29371.

I reviewed the UtilityGuide website and while I do not have an issue with Mr. van Ulden participating on the advisory board I would have a few cautions. It should not include any hard commitments from Enron in terms of funding. We may want to participate in the program but we should not be required too. His compensation should be insignificant or nothing. Otherwise he would have a conflict as their revenues will come from our competitors. I would have a lot of heartburn over that as an Enron representative as well as if I came from the competition.

Please let me know final status or if you have any questions.

Andrew Wu 12/12/99 07:59 PM To: Jim Badum/HOU/EES@EES cc: Jeff Dasovich/SFO/EES@EES Subject: Dirk vanUlden

Jim--

I am in the EES Legal Dept here in California. Jeff Dasovich of Public and Gov't Affairs asked me to send you an email soliciting your thoughts regarding Enron employees participating in third-party deregulation-related companies.

Specifically, an Enron employee here in California (Mr. Dirk van Ulden) has been asked to serve on the "advisory board" for a deregulated industry startup called UtilityGuide. UtilityGuide's goal is to create an online forum for buyers and sellers of deregulated energy services. UtilityGuide would be funded by (a) transaction fees paid by services providers, and (b) revenues derived from advertising and sponsorship.

The management of UtilityGuide includes an ex-White House policy analyst (I don't know which administration), a web design consultant and former marketing manager for Greenpeace, and an ex-portfolio manager for Union Bank of California.

Mr. van Ulden would be one of seven on the advisory board, which does not include any management activities. Mr. van Ulden's main duties appear to be assisting in recruitment of other members of the advisory board, other management members, and identifying potential sources of working capital. The term of Mr. van Ulden's appointment would be one year.

Jeff Dasovich and I have reviewed UtilityGuide's website (www.utilityguide.com) and we do not believe that Mr. van Ulden's service on the advisory board would be in conflict with the Enron Corporate Conduct policy, mainly because (a) UtilityGuide as an aggregator of energy servicers and not an energy service provider itself does not appear to be a competitor of Enron, and (b) Mr. van Ulden's position at Enron Energy Services as a project manager under Jeff Messina's Account Management and Delivery group limits virtually all actual conflicts between Mr. van Ulden's duties at EES v. his duties at UtilityGuide. However, because of EES' ongoing forays into the electronic marketplace, we thought it appropriate to ask your thoughts before responding. I believe that Mr. van Ulden has the concurrence of his management as to this appointment, although of course we can seek concurrence from any other management entities deemed necessary or prudent.

Your input would be greatly appreciated. Pls let me know if I can provide any further information. I can be reached in San Ramon at 925 543 3706. Jeff Dasovich can be reached in San Francisco at 415 782 7822.

FYI...

Here are the confirmations regarding what type of DASR the Joint UDC Proposal addresses from each of the three UDCs.

PG&E Rebecca:

In response to your questions regarding our latest Joint Proposal, here is my answer to your specific questions below:

a) The DASR Cut-off etc mentioned in your recent filing indeed refers to Connect DASRs only As the primary purpose of the implementation of the suspension of DA is to identify accounts that are eligible to go DA, the "DASR Cut-off" reference is for CONNECT DASRs only.

b) All other DASRs, such as Disconnect and Updates, will continue to be accepted regardless of any implementation of a Cut-off or not. Disconnect and Update DASRs will continue to be accepted for existing accounts and new accounts to be switched as proposed in our filing.

Thanks, Calvin Yee PG&E

SDG&E: a) The DASR Cut-off etc mentioned in your recent filing indeed refers to Connect DASRs only,

This is correct, the joint proposal refers to new connects

b) All other DASRs, such as Disconnect and Updates, will continue to be accepted regardless of any implementation of a Cut-off or not.

Updates DASRs and terminations DASRs will continue to be accepted.

Lora Clay Strategic Lead - ESP Relations e-mail: lclay@sdge.com

SCE: I have seen the responses to Rebecca's questions from SDG&E (Lora Clay's comments are included in the e-mail below) and PG&E (by separate e-mail to Rebecca from Calvin Yee, not included here). SCE would agree that the Joint UDC proposal regarding a DASR cut-off date pursuant to the joint UDC filing on 11/16/01 refers to:

1) "Connect" DASRs only, and that 2) under such a DASR cut-off, SCE would continue to accept "disconnect" and "update" DASRs (for changes to billing and/or metering options) for existing Direct Access customers (note: this is consistent with SCE's previous communications regarding the subject of DASR cut-off date)

Jack Horne Jack.Horne@sce.com

I have all three e-mails & will forward them to Dan today.

Rebecca

-----Original Message----- From: Dan Douglass [SMTP:douglass@earthlink.net] Sent: Tuesday, November 27, 2001 12:00 AM To: ARM; Jeff Dasovich Subject: Draft AREM Filing - Comments Needed Attached for your review and comment is a redlined third draft of our comments due Wednesday on the UDCs' Joint Proposal re DA suspension implementation. My thanks to Rebecca Schlanert and Jeff Dasovich for their comments. Jeff's suggestions re Option 3 are included at the end of the draft. The essential change from what the UDCs proposed is that the CPA verifications would go directly to the Commission rather than to the UDCs. I thought up a few reasons in support of this approach, but would appreciate more suggestions and comments. Since this is due Wed., comments received by close of business tomorrow will get put into a proposed final draft to be circulated Wed. morning. Thanks! Dan Law Offices of Daniel W. Spring fees and financial aid news

Sender	fidler@haas.berkeley.edu
Recipients	['mba01@haas.berkeley.edu', 'mbastaff@haas.berkeley.edu', 'mba00@haas.berkeley.edu', 'evstaff@haas.berkeley.ed...']
File	dasovich-j/mba_program/31.

SPRING FEES and FINANCIAL AID NEWS

Spring Fees CARS Billing Statements with assessed spring registration fees will be printed the weekend of November 20 and mailed before the Thanksgiving holiday. You should receive it by December 3, but are nonetheless responsible for paying fees by the deadline of December 15 even if you have not received a bill. Ensure that your local address is correct on Bearfacts. Fees can be read on Telebears if you do not receive a bill.

Health insurance fees are automatically waived in the spring semester if they were waived in the fall term. However, the assessment for health insurance will show under New Charges. Do not panic because the waived health insurance amount will show in the next section of the CARS bill.

You have the option of paying your bill in full or electing the Deferred Payment Plan (DPP), wherein your fees are paid in five equal monthly installments. There is a \$40 participation fee each semester for the DPP.

Students who entered in fall 1999, please be aware that your spring 2000 fees will appear \$500 higher than fall semester as your deposit no longer offsets the total.

Financial Aid and Spring Fees If you are a financial aid recipient and there are no holds on your CARS account, you have enrolled for at least 6 units in spring semester and returned all aid documents, then financial aid will credit your CARS account by the December 15 deadline. If your aid is not sufficient to fully pay your registration fees, you must pay the remaining balance by Dec. 15 to avoid a late CARS charge or a \$40 Deferred Payment Plan charge. If your financial aid amount exceeds your reg fees, then the remainder will be disbursed to you hopefully according to the following schedule:

Thursday, January 13 - if your Electronic Funds Transfer (EFT) request has been processed To sign up for EFT, download the form <http://fbs.berkeley.edu/DISB/efinfo.htm> Tuesday, January 18 - checks will be mailed to local addresses for those students not signed up for EFT. It may take up to 5- 7 business days to receive the check. Be certain your mailing address is current with the University (database is different than Haas). You can update it on Bearfacts <https://bearfacts.berkeley.edu>

NOTE: Although Berkeley may credit your CARS account with aid in December, the official disbursement date for your federal student loan is not until mid-January 2000. So interest does not begin to accrue on the second disbursement of your Unsubsidized Direct Loan until then. Also, if your company is paying registration fees, you will not receive a refund of your student loan until the third week of January.

Individuals expecting their second disbursement of private loans checks can anticipate that the check will be available for pick-up or mailed to you (same arrangements as for your fall private loan disbursement) by the third week of January.

If you have any financial aid questions, please contact me.

Regards- debi

debi fidler Director of Financial Aid for MBA Programs Haas School of Business, S472 University of California, Berkeley Berkeley, CA 94720-1900 voice (510) 643-1680 fax (510) 642-4700 - att1.htm

SB 1x hearing today

Sender	cmicheli@carpentersnodgrass.com
Recipients	['steven@iepa.com', 'smccabe@mccabeandcompany.net', 'smara@enron.com']
File	dasovich-j/notes_inbox/3775.

As you may know, SB 1x (Soto/Scott) passed the Senate Appropriations Committee by an initial vote of 7-3 (the bare minimum). Senator Soto said that the Legislature must make a "bold proposition" with this bill.? She said that this experience is "like no consumer has been gouged before."? The Legislature must cap rates.? This bill guarantees a generous profit to generators. Senator Scott said that these generator profits have been gained off of consumers.? According to FERC, over \$500 million in excess profits have been reaped.? Californians have been "royally mistreated" by generators.? This "money has left the state (to Texas and other places)."? This bill is the only solution.? The PUC can change the \$80 rate.? Based upon the January Field Poll, Californians support this concept.? We have to "stand up to the generators and say no more." Supporters were:? TURN and CTRA (Lenny Goldberg).? Lenny said that the FERC will not give any relief to CA ratepayers, so the Legislature has to.? This bill needs to be combined with the power authority by Senator Burton to hold prices down. Other supporters of the bill included:? Congress of CA Seniors; CalPIRG; CA Consumer Federation; CA Labor Federation; SEIU; Public Power Now.? SEIU (public employee union) said that this bill is "the only way to put caps on rates." Opponents were CMTA ("this is the wrong medicine for solving the problem"); WSPA (does nothing to resolve the shortage of energy; we should be doing bills to stimulate greater investment in supply); InterGen said that they are looking at California market, but will not build with this bill out there.? CA Wind Energy Assn (QFs oppose this bill because the rate is too low); and IEP (most productive answer to our problem is the build power plants). Senator Battin said that the price cap is lower than some of the Governor's long-term contracts at \$86 per hour.? Senator Scott said that the munis are, indeed, covered by the bill.? He also said that the PUC can change the rates contained in this bill.? Scott also said that the PUC can exempt renewables under the bill. Senator Bowen stated that the \$80 figure should be removed from the bill ("this price may be inappropriate").? She suggested using the "FERC proxy price."? She suggested that they look at an exemption for contracts with the state.? She saw no reason to exempt the renewables because they would make a bundle with an \$80 cap. Senator Poochigian said he was concerned about the majority vote issue (because this bill is allegedly revenue neutral).? Scott said all of the money raised by the bill will go to ratepayers.? He said that Legislative Counsel gave him an opinion (I don't know if it is written or verbal) that this scheme was permitted.? Poochigian said it was ironic that the PUC was being given the authority to set rates under this bill. Senator Scott stated that they would take as an author's amendment to exclude all long-term contracts from the provisions of this bill. Next stop for the bill is the Senate Floor. ?

To: 86464@WCTOPICS.djnr.com cc: Subject: Utilities, Electric: Deregulation: California Electricity Management Agency Approves ...

California Electricity Management Agency Approves Temporary Power Plants Anne C. Mulkern ? 10/05/2000 KRTBN Knight-Ridder Tribune Business News: The Orange County Register - California Copyright (C) 2000 KRTBN Knight Ridder Tribune Business News; Source: World Reporter (TM)

State electricity managers voted Wednesday to pay private companies as much as \$765 million over three years to build and run temporary power plants aimed at preventing blackouts next summer.

The Independent System Operator, the agency that controls 75 percent of the state's power grid, said it had no choice but to approve the plants, which can generate a combined 2,000 megawatts -- enough to power 2 million homes. Even with those new plants, the estimated demand for electricity next summer exceeds supplies by about 3,000 megawatts.

Calling the state's deregulated electricity market "a complete train wreck," board members said they needed to act immediately.

Under legislation passed last month, smaller plants can be approved in as little as four months. But applications for those plants have to be submitted by Oct. 31.

The plants, which can be built by June 2001, are more expensive to run and pollute more than larger plants. They will only run on days of peak demand.

The cost of building and running the new plants likely will be passed on to ratepayers, but the details have not been worked out. Board members could not say how much it would cost each consumer.

Electricity prices surged this summer when demand for power exceeded supplies. Under deregulation, which began in 1998, the ISO pays whatever it deems necessary to buy more electricity in an emergency. The agency has spent more than \$100 million this year for such purchases, a cost paid by consumers in their bills.

Consumer advocates said the vote to approve so-called peaker plants signals a partial re-regulation of the state's electricity market. Companies building the plants will be paid a guaranteed return of 16.6 percent for at least three years. ISO staff will choose them from among 69 companies that submitted bids.

One consumer advocate, however, said the move could protect the ISO from spending even more.

"We're recognizing that it's not going to be appropriate to just let the market function willy-nilly, because it may fail," said Michael Shames, executive director of Utility Consumers' Action Network in San Diego. "Given the extreme we're at, a little more regulation makes it a little more reasonable."

All, Hope everyone is doing well?With the job market the way it is, I thought I'd pass this job opportunity along. Contact James directly (Sarah is my girlfriend).

Best, Jon

-----Original Message-----

From: James Faucette [<mailto:JFaucette@pacific-crest.com>] Sent: Thursday, August 23, 2001 12:26 PM To: 'sarah_gragg@rscs.com' Subject: Pacific Crest Position

Sarah,

Nice chatting with you. As I mentioned we are looking for an assistant analyst to work in the communications software and wireless area.

My current coverage list includes Openwave, Palm, RIMM, Handspring, Comverse, Aether, Nuance, SpeechWorks, etc. Given the way our business is growing and evolving, we will be moving towards names like Qualcomm, Motorola, Nokia, and Ericsson in the very near future. We are looking for all of the cliché characteristics: motivated, high level of initiative, self disciplined, high attention to detail, good writing skills, modeling experience, blah, blah, blah. Potential assistants should expect to take primary responsibility for coverage on lower capitalization companies ASAP and migrate upwards as market conditions improve and research coverage is broadened (within a few months). The position would be based in Portland, OR.

Pacific Crest is a full service investment bank focused on the Internet and communications technology companies. The Bank has approximately 100 professionals with primary offices in Portland, OR. Pacific Crest also has offices in Seattle, San Francisco (primarily IB operations), and Boston (Sales and Trading). Most of the professionals at the Bank come from a larger institutions. Before joining Pacific Crest, I was an analyst at Deutsche Bank in London and ING Barings in Latin America.

If you have any other questions please feel free to give me a shout. I haven't been too specific on requirements as we are really just looking for the smartest and best people and are less concerned about previous experience, etc. It has been a fairly good hiring strategy to date-since I joined Pacific Crest, we have had zero attrition or turnover.

Regards, James

P.S. If you are ever in town on a weekday, feel free to come by-we are at the top of the U.S. Bank Tower (big Pinky) and have the best view in Portland.

James E. Faucette Vice President, Equity Research Pacific Crest Securities 111 SW Fifth Ave., 42nd Floor Portland, OR 97204 Tel: (503) 248-0721 Fax: (503) 417-9370

On Campus Recruiting "boot camp" 7/28

Sender	owner-eveningmba@haas.berkeley.edu
Recipients	[eveningmba@haas.berkeley.edu]
File	dasovich-j/notes_inbox/11991.

Just a reminder the On Campus Recruiting "boot camp" training will take place on 7/28. If you have sent me an email asking to be included there is no need to reply again.

Here is the original blurb with all of the details.

PLEASE READ IF YOU ARE INTERESTED IN PARTICIPATING IN On-Campus-Recruiting

(Most everything you need to know about OCR)

WHO IS ELIGIBLE? If you are within 12 months of graduating you can participate in OCR.. If you graduate 5/01, 12/01 or 5/02 you are eligible to participate. You may only participate in OCR once.

WHAT IS OCR? The On-Campus-Recruiting program is the primary MBA recruiting and placement program targeting new MBA graduates or MBA students that will be graduating within 6 months of the MBA recruiting season. The MBA recruiting season is a Fall to Spring season. Eighty per cent of the initial screening and interviewing takes place in the fall from September to December. During the spring follow-up interviews, some on site at corporate office interviews, and job offers occur. This is why it is very important to take advantage of the full fall to spring season. Some (20%) initial screening interviews do take place in the spring. In past years 250 companies have participated in the OCR process.

WHAT DO I NEED TO KNOW? You need to reply to this email or send me an email letting me know you are eligible and interested in participating in OCR. During the summer, on 7/28 I will be offering a Saturday boot camp on everything related to OCR, please plan on attending. When September roles around you will be ready to participate. I will need everyone participating to complete a one page resume template, which is on BearTracks. Please wait till I notify you individually before completing the resume template. The deadline for the one page resume is the first week in August, we will start the process of drafting a one page resume in the seminar. We market these one pagers in a resume book/disc/online resume database to recruiting companies. It is from this source that companies decide whether or not to recruit at Haas. From this resume source the companies choose who they will be interviewing. You may also use some of the 1,000 bid points, all OCR participant get to bid on interviews with companies (all of this will be covered in the 7/28 training). The bid point system makes it an equal playing field for all participating students to apply for positions they are interested in. The BearTrack system (on the Haas website career services link <http://www.haas.berkeley.edu/careercenter/>) is the only way to participate in any of the activities related to OCR. Make sure and get familiar with BearTracks or attend the BearTracks trainings offered in the fall if you can't attend the summer OCR training. I will be available to assist students that have scheduling conflicts and may not be able to attend the summer OCR training session.

WHAT ELSE? Please make sure and check your email during the summer regarding summer seminars. The career center is open all summer, I will be here all summer. During the summer our hours will be 9 to 4. This schedule begins 5/21 and goes to 8/10. I will be available by appointment for those wishing to meet after the 4:00 timeframe, please try and provide a 24 hr. advanced notice if you want to come in after 4:00. That's it for now. Have a great summer.

John Morel Associate Director of Career Services for Evening MBA and MBA Alumni Ph# 510-642-7731 Fax # 510-642-9387 morel@haas.berkeley.edu

If Karen thinks it would be useful to have the PR firm go and report back, that's how we'll handle it. Otherwise, we'll get reports from others. Other commitments win out over FERC's "open mike."

Susan J Mara 11/13/2000 12:28 PM

To: Jeff Dasovich/NA/Enron@Enron cc: James D Steffes/NA/Enron@Enron, Jeff Dasovich/NA/Enron@Enron, Karen Denne/Corp/Enron@Enron, Mona L Petrochko/NA/Enron@Enron, Paul Kaufman/PDX/ECT@ECT Subject: Re: FERC Notice of Public Conference in San Diego

We discussed this with Rick and Jeff when I was in Houston last week. FERC made it clear at the hearing on the 9th that the SD hearing was for people who could not make it to Wash DC. So, we thought it unnecessary for Enron to seek to speak. We thought, instead, that an observer might be appropriate. Jeff mentioned the new firm we hired as a possibility. I have child care duties in the morning and a WPF Board meeting from 9 - 3.

*Message 755 of 1299***FW: Western Wholesale Power Trades Fri Above FERC Price Limit**

Sender	alan.comnes@enron.com
Recipients	['robert.badeer@enron.com', 'ray.alvarez@enron.com', 'tom.alonso@enron.com']
File	dasovich-j/notes_inbox/12248.

FYI,

My understanding is we adjusted our prices down to the cap today in an abundance of caution.

FYI

Western Wholesale Power Trades Fri Above FERC Price Limit Updated: Friday, June 29, 2001 05:42 PM ET

NEW YORK (Dow Jones)--The price of power in the western wholesale market on Friday topped the limits set by federally ordered price controls, traders said.

Bulk electricity trades as high as \$107 a megawatt-hour in the western spot market were confirmed by one of the buyers. Also, Enron Corp.'s (ENE, news, msgs) Internet-based trading system publicly offered to sell power in Nevada at \$105/MWh.

The maximum price allowed under a formula set June 18 by the Federal Energy Regulatory Commission is \$91.87/MWh.

Asked about the overshoot, FERC said sellers would have to justify prices above the benchmark.

"We constantly monitor the markets out there," a FERC spokeswoman said. "If there is anything above the proxy price, they would have to come in and justify it."

Enron spokeswoman Karen Denne said the company posted the \$105/MWh offer on its EnronOnline system, but didn't sell any power above the FERC limit.

FERC's complicated price limits for the West set a maximum price based on the operating cost of the most expensive generator used to meet demand for electricity during power alerts in California.

Suppliers who claim prices above the limits must explain why to FERC, which can order refunds if it isn't convinced.

Some market participants point to a loophole. The FERC order only applies to "spot" market transactions, which the commission defines as deals done within 24 hours of the commencement of deliveries. But power traded Friday is for delivery Monday, so some market participants have said that the controls don't apply to Friday deals.

"It does appear to be a loophole," Denne said.

Gary Ackerman, executive director of the Western Power Trading Forum, an industry association, said that traders could start doing more transactions two days in advance to circumvent the FERC rules if market prices rise above the cap, which can change based on prices for natural gas. Or deals could be done at the cap with the seller adding non-monetary payments such as natural gas or free electricity delivered later in the year.

Other market participants said they simply will buy needed power supplies at the market price, regardless of the FERC rules.

On June 19, the first day the new rules took effect, hour-ahead deals were done at \$300/MWh. So long as two companies agree to a price and the buyer doesn't later complain to the FERC, it seems that FERC would be hard-pressed to enforce its rules.

If a buyer were to file a complaint after such a deal, it would quickly find itself locked out of the market when supplies become tight, traders said.

The FERC spokeswoman said the above-limit prices would have to be justified even without a complaint.

The price cap will be recalculated whenever the California Independent System Operator enters its next Stage 1 supply emergency. At that time the cap will likely be much lower, because gas prices have fallen significantly since the current cap was set.

File	dasovich-j/sent/12146.

Greetings: I'm assuming that Washington/Houston has this covered, but if there's anything I can do to assist, don't hesitate. Best, Jeff

=09Susan J Mara =0907/26/2001 11:42 AM =09=09=20 =09=09 To: Jeff Dasovich/NA/Enron@Enron =09=09 cc:=20
=09=09 Subject: Transwestern Hearing

Hey, time to join the fun at FERC!!!

Sue Mara Enron Corp. Tel: (415) 782-7802 Fax:(415) 782-7854 ----- Forwarded by Susan J Mara/NA/Enron on
07/26/2001 09:42 AM -----

=09Rebecca W Cantrell/ENRON@enronXgate =0907/26/2001 08:08 AM =09=09=20 =09=09 To: Susan J
Mara/NA/Enron@ENRON, Ray Alvarez/NA/Enron@ENRON =09=09 cc:=20 =09=09 Subject: Transwestern Hearing

Here=01,s a little more detail on the issues that FERC wants to explore wit= h=20 regard to the Transwestern negotiated deals:

NGI's Daily Gas Price Index=20 published : July 26, 2001 FERC Targets Transwestern for Market-Power Hearing=20 FERC called for a hearing to determine whether Transwestern Pipeline=20 exercised market power when it awarded negotiated-rate contracts that led t= o=20 shippers being charged up to \$27/MMBtu last February, when the firm=20 transportation rate to the California border was only 38 cents/MMBtu.=20 That was "70 times the recourse rate," said Commissioner Linda Breathitt, w= ho=20 called the matter up for discussion at the Commission's regular meeting.=20 "Thirty-eight cents versus \$27, that's a big difference in prices and we=20 ought to be looking at that," responded Commissioner William Massey.=20 "...[W]e believe closer scrutiny of transactions that provide the opportuni= ty=20 to impose rates many multiples in excess of maximum approved tariff rates i= s=20 necessary, especially in light of our

serious concern regarding the high prices for natural gas in California relative to prices in the rest of the country and their consequential effect on wholesale electricity prices in California," the order noted [RP97-288-009]. FERC's action was in response to a show cause order it issued in March, directing Transwestern to explain how it had firm capacity available on its pipeline to move gas under the negotiated-rate transactions, and why its actions in entering into the negotiated-rate agreements didn't violate Commission regulations and policy regarding firm transportation service and negotiated-rate agreements. FERC's order requires Transwestern to make certain changes to the posting of daily capacity. "I'm satisfied that this should take care of the issue prospectively," Breathitt said. But with respect to the negotiated agreements, "our order today establishes a hearing of limited scope on a fast-track basis to determine whether Transwestern exercised market power in awarding these...contracts." It directs an administrative law judge to convene a pre-hearing conference within 10 days, and issue an initial decision on the matter within 60 days. The hearing will focus on three issues: 1) whether Transwestern capacity was advertised and awarded in a fair manner; 2) whether the rates negotiated were the result of the exercise of market power; and 3) why the capacity awarded was available without interruption while recourse service was not available. "In addition, I have a question [as to] why shippers agreed to such rates when much lower recourse rates should have been available under our negotiated rate program," Breathitt said. The shippers that entered into the negotiated-rate transactions with Transwestern include Richardson Products Co., Sempra Energy Trading Corp., BP Energy Co., Astra Power LLC and Reliant Energy Services.

Concur Expense (XMS) Common Questions

Sender	enron.announcements@enron.com
Recipients	[all.users@enron.com]
File	dasovich-j/all_documents/28278.

Concur Expense (XMS) Common Questions

1. Where can I find online documentation on Concur Expense? Answer: Documentation on Concur Expense is stored in the ISC Document Library. Go to the following link: <http://isc.enron.com/site/doclibrary/user/default.asp> and click on the XMS - Concur Expense folder on the left.
2. How can I sign up for Concur Expense training and how much does it cost? Answer: Go to the following link: <http://iscdcenter.enron.com/docentlm/login.htm>. Log in using your Enron email address. Enter your birth date as the password in the following format: MMDDYYYY. Under the Courses section, select Concur Expense (XMS). This will show the training schedule. Click the Enroll button to sign up for a class. The cost is \$250.
3. Will old XMS expense reports be converted to the new Concur Expense system? Answer: No. History data was not converted to the new system because of our move to an Application Service Provider (ASP) solution for Concur Expense.
4. How can I view my old expense reports? Answer: Call the ISC Customer Care group at 713-345-4727. The ISC will be responsible for printing out old expense reports and forwarding them to you. Other options are being reviewed to allow you to view old expense reports.
5. Are there any Enron specific help instructions for Concur Expense? Answer: Yes. If you log into Concur Expense, you will see a link to Enron Help on the Concur Expense home page under the Company Links section. Also you will see a button for Enron Help at the top of the screen when entering expense reports.
6. Is Enron's Travel Policy available in Concur Expense? Answer: Yes. If you log into Concur Expense, you will see a link to Travel Policy on the Concur Expense home page under the Company Links section. Also you will see a button for Travel Policy at the very top of the screen when entering expense reports.
7. What if I am unable to see any of my credit card charges in Concur Expense? Answer: Since there are a number of factors that could cause this problem, it is best to call the ISC Customer Care group first. The ISC will research the problem and get back to you with an answer.

8. Does Concur Expense have a time-out feature? Answer: Yes. Concur Expense will automatically time out after 20 minutes of inactivity.

9. How do I enter foreign currency into Concur Expense? Answer: Go to the ISC Document Library described in #1 above. Go to the XMS - Concur Expense folder. Next go to the Special Procedures folder and following the directions stated in the document called Add a Foreign Currency Expense to an Expense Report.

10. Are there any other sources to quickly get me started using Concur Expense? Answer: Yes. Concur Expense provides a Quick Tour for new users. Log into Concur Expense and click the Help button in the top right corner of the screen. Then click the button labeled Quick Tour at the top of the help screen. The ISC intranet home page also contains some helpful information. The following link summarizes some of the topics discussed above:
<http://isc.dev.corp.enron.com/site/XMSchange.htm>.

11. Can you quickly describe some of the internal changes in the new Concur Expense system? Answer: There are minimal changes in the new upgrade. Here is a list: ? The first screen only has one tab instead of two ? New expense types were added ? Attendees and approvers will now be printed on the expense reports ? Manager and receipt dunning notices will be sent out ? The statistical order and statistical WBS element fields have been separated out

Please direct all other questions to the ISC Customer Care group at 713-345-4727.

Moveon.org Campaign Against Energy Producers

Sender	janel.guerrero@enron.com
Recipients	['richard.shapiro@enron.com', 'mark.palmer@enron.com', 'james.steffes@enron.com']
File	dasovich-j/notes_inbox/4002.

Moveon.org, a group that positions itself as an internet based consumer watchdog, has mounted a campaign in support of the Federal Energy Reliability and Stability Act of 2001. The campaign takes direct aim at enron, dynegy and other companies. Have a look at their website, at <http://www.moveon.org/priceshocked/index.html>. In the meantime, here's a copy of a mass, unsolicited email that someone at our PR Firm in NY (ss+k) received from moveon.org (see below).

Date: 4/24/01 5:01 PM From: Wes Boyd, MoveOn.Org Dear Friend of MoveOn,

Energy prices are skyrocketing across the nation, yet Washington is doing nothing. Energy producers are taking huge windfall profits. Consumers and taxpayers are given the shaft.

Enough is enough. Join our citizens' campaign by sending an instant email to your representatives in Washington. Go to:

<http://www.moveon.org/priceshocked/index.html>

The energy markets are controlled by a small number of companies -- Enron, Duke, Dynegy, Reliant, etc -- which supply local utilities throughout the country with gas and power. These companies are so big, they are more like monopolies than players in a price-competitive market. Their irresponsible behavior calls for a strong federal hand.

In California alone, these companies and their affiliates have already overcharged by more than \$6.3 billion (1). If nothing is done, the number is expected to rise to as much as \$70 billion (2). That's \$2,000 for every man, woman, and child in the state.

This may be the biggest scam ever to hit the U.S. -- potentially dwarfing the Savings and Loan mess of the 80s. Yet FERC, the Federal Energy Regulatory Commission, and the Bush administration are taking no action.

A new bill sponsored by Senators Feinstein (D-CA), Smith (R-OR), and Lieberman (D-CT), would direct FERC to set temporary "cost-plus" rates allowing wholesalers to charge a reasonable rate of profit, not the excessive premiums they are now charging.

Join us in voicing your support for this important bill at:

<http://www.moveon.org/priceshocked/index.html>

Thank you for your help. And pass on the word. We cannot let this go unchallenged.

Sincerely,

-Wes Boyd MoveOn.org

P.S. Beware myths spread by the energy lobby. Here are two corrections:

- Rising demand in California HAS NOT created the problem. California's monthly peak electricity demand actually declined in July, August, October, and December of 2000 relative to the same months in 1999 (4).

- More drilling and relaxed environmental standards ARE NOT the answer. Opening new domestic supplies takes decades and only adds months of additional supply (5). Increased efficiency, immediate investment in renewables, and market stabilization are the only short term answers.

Sources: (1) California Independent Systems Operator, <http://www.caiso.com/> (2) A range of \$50-70 billion is cited in "No Time for Lectures," LA times, April 18th, 2001, <http://www.latimes.com/news/comment/20010418/t000032667.html> (3) Severin Borenstein, Director of Univ. Cal. Enron Corp. CEO: Core Businesses Are In 'Great Shape' Dow Jones News Service, 03/23/01

Enron Says \$3.1 Bln Portland General Sale Probably Won't Close Bloomberg, 03/23/01

USA: Broadband unit in strong shape, says Enron CEO.

03/23/2001 Reuters English News Service (C) Reuters Limited 2001.

HOUSTON, March 23 (Reuters) - Enron Corp.'s broadband unit will execute nearly twice as many trades in the first quarter of 2001 as it did in the fourth quarter of 2000, Enron President and Chief Executive Officer Jeff Skilling said on Friday. "My expectation is that we will see over 400, maybe over 500 transactions this quarter which shows this business is absolutely developing, it is ahead of plans," Skilling said in a conference call that sought to assuage investor fears about Enron's stock and its broadband unit specifically. That is more than all 321 transactions done last year, and about twice the 236 done in the last quarter of 2000, he said. Skilling also said long supply and a weak telecom market is offering Enron greater and cheaper access to bandwidth capacity, which means Enron Broadband Services' capital expenditure budget should drop from \$750 million to \$250 million. Some analysts have attributed two consecutive days of price drops in Enron's stock - it dipped as low as \$51.55 on Thursday, from 60.95 on Tuesday - to false rumors of layoffs at the nascent broadband business and the market's devaluation of that unit in light of weak technology and telecom sectors.

Enron Corp. CEO: Core Businesses Are In 'Great Shape' By Christina Cheddar Of DOW JONES NEWSWIRES

03/23/2001 Dow Jones News Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

NEW YORK -(Dow Jones)- After several days of decline, Enron Corp. (ENE) shares were regaining ground Friday as Chief Executive Jeffrey Skilling addressed the market's concerns about the company. During a conference call, Skilling told investors that the Houston company's core businesses are in "great shape." The executive also reiterated the company's 2001 earnings target of \$1.70 to \$1.75 a diluted share. The company's outlook compares with a consensus estimate of \$1.74 a share published by Thomson Financial/First Call. Enron shares recently traded hands at \$58.60, up \$3.58, or 6.3%, on volume of 5.3 million compared with average turnover of 4 million. On Thursday, Enron shares set a 52-week low of \$51.51.

Enron Says \$3.1 Bln Portland General Sale Probably Won't Close 2001-03-23 13:48 (New York)

Enron Says \$3.1 Bln Portland General Sale Probably Won't Close

Houston, March 23 (Bloomberg) -- Enron Corp., the largest energy trader, said its \$3.1 billion sale of Portland General Electric Co. to Sierra Pacific Resources probably won't be completed. ``There's probably a 5 percent probability that Sierra Pacific's purchase of Portland General will be consummated," Chief Executive Jeffrey Skilling said during a conference call with investors. Enron said in January that Sierra Pacific might not be able to sell a Nevada power-plant stake as needed to win regulatory approval for the Portland General transaction. Enron blamed a California law that barred public utilities from shedding generators until 2005 because of an electricity shortage. Shares of Houston-based Enron rose \$3.98 to \$59 in midafternoon trading. They had fallen 18 percent in the past week.

Jeff Dasovich Sent by: Jeff Dasovich 07/05/2001 12:07 PM

To: Ann.Cohn@sce.com, kmccrea@sablaw.com, mkahl@ka-pow.com, jdasovic@enron.com, wbooth@booth-law.com, drothrock@camfg.com, smutny@iepa.com, brbarkovich@earthlink.net, dominic.dimare@calchamber.com, isenberg@hmot.com, jstewart@cmta.net, mdjoseph@adamsbroadwell.com, lga@mother.com, debinorton@aol.com, cra@calretailers.com, derek.naten@roche.com, vjw@cleanpower.org, "John R. Redding (PS, NE) (E-mail)" <john.redding@gene.GE.com>, "Mike Florio (E-mail)" <mflorio@turn.org> cc: (bcc: Susan J Mara/NA/Enron) Subject: Bond Leg Language, etc.

Greetings:

Hope everyone had a pleasant 4th.

I've read the respective Burton and Hertzberg language on amending AB 1X. The Burton language looks cleaner and simpler, though there may be reasons to include some of the Hertzberg language, too.

I'm proposing to the group the following as potential amendments to the bond bill. I would appreciate your feedback. The amendments would be as follows:

Customers who were on Direct Access when DWR started buying power (Jan. 17th?), and are still on Direct Access when the bill passes, should be exempt from paying for the bonds.

In short, customers should not be forced to pay for power twice--once from their ESP, and once from DWR. Since these customers receive power services from their ESP, they never consumed DWR power in the first place and it wouldn't be fair to require them to pay for it.

Customers who have been utility customers since DWR started buying power but subsequently switched to Direct Access should only pay for power provided by DWR that they actually consumed, no more and no less.

For example, if a customer was a utility customer when DWR started buying power but switched to Direct Access on May 1st, then the customer would only be responsible for reimbursing DWR for power deliveries that took place from Jan. 17th thru April 30th.

I believe that we agreed on these concepts during the negotiations that took place over the past 4-5 weeks. Or if we didn't explicitly agree during the talks, they seem to be principles on which we ought to be able to agree pretty easily now. And rather than leave the issue hanging, which can create unnecessary and costly uncertainty for customers, I suggest that we include very clear and simple legislative language in the bond bill clarifying what customers' obligations are. Your thoughts are appreciated.

In addition, we have talked quite a bit about providing customers with incentives in the attempt to get California out of the energy hole that it finds itself in. Providing (20KW and above) customers with an incentive to switch to Direct Access as soon as possible could 1) reduce the net short position that the state (and ultimately consumers) have to finance, thereby reducing spot purchases and price volatility, 2) reduce electricity purchasing costs, and 3) reduce the burden on the state budget.

With this in mind, I'm also proposing that the group consider an amendment to the bond bill that would exempt from bond charges any customer that switches to Direct Access by September 1st.

Finally, it seems odd that the language directing the PUC to suspend Direct Access is still in the bill. If a dedicated rate component is created, that seems to eliminate altogether the need to suspend Direct Access. And if that's the case, would it make sense to delete that language from the bill?

Look forward to your comments and working with you to get support for and passage of the "core/noncore" proposal.

Best, Jeff

From: Jeff.Dasovich@enron.com [mailto:Jeff.Dasovich@enron.com] Sent: Wednesday, February 07, 2001 8:26 AM To: Vavrek, Carolyn (US - San Francisco) Cc: chin@haas.berkeley.edu; Jeff.Dasovich@enron.com; Mark Guinney; sama@haas.berkeley.edu Subject: Re: HD Case: Proposed Plan

Hi folks:

Since we have only one page, the write up for number 4 will have to be very brief.? Before writing it, though, I wanted to offer a few bullets regarding what angle we might take, and let folks respond, comment, counter, etc. before writing it up.? I'll clean and beef up once we've agreed to the approach we'd like to take to question #4.? Finally, I can work from my office on this this evening, which means that I can use the conference call capability of my office phone to patch everyone in if we'd like to do a conference call. If that's what folks would like to do, I'd prefer to do the call at around 7 PM.? Just let me know.

Best, Jeff

The question for #4 is:

Stock price is down 23%, significant debt has already been tapped to support massive growth and covenants on that debt restrict taking on a lot more debt.

What should HD do w.r.t. current operations and future growth strategy? ???? In the near term focus less on growth and more on getting margins and EBIT growth back in line with results from previous years.? (Management's Letter to Shareholders alludes to this, but it's difficult to determine whether management is just paying lip service to the need to capitalize on the growth spurt and grown earnings, or continue on the growth effort.)

???? With respect to funding future (more moderate growth), the company does have some room to increase long-term debt (e.g., current ratio for 1986 = 2.26).? It seems that HD would get better terms and have increased flexibility by issuing additional debt rather than relying on lines of credit.? As such, HD ought to look those sources of funding and fill in any "funding gaps" with funds from the line of credit.

???? Given the significant drop in stock price, HD is likely better off in the near term 1) moderating growth, 2) improving performance to generate cash internally, and 3) using long-term debt issuance to provide the funds needed.? Once performance and stock price improves, then HD should consider a stock issuance.

How can company improve operating performance? ?? Reduce selling, store operating expenses and pre-opening expenses ?? Improve receivables turnover ?? Improve inventory turnover ?? Improve per store/sales ?? Consider closing poor-performing stores ?? All of which will improve margins

Should company change its strategy?? If so how? ?? Shift from meteoric growth to moderate, targeted growth, and focus on ?? generating positive cash flow from operations ?? Focus on improving performance at existing stores; specifically focus on ?? controlling costs and asset turnover and productivity ?? Consider another debt issuance rather than rely extensively on credit ?? line in order to decrease cost of funds and increase flexibility

'Hi, My Name Isn't Justice, Honey,' and Shame on Lockyer

By TOM G. PALMER

?????Here's what California Atty. Gen. Bill Lockyer said at a press conference about Enron Corp. Chairman Kenneth Lay: "I would love to personally escort Lay to an 8-by-10 cell that he could share with a tattooed dude who says, 'Hi, my name is Spike, honey.'" ?????Here's why Lockyer should be removed from his office of public trust: First, because as the chief law enforcement officer of the largest state in the nation, he not only has admitted that rape is a regular feature of the state's prison system, but also that he considers rape a part of the punishment he can inflict on others. ?????Second, because he has publicly stated that he would like to personally arrange the rape of a Texas businessman who has not even been charged with any illegal behavior. ?????Lockyer's remarks reveal him to be an authoritarian thug, someone wholly unsuited to holding an office of public trust. ?????But his remarks do have one positive merit: They tell us what criminal penalties really entail. ?????Contrary to some depictions of prisons as country clubs, they are violent and terrible places. More and more politicians propose criminal sanctions for more and more alleged misdeeds, and as a result ever more kinds of behavior are sanctioned by criminal penalties, perhaps now even selling electricity. Those found guilty of such crimes are put into cages, where they are deprived of their liberty and dignity and, as Lockyer so clearly acknowledged, raped and brutalized. What's worse, Lockyer has indicated that he believes that rape is an appropriate part of the system of punishments he administers. ?????Should it matter that Lay is a businessman? Imagine the outcry if the head of Enron were female. What would Lockyer's fellow Democrats have said to that? ?????Should it matter that Lay is chairman of an electricity generator? Does the nature of his business justify threats to escort him to his own rape? Lockyer told the Los Angeles Times that he had singled out Enron's chairman because the Houston-based company is the world's largest energy trader. ?????So apparently singling out a man for a heinous threat is OK because he's the chairman of the world's largest energy trading company. That's according to the man who, as a state senator, sponsored California's 1984 hate-crimes law. Evidently the crusader against intimidation on the basis of race, religion and sexual orientation feels no hesitation at all about intimidating someone and threatening him with the brutal use of physical force simply because he heads the world's largest energy trading company. ?????Lockyer and Gov. Gray Davis seem to think that the best way to keep the lights on is to threaten electricity producers with brute force, rather than to offer to pay competitive rates in competitive markets. Are energy producers to blame for California's energy problems? No. Bad policies, including rigid controls on retail prices of electricity, are the cause of the problem, not the people who generate energy. Scapegoating producers and threatening them with violence is an old ploy of authoritarians. Californians should not stand for it. ?????An Enron spokesman said that Lockyer's chilling stated desire to arrange the rape of Lay does not merit a response. The spokesman is wrong. Lockyer's remarks merit public disgrace and removal from office. After all, rape is not a form of legal justice in America--is it? - - -

LA Times -- Dem leadership to Sue FERC Over Price Cap -- Hertzberg

Legislators Set to Sue Federal Energy Agency Power: Lawmakers try a new idea: a lawsuit arguing that blackouts pose danger to people, law enforcement and even water supply.

By DAN MORAIN, Times Staff Writer

SACRAMENTO--Legislative Democrats today will sue federal energy regulators, charging that their inaction threatens elderly people in nursing homes, children in day care centers, law enforcement and its ability to fight crime, and the state's drinking water supplies. Rather than focus on record wholesale energy costs, the lawsuit takes a new tack, homing in on the threat to health and safety posed by California's energy crisis and the blackouts likely this summer. A draft of the suit seeks to force the Federal Energy Regulatory Commission to set "just and reasonable" wholesale power rates as a way of ending the crisis before blackouts occur. The action is being filed by veteran trial attorney Joe Cotchett on behalf of Senate President Pro Tem John Burton (D-San Francisco), Assembly Speaker Bob Hertzberg (D-Sherman Oaks), and the city of Oakland. "A crisis of unprecedented dimensions is already taking shape in California," the draft says. "The public health, safety and welfare of the state's 34 million residents is in jeopardy due to the tragic consequences of rolling blackouts and punitive prices."

Suit Says Blackouts Pose Threats Until now, most California officials, including Gov. Gray Davis, have been urging that the regulatory commission cap wholesale power prices as a way of limiting costs to the state, which has spent more than \$6 billion buying electricity since January. In the lawsuit, Cotchett will be arguing that while higher bills will stretch the budgets of people on fixed incomes, frail elderly people "are left to wonder if their oxygen tanks, drip IVs, dialysis machines and electricity-powered therapeutic beds will respond when they are needed." "Rolling blackouts represent more than just an annoyance for the men, women and children with disabilities," the suit says. "They represent an imminent threat to life, health and independence." Cotchett said the suit will be filed in the U.S. 9th Circuit Court of Appeals in San Francisco, bypassing the federal trial court. Cotchett said the circuit court has direct jurisdiction over FERC. Joining Cotchett will be Clark Kelso, a professor at McGeorge Law School in Sacramento who briefly was insurance commissioner last year after Chuck Quackenbush resigned. Kelso said he initially was skeptical that lawmakers had legal standing to sue. But after Cotchett spoke with him, Kelso said he became convinced the suit had merit. "Let's face it," said Kelso, a Republican, "this is the single most important issue that the state faces for the next six months."

Watching the Water Supply The suit cites warnings from governmental agencies about the implications of blackouts, including one the state Department of Health Services issued earlier this month to public water agencies statewide. The warning contains a sample notice that local water authorities should give to consumers. "If the water looks cloudy or dirty," the warning says, "you should not drink it." The warning suggests that if people are concerned about water quality, they can boil it or add "eight drops of household bleach to one gallon of water, and let it sit for 30 minutes." Most water agencies have back-up generators. But the suit says that "if an agency's water treatment facilities are hit by a power outage, a two-hour blackout can result in two-day interruptions in providing safe drinking water because of time needed to bring equipment back online and flush potentially contaminated water from the system."

FW: APX Comments on Letter to the Governor.

Sender	dhunter@smithandkempton.com
Recipients	['alippin@mail.arco.com', 'cohnep@sce.com', 'athomas@newenergy.com', 'Robert Berry (E-mail); Edward G. Cazalet...]
File	dasovich-j/ab_1890_group/3.

-----Original Message-----

From: Edward Cazalet [mailto:ed@apx.com] Sent: Friday, August 25, 2000 9:12 AM To: dhunter@smithandkempton.com
Cc: Robert Berry (E-mail); Edward G. Cazalet Subject: APX Comments on Letter to the Governor.

Would you please distribute the attached APX comments on the letter to the Governor to the AB1890 list? The comments are attached both as a Word file and below in the body of this e-mail.

A core purpose of restructuring through AB1890 was to decrease reliance on regulation and increase reliance on the market to allocate resources in the California electric power market. However, as it is now written, the letter to the Governor does not include any direct reference to the way forward markets can address the problem of high and volatile prices.

Several reports have expressed serious reservations about the CalPX and CAISO use of "call auctions". An example of a call auction is the CalPX's daily auction that sets a single price for electricity in each hour of the next day. The CAISO uses several call auctions for real-time energy and ancillary service procurement.

A call auction provides no opportunity for market participants to react to each other's bids. A call auction lacks the feedback from offer to counter-offer which is the source of efficiency in forward markets. Because a call auction lacks feedback and clears at a single price, it is more likely that attempts to manipulate the single price will be more successful and will have a greater impact because all transactions are at the same price.

Instead, all other commodity markets rely on continuously traded forward markets, which allow participants to use price feedback and gradually develop their contract positions.

APX recommends that the Letter include the following:

The CAISO has recently announced its intent to acquire up to 3000 MW of ancillary services through forward contracts of at least a year. The CPUC has recently granted both PGE and SCE the opportunity to make contracts through 2005 to serve their load. These policies represent a wise shift from the almost exclusive reliance on short-term (day-head and hourly) markets by both the CAISO and the UDCs. However, adoption of such policies will tend to create a bifurcated market with very short-term markets and long-term contracts.

In most commodity markets, participants can trade a variety of contracts of different duration. Contracts are standardized so that the published prices of these traded contracts are meaningful. Trade occurs continuously, which allows continuous price discovery. The efficiency of the power market improves considerably when such continuous forward trading occurs and the opportunities for price manipulation are less. And the existence of such forward markets provide the basis to establish the prudence of both forward and spot purchases of power by the UDCs.

As an example, encouraging loads to participate in continuous forward markets will dampen price volatility because as the forward price rises load will begin to reduce its demand by not contracting or by selling back previously contracted positions. Generators can use forward markets to support decisions to invest in new power plants and properly time maintenance decisions to reduce the impacts on prices. Open, continuous forward markets with published prices will allow all West Coast buyers and sellers to contribute to market stability and lower prices in California.

The CAISO does not need to provide such continuous forward markets but can encourage their development and use by encouraging inter-SC trades and self-provision of ancillary services.

Dear Jeff:

Sorry I didn't get back to you last week. I was sick on Thursday and Friday and only dealt with a couple of things. Unfortunately, not much to report. Letter sent to Governor's office. Not even a courtesy call in return. I spoke with Lynn Schenk on Thursday. She told me point blank that the Governor and his staff had already solved the energy crisis and that it was too late to convene a meeting such as LDT was suggesting. Please DO NOT pass on this information to anyone else in the "Berkeley group." We'll probably try to reach Schenk again today. Marybeth

On Wed, 24 Jan 2001 Jeff.Dasovich@enron.com wrote:

Mary Beth: For what it's worth, I've read this, and if Laura Tyson or Larry Summers sign it, I have serious concerns about the effect it would have on their ability to play the role that we envision in moving our proposal forward (understanding that our odds of success are somewhat meager). While I don't disagree with the language, it is strong and therefore very likely to make the Governor and his staff very uncomfortable. I would recommend that they do not sign. File	dasovich-j/sent/526.

Lee: I'm not certain that it will be possible to get Skilling, but I'll get back to you soon. Also, I want to manage expectations a bit about the possibility of having Enron stream the conference. Just don't want us to get ahead of ourselves. I'd prefer

that it not go out in any announcement at this juncture. Thanks a bunch.

Best, Jeff

"Lee S. Friedman" <lfried@uclink4.berkeley.edu> 10/04/2000 05:52 PM

To: "Tim Belden" <tim.belden@enron.com>, "Jeff Dasovich" <jdasovic@enron.com> cc: Subject: Nov. 13 UC summit conference on electricity

Jeff and Tim,

Tim, I know Jeff knows all about the conference we are organizing and I hope you do as well.

Rob, I and the rest of the conference organizers are wondering if you could help us find out if Jeff Skilling from Enron would be willing to be one of our panelists? He has been an articulate critic of the current state of our electricity markets, and we definitely would like the genco perspective represented.

Naturally we are hoping to get a quick answer because our publicity about the conference will be going out shortly.

A brief description of the conference is appended below. Please let me know if you need any additional information.

Thanks very much for your help and advice. Lee

The summer of San Diego has prompted the School, in collaboration with UC's Energy Institute and Competition Policy Center, to sponsor a high-level summit conference on electricity deregulation. The focus, and the audience, will be national, but heavily informed and influenced by the California crisis. The conference will evaluate (1) the wisdom of deregulation and (2) how the pitfalls encountered so far can be avoided and remedied. The University will facilitate an open, honest and reasoned exchange between executive-level players from various perspectives: industry, regulators, consumers, legislators, academics, and market and system operators.

The format entails two roundtable discussions with six speakers and a moderator. During the panel sessions, the speakers will engage in a debate/dialogue on the current situation in electricity deregulation, where we have come from, what the future holds, and what solutions lie on the horizon. Each speaker will have uninterrupted time to speak, followed by Q&A and discussion. We expect a live audience of about 200, including a large press presence. One sponsor has tentatively offered to provide internet streaming video services. We hope to have a balanced group of sponsors ranging from the American Public Power Association to energy companies.

The speakers are being arranged at this time. We have commitments from: Loretta Lynch (Chair, CPUC), and PJM CEO Phil Harris. We have a preliminary acceptance from Steven Littlechild (England's former primary electricity regulator) and Laura Tyson (former Chair, President's Council of Economic Advisors and National Economic Council, currently Dean, Haas School of Business). We have invited FERC Commissioner Curt Hebert, and U.S. Representative Edward Markey, executive-level managers from several energy companies and state legislators. Former DOJ chief economist Carl Shapiro will be on one of the panels, as will economist Severin Borenstein, Director of UCEI and Professor of Business and Public Policy. Michael Florio from The Utility Reform Network (TURN) will be a consumer advocate on one of the panels. Lee Friedman, economist and Professor of Public Policy, will briefly provide an introduction to the panel discussions with his talk "Lighting the Stage: The Electricity of Deregulation."

A dinner for the panelists and organizers will be hosted at UC's Goldman School of Public Policy following the conference proceedings. We have reserved rooms for our speakers at Berkeley's landmark Claremont Hotel. We can reimburse those speakers who request it for coach airfare expenses and other ordinary local expenses.

For further information, please contact: Lee S. Friedman Professor of Public Policy Goldman School of Public Policy University of California 2607 Hearst Avenue Berkeley, CA 94720-7320 Ph: (510) 642-7513 Fax: (510) 643-9657 email: lfried@uclink4.berkeley.edu

Peter,

The concern about customers who were never on utility service is not just a large customer issue. I have thousands of customers that did not contribute to the DWR undercollection and should not have to repay it. On the other hand, a large customer who went DA today, should have to repay it because they enjoyed the benefits of DWR procurement for half a year.

Rick

-----Original Message-----

From: Peter.Bray@NewPower.com [mailto:Peter.Bray@NewPower.com] Sent: Thursday, August 09, 2001 2:41 PM To: arem@electric.com; douglass@earthlink.net Cc: jeff.dasovich@enron.com; johnlatimer@capitoladvocacy.com; nplotkin@rcsis.com Subject: Comments: Emergency AReM Pleading

? The "special preference for green customers" should be less vague, or dropped. This includes the reference in the 2nd paragraph in the "Conclusions" section. Rick, do you have something in mind?

? On its face, this bullet looks like it's reaching (too far): "End-users who never received procurement services from either the utility or DWR as of the effective date of the Commission order implementing this proposal would be exempt from the DRC related to the bonds and the UDRC related to the utility's past procurement-related debt." [From Option A; there is a parallel provision in Option B.] The bullet (currently) reads as if there is a special pass to be handed out to those (large customers) able to make quick DA contracting decisions. That's not OK. I assume that the author's intent is clearly covered in the two bullets that follow the offensive bullet (both in Option A and B). Therefore, rather than convoluting (to correct) the offensive paragraph(s), let's just drop it (them).

? Given the e-mail exchange with Bill Booth, I believe that CLECA would join TURN to OPPOSE an AReM proposal (perhaps even the motion), and in particular, the Option B element: "Utility customers who choose Direct Access would be required to pay:?[a] long-term dedicated rate component ("LTDR") to cover the customer's proportionate share of any above-market costs associated with DWR's long-term contracts?." While I do not propose that AReM adapt its positioning to accommodate CLECA, I observe that AReM would be leading with its chin.

Dan, you've done a killer job in close to zero real-time. Wow. Kudos.

Peter

-----+

Just in advance of the conference scheduled for a few minutes from now, attached for your review and comment are the following two documents:

1. A motion for permission to file supplemental comments on the draft decision of ALJ Barnett and the alternate draft decision of Commissioner Bilas; and
2. The supplemental comments, in which the proposal circulated yesterday is included.

Please note there have been some changes to the bullet point proposal. Some is merely wording to make it read more smoothly. However, Option A also includes Peter Bray's suggestion that the participation limit include a 20% DA capacity reservation for residential and small commercial customers, with preference for those using green power. Also, this has been dated for filing on Monday, rather than Friday, because Rick Counihan and I could not see how parties could provide comments and have us agree on a final version by Friday.

All comments will be greatly appreciated, as soon as possible.

More on FERC generator hearings

Sender	dhunter@s-k-w.com
Recipients	['jdasovic@enron.com']
File	dasovich-j/all_documents/28472.

-----Original Message-----

From: McEvoy, Bridget [mailto:Bridget.McEvoy@ElPaso.com] BN 18:06 Talks Between California, Generators End; No Accord (Correct)

(Corrects lead to say judge recommended FERC hearings to result disagreements; adds comments from judge in fifth paragraph and comments from Enron in 13th paragraph.)

Washington, July 9 (Bloomberg) -- A judge who oversaw two weeks of unsuccessful negotiations aimed at persuading power sellers to pay refunds in California and other western states recommended that the Federal Energy Regulatory Commission hold hearings to resolve disagreements within 60 days.

Two weeks of FERC-ordered talks ended today with the two sides no closer to an accord.

"In 15 days, you can't work miracles," said Curtis Wagner, FERC's chief administrative law judge. "The numbers were too far apart."

California says it is due a refund of \$8.9 billion because the companies charged excessive prices. Other western states are also requesting money.

A group of power sellers offered \$510 million to California during the negotiations, scoffing at the state's method of

calculating the refund, Wagner said. Other parties to the talks offered about \$206 million, bringing the total offer from generators to \$716 million.

On Saturday, the state brought in analysts who explained how the state calculated its estimate. He wasn't convinced by California's arguments that it should receive \$8.9 billion, said Wagner, who wouldn't provide his own estimate of how much should be paid.

Wagner said FERC should hold hearings of 60 days or less and should calculate a refund based on a system it approved for price caps on June 18. The caps are based on the costs of the highest priced generator during the early stages of a power shortage.

That formula should be applied retroactively to Oct. 1, Wagner said. He wouldn't provide an estimate of the size of such a refund, saying it would require research into fuel prices from that time period.

Michael Kahn, California's chief negotiator, said the judge's recommendation was a victory for his state. Wagner's formula would give his state a refund of ``several billion dollars," and California will sue to get the rest, he said.

``The judge said we're entitled to our money without releasing any of our claims," Kahn told reporters.

Generators were mixed on what Wagner's recommendations meant, though they agreed the state asked for too much.

``Under the faulty methodology the state has come up with (to justify the \$8.9 billion refund), we would be owed money because we bought more than we sold in the spot market in the period in question," said Mark Palmer, a spokesman for Enron Corp, one of the power sellers taking part in the negotiations. ``That's shows how ridiculous this is."

Houston-based Enron didn't participate in the offer to refund \$510 million, Palmer said, without being more specific.

``Nothing I've seen suggests that California cares about a settlement," Palmer said. ``What they care about is shifting blame. What they care about is a witch hunt."

Duke Energy Corp. is ``very pleased" by the judge's

recommendations, said Brent Bailey, vice president and general counsel of the Charlotte-based company. The judge's plan fixes problems with California's methodology for calculating the refunds, he said.

California's two biggest utilities have piled up almost \$14 billion in debt because of the surging prices that resulted when the state's plan to deregulate its electricity system failed. The state began buying power on the utilities' behalf in January and has spent close to \$8 billion.

Hi folks: Since we have only one page, the write up for number 4 will have to be very brief. Before writing it, though, I wanted to offer a few bullets regarding what angle we might take, and let folks respond, comment, counter, etc. before writing it up. I'll clean and beef up once we've agreed to the approach we'd like to take to question #4. Finally, I can work from my office on this this evening, which means that I can use the conference call capability of my office phone to patch everyone in if we'd like to do a conference call. If that's what folks would like to do, I'd prefer to do the call at around 7 PM. Just let me know. Best, Jeff The question for #4 is: Stock price is down 23%, significant debt has already been tapped to support massive growth and covenants on that debt restrict taking on a lot more debt. What should HD do w.r.t. current

operations and future growth strategy? In the near term focus less on growth and more on getting margins and EBIT growth back in line with results from previous years. (Management's Letter to Shareholders alludes to this, but it's difficult to determine whether management is just paying lip service to the need to capitalize on the growth spurt and grown earnings, or continue on the growth effort.) With respect to funding future (more moderate growth), the company does have some room to increase long-term debt (e.g., current ratio for 1986 = 2.26). It seems that HD would get better terms and have increased flexibility by issuing additional debt rather than relying on lines of credit. As such, HD ought to look those sources of funding and fill in any "funding gaps" with funds from the line of credit. Given the significant drop in stock price, HD is likely better off in the near term 1) moderating growth, 2) improving performance to generate cash internally, and 3) using long-term debt issuance to provide the funds needed. Once performance and stock price improves, then HD should consider a stock issuance. How can company improve operating performance? Reduce selling, store operating expenses and pre-opening expenses Improve receivables turnover Improve inventory turnover Improve per store/sales Consider closing poor-performing stores All of which will improve margins Should company change its strategy? If so how? Shift from meteoric growth to moderate, targeted growth, and focus on generating positive cash flow from operations Focus on improving performance at existing stores; specifically focus on controlling costs and asset turnover and productivity Consider another debt issuance rather than rely extensively on credit line in order to decrease cost of funds and increase flexibility

Summer 2001 EMBA Seminar In International Business - Initial

Sender	owner-eveningmba@haas.berkeley.edu
Recipients	[eveningmba@haas.berkeley.edu]
File	dasovich-j/all_documents/3841.

Dear Evening MBA Students,

It is once again time to plan for the EMBA Seminar in International Business. For those of you unfamiliar with this course, please see <http://www.haas.berkeley.edu/groups/HaasGlobal/NGcourseoutline.htm> for the 2000 version that looked at Ghana, Belgium and the Netherlands or <http://www.haas.berkeley.edu/groups/HaasGlobal/JVcourseoutline.htm> for the 1999 version that included Japan and Vietnam.

For 2001 we are going to try something slightly different. We will have two distinct programs - one will be a repeat of last year's and the other will venture into new territory. The details are as follows. Please note that everything mentioned below is still tentative and subject to change or cancellation.

PROGRAM DESCRIPTIONS

Both programs will commence with a series of classes, at Haas, in June.

Program A, led by Diane Dimeff will retrace the itinerary of the 2000 program to Ghana, the Netherlands and Belgium. The approximate dates for the travel portion will be Saturday, July 7 through Saturday, July 21.

Program B, led by Sebastian Teunissen will consist of one of two possible itineraries, depending on student demand:

itinerary 1: Cuba, Panama and Venezuela (or Costa Rica.) itinerary 2: Australia and Indonesia.

Travel for program B will also start on approximately July 7 and end on approximately July 21.

Costs for the programs are expected to be approximately equal to those charged in previous years (\$4,600), with the exception of the Australia/Indonesia option. If this program is selected the final cost is likely to be roughly \$1,000 higher due to increased air fares. Final costs will be determined once itineraries are set.

As you can see, planning is still in the early stages. But, before we go much farther we need to know who is interested in participating. So, we need to receive expressions of interest, in the form of a refundable \$100 deposit from interested students.

APPLICATION PRIORITIES

Students will have different priorities depending on seniority. Priorities are as follows:

Top Priority - both programs - students in fourth semester or higher in January 2001 who HAVE NOT participated in the program in a previous year.

Second Priority - Program B only - students in fourth semester or higher who did participate in the program in a previous year. These students are not eligible for program A.

Lowest Priority - both programs - students in second or third semester.

Each group is limited to a maximum of 15 students.

APPLICATION PROCEDURE

Please submit, to the Evening MBA office, a check in the sum of \$100 payable to UC Regents together with the following information, no later than December 15, 2000. - Name - Semester level as of January 2001 - Whether or not you have previously participated in the program - Choice of program: A or B (If you choose program B please also indicate your preferred destination: Latin America or Australia/Indonesia.) - e-mail address

Once we have a clear indication of preferences the final details will be planned and announced. The announcement will likely be made in January. At that time you will be advised of the program for which you are eligible. You will then be asked to increase your deposit by \$900 and the entire \$1,000 deposit becomes non-refundable.

OTHER ISSUES

Please check your passport to ensure that it expires no earlier than December 31, 2001. If it does please renew it now. Passports with shorter expirations may be rejected for visas, depending on the countries to which you will travel.

Also, please check the visa requirements for the countries of interest for your particular nationality. This may have a bearing on the program that you select.

You might wish to check out the US State Department Consular Information Sheets and Travel Warnings at http://travel.state.gov/travel_warnings.html before applying. You may also wish to review health information at <http://www.tripprep.com/> or at <http://www.cdc.gov/travel/>.

Should you have any questions please contact me.

Regards,

Sebastian

Paul,

Thanks for your note.

A few comments that correspond to yours:

The DS-3 pricing is not material since it is only used for sending encoded content to the EIN. It is not directly part of the Internet transit proposal. We are awaiting a price from our provisioning group (who gets it from other providers). I am awaiting a proposal from a colocation provider at the Westin on pricing for Activate.net. It is likely that we will NOT get involved and have the customer work directly with this provider. As such, we should not have the headache as well as the worry about pricing this element. We would actually need fiber riser between our suite at the Westin and the Meet-Me room at the Westin; not Gigabit Ethernet. No pricing at this point but I would expect this to be \$1K per month maximum My estimate on the 6509's is \$100K each installed for a total of \$200K. For a GSR, I would put this at \$200K each for a total of \$400K. I am awaiting pricing from our provisioning folks for the dark fiber that would allow us to run Gigabit Ethernet over this infrastructure. They are working with Level-3. I have also asked for OC-12 pricing if we don't get the dark fiber. See response #4. The only difference is that we would need to pay Level-3 for a rack to be placed at their end for our equipment. Estimate for this is \$1K per month. Pricing from L-3 for Internet transit is approximately \$250 per Mbit per month as measured on a 95% percentile. This might go down as you may have heard from Dorn due to market conditions and our bulk buying power as well as some price configuration changes by Level-3 (e.g., pay \$200/Mbit/month based on the higher of upstream or downstream measurements).

A Visio drawing, its equivalent bitmap rendering as well as an Excel spreadsheet containing a very preliminary estimate of pricing is also attached for your reference.

What has to be added as part of any pricing analysis is the IP & AFTS transport that we might provide in the future to carry some of the traffic outside of the Seattle-area because Internet transit there might not be sufficient or too congested.

Matt and I will do more work on this proposal on Wednesday & Thursday and will plan to keep you informed. Again, we owe a term sheet to the customer later this week.

Merat

Subject: Activate.net Costing Issues

Below are the Activate.net pricing elements we need for the economic model that will be discussed during tomorrow's TDS (aka. Transaction Development & Structuring) meeting at 11AM Pacific Time.

Local Loop Pricing (DS-3 from Activate.net to Westin) Total cost of co-location at Westin Gig Ethernet Cross Connect from Westin router to EBS router Installed cost for 6509 Router and GSR 12012 Router at Westin; [WE NEED BOTH ESTIMATES DEPENDING ON WHICH LOCAL LOOP IS AVAILABLE] Local loop from Westin to L3 gateway (Gig Ethernet on dark fiber and OC12); WE NEED BOTH ESTIMATES DEPENDING ON AVAILABILITY] Installed cost for 6509 Router and GSR 12012 Router at L3; [WE NEED BOTH ESTIMATES DEPENDING ON WHICH LOCAL LOOP IS AVAILABLE] Pricing of Internet transit from L3 [Allen Hill and I need to talk to Dorn this afternoon and will address this pricing issue with him.]

Do you know if we will be able to have G Ethernet on dark fiber for local loop from Westin to L3? I will look for the pricing elements tomorrow morning and we can discuss when I call you tomorrow at 8:30AM Pacific Time. Let me know if I can be of assistance in tracking down any of the information.

Thanks!

Gouger Gray Davis California's petulant governor ignores reality as he overpays for electricity

LANCE T. IZUMI Mr. Izumi is a senior fellow in California Studies at the San Francisco- based Pacific Research Institute. On the surface, things seem to be going pretty good for Gov. Gray Davis with regard to California's electricity crisis. The governor has scored some nice publicity by switching on some new power plants. The weather has been unseasonably cool. His poll numbers are edging back up. Yet beneath this optimistic picture lie troubling problems. For example, Davis's argument that out-of-state power generators are responsible for the electricity crisis has been falling apart. For months, Davis has been claiming that private generators have overcharged California by \$8.9 billion and demanded that this amount be refunded to the state. However, after a two-week mediation between state officials and the generators, Curtis Wagner, the federal government's chief energy regulatory judge, rebuked Davis's claim saying that such a huge overcharge "has not and cannot be substantiated." Further, while the generators may be liable to refund a much smaller amount to the state, perhaps \$1 billion, Wagner said that generators are owed more money by the state than they owe the state in refunds: "Can a cash refund be required where a much larger amount is due the seller? The chief judge thinks not." Davis reacted to the judge's ruling by calling it a "raw deal" and by urging the Federal Energy Regulatory Commission to ignore the lack of evidence and the judge's conclusions and to "step up and provide the refunds we've asked for." Davis's position, as usual, is motivated purely by politics. Indeed, Dan Walters of the Sacramento Bee says that Davis is operating in a "melodramatic virtual world" de-linked from reality. Davis's blame-the-generators argument took another body blow when newly released documents showed that, on average, major out-of-state power companies such as Enron, Duke, Dynergy and Mirant charged less than the average prices paid by the state during the first three months of the year. California government utilities, on the other hand, such as the Los Angeles Department of Water and Power and the Sacramento Municipal Utility District (SMUD), charged the state much more for electricity than the out-of-state generators. For example, while Texas-based Enron, a favorite Davis whipping boy, charged an average \$181 per megawatt hour, SMUD charged an average \$330 per megawatt hour. Davis responded to this revelation in typical political fashion. A Davis spokesman said that the governor had expressed his anger at "the generators who wear cowboy hats" and that "just because there are other entities that are charging us more doesn't change the fact that we are getting ripped off by companies from Houston, Tulsa, Atlanta or Charlotte." Yet, for all Davis' feigned indignation about consumers being ripped off, it turns out that he and his regulators are poised to ensure that business consumers are ripped off by state

government. Davis has signed \$43 billion in ill-advised long-term purchase contracts at rates above-market-price. The state must, therefore, ensure that enough business customers remain in the current state-controlled distribution system to pay for high-priced state power purchases. This is especially important to Davis since the high prices are borne disproportionately by business. Thus, Davis' regulators are set to eliminate "direct access," which allows businesses to shop for cheaper power. Who's the real gouger? No matter how much Davis points the finger, Californians are paying dearly for his political opportunism and bad policies.

Can you all help with the California issues? ----- Forwarded by Christi L Nicolay/HOU/ECT on 06/22/2001 12:55 PM -----

From: Christi L Nicolay 06/19/2001 03:33 PM

To: Robert Eickenroht/Enron@EnronXGate, Paul Kaufman/Enron@EnronXGate, Janine Migden/NA/Enron@Enron, Steve Montovano/NA/Enron@Enron, Harry Kingerski/NA/Enron@Enron cc: James D Steffes/NA/Enron@Enron, Sarah Novosel/Corp/Enron@ENRON, David Portz/Enron@EnronXGate, Robbi Rossi/Enron@EnronXGate, Ray Alvarez/NA/Enron@ENRON, sscott3@enron.com, Andrea Woodland/Enron Communications@Enron Communications

Subject: ASAP please -- EBS on site power deals

EBS owns on-site back up generators at various POP locations (in the EBS buildings) across the US (see the list below. The generators max at appr. 1.5 MWs each. Per the generator permits, the generators only run during emergencies when there is no power coming off the grid. EBS only uses about 20% of the generator output.

EBS has been approached by several tenants within the EBS buildings about "sharing" by purchasing power from the on-site generators during emergencies only. The appr. value to EBS is \$2MM this summer.

Robert--Are there any PUHCA issues to Enron if EBS sells power to other tenants in the same building? Is EBS required to obtain an EWG certificate before doing this?

Retail folks--Since the power would not flow to the grid, this seems like it may entail a "retail type" sale of on-site generation, rather than a wholesale sale for which a power marketer license is required. Do you know of any specific restrictions for the states listed? (FYI -- One of the locations is in San Jose and the power has been curtailed several times at the location. It certainly seems like Cal. would be encouraging the use of back up generators, but I do not know the specific rules.)

Finally, since EBS wants to act quickly, we discussed EBS hiring perhaps Sam Behrens to work through this issue in the event we are unclear about any of the regulations or rules. Thanks for letting me know your comments right away.

-----Original Message-----

From: Woodland, Andrea Sent: Friday, June 15, 2001 4:35 PM To: Rossi, Robbi Subject: Re: Power

Here's the scope of this project. I do not have David's email, so could you send this onto him?

The plan is to sell Emergency Power at our POP's. There are 11 POP's where we have generators installed in the building, and we are only utilizing approximately 20% of the capacity. The plan is to sell the other 80% to other building tenants. The power would only be provided in emergency situations - which means when the normal power grid is down (current building permits allow this). There would be an up front cost to providing the power (breaker/conduit/conductor) which we would pass onto the customer as an initial Non-recurring Fee. They would pay a monthly fee to have the emergency power available (demand charge), then pay a fee for the kwh used (capacity charge). The customers that will be interested in this

are either tapped out on their generator or do not currently have a generator. So, to pay a initial connection fee, which will be much less than the cost to install a generator, and then a monthly fee for the power insurance, should be acceptable.

This file shows the cities & the generator sizes, with about 80% available. The companies on the right are who I've currently sent letters to. So far we've received 3 phone calls - 1 who wants to buy all the power he can in San Jose. From these discussions, the requests have ranged from 100A or 83kW to 1000 A or 830kW.

We need a term sheet or contract, and I would also be interested in speaking with EPMI about a contract with them. Sounds like that might be a bit less risky.

Thanks for you help. Andrea Woodland Enron Broadband Services 503-886-0532 (desk) 503-880-4547 (cell)

Andrea,

David called me back and said he wanted to talk to Kristy Nickolay - his regulatory person before we spoke. It may be helpful if you could send him a brief description of the intended transaction. The power people are very busy right now - and the easier we can make it for them to help us - the better. He needs to know something about the size of the transactions and the potential customers.

File	dasovich-j/eci/125.

Interactive Week 11/1/99

Wall Street enthusiasm and a growing list of brand-name clients have legitimized content distribution as a business, putting two companies that started it all - Akamai Technologies and Sandpiper Networks - into the spotlight.

Digital Island's \$630 million acquisition of Sandpiper last week and Akamai's \$2.2 billion pre-initial public offering valuation are likely to make merger and acquisition artists wonder how much their company would be worth with the inclusion of a Sandpiper or Akamai. Akamai, which priced its shares at \$26, saw its stock hit \$125.50 in midday trading Oct. 29.

Digital Island, the San Francisco-based Web hosting shop that was worth \$1.2 billion on Oct. 25 when it announced the Sandpiper acquisition, saw its market capitalization gain \$1 billion in the course of four days.

Why are the services of Akamai and Sandpiper so valuable all of a sudden? The Internet can't deliver Web - much less broadband - content fast enough, and network backbone companies are taking too long to solve the bottleneck puzzle, industry experts said.

"We looked at content sites A through Z, and 52 percent of them are planning to buy content delivery services next year," said Greg Howard, principal analyst and owner of the HTRC Group, a market research company.

With customers that eager to show service providers the money, many are scrambling to deliver.

In a space where a year ago Sandpiper was a lone evangelist and Akamai a rocket from nowhere, new content distributors are popping up like mushrooms.

Adero, Edgix and Mirror Image are three companies that are gaining mindshare in the market. Since at the core of a content distribution system lies a massive task managing hundreds and eventually thousands of caches operated as one network, such companies as iBeam Broadcasting and SkyCache are also gaining credibility in the market.

And then there are a few sudden entrants. Enron Communications and Exodus Communications are trying to amend existing business models to take advantage of the new opportunity.

How big is the opportunity? The content distribution market, Howard said, will grow from \$62 million this year to \$306 million next year, and to about \$2.3 billion in 2002.

Acquisition as an exit strategy is certainly something new content distributors are thinking about.

"I think it's hard to say what will happen in this industry next. All business models are very different," said Rangu Salgame, president and chief executive of Edgix. "I think we will stand independent - for a while."

Potential buyers include any given content provider - from CNN Interactive to Pets.com - that writes three checks every month: one for bandwidth, one for Web hosting and, lately, one for content distribution. These groups have the most to gain from content delivery services, executives said.

"There are a couple of likely players in this space. One, there are new start-ups like Adero and specialized content distributors like Intervu; two, there are colocation providers like Exodus; and three, there are traditional telcos like MCI WorldCom, who are standing on the sidelines right now, but have a lot of edges for content to reside on," said Leo Spiegel, president and CEO of Sandpiper, soon to be Digital Island.

What would happen if any given company were to buy all three components?

"This would mean running content distribution through a single network and maintaining a global footprint," Howard said. "It is hard, but doable."

There are reasons why the network-content distributor combination could backfire. Akamai executives declined interviews for this story due to the Securities and Exchange Commission-imposed quiet period. But in the past, they have been vocal about a single network scenario being untenable for content distribution because their business model is predicated on carrier neutrality. This is why Internet service providers and telephone companies are open to content distributors colocating servers within their networks.

Another possible exit strategy for content distributors is to sell out to large media companies such as America Online, Disney and Time Warner. These companies could maintain the content distributors' "Switzerland" status and still use the service as a competitive advantage by speeding up content delivery, industry watchers said.

PUBLIC PARTICIPATION HEARING RE BASELINE ALLOWANCES FOR RESIDENTIAL

Sender	lgoldseth@svmg.org
Recipients	['lgoldseth@svmg.org']
File	dasovich-j/all_documents/27969.

ADMINISTRATIVE LAW JUDGE=01,S RULING SETTING PUBLIC PARTICIPATION HEARINGS AND REQUIRING CUSTOMER NOTICE

The Commission has stated that the purpose of this proceeding is =018to determine whether current baseline allowances for residential gas and electricity users in California should be revised, and if so, to what new levels.=018 (Order Instituting Rulemaking, May 24, 2001, p. 1.) As part o= f this proceeding, we are scheduling Public Participation Hearings. At the Public Participation Hearings, interested members of the public may make their views known to the Commission on the issues to be addressed in this proceeding. Public Participation Hearings in this proceeding are set for the following dates and locations.

Sept. 20, 2001 San Jose 7:00 p.m. Double Tree Hotel 2050 Gateway Place San Jose, CA

While this proceeding has been split into two phases, comments at the Publi= c Participation Hearings may address issues to be examined in either phase. Issues currently identified as being addressed in Phase I are: 1) Updating the energy usage data used by the Commission in calculating baseline quantities; 2) The appropriate percentage of energy usage to use in calculating baseline quantities, within the legally permissible range; 3) Possible changes to the medical baseline allowance; and 4) Suggestions for legislative changes. Issues within the scope of the proceeding not addressed in Phase I will be addressed in Phase II, and may include consideration of the priorities and policy objectives of the baseline program, possible changes to climate zones, consideration of household and demographic characteristics, definition of seasons, and gas versus electric issues. Other issues reasonably within the scope of the proceeding may als= o be addressed at the Public Participation Hearings. In a previous Ruling respondent utilities were directed to coordinate with the Commission=01,s Public Advisor=01,s Office regarding the preparation an= d content of bill inserts providing notice of these Public Participation Hearings. Respondent utilities should incorporate the above information, and continue to coordinate with the Commission=01,s Public Advisor=01,s Off= ice. All respondent utilities are required to provide timely notice to their customers of the Public Participation Hearings. Each respondent utility shall send written notices, in a form approved by the Public Advisor=01,s Office, either by mailing them postage prepaid directly to customers, or by including notices with customers=01, regular bills. To the extent any util= ity bills its customers electronically via the Internet, notice to those customers may also be done electronically. Anyone who needs assistance with participation in this proceeding should make use of the resources on the Commission=01,s web site, www.cpuc.ca.gov,= or should contact our Public Advisor=01,s Office, which is available to help parties understand how to participate in a proceeding, how to file a pleading, and to answer other questions about Commission procedure. The northern California office can be reached at 415-703-2074 or public.advisor@cpuc.ca.gov. The southern California office can be reached at 213-576- 7055 or public.advisor.la@cpuc.ca.gov.

IT IS RULED that: 1. Public Participation Hearings will be held on the dates and at the locations and times described above. 2. Each respondent utility will provide a company representative at each of the Public Participation Hearings in, or within 125 miles of, its service territory, to be available to address any comments or concerns expressed by attendees. 3. Each respondent utility will provide notice to its customers not later than 10 days prior to the earliest Public Participation Hearing in, or within 125 miles of, its service territory. Notices shall be provided either as an insert with a regular bill or may be mailed separately if necessary to reach customers at least 10 days before the relevant Public Participation Hearing. 4. Each respondent utility will provide to the Public Advisor=01,s Office n= ot later than five days prior to the relevant Public Participation Hearings, a letter certifying that it has complied with the requirement of Ruling Paragraph 3 above. The compliance letter shall state the date(s) notices were sent to customers and the approximate number of customers so notified, and attaching one copy of the actual notice used. 5. Any party that desires expedited or daily transcripts should advise the Chief Hearing Reporter by telephone at (415) 703-2288 no later than three days prior to the first day of hearings.

To: 86464@WCTOPICS.djnr.com cc: Subject: Utilities, Electric: Deregulation: California Utility Woes Attract National Attention

California Utility Woes Attract National Attention UTILITY BUSINESS STAFF ? 09/30/2000 Utility Business Copyright 2000 by Intertec Publishing Corporation, a PRIMEDIA Company. All rights reserved.

California is fast becoming the symbol for problems that can develop when the electric utility industry is deregulated.

Since becoming the first state to deregulate its retail market, California has had several power shortages this summer in which consumers were hit with skyrocketing electric rates. In San Diego, rates doubled and even quadrupled in the last two months. There's so much public backlash that members of Congress from California will hold hearings this month to examine the problem.

Trade groups that represent the utility companies and public power organizations say deregulation is not at fault, but rather the specific way in which California opened its markets without accounting for supply and demand. They say there's not enough power generation to meet demand.

The state hasn't built any power plants for at least 10 years, in large part because of the resistance utilities face from environmentalists concerned about siting locations.

The National Energy Marketers Association, which represents wholesale and retail energy marketers, warned that suggestions about placing price caps for wholesale power markets would backfire. Instead, the group says Congress and states should eliminate regulations that harm competition in wholesale and retail power markets.

The group says the problem has been exacerbated by policies that increase the risk to build new power plants and a lack of uniformity for operating procedures and other requirements.

California's utility problems have also become an issue in the presidential campaign. Green Party candidate Ralph Nader has called on the state legislature and Gov. Gray Davis to pass a rate rollback law that doesn't include a balloon payment to compensate utilities for the money they would lose during a rate decrease.

"Electricity deregulation really brings about a collision of interests," Nader said. "It pits the interests of consumers - who are often unorganized and lack power against the interests of suppliers who are usually very organized, powerful and have a lot of money behind them. It shouldn't be that way."

Energy Issues Divide Bush, Gore

For the first time in 20 years, energy issues could emerge as a major issue in the presidential campaign. Both major candidates are trying to use the issue to their advantage.

The Democrats argue that Texas Gov. George W. Bush and running mate Dick Cheney - who are well-known figures in the oil industry - are in the back pockets of oil companies that have lobbied to drill on more public lands.

Republicans have criticized Vice President Gore for failing to develop a plan to address the country's long-term energy needs. The Republicans say that Gore and his running mate Joseph Lieberman are more concerned about winning the support of environmentalists than they are in developing an energy policy.

Gore and Lieberman support the development of alternative energy sources and tax credits for energy-efficient vehicles. They also have promised to block energy companies from drilling for oil or natural gas in the Arctic National Wildlife Refuge in Alaska or along the coasts of California and Florida.

Bush and Cheney favor increased domestic oil production to reduce U.S. dependence on foreign oil. Bush says he backs the moratorium on new drilling in Florida and California, but supports oil exploration in the Arctic refuge.

Both Gore and Bush support new federal regulations that would require lower sulfur levels in gasoline and cleaner engines in cars.

File	dasovich-j/sent_items/185.

Dan. You might want to amend. The decision puts everyone on notice that t= he Commission is going to consider taking it back to July 1---no info on wh= at the decision process would be. =20 Best, Jeff

-----Original Message-----

From: Dan Douglass [mailto:douglass@energyattorney.com] Sent: Thursday, September 20, 2001 2:34 PM To: ARM Cc: Vicki Sandler; Tamara Johnson; Mara, Susan; Steve Huhman; Roger Pelote;= Rob Nichol; Randy Hickok; Nam Nguyen; Jim Crossen; Dasovich, Jeff; Janie M= ollon; Jack Pigott; Greg Blue; George Vaughn; Gary Ackerman; Ed Cazalet; De= nice Cazalet Purdum; Curtis Kebler; Curt Hatton; Corby Gardiner; Charles Mi= essner; Carolyn Baker; Bill Ross; Karen Shea; Max Bulk Subject: DA Suspended, but NOT retroactively

The Commission has just voted 3-2 to approve the draft ALJ Barnett decision= , modified to be prospective only. There is NO retroactive suspension. =20

Carl Wood introduced the ALJ's draft decision, with a diatribe against dire= ct access. He said that DA is a subsidy from less attractive customers to = large customers and an example of the saying that, "big dogs eat first and = big dogs eat best." He added that most comments advocated delay of suspens= ion and no retroactivity. He said he "finds it hard to consider these comm= ents to be anything but misleading and disingenuous." He added that, "Smal= l consumers effectively have no options." He said retroactivity will be th= e subject of further review, although it was not clear what this meant. Wi= thin 14 days, the UDCs must inform the Energy Division of steps taken not t= o accept DASRs for contracts entered into after 9/20/01. He said that dire= ct access is half of the failed deregulation process; the other half was op= ening ourselves up to the erratic wholesale market. He said that supporter= s of DA engage in "hollow rhetoric." The market has failed in the state, a= nd, "We need to put an end to the lack of social responsibility in the elec= tric market."

He concluded that several commenters had indicated that direct access was a= way for making green power available to residential customers. He respond= ed that this just means other customers are getting more dirty coal-fired p= ower. He concluded that advocates of direct access make a "fraudulent clai= m of customer choice." <?xml:namespace prefix =3D o ns =3D "urn:schemas-mic= rosoft-com:office:office" />

Commissioner Bilas then spoke for his alternate, responding to Wood. He sa= id he had learned how to count, and he can count to three. He then briefl= y summarized his alternate. First, he expressed disappointment in the Sacra= mento

process and the fact that they had not yet done something to rescue direct access. Second, he indicated his view of DA was a lot different from that of other people. He said he had always opposed the AB 1890 provision that instituted the UDC buy-sell arrangement, saying that it eliminated the largest customers from direct access. Commissioner Duque then spoke briefly to indicate his support for the Bilas alternate draft decision and his strong support for direct access.=20

Commissioner Brown said first, "In the weight of these sad times we must obey. We are paying the price of the severe energy crisis which occurred last year and the extraordinary means that were used to resolve it." In an ordinary market, he thinks DA is good, but there is no way it can coexist with the State's \$22 billion worth of bonds. Therefore, there is no question that it has to be suspended. "We probably should have done so months ago, in order to avoid a last-minute stampede." There is an inequity between customers that have moved to opt for direct access and those who have not. But sometimes "you don't have a lot of good choices, and this is one of those times." "If future legislation comes forward, and we hope that it would, the Commission will attempt to revise this action. =20

President Lynch noted the State Senate leadership has written asking for a study to be delivered by 1/1/02 as to how DA can be maintained without bias to ratepayers and she supported this action.=20

Bilas and Duque indicated they will both file dissents.=20

In conclusion, we have prevailed in our opposition to retroactive direct access suspension. We now need to consider whether we want to contest the suspension itself, on legal/procedural grounds.

Dan =20 Law Offices of Daniel W. Douglass 5959 Topanga Canyon Blvd. Suite 244 Woodland Hills, CA 91367 Tel: (818) 596-2201 Fax: (818) 346-6502 douglass@energyattorney.com <mailto:douglass@energyattorney.com>

To: 86464@WCTOPICS.djnr.com cc: Subject: Utilities, Electric: Deregulation: Temecula, Calif., Forms Committee to Study Electric ...

Temecula, Calif., Forms Committee to Study Electric Deregulation Dave Downey ? 10/06/2000 KRTBN Knight-Ridder Tribune Business News: North County Times - Escondido, California Copyright (C) 2000 KRTBN Knight Ridder Tribune Business News; Source: World Reporter (TM)

TEMECULA, Calif.--Shocked by San Diego County's experience with skyrocketing electric rates this past summer, the City Council has formed a committee to study ways of shielding Temecula residents from similar jolts when the deregulation wave washes into Riverside County in a couple of years.

The council appointed colleagues Jeff Comerchero and Mike Naggar to serve on the electric needs committee, scheduled to hold its first meeting later this month.

"Deregulation is something that is supposed to be friendly to customers," said Mayor Jeff Stone.

It turned out to be anything but these past few months as temperatures soared, sending demand for electricity to power air conditioners and monthly electric bills for neighbors to the south through the roof. The rest of the state watched in amazement as the 1.2 million customers of San Diego Gas&Electric sweated through a long, hot summer, serving essentially as California's guinea pigs in the statewide experiment with electric deregulation. They were the first to feel the

effects of wildly fluctuating wholesale rates passed directly on to customers.

"We're concerned that deregulation may have that sort of effect on Temecula and our residents, and we would like to try to avoid Temecula residents getting a double or triple bump on their bills," Naggar said.

"The electric deregulation took San Diego officials by surprise," he said. "They were asleep. We now know what can happen, and we don't want to be caught asleep."

One of the things the committee will look into is whether it would make sense for Temecula to try to contract with an electric provider to bring in relatively cheap power for its 54,000 residents. The area is served by Southern California Edison.

San Marcos and Chula Vista have held talks with the Enron Corp. about the possibility of providing power to their residents to hold down rates. Those cities are studying the experience of Palm Springs, which in 1997 contracted with Portland Gas and Electric to provide residents with a flat rate for electricity for five years.

Whether such an arrangement would work for Temecula is anyone's guess, Naggar said.

"If it turns out we can't do anything, at least we've gotten everybody's attention," he said.

Naggar said the council has yet to form a committee charged with monitoring San Diego Gas&Electric's proposal to string new lines across huge metal towers through Southwest County, to relieve San Diego's electric rate explosion. Cities and communities throughout Southwest County have rallied against the project, saying they don't want the visual blight and perceived health threat from having fat power lines buzzing 150 feet overhead.

The San Diego-based utility is expected to name a preferred route soon.

"I get about five or six e-mails a day on the preferred route subject," Naggar said. "It is a hot, hot, hot issue. But there is nothing for us to do until they make a move. If they decide to go down the middle of Temecula, I can assure you we'll make a move. If they decide to go through the (Santa Rosa) Plateau, I can assure you we'll discuss it."

Temecula council members have been unanimously opposed to bringing new power lines through, or near, the city since the project was unveiled about two months ago. And, in September, City Manager Shawn Nelson sent off a letter to the utility expressing the city's opposition to routes through the pristine hills of De Luz to the west and the verdant Wine Country to the east as well.

Enron Energy Services

From: Marty Sunde 06/14/2001 08:05 PM Phone No: 713-853-7797

To: Kevin Keeney/HOU/EES@EES cc: Lamar Frazier/HOU/EES@EES Subject: Re: Core/Non-Core - California

Kevin, You may want to connect with Jeff Dasovich re: his belief on the three most likely alternatives for the exit fee issue and the probabilities of each. Mike Day, Dasovich will have the most current info. Lets see if we can't get this info quickly.

Thanks ----- Forwarded by Marty Sunde/HOU/EES on 06/14/2001 08:04 PM ----- From: Harry Kingerski@ENRON on 06/12/2001 11:09 AM To: Marty Sunde/HOU/EES@EES cc: Dennis Benevides/HOU/EES@EES, James D Steffes/NA/Enron@ENRON, Kevin Keeney/HOU/EES@EES, Lamar Frazier/HOU/EES@EES, Scott Stoness/HOU/EES@EES, Jeremy Blachman/HOU/EES@EES, Richard Shapiro/NA/Enron@Enron Subject: Re: Core/Non-Core - California

Marty - the latest -

2 Direct Access bills (Bowen, Kelly) are still on the table. Have not changed much since my earlier e-mail to you, except that Bowen bill now includes a fee to the alternate provider when a customer is "involuntarily returned" to the utility. Language is attached.

- SB 27xx - mockup.doc

Right now, this legislation is awaiting the outcome of negotiations involving SCE and other parties (Jeff Dasovich is our rep). Speaker Hertzberg and Senator Burton both have endorsed these negotiations and promised to support agreements the parties reach. Jeff tells me this morning they are getting close to agreement on core/non-core and direct access issues but there are still major stumbling blocks, mostly surrounding the going forward DWR costs and contracts, and the issuance of bonds to pay for them. The bond guys see direct access as possible undermining the bonds. If or once agreement is reached, the expectation is that enabling legislation would be crafted that would apply California-wide.

The general structure in the SCE discussion is this - By Jan 1, '03, 500 kW+ customers decide to go to market or stay with utility for a long (5 yrs+) period. Re-entry from market would be with up to 12 month notice and could require customer to pay spot market price under utility default. 20-500 kw customers would have voluntary direct access. Under 20 kw customers would have green-only voluntary direct access. Recovery for past undercollections is being negotiated, but will likely require large customers (20 kw+) to pay a disproportionate share of the costs.

This may be less than definitive, but as usual, the situation is fluid. Marty and Jeremy, are you available for a Wednesday morning call with Jeff Dasovich?

Also, just in case you didn't hear, the Commission is scheduled to vote on Thursday the 14th on an order that would suspend direct access under the AB1x. The expectation is that the vote will be delayed. Best information says there are not enough votes to approve direct access suspension.

Marty Sunde@EES 06/12/2001 09:29 AM

To: Harry Kingerski/NA/Enron@Enron cc: James D Steffes/NA/Enron@Enron, Kevin Keeney/HOU/EES@EES, Lamar Frazier/HOU/EES@EES, Scott Stoness/HOU/EES@EES, Dennis Benevides/HOU/EES@EES Subject: Core/Non-Core - California

Harry (or anyone else that might know), Can you help me understand what has gone on in the last week re:

1) definitive view of exit fees and how they will be administered. What is the probability of one proposed approach vs. others?

2) definitive view of core / non core decisions? when are they coming? How might they influence our actions with the existing contracts. Probability of one proposal passing and when? ----- Forwarded by Marty Sunde/HOU/EES on 06/12/2001 09:13 AM -----

David W Delaine 06/11/2001 06:02 PM To: Lamar Frazier/HOU/EES@EES, Marcus Dotson/HOU/EES@EES, Marty Sunde/HOU/EES@EES, Gayle W Muench/HOU/EES@EES, Don Black/HOU/EES@EES, Jeff Richter/HOU/ECT, Sean A Holmes/HOU/EES@EES, James M Wood/HOU/EES@EES, Richard L Zdunkewicz/HOU/EES@EES, Greg Sharp/HOU/EES@EES, Scott Gahn/HOU/EES@EES, Jeremy Blachman/HOU/EES@EES cc: Janet R Dietrich/HOU/EES@EES Subject: Core/Non-Core - California

Guys, I assume that we are managing all new and old California contracts with this potential issue in mind. This plus the exit fees could be a significant issue. Let me know if we need a broader discussion.

Regards Delaine

RE: Nov. 13 UC summit conference on electricity

Sender	lfried@uclink4.berkeley.edu
Recipients	['jdasovic@enron.com; tim.belden@enron.com', 'jeff.dasovich@enron.com']
File	dasovich-j/all_documents/2132.

Thanks Jeff. I really hope that he agrees. I would think Enron would surely want to be represented and to make sure its viewpoints are aired, and I know everyone else feels it is important to learn from this. I just learned that John Fielder, SCE's Senior Vice President for Regulatory Policy and Affairs, is confirmed as a panelist.

We are awaiting word from you on the sponsorship, and won't say anything until you can tell us what.

Best, Lee

-----Original Message-----

From: Jeff.Dasovich@enron.com [mailto:Jeff.Dasovich@enron.com] Sent: Friday, October 06, 2000 10:10 AM To: Lee S. Friedman Cc: jdasovic@enron.com; tim.belden@enron.com Subject: Re: Nov. 13 UC summit conference on electricity

Lee: I'm not certain that it will be possible to get Skilling, but I'll get back to you soon. Also, I want to manage expectations a bit about the possibility of having Enron stream the conference. Just don't want us to get ahead of ourselves. I'd prefer that it not go out in any announcement at this juncture. Thanks a bunch.

Best, Jeff

"Lee S. Friedman" <lfried@uclink4.ber To: "Tim Belden" <tim.belden@enron.com>, "Jeff Dasovich" <jeff.dasovich@ucsf.edu>
<jdasovic@enron.com> cc: 10/04/2000 05:52 PM Subject: Nov. 13 UC summit conference on electricity

Jeff and Tim,

Tim, I know Jeff knows all about the conference we are organizing and I hope you do as well.

Rob, I and the rest of the conference organizers are wondering if you could help us find out if Jeff Skilling from Enron would be willing to be one of our panelists? He has been an articulate critic of the current state of our electricity markets, and we definitely would like the genco perspective represented.

Naturally we are hoping to get a quick answer because our publicity about the conference will be going out shortly.

A brief description of the conference is appended below. Please let me know if you need any additional information.

Thanks very much for your help and advice. Lee

The summer of San Diego has prompted the School, in collaboration with UC's Energy Institute and Competition Policy Center, to sponsor a high-level summit conference on electricity deregulation. The focus, and the audience, will be national, but heavily informed and influenced by the California crisis. The conference will evaluate (1) the wisdom of deregulation and (2) how the pitfalls encountered so far can be avoided and remedied. The University will facilitate an open, honest and reasoned exchange between executive-level players from various perspectives: industry, regulators, consumers, legislators, academics, and market and system operators.

The format entails two roundtable discussions with six speakers and a moderator. During the panel sessions, the speakers will engage in a debate/dialogue on the current situation in electricity deregulation, where we have come from, what the future holds, and what solutions lie on the horizon. Each speaker will have uninterrupted time to speak, followed by Q&A and discussion. We expect a live audience of about 200, including a large press presence. One sponsor has tentatively offered to provide internet streaming video services. We hope to have a balanced group of sponsors ranging from the American Public Power Association to energy companies.

The speakers are being arranged at this time. We have commitments from: Loretta Lynch (Chair, CPUC), and PJM CEO Phil Harris. We have a preliminary acceptance from Steven Littlechild (England's former primary electricity regulator) and Laura Tyson (former Chair, President's Council of Economic Advisors and National Economic Council, currently Dean, Haas School of Business). We have invited FERC Commissioner Curt Hebert, and U.S. Representative Edward Markey, executive-level managers from several energy companies and state legislators. Former DOJ chief economist Carl Shapiro will be on one of the panels, as will economist Severin Borenstein, Director of UCEI and Professor of Business and Public Policy. Michael Florio from The Utility Reform Network (TURN) will be a consumer advocate on one of the panels. Lee Friedman, economist and Professor of Public Policy, will briefly provide an introduction to the panel discussions with his talk "Lighting the Stage: The Electricity of Deregulation."

A dinner for the panelists and organizers will be hosted at UC's Goldman School of Public Policy following the conference proceedings. We have reserved rooms for our speakers at Berkeley's landmark Claremont Hotel. We can reimburse those speakers who request it for coach airfare expenses and other ordinary local expenses.

For further information, please contact: Lee S. Friedman Professor of Public Policy Goldman School of Public Policy University of California 2607 Hearst Avenue Berkeley, CA 94720-7320 Ph: (510) 642-7513 Fax: (510) 643-9657 email: lfried@uclink4.berkeley.edu

Position Development	
Sender	mona.petrochko@enron.com
Recipients	['james.wood@enron.com', 'west.ga@enron.com', 'douglas.condon@enron.com', 'martin.wenzel@enron.com']
File	dasovich-j/all_documents/1466.

The Commission has opened an investigation, which we are still awaiting some indication about its scope, however it is likely to ask questions about how we can "fix" California's retail markets.

Contained below are some questions that a coalition that we participate in has formulated. I would like to start developing our position relative to those questions (ie. default provider, what product should the utility offer, etc.)

I am happy to take a first stab at responses to the following and circulate for comment, to get things started. In the meantime, if anyone has any thoughts about these questions, it would be appreciated. Thanks.

Mona

----- Forwarded by Mona L Petrochko/SFO/EES on 09/14/2000

05:37 PM -----

"Leslie, John" <jleslie@LUCe.com>@LUCe.com> on 09/07/2000 06:22:56 PM Sent by: "Johnson, Roseann" <RJohnson@LUCe.com> To: "ARM Members (E-mail)" <ARM@phaser.com>, "Leslie, John" <jleslie@LUCe.com> cc: Subject: CPUC I.00-08-002

To The ARM Group:

At today's ARM meeting, the Group members agreed that by next Friday, September 15, each company will develop a position on each of the questions enumerated below. The questions relate to the issues that have been raised in the CPUC's investigation in I.00-08-002. The Group's position on these issues will determine the basis for testimony and other submissions that may be made in that case and elsewhere.

The Group will meet for an all-day session on Friday, September 15 in San Francisco, at the offices of Luce, Forward at 121 Spear Street (Rincom Center 2), Suite 200. The meeting will begin at 9:00 a.m. The telephone number at the office is (415) 356-4600.

The questions (based upon my notes) are as follows:

1. Should default energy supply service be available to all customer classes?
2. Should the default provider be different from the provider of last resort (POLR), and should default service be different from POLR service?
3. Should default service be different for different customer classes (i.e. fixed price vs. spot price)?
4. How should default service be priced?
5. Should the default provider be allowed to offer more than one pricing option?
6. Should the default provider role remain with the utility?
7. If so, should there be rules about how the utility purchases supplies in the wholesale market (i.e. a predetermined portfolio of long- and short-term supplies)?

8. What reasonableness review procedures, if any, should apply to utility purchases? Should a PBR apply to utility procurement?

9. Should the utility bear the risk if purchase costs exceed a certain predetermined standard?

10. If the utility does not perform the default role, how will default service be provided by one or more third parties? Issues to be considered include: bid procedures; term; blocks of customers; more than one default supplier; how to allocate customers between default suppliers; how to deal with new customers; should the default supplier bear the risk for purchase costs that exceed some predetermined standard, or should there be a reasonableness review process; consumer protection standards; qualifications to participate as a default supplier.

11. How should the utility's procurement function be separated from the utility's transmission/distribution function? What costs should be unbundled from all customers' transmission/distribution rates in order to limit the utility to providing truly monopoly services/functions? Are there costs currently treated by the utility as "transmission" costs (e.g. RMR) that should be categorized as "procurement"?

12. Should the utility continue to perform the "gatekeeper" function (DASRs, customer switching, credit review)? If not, how should this function be performed?

13. How can the CPUC guarantee that all ESPs (and default providers) have equal access to the utility's essential monopoly facilities?

14. Should the CPUC establish uniform business standards and uniform operational practices for all utilities, as applied to all ESPs and default providers?

15. Should the CPUC change the marketing affiliate rules if the utility exits the merchant (procurement) function?

Please let me know if I have missed -- or mischaracterized -- any of the agreed up questions. I look forward to seeing you on Friday, September 15 in San Francisco.

-John

Appeals court declines to order energy price caps

Updated: May 29, 2001 - 12:22 p.m. SAN FRANCISCO -- A federal appeals court declined Tuesday to order federal energy regulators to cap wholesale electricity prices.

The decision by a three-judge panel of the 9th U.S. Circuit Court of Appeals came hours before California Gov. Gray Davis was to urge President Bush in Century City to cap wholesale power costs, which have been spiraling out of control.

The panel, in a brief statement, said last week's appeal by state Senate President John Burton and state Assembly Speaker Robert Hertzberg does not warrant "intervention of this court."

The lawmakers, both Democrats, were joined by the city of Oakland in their appeal to the 9th Circuit.

"The citizens of California are suffering immediate irreparable harm as a result of FERC's abrogation of its duty to establish just and reasonable rates for electricity," they wrote to the 9th Circuit, which has jurisdiction over FERC.

The lawmakers said California's looming threat of continued blackouts "are an imminent threat to the health, welfare and safety of every California citizen."

The suit came after more than a year of wholesale power prices reaching historically high levels. In December, prices in California reached \$200 per megawatt hour -- and they have skyrocketed to as much as \$1,900 per megawatt hour during peak times since then.

The Bush administration ardently opposes price caps and President Bush has declined Davis' requests to urge FERC to impose strict caps.

Vice President Dick Cheney, chief architect of the administration's energy plan, has said capping prices would not increase energy supplies or reduce demand.

"We get politicians who want to go out and blame somebody and allege there is some kind of conspiracy ... instead of dealing with the real issues," Cheney has said.

Cheney criticized Davis, a Democrat, for what he called a "harebrained scheme" to use the state's budget surplus to buy power because California's two largest utilities face enormous financial problems.

For the short term, the Bush administration has approved Davis' request to expedite permits for new power plants and has ordered federal facilities in California to reduce energy consumption 10 percent this summer.

Sacramento and the White House appear locked in a high-voltage war of rhetoric over energy policies. There is broad bipartisan dissatisfaction in Sacramento with Washington's response to California's energy crisis -- the result of its own 1996 deregulation rules.

Last month FERC did order a one-year cap on electricity sold into California during power emergencies, when power reserves fall below 7 1/2 percent. The agency did not set a price and also required the state to join a regional transmission organization, which could limit California's ability to control its own power grid.

Davis called the plan a "Trojan horse," and state power regulators dismissed the cap as inadequate, saying it would profit power generators at ratepayers' expense.

In addition, Davis and state lawmakers sharply criticized FERC for considering requiring the state's power grid operator to add a surcharge on power sales to pay generators the money they are owed by the state's two large financially strapped utilities.

The case is *Burton v. Federal Energy Regulatory Commission*, 01-70812.

Greg Lucas' long-awaited Chronicle story about DA ran this weekend ... ENERGY CRUNCH Direct access falls victim to crisis Power-buying plan's future is in doubt Bernadette Tansey, Greg Lucas, Chronicle Staff Writers Sunday, June 24, 2001 ,2001 San Francisco Chronicle URL: <http://www.sfgate.com/cgi-bin/article.cgi?f=/c/a/2001/06/24/MNL67535.DTL> The option to shop around for the best deal on electricity -- one of the cornerstones of California's deregulation plan -- could soon be scrapped. Businesses may lose the right to cut their own deals with private power suppliers, and environmentally conscious consumers could be barred from shifting their business from utilities to renewable energy firms, unless the Legislature acts quickly to save the program. The potential cost savings of so-called direct access to competing electricity providers was the plum that incited big businesses to fight hard for deregulation in 1996. But the program -- although it was not responsible for the soaring rates that piled up state and utility debt -- may be sacrificed in the state's drive to recoup its costs. The fate of the program was thrown into doubt last winter, when skyrocketing wholesale electricity costs collapsed the nascent direct access market, weakened the utilities and caused the state to take over power purchases. Industry has been lobbying hard since then to keep the option open for the future. But the problem for Gov. Gray Davis' administration is that the state needs big industrial consumers to stay on as utility customers to help pay off the \$8 billion it has already spent buying power and the estimated \$43 billion worth of power it has contracted to buy over the next 20 years. Otherwise, the utility customers left behind -- householders and small businesses -- will be stuck with the whole bill. Competing proposals to allow companies to bail out by paying an "exit fee" to cover a share of the cost are working their way through the Legislature. But time is running short, state Treasurer Philip Angelides warned the Legislature and the state Public Utilities Commission this month. The state plans to issue \$12.5 billion in bonds in September for power purchases, and officials say underwriters want to be assured that there is a large enough revenue stream to repay the bonds. Angelides and other state officials urged the Legislature and the PUC to decide by the end of June either to ban direct access or lock in a procedure to charge each departing company for its share of the state power costs. "The hypothetical and theoretical desires for a direct access market and the hypothetical and theoretical desire for a bond sale are now intersecting in reality," said Assemblyman Fred Keeley, D-Boulder Creek (Santa Cruz County). Industry advocates agree that firms should pay a fair share of the electricity purchased on their behalf. But how much -- and how to make that calculation -- is a complex issue they fear will be decided in haste, said Dorothy Rothrock, a lobbyist for the California Manufacturers and Technology Association. "We are reacting to crises, real or man-made, and making decisions in a rush without considering the consequences," Rothrock said. The PUC is set to vote Thursday on a proposed urgency measure to suspend direct access as of July 1. The ban recommended by a PUC administrative law judge would continue as long as the state functions as power buyer for utility customers -- conceivably through the term of state contracts ending in 2020. Lawmakers had authorized the PUC to suspend direct access last winter when the state took over electricity purchasing. But a divided PUC delayed action as legislators worked with industry to salvage the program. Although direct access contracts are still legal until the PUC acts, in effect the program was slammed into suspension by the brutal power price hikes of the past 18 months. Threatened by exposure to rising wholesale electricity rates, virtually all direct access customers have returned to the utilities, where they are protected by the state rate freeze. Even though the right to deal directly with generators has been on the books since 1996, few businesses or householders actually did it. Many of the residential customers who signed on with alternative suppliers did so to support the growth of renewable power like solar and wind energy. At its peak, the program drew about 224,000 households -- about 2.5 percent of the customer base of California's major utilities. About 13 percent of the industrial market contracted for their own power. Industry has until tomorrow to file plans with the PUC to preserve direct access under a proposal by public utilities Commissioner Richard Bilas, a strong supporter of the program. Commissioner Jeff Brown said he favors direct access, but the continuing uncertainty over the form it would take jeopardizes the state's ability to float its bonds. Commissioner Carl Wood, a direct access opponent, said it should be abolished, because it creates a danger that residential and small business customers will be stuck paying for relatively high-cost contracts secured by the state during the energy crisis, while large industries would be free to buy cheap power from the newer, more efficient plants that will be coming online in the next few years. But Wood said even if the PUC suspends the option, the state Legislature could order its reinstatement. Sen. Debra Bowen, D-Marina del Rey, is carrying a bill to do that while requiring the exit fees demanded by Angelides and state finance officials. Without those safeguards, utility revenues would dive into a "death spiral," where rates would keep rising as more companies abandoned the system, Bowen said, giving the remaining customers a deeper incentive to bail. State legislators are set to meet this week to start deciding how California's electricity market should be structured in the future. But deadlines to deal with the state's financial hangover are pushing decisions on direct access. Bowen said it's unlikely he

Consumer Outrage in California Al Senia ? 09/30/2000 Utility Business Copyright 2000 by Intertec Publishing Corporation, a PRIMEDIA Company. All rights reserved.

Sempra sits on the hot seat as California rides out the effects of its efforts at deregulation.

Wild fires have swept the western United States this year, but they are nothing like the fire storm over energy deregulation that has engulfed San Diego's Sempra Energy. By a quirk of business fate, the 1.2 million customers of Sempra's San Diego Gas&Electric division in July became the first to experience fully deregulated electricity rates in California. Electricity bills instantly doubled and tripled. The expectation was that deregulation would cause prices to drop, not spike. The resultant outcry threatens to derail the state's fledgling deregulation program and shape the future of deregulation nationally. It also situates Sempra squarely on the hot seat at a time when its profits are on the rise.

Does Sempra deserve to be in this position? Like many other deregulated utilities around the nation, Sempra is in the midst of transforming itself from a regulated utility business (SDG&E) to a broad-based energy company that offers a variety of value-added services. Under the direction of Sempra President and Chief Executive Officer Stephen L. Baum, that process has been especially robust. The company has launched a number of domestic and international strategic initiatives designed to accelerate earnings growth by an average of 8 percent to 10 percent annually and generate at least one-third of the earnings from unregulated businesses by 2003.

Baum, who became chairman this month, intends to change the focus of Sempra's overall business to cope with deregulation. He wants to further diversify the company, create a strong retail energy business, pursue selective international investments and capitalize on emerging technologies. "I want the company...to have a large and diverse customer base nationwide and worldwide in which we're moving from an asset-intensive business to a customer- and products- and risk-management-intensive business," says Baum.

So far, the strategy seems to be working - maybe a little too well. Profits soared 34 percent in the second quarter from \$82 million last year to \$110 million this year. One big contributor was the Sempra Energy trading subsidiary, which deals in electricity, natural gas and oil. Its profit soared in the second quarter this year to \$40 million from \$3 million in 1999. So far, so good, but the rosy revenues and profit propelled Sempra's San Diego Gas&Electric to become the first utility in the state to pay off all its bonds floated to pay for "stranded costs." These are expenses (such as past massive nuclear power plant investments) incurred in the previously regulated market that may not be fully recoverable in a competitive market. Those bond payoffs triggered the full force of the free market, since the artificial price caps on electricity prices, which were put into place as a transitional arrangement by the state legislature to make deregulation politically palatable, automatically expired with the bonds. Since California's deregulation law required the state's utilities to sell off their generation businesses and stick to delivering energy, SDG&E now buys its power in an open market through the California Power Exchange. That arrangement tends to favor large businesses that can more easily shop for their electricity supplies. With the bonds paid off, the Sempra division now passes the full cost of that power to its customers (California's other utilities are not expected to reach this point until 2002). And with the demand for power rising in the state while supplies fall short, the cost for Sempra customers is up. Way up. SDG&E is paying as much as 10 times the regular cost for electricity every time a summer heat wave hits.

Through its success, Sempra pushed the door open into a pure, deregulated market nearly two years before anyone in California expected it. What industry executives, politicians, consumer advocates and ratepayers quickly discovered is that

energy demand is rising, there aren't enough power plants to meet demand and prices are skyrocketing. Even with the higher prices, there may not be enough electricity to go around. So during hot spells, rolling one-hour energy blackouts throughout the state became a possibility for the first time since World War II. Sempra claims it's merely following the state's deregulation orders, but consumer advocates are outraged that the parent company (through its trading subsidiary) benefits from energy price volatility. They want some of the company profits to go back to SDGO to lower customer utility bills.

That isn't Sempra's (and the other state utility holding companies') only problem. Bill-burning protests are being organized in downtown San Diego. San Diego Mayor Susan Goldberg wants the state attorney general to probe whether there has been "collusion, price fixing or any other inappropriate behavior in the market price of electricity." The state legislature is being asked to consider reversing or postponing the deregulation effort. Some legislators have launched an effort to roll back utility rates. The architect of the deregulation law is under fire for alleged close ties to the utility companies. State Public Utility Commission member Carl Wood calls deregulation a mistake and accuses unnamed power players of profiteering at the consumer's expense.

Even California Gov. Gray Davis has gotten critical. "Californians are willing to pay their fair share of the cost for a reliable supply of electricity, but I believe the current situation is unjust and totally unacceptable," Davis says. He successfully pushed the Federal Energy Regulatory Commission to investigate wholesale energy prices in the western United States, believing it would lead to short-term federal price controls. The governor also proposed a plan in mid-August to the Public Utility Commission that would average consumers' bills over a 12-month period to make monthly statements predictable. He says deregulation can work, but not until supply and demand come into balance and "until electricity generators act responsibly." It's no wonder Davis wants the feds involved - the state doesn't have much power over power anymore now that deregulation has become state law.

Despite Davis' hopes, a supply balance isn't likely to return to California anytime soon. The state's last major power plant, a nuclear facility at Diablo Canyon, went online 15 years ago. Since then, the state's population has grown by 8 million, and 3.5 million new jobs have been created. Four new plants are under construction, but that isn't enough to meet escalating demand, and the first plant won't come online for a year. Meanwhile, market uncertainty - and increasing calls for reregulation - aren't doing much to attract new power plant investment. Reliant Energy Inc., for example, has backed off a plan to build a plant in Barstow, Calif. Calpine Corp. wants to build a power plant in San Jose, the center of Silicon Valley, but the effort is strongly opposed by local businesses and residents. A 700-megawatt plant proposed for a desert area is mired down in a regulatory morass. However, Duke Energy North Ame

California Electric Utility Seeks to Recoup Costs from Customers Rick Burnham ? 09/27/2000 KRTBN Knight-Ridder Tribune Business News: The Press-Enterprise - Riverside, California Copyright (C) 2000 KRTBN Knight Ridder Tribune Business News; Source: World Reporter (TM)

Southern California Edison is asking state regulators for permission to charge customers for its soaring wholesale electricity costs -- a bill of nearly \$2 billion and growing.

Under the 1996 legislation that deregulated the state's electricity industry, rates are frozen for the residential and small business customers of Southern California Edison and Pacific Gas&Electric until March 31, 2002 or until the utilities pay off their "stranded assets," investments made in nuclear power plants and other obligations.

That has left the utilities to pay the difference between the frozen rate and this summer's skyrocketing market rates.

As of Aug. 31, the difference -- known as an undercollection -- amounts to \$1.97 billion for Edison, the company said Tuesday.

Not all details have been worked out, but Edison will file a request later this week with the state Public Utilities Commission asking for permission to recoup their unpaid electricity costs after the rate freeze ends, said Jim Scalacci, its chief financial officer.

Edison officials couldn't say how much the extra cost would add to the typical Edison residential customer's bill. But if the current \$1.97 billion in undercollections were sought all at once as a rate increase, it would raise rates more than 20 percent, Scilacci said.

"Of course we would not propose that," Scilacci said. "We would span it over a period of time."

Instead, the utility will make another filing to regulators later this year for a "rate stabilization plan" that would include a rate increase and a mechanism to recover its undercollections over a period of time, Scalacci said.

The utility said it also would consider other options -- including a lawsuit -- to recoup the costs.

Sempra Energy, parent of San Diego Gas&Electric, paid off its stranded assets more than a year ago, allowing it to pass through the full cost of electricity to its customers.

That resulted in SDGOaverage monthly residential bills skyrocketing from \$40 to \$68 to \$130 in less than three months this summer. After an outcry from SDGOcustomers, area politicians and consumer groups, the state legislature in August capped SDGOresidential rates to a maximum of \$68 a month.

The deregulated electricity market does not affect customers of municipal utilities, such as those in the cities of Riverside, Colton, Banning and Los Angeles.

Under the deregulation law, the investor-owned utilities are able to recover undercollections from future positive revenues until they recover all stranded costs or the March 31, 2002 deadline.

Edison believes it already has amassed enough credits through the pending sale of power plants and the valuation of its hydroelectric properties to offset its \$1.3 billion in stranded assets.

But so far, the PUC has denied requests from the utilities to regain their uncovered costs after the rate freeze ends. Regulators also have prohibited the utilities from continuing to collect the charge to offset stranded costs.

Pacific Gas&Electric appealed the PUC's denial, but the California Court of Appeal denied its petition for review. The case is being appealed to the state Supreme Court.

Edison believes the PUC -- in refusing to allow the utilities to recoup undercollections past the 2002 deadline -- is misinterpreting California's electricity restructuring law.

"That law placed California electric utility companies at risk for recovery of their stranded costs, but did not place them at risk for recovery of the costs of procuring electricity for customers," Edison said in a filing with the Securities and Exchange Commission.

PUC President Loretta Lynch said she recognized that the utilities are hurting. But Lynch said the ultimate answer isn't to expect consumers to foot the entire bill.

The action by the utilities also appears to presume that California's electricity woes will continue, leaving them no way to recoup their costs in the future, Lynch said.

"The presumption that the market will stay out of whack the next two years is incorrect," Lynch said. "I would hope the federal government will do something (about addressing the wholesale electricity market)," she said.

Lynch said regulators will take a look at the total utility picture -- including the revenue utilities continue to make from generating power. "We'll be asking for the revenue side as well as the expense side," she said.

PUC commissioner Carl Wood, a former Riverside resident, said Tuesday that he thinks it's unreasonable to assume that just because Edison is making the request that it will be approved.

Wood said this summer's higher electricity rates have been caused at least in part by a dysfunctional market and what he calls "unconscionable pricing."

"Edison ought to focus on getting money back from the generators and suppliers ...," Wood said.

Meanwhile, consumer advocates in San Diego and San Francisco requested that candidates for state or federal office sign a Ratepayer Protection Pledge to protect consumers from "unfair and unreasonable electric rates."

The pledge, developed by TURN (The Utility Reform Network), The Foundation for Taxpayer and Consumer Rights and Consumers Union, was mailed to all candidates Tuesday.

"Utility-style deregulation has obviously failed, and lawmakers must act now to prevent the entire state from being thrown into a financial crisis," said Nettie Hoge, executive director of San Francisco-based TURN.

The consumer groups said that if politicians sign the pledge, they commit to oppose any legislation or efforts to force ratepayers to pay Edison, PGOor SDGOretrospectively for this summer's high wholesale energy costs. They also would agree to "not allow for rate increases for PGOor Edison ratepayers during the rate freeze period and beyond until such time as rates are just and reasonable."

TURN and FTCR said they will post a list of all candidates and their position on the pledge on their Web sites (www.turn.org) and (www.consumerwatchdog.org).

California Governor Contemplates Bill to Reduce Electricity Prices Janet Lavelle ? 09/29/2000 KRTBN Knight-Ridder Tribune Business News: North County Times - Escondido, California Copyright (C) 2000 KRTBN Knight Ridder Tribune Business News; Source: World Reporter (TM)

A bill that could give a \$150 million bailout to San Diego Gas & Electric Co.'s 1.2 million customers if they're hit with high electric bills in a couple of years is awaiting Gov. Gray Davis' signature.

Davis has until midnight Saturday to decide the fate of Assembly Bill 1156, the only one of a trio of bills the governor hasn't signed that were designed to cut electricity rates for SDGOCustomers faced with skyrocketing power bills in the summer.

SDGOCustomers saw their electric bills double and sometimes triple between June and August as soaring wholesale electricity rates were passed on to them.

Two years ago, San Diego became the first region in California to fall under a new electricity deregulation law, and the summer's wildly fluctuating wholesale power market was an unanticipated outcome.

Three weeks ago, Davis signed Assembly Bill 265, which capped retail electric rates SDGOcould charge its customers at 6.5 cents per kilowatt hour, retroactive to June 1 and extending to January 2002.

The rate cap rescues SDGOCustomers, at least temporarily, from paying the wholesale price that soared as high as 19 cents per kilowatt hour this summer.

Davis also signed Assembly Bill 970, which shortened the construction permitting process for some new power plants.

The third bill, AB 1156, now on the governor's desk, would set aside \$150 million in state funds to protect SDGOCustomers from high electric bills after the rate cap ends.

The money would be used so ratepayers won't be solely responsible for paying down any debt SDGOincurs if the company has to buy wholesale power at a higher rate than the 6.5 cents it can charge its customers.

The three bills were passed in the final hours of the Legislature's chaotic session and only after long days of deal-making between Democrats and Republicans.

Davis quickly signed the first two bills but set aside AB 1156, which Republican lawmakers had demanded in return for their votes in favor of the rate cap Democrats wanted.

When AB 1156 was written a month ago, the governor told some lawmakers he wouldn't sign it. Since then, Davis has been tight-lipped on the issue.

Only the governor's veto can kill AB 1156, though. It will become law if Davis either signs the bill or leaves it unsigned.

"I don't know what he's going to do, but if he were going to sign it, he would have done it by now because he's signed the other two bills," said Sen. David Kelley, R-Idyllwild. Kelley co-sponsored the bill in the Senate.

Kelley said he suspected the governor is considering vetoing the bill because it would set a precedent for 2003, when Pacific Gas&Electric and Southern California Edison Co. fall under the deregulation law and start charging their customers market electricity rates.

"I haven't heard anything," said Assemblywoman Denise Ducheny, D-National City, the author of the bill.

Ducheny said representatives from Pacific Gas&Electric and Southern California Edison were in the Capitol on Wednesday, and she agreed with Kelley that the governor is probably weighing whether he wants to set a precedent.

"I still think it's right to give people a safety net and assure them the state is willing to help so the rates don't adversely effect the economy," Ducheny said.

"I hope the governor does decide to sign the bill," Sempra Energy President Stephen Baum said Thursday. Sempra Energy is the parent company of SDG&E.

Baum opposes the 6.5-cent cap and said the company will have to borrow money to pay the difference between retail and wholesale prices.

His company estimates a so-called "balancing account" that tracks the cost will reach \$300 million into the red by the end of November and could be \$600 million by January 2002.

Baum blamed the wildly fluctuating wholesale prices on a badly written electrical deregulation law the Legislature unanimously approved in 1996. He said it was reasonable to expect the state to share in the resulting costs.

As he has done repeatedly in the past few weeks, Baum said he regretted not signing long-term contracts with electricity suppliers to lock in lower prices. He said he expects that the Public Utility Commission may force his company to absorb

some of any debt because of its failure to sign a contract.

"I think he'll veto it; it's a dumb law," consumer advocate Michael Shames said. "And the only ones who support it are Semptra and the Republicans."

His organization, Utility Consumers' Action Network, considers the bailout "premature."

No one knows how much money SDGO may owe once the rate cap is lifted, and Shames thinks it won't be much.

"I liken (AB 1156) to getting a check from the insurance company before the estimators come out to calculate the cost of the damage," Shames said.

Shames said SDGO could end up with little owing in its balancing account because some of the expenses will be offset by revenues the company makes selling power from San Onofre Nuclear Generating Station.

Reliant Energy has offered SDGO a two-year contract to buy electricity at 5.6 cents, Shames noted.

"If SDGO signed the contract, the balancing account wouldn't grow," he said.

Staff writer Dan McSwain contributed to this story.

Subject: RE: Legislative Report (07/20/2001)

Dear all,

Attached is this week's legislative report.

This entire week has been focused on devising a "solution" for the energy crisis in addition to negotiating the passage of the state budget. Although the Democratic leadership of the Assembly and the Governor successfully lobbied four Assembly Republican lawmakers to switch sides and vote for the budget on Monday, the four Republicans have refused to vote for five crucial "trailer" bills which are necessary to implement the budget bill. There are approximately 18 trailer bills that must be passed in addition to the budget bill, but 5 have raised concerns for the Republicans: SB 767 Transportation Funding Shift, SB 735 Elimination of School Facility Fee Housing Programs, SB 1041 Omnibus Health Trailer Bill, AB 144 Public Social Services and SB 79 Omnibus Social Services Trailer bill. Senate President pro Tempore John Burton has stated that they will not vote on the budget bill in the Senate until the trailer bills are approved by the Assembly. As of 7:00 p.m. tonight, there is no budget deal.

Meanwhile, on the energy front, the four proposals we have been discussing all week -- SB 18xx (Burton), SB 78xx (Polanco), AB 82xx (Keeley) and AB 83xx (Wright) -- are still "in play" legislatively this evening, even though the governor told the Dow Jones Newswire earlier today that the proposals are not acceptable to him in their current form and encouraged the Assembly and Senate to stay in session (despite the scheduled summer break) until a bill acceptable to him could be agreed upon by the two houses and sent to him for signature:

* SB 78xx (Polanco) Electric Utility Rate Stabilization Act of 2001 passed out of the full Senate on Friday with 22 AYES and 17 NOES. The originally introduced version of SB 78xx reflected the terms of the original Memorandum of Understanding ("MOU") negotiated between Governor Davis and Southern California Edison ("Edison"). It was recently amended to reflect Senator Sher's proposed "Plan B" of the MOU -- a version of the MOU opposed by Edison on the grounds that the bill would not leave Edison creditworthy. It was heard in the Senate Energy, Utilities and Communications Committee on Wednesday where it failed on a 4 AYES and 3 NOES vote. Reconsideration was granted, however, and the bill passed out of the committee with 6 AYES and 2 NOES on Thursday morning. The authors took up amendments such as striking the urgency clause, changing the rate component from 125 KWs to 500 KWs, placing conservation lands into land trusts and deleting Section 399.26 (which insulated Edison International from certain claims) during the Thursday hearing. SB 78xx was then passed out of the Senate Appropriations Committee on Thursday with 7 AYES and 3 NOES.

* SB 18xx (Burton) Department of Water Resources: electricity: bond financing order passed out of the full Senate on Friday with 35 AYES and 2 NOES, making it possible for DWR to issue bonds at a lower, cheaper rate than allotted in AB 1x (Keeley) assuming the Assembly concurs and the bill is signed by Governor Davis. The bill also prohibits any additional charges such as consultants and ad campaigns unless approved by the Legislature and requires certain "sunshine" provisions for greater scrutiny of contracts entered to by the DWR. We understand that J.P. Morgan and Lehman Brothers -- the firms working with State Treasurer Angelides on the bond offering -- have advised the governor's office that SB 18xx could delay the issuance of the bonds indefinitely for a variety of reasons, so it is unclear whether this bill will ever be signed. The bill was heard by the Senate Energy, Utilities and Communications Committee on Thursday where it passed

with a 10 AYES and 0 NOES vote. It next must be heard in the Assembly.

* AB 82xx (Keeley) Electric Utility Rate Stabilization Act of 2001 passed out of Assembly Energy Costs and Availability Committee Wednesday evening on a 11 AYES and 9 NOES vote. It was then heard later the same evening by the Assembly Appropriations Committee, where it was passed on a 11 AYES and 6 NOES vote. This is the "compromise" bill we have been discussing all week authored by Speaker Hertzberg and Assembly Member Fred Keeley. The bill continues to be a work in progress as we write this report, with significant amendments being considered and awaiting a vote by the full Assembly, possibly later this evening. The current version of the bill provides for limited

Legislative Weekly July 26, 2001 Issue 30, Volume 3 A weekly publication from the California Manufacturers & Technology Association detailing legislative and regulatory developments in Sacramento

GOVERNOR SIGNS BUDGET The 2001-02 Budget passed by the Legislature was signed by the Governor this afternoon, July 26. The amount of the total Budget is approximately \$102 billion, of which, about \$79 billion is the general fund, the balance is special funds. The bulk of General Fund spending is allocated approximately as follows: \$33 billion K-12 Education \$22 billion Health and Human Services \$10 billion Higher Education \$5 billion Youth and Adult Correctional

The balance is spent on expenses attributable to programs relating to business, transportation and housing, state and consumer services, environmental protection, to the courts and to tax relief. In addition, Health and Human Services receive the largest portion of special funds. Tax relief, in the version passed by the Legislature, was very insignificant, the lion's share was \$75 million for assistance to low income seniors and disabled persons. A total of about \$39 million was to go to sales/use tax exemptions for purchases of: liquefied petroleum used for residential or harvesting use (6.9 million) diesel fuel used for agriculture or food processing (11.4 million) farming equipment (18.4 million) timber equipment (1.7 million) racehorse breeding stock (1.3 million)

In order to pass the budget legislation, the Legislature also made a deal whereby a Constitutional amendment will be sent to the voters regarding permanent allocation of a portion of gasoline sales tax revenues to transportation purposes. They also agreed to suspend a % of the general sales tax in any year (as of 2002) in which the General Fund reserve is determined to exceed 3% (existing law sets 4% as the trigger). See CMTA's Press Release on the Budget: <http://www.cmta.net/press/072601budget.shtml>

SCE BAIL-OUT UPDATE The latest Assembly version of the proposed Southern California Edison (SCE) bail-out legislation was revealed this week in proposed amendments to ABX2 82 (Keeley D-Boulder Creek) and SBX2 78 (Sher D-Stanford). CMTA opposes this package as unfairly shifting the cost of SCE debt onto business. In addition, direct access options may be severely limited as the Department of Water Resources (DWR) continues to enter into long term contracts for supply and the utilities may construct new generation. The bills may be heard after August 20, or earlier on the call of the Speaker. CMTA urges you to contact legislators about the impact of high energy prices on your business and concern about taking on any more costs. Elements of the package: SCE Debt Payment: Total \$3.9 billion debt allocated as follows: \$2.5 billion to be collected, 20% from small and 80% from large customers. (The demand level division between small and large is yet to be determined.) \$1 billion is left for SCE to recover from large generators. \$400 million tax refund from SCE parent. No transmission system purchase or option. Direct Access: Allowed without payment of exit fees after January 1, 2002 so long as there is more demand for power than can be served by SCE native generation and DWR contracts. Green power deals allowed for small residential and commercial customers immediately. Ratepayer Benefit Account: Positive balances in the account that includes refunds ordered by FERC, litigation proceeds, and DWR Power fund revenues would go to customers in refunds in proportion to the March, 2001 CPUC rate increase. Renewable Portfolio Standard: Sets a target of 20% renewable power in 2010 through requirements to purchase renewable power for

resale. SCE Financials: CPUC cannot lower SCE rate of return before 2006. SCE may be required by the CPUC to construct new generation under cost-based ratemaking.

CRIMINAL PENALTIES ON ENERGY PRODUCERS CMTA and other interested parties met with staff from the offices of Assemblymember Dennis Cardoza and Lieutenant Governor Cruz Bustamante to discuss onerous provisions in ABX2 65 (Cardoza D-Merced) that would impose severe criminal penalties on energy producers. Amendments taken in the Assembly Appropriations Committee on July 19 delete references to petroleum products, coal and coal products, and limit the bill to apply to electricity and natural gas. While no specific agreement was reached, the staff indicated that the author would consider amending the measure to more narrowly focus the penalty provisions of the bill. ABX2 65 passed (11-5) from the Assembly Appropriations Committee on July 11, and will be taken up on the Assembly Floor when the Legislature reconvenes from its Summer Recess.

OVERPAYMENT REFUNDS TO PAY FOR TRANSMISSION LINE UPGRADES Assemblymember Sarah Reyes (D-Fresno) has amended her ABX2 78 to use any overpayment refunds ordered by the Federal Energy Regulatory Commission (FERC) for payment of principal and interest on bonds, to upgrade electricity transmission lines and to reimburse ratepayers. CMTA and the California Chamber of Commerce opposed the measure in the Assembly Energy, Costs and Availability Committee on July 17, asserting that 100 percent of the refunds should proportionately be returned to the ratepayers who have shouldered the burden of elevated energy prices. As introduced, ABX2 78 required 50 percent of the overpayment to be returned to ratepayers, and 50 percent to be deposited into the General Fund. ABX2 78 passed (15-1) to the Assembly Appropriations Committee.

EXIT FEES ON NONCORE GAS CUSTOMERS CMTA and other business groups are working with Assemblymember Pescetti (R-Rancho Cordova) during the Legislature's Summer Recess to amend his ABX2 23 which imposes exit fees on noncore gas customers. The measure also expedites the review process for approval of gas facilities, and requires pipelines within the state to meet the test that every customer would expect to be curtailed not more than once every ten years, which increases the current standard of once every five years.

INITIATIVE TO LOWER NATURAL GAS PRICES CLEARED FOR SIGNATURE GATHERING A ballot initiative to expand the entities that can buy and sell natural gas has been approved for signature gathering by the Secretary of State. The measure would allow cities, counties, municipal utilities and irrigation districts to buy and sell natural gas and be exempt from the oversight of the California Public Utilities Commission. Assemblyman Dennis Cardoza (D-Merced) is the sponsor of the initiative. Supporters expect that if passed, the measure would increase competition and lower gas and electricity prices for consumers. The sponsors need to collect the signatures of 670,816 registered voters by October 26, 2001 to qualify for the March 2002 ballot. This may be the first of several initiatives for the 2002 election seeking to address the state's energy crisis. According to a public opinion poll recently released by the Public Policy Institute of California, residents by a two-to-one margin (65%) say questions of how to address the electricity crisis should be decided, not by the legislature and governor, but by voters through state ballot initiatives in 2002.

FED-OSHA HOLDS PUBLIC FORUM ON ERGONOMICS AT STANFORD UNIVERSITY The Department of Labor held the third and final public forum on ergonomics at Stanford University in Palo Alto on July 24. Following the repeal of the federal Occupational Safety and Health Act (OSHA) ergonomic rule by Congress, Secretary of Labor, Elaine Chao promised that public forums would be held in several locations to explore the issue of developing an ergonomic standard. The forum follows a major victor

You did an absolutely fabulous job on Sunday. It was a great time, the food was extraordinary, and the wine was better still. Thanks so much for it all. You're very sweet.

Almost makes any more engagements superfluous, don't you think. (kidding!)

Don't forget to water the tomatoes!

Best, Jeff

Nancy Sellers <Nancy.Sellers@RobertMondavi.com> 05/15/2001 11:27 AM

2 more celebratory items I forgot - well actually, I forgot one and did not know about the other...

#1 - Jeff Dasovitch, Scott Laughlin, Cameron Sellers, Nancy Sellers, and Prentice Sellers - are all SMOKE FREE!! Now that is something to celebrate!!

and - - #2 - drum roll drum roll drum roll DRUM ROLL DRUM ROLL

On Saturday, May 12, Mr. Scott Warner Laughlin asked Ms. Cameron Smith Sellers to marry him. And she said.....YES!!!! Isn't that just the most wonderful news!!!!!! We are all so happy and excited!

OK - now for a wine tasting update. Every "unit" should bring 2 bottles of each wine (1 won't make it with this large a crowd). It does not have to be from your designated local area (LizAnne was making noises about the Sonoma/Napa/Santa Cruz disparity) - it can just be something you think is yummy.

Saturday night let's make it Pinot Noir and Sunday Chardonnay, since no one had any burning favorites!

Chris and Cristina have a family reunion that they have to attend - but they promise that the THREE of them will be with us next year! We will really miss you guys!

Anything else?

-----Original Message----- From: Nancy Sellers Sent: Saturday, May 05, 2001 10:00 AM To: 'Lynne Robertson'; 'Laura Whiting'; 'John Whiting'; 'Lisanne and Ken Jensen'; 'Celise'; 'Eldon Sellers'; 'Cristina Greenway Shea'; 'Chris Shea'; 'Carter'; Cameron; Jeff Dasovich; Prentice @ Berkeley; Prentice Sellers; Scott Laughlin Subject: Memorial Day I hope you are all making plans to meet at the dome - we are so excited to see you all and have some fun! Bring a bottle of bubbly (sparkling cider) because we have some special things to celebrate: * May 20 - Prentice graduates from Haas with her MBA * May 26 - Laura's birthday * John's new job * and...drum roll... * Cristina is going to have a baby!!! (November - good Scorpio month!) Please feel free to submit other celebratory items!! There is one major problem. Try as we might, we have not been able to get the deck finished. Everything is done (I think) except the railing. That means there is a definite safety hazard. Eldon is going to keep trying to get someone to finish it up but I am not too hopeful. That means that the deck is fine for: * Sleeping * Sitting * Reading * Chatting * Eating/Cooking * Moderate Alcohol consumption IT IS NOT FINE FOR: * Dancing (Andrew) * Running (Scotty) * Manhattan Projects (Teddy) * Heavy duty alcohol consumption (Chris) I have a couple of requests: #1 - I think we should start having an annual blind wine tasting. A white on Saturday and a red on Sunday - if anyone has a varietal that they want to start with - let me know. Each "family unit" should bring a bottle of the white and red varietal and we will hold a blind tasting. What do you think? It would be especially fun if the wines were typical of your geographical area and we could have a really diverse sampling. If you want to use wine glasses you would have to bring your own. I'll have plastic ones available. #2 - I have a special request for the ab hunters. It would be so great if we could have the ab feast for dinner on Sunday night instead of as appetizers on Saturday. That would save one whole meal of cooking and we could do a nice salad, garlic bread, etc. I realize that we would have to improvise if -- God forbid -- the ab was not to be found - but we could chance it! Let me know about any other ideas you have out there... Don't forget your baseball mitts! Nancy (707) 251-4870 (phone) (707) 265-5446 (fax) "Plus je bois, mieux je chante"

FYI, if you haven't already seen this, Congressional Democrats on the Commerce Committee are leading an effort to send the attached letter to President Bush.

Thanks, Jean

-- Jean Munoz McNally Temple Associates, Inc. 916-447-8186 916-447-6326 (fx)

The Californian Members of the Energy and Commerce Committee, Reps. Waxman, Eshoo, Capps, and Harman would like to encourage the Caucus to sign the attached letter to the President urging the President to intervene at FERC. The letter asks the President to support the Governor's request regarding wholesale electricity sales this summer and to investigate recent allegations of overcharges. March 29, 2001 The Honorable George W. Bush The President The White House Washington, DC Dear Mr. President: We are writing because our constituents and millions of Americans across the West need your intervention at the Federal Energy Regulatory Commission (FERC) in order to address serious problems with the Western energy market. As you know, California has been experiencing an electricity crisis that has resulted in blackouts throughout the state, inconvenienced millions of citizens and businesses, and disrupted the state's and region's economy. Indeed, this crisis seriously threatens to cause long-term damage to the economy of California, the Western region, and perhaps the entire country. The crisis is the result of a dysfunctional energy market where wholesale prices of electricity have spiked exorbitantly. For example, wholesale prices on December 15, 2000, ranged from \$429 per Mwh to \$565 per Mwh, compared to prices from \$12 per Mwh to \$29 per Mwh one year earlier. Wholesale prices have jumped as high as \$1400 per Mwh. In fact, the California Independent System Operator (ISO), the state's power grid operator, has projected that electricity which cost \$7 billion in 1999 will cost \$70 billion this year. These skyrocketing prices can only partly be explained by natural gas price increases and increased energy demand. These exorbitant price spikes have led FERC Commissioner William L. Massey to state on February 8, 2001: These high prices serve only to continue a massive wealth transfer out of the region. Is it worth dragging down an entire regional economy, or perhaps even the national economy, for the theoretical purity of unfettered price signals? I say no. I call on my fellow commissioners to consider a time out now. It's our statutory obligation. . . . FERC's timidity and hands-off approach is eroding consumer confidence and destroying the consensus that heretofore supported a market based approach. The dysfunctional nature of the market has apparently allowed it to be manipulated. The California ISO last week presented FERC with findings of a comprehensive study of pricing data in California's wholesale electricity market over the last 10 months. According to the Los Angeles Times, the ISO's study found "evidence of market manipulation and consistent patterns of bidding far above costs" and that "suppliers commonly offered electricity at twice their costs." The ISO has estimated the cost of the potential overcharges between May 2000 and last month are high as \$6.3 billion. Unfortunately,

FERC actions have fallen far too short. To date, FERC has not aggressively worked to address market manipulations, despite finding last fall that wholesale prices

Telecommunications Reports presents TR's State NewsWire January 31, 2001 A.M. Edition

STATES WASHINGTON -- Bill could erase price list requirement for competitive carriers MICHIGAN -- Parties discuss municipal rights-of-way fee structures OREGON -- Committee OKs digital signature bill ARKANSAS -- Bill would outline implementation of federal mobile telecom law WASHINGTON -- Lawmaker would give citizens tool against unwanted telemarketers MISSOURI -- Bill would create e-commerce advisory committee VIRGINIA -- Verizon South to implement second phase of expanded local calling

FUTURE OF REGULATION WASHINGTON Bill could erase price list requirement for competitive carriers

The Utilities and Transportation Commission has forwarded a bill (HB 5380) to the Legislature that would give the commission the ability to waive the requirement that competitive carriers file a price list with the WUTC. The commission staff explained to TR that under current law, competitive carriers must file either a tariff or a price list. This bill would give the commission the discretion to determine whether a price list should be filed.

The staff said that if the bill is passed, the commission would follow up with a rulemaking proceeding, which would allow the industry to weigh in on whether to modify or eliminate the price list requirement.

The staff said HB 5380 stems from issues relating to competitive carriers and their pricing. The staff explained that certain carriers have quoted customers one price but charged them a different one. When questioned by the customers, the carriers said the prices being charged were included in a price list on file with the WUTC.

HB 5380 also would ensure that competitive carriers and competitive services are treated equally. Under current law they are treated separately, although both have minimal regulation. For competitive companies, the commission may waive any regulation, but that's not the case for competitive carriers, the staff said. This bill would strike the statutory language governing both competitive carriers and services and would write new language treating the two the same.

HB 5380, which was sponsored by Sen. Betti Sheldon (D., District 23), awaits consideration by the House Economic Development and Transportation Committee.

STATE & LOCAL GOVERNMENT MICHIGAN Parties discuss municipal rights-of-way fee structures

The Public Service Commission is hosting meetings with company and municipal officials to discuss model regulations and fee structures for franchise agreements with city governments. The group held its first meeting Jan. 18, during which it accomplished several organizational tasks. The second meeting tentatively is scheduled for sometime during the second week of January, a Michigan Telecommunications Association representative told TR.

In October 2000 the PSC fined the city of Birmingham \$10,000 for its practices regulating use of the municipal rights-of-way. The PSC fined the city of Rochester \$20,000 for similar violations in December 2000. (12/21/00 a.m.)

INTERNET OREGON Committee OKs digital signature bill

The House Advancing E-Government Committee has approved HB 2040 to require the Department of Administrative Services to adopt rules for digital signature use by state agencies. The Joint Legislative Committee on Information Management and Technology requested HB 2040 on behalf of the Oregon Internet Commission.

HB 2040 awaits consideration on the House floor.

TAXATION ARKANSAS Bill would outline implementation of federal mobile telecom law

Sen. Jim Hill (D., District 5) has introduced SB 309 to allow the director of the Department of Finance and Administration to decide how to implement the federal Mobile Telecommunications Sourcing Act, which was enacted last year. The Act allows only local tax authorities in a customer's "place of primary use" to tax mobile services provided by the customer's home service provider.

SB 309 would help implement the Act by requiring the director of the Department of Finance and Administration to determine how to assign the place of primary use. The director either could provide vendors with a database linking taxing jurisdictions to addresses or ask vendors to use an extended zip code at least nine digits long.

SB 309 also would amend an existing state law pertaining to the levy of gross receipts tax on telecom services. The bill would extend the list of taxable long distance services by adding long distance messages that originate and terminate outside Arkansas made by wireless phone services that are billed to a place of primary use in the state.

SB 309 has been referred to the Senate Committee on Revenue and Tax. Its text is available at <http://www.arkleg.state.ar.us/ftp/root/bills/2001/htm/SB309.pdf>.

CUSTOMER-AFFECTING WASHINGTON Lawmaker would give citizens tool against unwanted telemarketers

Rep. Cheryl Pflug (R., District 5) has introduced a bill to create a no-call list for citizens that don't want to receive telemarketing telephone calls. The state Utilities and Transportation Commission would set up the list. Registration would be free.

HB 1402 awaits consideration by the House Technology, Telecommunications, and Energy Committee.

FUTURE OF REGULATION MISSOURI Bill would create e-commerce advisory committee

Sen. Sarah Steelman (R., District 16) has introduced SB 293 to establish a committee that would advise state agencies on electronic commerce issues. The Advisory Committee for Electronic Commerce would operate within the Department of Economic Development (DED). The director of the DED would chair the new committee and appoint 10 other members. Each member would serve a two-year term.

SB 293 has been referred to the Senate Commerce and Environment Committee. Its full text is available at <http://www.senate.state.mo.us/01info/billtext/intro/SB293.htm>.

Rep. Bill Luetkenhaus (D., District 12) has introduced a similar bill, HB 447, in the House. (1/22/01 2 p.m.) Its text is available at <http://www.house.state.mo.us/bills/01/billtxt/01/intro/01/HB0447I.htm>.

INTERCOMPANY COMPENSATION -- EAS VIRGINIA Verizon South to implement second phase of expanded local calling

The State Corporation Commission has approved the second phase of a plan to expand local calling in several Verizon South, Inc. (formerly GTE South, Inc.) exchanges in the Norfolk area. The exchanges include Boykins, Chuckatuck, Courtland, Crittenden, Dendron, Franklin, Holland, Ivor, Smithfield, Surry, Wakefield, and Windsor.

In August 2000 the SCC approved the first phase of the expanded calling plan for exchanges in several local access and transport areas served by Verizon South and Verizon Virginia, Inc. (formerly Bell Atlantic Virginia, Inc.). The companies' expanded calling plan implements a condition included in the SCC's order approving the Bell Atlantic Corp.-GTE Corp. merger, which created Verizon. (11/30/99 a.m.)

The commission received nearly 50 comments from customers in the affected exchanges, most of them supporting the plan. Because implementation will result in "substantial rate increases" for many customers, the commission ordered Verizon South to issue a notice at explaining "applicable local exchange service options" customers can use to mitigate higher basic service rates. (PUC000204, Joint application of Verizon Virginia Inc., f/k/a Bell Atlantic-Virginia, Inc., and Verizon South Inc., f/k/a GTE South Inc. to expand local calling between various exchanges)

Dear all,

*Attached please find this week's legislative report. Most of the action this week centered around the budget conference committee hearing as the deadline to pass the state's budget is next Friday, June 15th. Also, today was the last day for bills to pass out of their house of origin and sent to the other house for legislative hearings. This week's energy highlights include the following: EVENTS: * Governor Davis sends letter to the state PUC President Loretta Lynch, urging that California's petroleum refineries and ancillary facilities be exempt from rotating outages. The basis for the governor's letter is his stated belief that even a brief disruption of electricity for these facilities can shut down production and supply of petroleum products for several weeks. "The availability of petroleum derived transportation fuels is critical to the public health and safety of Californians. Public safety agencies such as law enforcement, emergency medical care responders, and the military all rely on these fuels. Without petroleum fuels, the ability of these essential-use customers to perform their critical functions would be seriously impaired," said Governor Davis. * Governor Davis, along with top executives and business leaders in the state, announce a joint-Declaration on Thursday committed to saving 20 percent in overall electricity consumption. With more than 140 businesses and organizations statewide, this "energy-conservation" coalition sets the following goals among others to reduce energy use: (1) set temperatures for occupied space to 78 degrees from May to October; (2) reduce lighting levels by 25 percent and an additional 25 percent upon the declaration of a Stage II emergency; (3) close blinds and shades when possible; and (4) turn off and unplug all office and kitchen equipment when not in use. * QFs will have to wait until next Wednesday to hear whether or not the state Public Utilities Commission forces utilities to pay 15 percent of back payments to some alternative-energy generators. The PUC postponed their vote to June 13 on a proposal that would allow alternative generators who need the money to continue making electricity to ask for it from PG&E and Edison to remain in business. * The California State Senate Rules Committee, in cooperation with the Senate Select Committee to Investigate Price Manipulation in the Wholesale Energy Market, agrees on Tuesday to issue subpoenas to provide further background information in its investigation into whether generators are illegally profiteering from the state's power crisis. Eight out-of-state generating companies (and perhaps, eventually, the Los Angeles Department of Water and Power and the state Department of Water Resources) stand to receive papers demanding documents on bidding, pricing, and other aspects of power sales in the state. Those companies will be Reliant Energy, Dynegy Energy Services, Inc., Williams Energy, Enron Corp., NRG Energy Inc., Duke Energy, Mirant Inc., and AES Corp. * Governor Davis signs Executive Order D-37-01 on Monday aimed at increasing small business participation in state contracting. This order mandates state agencies to push for an annual 25 percent small business participation level in state contracting and authorizes the Department of General Services (DGS) to streamline the small business certification process, increase the pool of certified small businesses, establish a Prompt Payment Advocate, and implement a state-sponsored Economic Conference and Opportunity Fair focusing on enhancing contracting opportunities for small businesses. LEGISLATION * Property taxation bill -- AB 81 by Assembly Member Carole Migden (D-San Francisco) -- passes out of the full Assembly on Thursday with 43 AYES and 28 NOES. This bill would return the tax assessment authority over electric-generating facilities back to the state Board of Equalization, thereby nullifying "Rule 905." Although the author asserted that her bill will not take away much-needed tax revenue from cities and counties, AB 81 is considered a huge disincentive and unfair tax on current and potential electric generating companies in the state. IEP testified against this bill in committee and will continue to oppose this bill in the Senate. * Assembly Member Cohn (D-Saratoga) gains Assembly approval*

Calling in on the 2nd should be fine. Sorry that it doesn't work for you to be there in person.

I'm going to be out of the office from about 3:00 this afternoon until 11:00 tomorrow morning, EST. If your meeting happens after 11:00 EST tomorrow, I would like to join by phone. (But don't worry about scheduling around me if it's a problem). Donald is on his way back from South America, and probably isn't available. Scott may be available by phone and probably would be interested in participating.

Maybe the next person we hire should be a full-time schedule coordinator. Thanks for your enduring patience.

Jeff Dasovich Sent by: Jeff Dasovich 10/26/2000 08:21 AM

To: Sue Nord/NA/Enron@Enron cc: Subject: Re: Bandwidth Trading Structure Meeting

So it is the 2nd after all? Thought it might be the first, which I could have made. The 2nd doesn't work---have set up a meeting with ENA to meet with Sempra execs to see if a deal can be done (yeah, right). But since it's that early on the 2nd, I can call in by conference call and attend the first 90 minutes, or so. Will that work?

In other exciting news, going to meet with the lawyers and Bowen either this afternoon or first thing in the morning tomorrow. You want to join? And should I see if Scott and/or Donald want to attend? Just let me know.

Best, Jeff

Sue Nord 10/25/2000 02:15 PM

To: ISO Grid Planning Standards Committee

Attached for your review and comment is the draft ISO Board memo for our proposed new planning standard for the San Francisco Greater Bay Area. This issue is scheduled to go to the ISO Board in late April or early May. Please review this memo and provide me with your comments via e-mail by April 16. Thanks for all of you help on this.

Also attached is a draft agenda for our next meeting which will be on May 3rd at the Sacramento Airport Host Hotel from 10:00 to 3:00. Additional meeting materials will be sent out prior to the meeting. Hope to see you then.

Jeff Miller

I realize that this note is likely stale, but, FYI, Ms Cassandra's is mistaken. SB 78 ain't silent on DA. It kills it, period.

I sure hope that ARM is seriously opposed to the bill.

Best, Jeff

Aren't we opposing ABXX 78?

Sue Mara Enron Corp. Tel: (415) 782-7802 Fax:(415) 782-7854 ----- Forwarded by Susan J Mara/NA/Enron on 07/20/2001 12:12 PM -----

Kassandra Gough <kgough@calpine.com> 07/20/2001 12:09 PM

To: "arem@electric.com" <arem@electric.com> cc: Subject: Recommend Oppose of SB 78xx

Hi everyone,

I know that AREM is not opposing SB 78xx (Polanco/Sher) because it is silent on direct access; however, I want to recommend that the position be changed to oppose. I have spoken with Norm and he asked that I send this out for comment. Please look at the bill and specifically Section 13, on Page 35 (see below). I believe that if this bill were to become law direct access in SCE's, PG&E's and SDG&E territories (I believe the section stands alone so it wouldn't matter if PG&E accepted the same deal or not) would be dead. In summary, the bill would essentially allow any IOU to go back into the generation business and require the CPUC to approve rates that are sufficient to cover their reasonable cost of operation, investment and provide for a reasonable rate of return (I don't believe this is cost-based rates). The CPUC is given broad latitude over conducting proceedings, issuing orders or anything else that may be necessary to accomplish the goal of assuring that service provided by IOU's is adequate. Section 13 will kill competition, eliminate direct access and create new stranded costs. And, to add insult to injury the State Power Authority may be their partners in crime. As to the politics of the bill it was just amended to be a majority vote bill. Burton has said it is this bill or nothing. SCE is opposing the bill but there are several lobbyist who think this is all an ambush and SCE would love this bill.

Please comment on my above analysis. I would love to be wrong on this one.

Kasssandra Gough Government and Legislative Manager Calpine SEC. 13. Section 454.10 is added to the Public Utilities Code, to read: 454.10. (a) In order to assure that the service provided by electrical corporations is adequate, the commission may require each electrical corporation that provides distribution service to make direct investments in electric generation facilities whose output is dedicated to serve the customers connected to its distribution grid. (b) After a hearing, the commission shall approve rates sufficient to enable the electrical corporation to recover its reasonable costs of operation, its reasonable investment in the electric generation facilities and a reasonable return on its investment, in accordance with Section 451. (c) An electric corporation may meet the obligation described in this section by entering into projects for electric generation facilities jointly with the California Consumer Power and Conservation Financing Authority. (d) The commission may conduct proceedings, enter orders and undertake such actions as it considers necessary or appropriate to carry out the provisions of this section. <<sb 78xx -Polanco.pdf>>

Court dismisses suit alleging gasoline price-fixing

Updated: June 14, 2001 - 11:35 a.m.=20 SAN FRANCISCO -- The California Supreme Court dismissed a class-action suit= =20 Thursday alleging major oil refineries colluded to gouge consumers for=20 cleaner-burning gasoline.=20

The unanimous court said the suit did not provide enough evidence to suppor= t=20 allegations that nine major oil companies in California conspired to limit= =20 supply and fix prices.=20

In ruling that the case cannot go to trial, Justice Stanley Mosk said that= =20 the 1996 suit presented evidence that the petroleum companies may have=20 possessed the motive, opportunity and means to unlawfully conspire.=20

"But that is all. That is not enough," Mosk wrote for the court.=20

The suit alleged that the state's largest refiners decided to share=20 confidential information and hold back on supplies of reformulated gasoline= =20 after the state required refiners to make gasoline that would not create as= =20 much pollution as previous formulas.=20

The case was granted class action status in 1997. The following year, a San= =20 Diego County judge tossed out the case, siding with the oil companies who= =20 said evidence was insufficient to persuade a jury.=20

Then, that judge, David Danielsen, reversed his own decision. The companies= =20 appealed and in January 2000, an appeals court concurred with the judge's= =20 initial decision.=20

The oil companies sued were Atlantic Richfield Co., Chevron Corp., Mobile Oil Co., 76 Products Co., Shell Oil Co., Texaco Refining and Marketing Inc., Tosco Corp., and Ultramar Inc.

The case is Aguilar v. Atlantic Richfield Co., S086738.

-- Associated Press

GOP vulnerability in California prompts Bush shift on power prices

By Finlay Lewis COPLEYPOLY NEWS SERVICE June 14, 2001 WASHINGTON) A lengthening list of politically endangered California Republicans appears to have spurred the Bush administration into a retreat on the state's volatile electricity pricing issue. White House desire to keep Republican control of the U.S. House in next year's elections will be an unspoken but clear concern when the Federal Energy Regulatory Commission meets Monday to reconsider its pricing policy, according to a wide range of analysts who have studied the situation. The expected turnaround on the part of FERC and the White House is due at least partly to complaints from embattled California House Republicans that Democrats have gained the political high ground as voters come to believe that out-of-state energy companies are engaged in price gouging and profiteering. "Republicans have come to realize that the entire pricing structure here is a potential political killer," said Tony Quinn, a Sacramento political analyst with past ties to the GOP. After months of condemning price controls, the administration gave the green light to FERC to devise a plan to restrain wholesale electricity prices in California and 10 nearby states by pegging them to the costs of the least efficient producer in a given market. This approach has already been invoked in California in energy-supply emergencies. The plan before FERC would leave it in place during the summer months in California and much of the rest of the West regardless of energy availability. While far more generous to the industry than the price-cap formula being advanced by congressional Democrats and California Gov. Gray Davis, the pricing mechanism likely to be embraced by FERC represents a substantial retreat by the agency and the White House. Until now, both have insisted on giving free play to market forces except in emergencies. "The more savvy Republican leaders here have figured out that you can't go down in flames for an ideological position when your constituents are being hurt," said political scientist Sherry Bebitch Jeffe of Claremont Graduate University. With the GOP enjoying only an 11-vote margin over the Democrats in the House, Republican strategists in recent days have focused on assessments showing that a number of Republican-held seats in California could switch hands due, in large part, to soaring electricity prices. The list includes Reps. Doug Ose of Sacramento, author of the pricing plan now under consideration by FERC, and Rep. Steve Horn of Long Beach, a widely respected moderate. According to some analysts, others in jeopardy are Reps. Elton Gallegly of Simi Valley, Richard Pombo of Tracy, and Gary Miller of Diamond Bar. Quinn also argued that Rep. David Dreier of San Dimas, chairman of the powerful Rules Committee and a rising GOP star in the House, could face energy-related problems and that Rep. Mary Bono of searingly hot Palm Springs could find herself losing some ground in her otherwise safe GOP constituency. "The California energy crisis has all the earmarks of a classic attack issue," said John R. Pitney, a political scientist at Claremont-McKenna College. "You have a Republican administration headed by two people with connections to the oil industry, and you have a very visible problem and a solution that is easy and plausible (Democratic) price controls." Alarmed by these developments, House Majority Whip Tom DeLay of Texas this week launched a damage-control effort by assigning a team of Republicans to help counter Democratic attacks on the White House. The team's assignment includes daily floor speeches defending Bush's energy policies. The energy crisis is only the latest development in a trend that has increased the sense of Republican congressional vulnerability in California. Even before this spring's blackouts and stratospheric energy bills, long-term demographic shifts were tilting the state in a Democratic direction. Congressional redistricting also is expected to exact a toll on the Republican delegation. Compounding the party's troubles was the perception that Bush, having lost California handily to Democrat Al Gore last fall, had written off the state in terms of his expected re-election campaign in 2004. Then came the loss of Republican control of the U.S. Senate, a development that reminded GOP strategists of their tenuous position in the U.S. House. "The administration soon

The CMTA Fall Conference scheduled for October 31 - November 2 has been canceled.

Legislative Weekly October 26, 2001 Issue 42, Volume 3

A weekly publication from the California Manufacturers & Technology Association detailing legislative and regulatory developments in Sacramento

DEPARTMENT OF FINANCE: ECONOMY CONTINUES SLIDE 10,000 Manufacturing Jobs Lost in September

The California Department of Finance reports in their October bulletin that the employment and revenue picture in the state is not positive. The most available economic data on the state do not yet reflect the economic impacts or conditions after the September 11, 2001 attacks. The Department indicated in their October bulletin that although too little time has elapsed to accurately appraise the attacks' impact on the state, it is reasonable to assume that the full impacts of the September attacks will be quite serious, add to existing economic woes, and are now only beginning to emerge.

Labor market figures in the bulletin for September reflect employment status at anytime during the second week of the month, including September 10, the day preceding the attacks.

* Nonfarm employment, based on a survey of establishments, declined 17,400 in September. Industry estimates for September indicate a decline in construction employment, weakness in nearly all manufacturing sectors, gains in private service employment, and an anomalous drop in government employment. * Manufacturing employment dropped by 10,100 jobs in September. California's high-tech specialties—computers, electronics, aerospace, and instruments—accounted for over 60 percent of the losses. Only textile mill employment rose in September. * Service sector employment rose by 6,500 in September based on gains in motion pictures (3,800 jobs), social services (3,000 jobs), and engineering and management consulting (1,700 jobs). These gains offset the fifth consecutive monthly decline in business service employment, which lost 3,000 jobs. * On a year-over-year basis, services added the most jobs, 66,100, followed closely by government, 61,100 and more distantly by wholesale and retail trade, 47,200. Manufacturing lost 63,000 jobs over the year, with losses in nearly all sectors. High tech manufacturing has been hard hit. * California's unemployment rate, based on a survey of households, inched up 0.1 percent to 5.4 percent in September based on a rise by 7,000 in the number unemployed. A year ago, the unemployment rate was 4.9 percent. The national unemployment rate, at 4.9 percent, is up a full percentage point over the year. * Preliminary General Fund agency cash for September was \$468 million below the 2001 Budget Act forecast of \$7.451 billion. At this time, it does not appear that any significant amount of this month's shortfall was attributable to the September 11 terrorist attacks. If a reduction in taxable sales occurred as a result of those attacks, it will be reflected in the sales tax receipts due at the end of October. Any other effects on revenues, due to such things as the fall in the stock market or employment losses, may not be apparent for some time. Year-to-date, revenues are \$608 million below expectations.

CPUC EXPLORES ISSUES SURROUNDING DIRECT ACCESS

On September 20, the CPUC suspended the right to enter into new contracts for direct access. The CPUC left for later consideration what effect should be given to contracts executed before September 20, 2001, including renewals of such contracts. (Previously the CPUC indicated that it might suspend direct access effective July 1, 2001.)

On October 23, Commissioner Wood issued a ruling asking for public input on direct access contracts, noting that commencing on or about July 1, 2001, there has been an increase in customers switching to direct access.

He states that "there are serious policy concerns about cost-shifting. If customers are allowed to switch to direct access, there is a potential for these exiting customers to avoid helping to pay down the unprecedented debt incurred by the State to help weather the energy crisis. These cost-shifting issues are part of the Commission's consideration in determining whether there should be an earlier suspension date and what this date should be."

Some of the questions he asks include:

- 1) Why should or shouldn't the Commission choose an earlier date (than after September 20, 2001) for suspending the right to acquire direct access service?
- 2) If the Commission should choose an earlier date, why should or shouldn't the Commission consider a July 1, 2001 suspension? If not July 1, 2001, what other date or dates should the Commission consider and why?
- 3) Are there alternatives to suspending direct access as of a date before September 20, 2001, that would still alleviate cost-shifting problems?
- 4) What effect, if any, should be given to renewals of contracts originally entered into prior to the effective date of the Commission's suspension of direct access?
- 5) What effect, if any, should be given to provisions in contracts (?add-on provisions?) that allow the buyer to add more facilities to be served after the date on which direct access is suspended?
- 6) For electric service providers ? How many contracts have you entered into with direct access customers between January 17, 2001 and September 20, 2001? What percentage of your total direct access contracts contains any renewal provision? What percentage of your total direct access contracts contains any add-on provision?

Also requested are copies of unsigned contract forms and signed contracts, with names and other sensitive information deleted but contract signing dates retained.

CMTA will be submitting written comments which are due November 2, 2001.

EMPLOYERS IN A QUANDARY ON TEMPORARY PLANT SHUTDOWN STATUS

The California Manufacturers & Technology Association (CMTA) is continuing to seek clarification from the Industrial Welfare Commission (IWC) in regards to the Division of Labor Standards Enforcement (DLSE) Opinion Letter of May 30, 2001, Re: ?Deductions From Exempt Employees Salary.? This very controversial letter written by Mr. Miles Locker, Chief Counsel, DLSE generated an enormous number of complaints from employers. Labor Commissioner Arthur Lujan suspended the letter on June 20, 2001 and requested clarification from the Industrial Welfare Commission (IWC) of the criteria for determining the correct interpretation of ?salary.?

However, the letter left reduction from exempt employees salary and other issues raised in the letter unresolved and still hanging over the heads of employers when they are about to enter the most frequent periods of use, Thanksgiving and Christmas weeks. CMTA believes that the ?salary basis? test applicable to all wage orders should be interpreted in a manner consistent with the ?salary basis? test in the Fair Labor Standards Act (FLSA) that California has consistently followed over the years.

Under the FLSA the salary deduction for exempt employees is measured by weeks and not months as opined by Mr. Locker under California law. The opinion letter prohibited any deductions from exempt employee's salary in increments of less than one month based on the quantity of work, quality of work and or business operating requirements. Therefore, in order to be eligible for the overtime exemption, the employee must receive his or her full salary for any month in w

Sorry if this is a duplicate: The following notice was also posted at FERC regarding the December 19 conference on forward contracting:

Information About the Planned Conference Announced at the December 15, 2000 Commission Meeting Date: Tuesday, December 19, 2000 Time: 10:00 AM Place: Hearing Room 1 Federal Energy Regulatory Commission 888 First Street, NE Washington, DC 20426 Purpose: To facilitate forward contracting by California Utilities Scope: The scope is confined to forward contracting only Participants: Limited to California Investor Owned Utilities, generators who supply California, marketers, the California ISO, the Office of Governor Gray Davis, and the California Public Utilities Commission.. It is requested that all participants have persons present with authority to approve any matters agreed to.

Other Info: The conference will be convened by the Commission's Chief Administrative Law Judge

Katie Kaplan wrote: We sent this release out today regarding the FERC order

Contact: Jean Munoz FOR IMMEDIATE RELEASE 916-447-8186 December 15, 2000

Statement from Jan Smutny-Jones, Executive Director of Independent Energy Producers, Regarding today's Ruling by the Federal Energy Regulatory Commission:

"While we have not yet had the opportunity to review the entire FERC order, we commend the FERC for encouraging long term fixed price contracts - a solution IEP members have been advocating and offering since June.

"We are committed to continuing to be part of the solution and look forward to moving toward a truly competitive electricity market that delivers a reliable supply of clean and affordable energy to the state's business and residential consumers."

-----Original Message-----

From: Kari Paakaula Sent: Friday, March 16, 2001 10:11 AM To: NAEP Team Subject: Washington Post Op-Ed California in the Dark By Lawrence Makovich and Daniel Yergin Friday, March 16, 2001; Page A21 The common diagnosis of California's electric power debacle is wrong. The state is not suffering from deregulation. Rather, it is afflicted by a strange mutant ailment -- partial deregulation and now partial reregulation -- that has produced a flawed market. California designed a market that disconnected customers from prices and, at the same time, made it neither profitable nor possible to build a new power plant. The result is a serious power shortage. Instead of fixing these flaws, the current policies from Sacramento are moving California down the road to an expensive public power setup and higher prices for consumers and businesses. And the shortage is going to get worse this summer. Under typical weather conditions, the state could face as much as a 10 percent shortfall in electric power during summer peak demand, which will mean severe emergency conditions and periods of blackouts. The effect is likely to be a big shock not only to the economy of California and to the rest of the interconnected West but also to the bruised national economy. Unlike other states that have successfully deregulated over the past few years, California has made three crucial mistakes since the mid-1990s, when restructuring of the power industry began. The first is the political unwillingness to allow consumers to see real price signals. The so-called "wholesale price" -- what utilities pay to generating companies -- has been decontrolled, but the price consumers pay to the utilities has not. Consumer prices are remain at 1996 levels, and Gov. Gray Davis has promised to hold to his pledge of no rate increase. Although the price of natural gas, which is used to make a large and rapidly growing share of electricity in California, has increased dramatically, consumers would not know that from their bills. Nor would they know that rain and snowfall levels, on which California critically depends for hydropower, are at low levels. As a result, the utilities have been in the perverse position of selling power to their customers at much lower rates than they are buying power from generators. That is why the utilities are now \$13 billion in the hole and teetering on bankruptcy. Instead of letting customers see higher prices that reflect the realities of supply and demand -- and then act accordingly --

CSO - Level 3 Communications Corporate Presentation

Sender	owner-eveningmba@haas.berkeley.edu
Recipients	['mba01@haas.berkeley.edu', 'mba02@haas.berkeley.edu', 'fx00@haas.berkeley.edu']
File	dasovich-j/all_documents/1995.

See the following note from Level 3 Communications on their presentation tomorrow for all UC students (Engineers, Operations Research PhD's, Haas MBA's and undergrads).

The atypical location and time are due to the broader audience.

No sign-ups required for this presentation.

Sorry for the late notice.

Rich

Rich Wong Account Manager, Technology Haas Career Center

*****_ * *****

Where: University of California, Berkeley, Alumni House, Bechtel Room

When: Tuesday, October 3, 2000, 12:00 pm (Lunch will be provided)

Come find out why Level 3 Communications is one of the fastest growing "next-generation" data communications providers in the world. It=01,s uniqu= e business strategy - to build the world=01,s first continuously upgradeable all-IP network - is so compelling Wall Street has raised over \$13 billion i= n debt & equity to support it. Yet our \$32 billion market

cap is less than 2% of the estimated \$2 trillion market cap attributed to our marketplace - a marketplace we plan to dominate. Our Outperformance Stock Option plan rewards us with multiples of value for beating the S&P 500 index. Now THAT= =01,s upside.

The Level 3 team has grown from a handful of senior executives to a dynamic group of recent top tier MBA's, ex-consultants, ex-bankers, ex-telecom professionals and e-commerce entrepreneurs who share the exuberance and excitement that comes from building a company from scratch. The difference is that we are in a market with real revenues, real assets and real challenges. You won't stand on the sidelines as we make this happen. MBA's serve in key roles and are responsible for projects vital to the company's success. Our headquarters sits on a brand new campus in Broomfield, Colorado; 20 minutes from Denver and 10 minutes from Boulder. So forget consulting, investment banking and the latest dot.com "someday we will make money" business plan. Join the company that is already collecting checks from most of the dot.com community. They call in "paying for bandwidth," we call it our bread and butter.

Positions Available: (2nd years)

Manager, Corporate Development (North America, Europe and Asia)

Manager, Corporate Finance (North America)

Manager, Strategic Alliances (North America and Europe)

FYI. Indicates where CMTA is on key bills working their way through California's wacked out Legislature.

Best, Jeff -----Original Message----- From: Geri L. Royer [mailto:groyer@cmta.net] Sent: Thursday, September 06, 2001 4:30 PM To: undisclosed-recipients Subject: CMTA Legislative Weekly - 09/06/01

Legislative Weekly September 6, 2001 Issue 35, Volume 3

A weekly publication from the California Manufacturers & Technology Association detailing legislative and regulatory developments in Sacramento

ELECTRICAL RESTRUCTURING

SBX2 78 (Polanco D-Los Angeles and Sher D-Stanford). CMTA supports this bill to allow Southern California Edison to collect \$2.9 billion from customers to cover excess power costs incurred between May 2000 and January 2001. While the debt can only be assessed against customers over 20kw in demand, provisions protecting the right to direct access and customer generation overcome our objections to the disproportionate spread of debt. The bill will be on the assembly floor this week.

SBX2 27 (Bowen D-Marina del Rey). This direct access bill remains a potential vehicle for reinstatement of direct access if SBX2 78 fails. It failed to gain 2/3 votes in the Senate last June. CMTA did not support the bill, but remains willing to work

with the author.

SBX2 18 (Burton D-San Francisco). CMTA supports this bill to create a separate revenue stream for payment of state energy revenue bonds, saving financing costs and simplifying the relationship between bonds and Department of Water Resources power contracts. Passed out of Assembly Energy Costs and Availability.

SBX2 85 (Burton). CMTA opposes this bill to repeal the sunset on the 10% rate discount for small commercial and residential customers that was created by AB 1890. It passed out of Assembly EC&A.

NATURAL GAS EXIT FEES

ABX2 23 (Pescetti R-Rancho Cordova) requires non-core customers to make long-term projections regarding their firm service gas delivery needs, and would allow utilities to impose exit fees on non-core customers that do not later desire that firm service level.

CMTA is opposed unless exit fees are removed. CMTA supports amendments to simply require the PUC to study the state's natural gas infrastructure to determine ways in which to expand capacity and increase competition. The bill has not yet been set for hearing in Senate Energy Utilities and Communications.

ELECTRICAL GENERATION - EMINENT DOMAIN

ABX2 35 (Vargas D-San Diego) authorizes the California Consumer Power and Conservation Financing Authority to exercise eminent domain to acquire generating facilities for 18-24 months. Generators would be reimbursed a "reasonable rental value" as opposed to "fair market value" for facilities temporarily taken by the State. Co-generation facilities are not exempt from the bill.

CMTA is opposed and the bill may not move. It is rumored that a Legislative Counsel opinion questions its constitutionality. The bill is currently in the Assembly Energy Costs and Availability Committee.

ELECTRICAL GENERATION - STRICT LIABILITY

ABX2 51 (Reyes D-Fresno) provides that a resale or wholesale operator of an electric generation facility that reduces or discontinues service for solely economic reasons shall be held strictly liable for any damages proximately caused by that reduction or discontinuance. "Economic reasons" is defined as the withholding of power for financial gain. Cogeneration is exempted from the bill.

CMTA is opposed. According to the author's staff, the measure will not be moved. The bill is in Assembly EC&A Committee.

ELECTRICITY AND NATURAL GAS - ILLEGAL BUSINESS PRACTICES

Despite rigorous debate on the Assembly Floor, on September 4 the Assembly adopted amendments to ABX2 65 (Cardoza D-Merced) which make the bill less onerous. As amended, the measure makes it a wobbler for any person or entity, whose principal business is the generation or sale of electricity, to exercise market power. Market power is defined as the profitable maintenance of wholesale electricity prices above the prices that would occur in the wholesale market if that market were competitive. The measure also allows the imposition of a fine of up to 10 percent of the violator's gross assets, upon conviction. Felony penalties would apply to any person or entity that exercised market power during a Stage 1, 2 or 3 electrical emergency as determined by the Independent System Operator.

The September 4 amendments limit the bill to apply only to entities whose principal business is the generation or sale of electricity that are able to exercise market power, and technically exempt qualifying facilities, co-generation, or self-generation. The measure still includes onerous bounty-hunter provisions that authorize the Attorney General to pay a reward to any person who provides information that materially contributes to the imposition of a criminal fine. The reward would be equal to 10% of the amount of the criminal fine collected by the AG, district attorney, or imposed by the court. The measure likely will be taken up for a vote on the Assembly Floor sometime this week.

TAX - TRIAL DE NOVO

AB 934 (Hertzberg D-Van Nuys). CMTA supports reforms to the property tax assessment appeal process, granting courts more power to overturn decisions that are anti-taxpayer. Assessors and counties claim that they will be manipulated into

settling disputes too cheaply. They obtained a Leg Counsel opinion declaring it to violate the California Constitution.

The bill is in Senate Rules. CMTA is lobbying to ensure that it is sent to Appropriations and are lobbying members of that committee as well as members whose votes will be needed on the floor. There is speculation that it is being held in Rules for leverage for a larger deal but it is more probable that it is a tactic to delay it until Hertzberg, the author, is no longer Speaker.

CORPORATE COUNSEL - PROTECTIVE ORDER/CONFIDENTIAL SETTLEMENTS

AB 36 (Steinberg D-Sacramento), SB 11 (Escutia D-Whittier), AB 881 (Simitian D-Palo Alto). CMTA opposes these bills to potentially expose proprietary information to the public. SB 11 and AB 36 drive up litigation costs for defendants, leveraging higher settlements. AB 36 was "Speakerized" with the proviso that its substance would not go to the Governor, that SB 11 would be "the vehicle" and be revised into a more business friendly version. Nevertheless, AB 36 (unchanged) has received a rule waiver allowing it to move in the Senate.

CMTA is working on keeping the moderate Democrats in the Assembly from passing SB 11 and, if AB 36 does go to the Governor, in having them help with obtaining a veto. CMTA is proposing AB 881 as an alternative though it is preferred that it not pass, and the trial lawyers would likely kill it. At this point it appears that the moderates will stay with us but it appeared that way just before they caved-in in June.

EDUCATION - CAREER AND TECHNICAL EDUCATION

AB 348 (Wright D-So. Central Los Angeles). Several "voc-ed" bills designed to bolster this ailing system were passed by the Legislature this year including AB 348 which introduces mechanisms to elevate the academic standing of such courses. Unfortunately, much of the funding for the voc-ed bills was cut out of the Budget.

EDUCATION - FACILITIES BOND

AB 16 (Hertzberg D-Van Nuys/Leonard R-San Bernardino) and SB 844 (Chesbro D-Arcata). CMTA has declared support for this legislation to place a statewide school facilities bond on the ballot in 2002. Their scope spans K-College. A conference committee is addressing the timing for the ballot (March vs. November), the amount and the allocation between K-12 and hi

STATES ARKANSAS -- Bill would require use tax on electronic transactions VIRGINIA -- SCC enjoins Verizon from disconnecting CLEC's customers KANSAS -- House OKs bill bringing broadband to schools, libraries, hospitals HAWAII -- Lawmaker proposes no-call list MISSISSIPPI -- Bills would create emergency telephone service charge MO. -- Bill would establish classroom technology trust fund and commission IOWA -- Board to rehear Qwest tariff FLORIDA -- BellSouth says competition in the state is on the rise

INTERNET ARKANSAS Bill would require use tax on electronic transactions

Rep. Roger Smith (R., District 32) has introduced a bill that would require out-of-state vendors with ties to Arkansas to collect a use tax on sales made electronically to Arkansas consumers. HB 1440 would amend Arkansas Code 26-53-124 regarding the collection of use tax by out-of-state vendors.

Under HB 1440, orders processed over the Internet, telephone, fax, or other electronic means would be subject to the use tax if the vendor held a "substantial ownership interest" in a retailer with a physical presence in Arkansas.

The use tax also would apply if a "bricks-and-mortar" retailer based in Arkansas owned a significant part of the out-of-state vendor. In addition, an out-of-state vendor would have to collect the use tax if its offerings were "substantially similar" to an

Arkansas retailer's product line, or if the out-of-state vendor marketed its products using an Arkansas retailer's workers or facilities.

HB 1440's text is available at <http://www.arkleg.state.ar.us/ftp/roo/bills/2001/htm/HB1440.pdf>.

SECTION 251/252 VIRGINIA SCC enjoins Verizon from disconnecting CLEC's customers

The State Corporation Commission has enjoined Verizon Virginia, Inc., from "unreasonably disconnecting service" to local exchange service customers who switch from Verizon to competitive carrier Cavalier Telephone LLC.

Cavalier petitioned the SCC for help last September, claiming Verizon "unlawfully interrupted service" to hundreds of customers who chose to migrate to Cavalier. Verizon acknowledged that "premature disconnections" led to 66 of the service outages but said that 43 of those customers were reconnected either the same day they were reported to Verizon or by the following day. (11/8/00 p.m.)

After taking evidence during a November 2000 hearing, the SCC found that although the number of premature disconnections was "unacceptable," there was no evidence that Verizon's disconnections were intentional. "Nevertheless," the SCC said, "we cannot condone this inattention to customer service."

The SCC directed the companies to file monthly reports, beginning Feb. 12, detailing any further unwarranted disconnections of service. (Docket no. PUC000262, Petition of Cavalier Telephone LLC for Emergency Relief to Halt Unlawful Customer Disconnects by Verizon Virginia, Inc.)

ADVANCED SERVICES KANSAS House OKs bill for broadband network for state's schools, libraries, hospitals

The House of Representatives has approved a bill that would establish a KAN-ED broadband network for Kansas schools, libraries, and hospitals. (1/23/01 a.m.) HB 2035 would require that the statewide network link schools and libraries to the Internet by July 1, 2002. Hospitals wouldn't have to be connected until July 1, 2003.

HB 2035 was recommended by the State Education Technology-Based Network Task Force. Proponents of the legislation included the Commissioner of Education, the Kansas National Education Association, the Kansas Cable Telecommunications Association, the Kansas Telecommunications Industry Association, Sprint Corp., and the Kansas Independent College Association. No opponents have surfaced.

The bill also would set up a KAN-ED board to govern the program and establish a plan to ensure that all schools, libraries, and hospitals have quality, affordable access to the Internet and distance learning. HB 2035 would authorize the board to contract with telecom and cable TV service providers to establish, operate, and maintain the network. Additionally, the board would set the network's standards.

The House Utilities Committee sponsored HB 2035. A similar measure, SB 48, sponsored by the Senate Education Committee, awaits consideration in that committee. HB 2035 also will be considered by the Senate Education Committee.

CUSTOMER-AFFECTING HAWAII Lawmaker proposes no-call list

Rep. Sylvia Luke (D., District 26) has introduced a bill that would set up a no-call list for citizens that don't want to receive telemarketing phone calls. The list would be established and maintained under the auspices of the Public Service Commission. HB 914 would require the list to be operational by Jan. 1, 2002.

HB 914 would require local exchange companies to inform residential customers of their right to be included on the no-call list. Residents would have to pay \$5 to place their telephone numbers on the list.

The state's attorney general would have the authority under the bill to initiate a proceeding against a telemarketer that violated the measure. If found guilty, the telemarketer would face a fine of up to \$2,000 for each violation.

Additionally, any person on the list who received more than one telephone solicitation within any 12-month period by or on behalf of the same person or entity could bring an action to enjoin further violations. The person could recover an actual monetary loss, or receive up to \$2,000 in damages.

HB 914 awaits committee referral.

WIRELESS MISSISSIPPI Bills would create emergency telephone service charge

Rep. Tim Ford (D., District 18) and Sen. Thomas E. Robertson (R., District 51) are sponsoring similar bills, HB 469 and SB 2393, to provide for a surcharge to fund emergency response telephone services. HB 469 has passed the House Public Utilities Committee, and SB 2393 has passed the Senate Public Utilities Committee.

The proposed bills would enact an emergency telephone service charge of up to \$1 per month for a residential telephone subscriber line and up to \$2 per month for a commercial telephone subscriber line for exchange telephone service.

HB 469 and SB 2393 also would establish a Commercial Mobile Radio Service (CMRS) Board. The five-member board would require a CMRS emergency telephone service charge of \$1 per month for each CMRS connection. CMRS providers would collect the CMRS service charges as part of their regular monthly billing process. HB 469 and SB 2393 also would require CMRS providers to offer wireless E911 service.

UNIVERSAL SERVICE MISSOURI Bill would establish classroom technology trust fund, commission

Rep. Tim Van Zandt (D., District 38) has introduced HB 559 to establish a classroom technology trust fund and a commission to administer it. The fund would receive all the money from state abandoned property funds that otherwise would revert to general revenues.

The classroom technology commission would distribute money from the fund to school districts to help bring technology into the classroom. Money from the fund could be used for technology expenditures for hardware, software, Internet connections, teleconferencing, and training for students and teachers. The commission would forward recommendations to the state treasurer on other uses of the fund.

HB 559's text is available at <http://www.arkleg.state.ar.us/ftp/rooot/bills/2001/htm/HB1440.pdf>.

TARIFFS IOWA Board to rehear Qwest tariff

The Iowa Utilities Board has decided to grant petitions for rehearing filed by Qwest Corp. and the Consumer Advocate Division of the Department of Justice regarding a Qwest tariff filing to reduce its rates.

In December 2000 the board ordered Qwest to reduce its rates by 1.21% and to reduce selected basic service rates. The board also denied in its December 2000 order a Qwest request to of

Cameron and Scott -- that's great!!! And Congratulations also to all you non-smokers!

Ken and I are looking forward to seeing all of you but we aren't sure exactly when or how long we'll be dropping by. On a total whim, we bought a cute (although a bit funky) little house up in Ft. Bragg last October. Our main goal over Memorial Weekend is going to be to build a new staircase for that house, but we're hoping to make it down to the dome Sunday early evening. If not that, then we'll definitely show up for the softball game on Monday. My Dad, the sweetheart, is coming out to help with this project on his way up to the San Juan Islands and I know he's excited about getting to experience a piece of 'The Dome' as well. Sarabeth is going to Greece for a couple of weeks, so she's going to miss all the fun, poor thing. Anyway, we'll be sure to bring champagne for all the celebratory causes and See you all soon! Celise

09:27:02 -0700 2 more celebratory items I forgot - well actually, I forgot one and did not know about the other... #1 - Jeff Dasovitch, Scott Laughlin, Cameron Sellers, Nancy Sellers, and Prentice Sellers - are all SMOKE FREE!! Now that is something to celebrate!! and - - #2 - drum roll drum roll drum roll DRUM ROLL DRUM ROLL On Saturday, May 12, Mr. Scott Warner Laughlin asked Ms. Cameron Smith Sellers to marry him. And she said.....YES!!!! Isn't that just the most wonderful news!!!!!! We are all so happy and excited! OK - now for a wine tasting update. Every "unit" should bring 2 bottles of each wine (1 won't make it with this large a crowd). It does not have to be from your designated local area (LizAnne was making noises about the Sonoma/Napa/Santa Cruz disparity) - it can just be something you think is yummy. Saturday night let's make it Pinot Noir and Sunday Chardonnay, since no one had any burning favorites! Chris and Cristina have a family reunion that they have to attend - but they promise that the THREE of them will be with us next year! We will really miss you guys! Anything else? > -----Original Message----- > From: Nancy Sellers > Sent: Saturday, May 05, 2001 10:00 AM > To: 'Lynne Robertson'; 'Laura Whiting'; 'John Whiting'; 'Lisanne and Ken > Jensen'; 'Celise'; 'Eldon Sellers'; 'Cristina Greenway Shea'; 'Chris > Shea'; 'Carter'; Cameron; Jeff Dasovitch; Prentice @ Berkeley; Prentice > Sellers; Scott Laughlin > Subject: Memorial Day > > I hope you are all making plans to meet at the dome - we are so excited to > see you all and have some fun! > > Bring a bottle of bubbly (sparkling cider) because we have some special > things to celebrate: > * May 20 - Prentice graduates from Haas with her MBA > * May 26 - Laura's birthday > * John's new job > * and...drum roll... > * Cristina is going to have a baby!!! FYI. Some interesting tid-bits from CMTA.

-----Original Message-----

From: Geri L. Royer [mailto:groyer@cmta.net] Sent: Monday, October 15, 2001 2:43 PM Cc: Royer, Geri Subject: CMTA Legislative Weekly - 10/15/01

The CMTA Fall Conference scheduled for October 30 - November 2 has been canceled.

Legislative Weekly October 15, 2001 Issue 40, Volume 3

A weekly publication from the California Manufacturers & Technology Association detailing legislative and regulatory developments in Sacramento

ECONOMIC SUMMIT

In the wake of repeated economic blows on the state's business community and announcements of losses, layoffs and declining tax revenues, the Governor has stated his intention to hold an Economic Summit in early November with business and labor leaders, and professional economists to identify and discuss measures to stimulate California's economy. The date and participants will be announced this week. Governor Davis is also considering the possibility of calling a Special Legislative Session to enact such measures immediately. In an effort to avoid or minimize a looming State budget deficit, the Department of Finance has instructed state agencies to cut their budgets by 15%.

CMTA's members are devising a priority list of policies that should be adopted to help mitigate the effects of the international economic cooling and hopefully, stave-off recession in this state.

POWER AUTHORITY MEETING

Renewables and the Power Authority At an October 5 Consumer Power and Conservation Financing Authority (Power Authority) meeting in San Francisco, Chairman David Freeman acknowledged that renewable peaking capacity may comprise a significant portion of the 15 percent reserve the Authority expects to establish to prevent future price spikes in the cost of electricity.

Freeman indicated that the Authority has received proposals for 18,000 MW in peaker capacity, which have been evaluated and winnowed down to 3,000 MW. While commitments to build these peaker facilities have not yet been formalized, the Power Authority is moving forward with proposals for a few hundred renewable megawatts.

Freeman also indicated that at least two state biomass plants are at risk of shutting down. He believes that these plants should continue to run, despite the high costs associated with this market. Power Authority staff has been asked to look at options to keep the plants operating, and to report back to the Power Authority.

Board member Donald Vial expressed concern at the way in which the Power Authority is looking at the 15 percent reserve. He believes that the reserve should be a working capacity margin used to phase out dirty plants and to move into, and to promote renewables.

Board member John Stevens pointed out that the Power Authority has limited funding with which to purchase peaking capacity, and reminded the members that any plan must reasonably balance the costs associated with the generation capacity.

Department of Water Resources Update The Power Authority also received a report from staff of the Department of Water Resources (DWR) who indicated that the Department is looking at load curtailment, renewables and new supplies that ideally are north of Path 15. The Department believes it has been instrumental in keeping the spot market under control and minimizing the number of blackouts experienced this summer. The Department also gave a great deal of credit to customers who have been instrumental in preventing blackouts through conservation.

The Department will be updating its energy portfolio needs, and posting its information on its website at www.cers.water.ca.gov, sometime next week.

Public Utilities Commission Natural Gas Infrastructure Report Barbara Hale, the Director of Strategic Planning at the Public Utilities Commission (PUC) provided an update on the Natural Gas Infrastructure Report that is due to the Power Authority by November 15. Ms. Hale indicated that the PUC is working with the California Energy Commission (CEC) to evaluate the adequacy of the natural gas infrastructure, including interstate pipelines, intrastate pipelines, local distribution, storage and backbone. The PUC fully expects to have the report finalized and ready to deliver to the Power Authority by November 15.

Preliminary findings indicate that in-ground storage is at 85 percent of capacity, a healthy margin to meet demands through the winter. While there still is room to inject additional natural gas, the PUC is expecting a moderate winter with low gas demand. Chairman Freeman requested that the Natural Gas Infrastructure Report also include a forecast of natural gas availability from the lower 48 states and Canada, as well as whether or not California may depend on these sources to meet its needs.

Board Member Vial questioned if the unbundling of storage has been successful. Ms. Hale replied that the PUC is monitoring non-core use, and that preliminary findings indicate that many non-core customers are increasing their use of storage.

Activities Related to Renewable Energy and Conservation Staff at the Power Authority reported that coordination between the PUC and the Power Authority is necessary to optimize conservation, energy efficiency, and demand response. Specifically, the Power Authority is putting together a residential loan program; financing for efficiencies in public buildings; and, financing for small commercial and industrial upgrades. The Power Authority believes that the small commercial and industrial market is the most under-served, due to the multiple demands on owners and their lack of resources. The Power Authority is looking at ways to assist these customers in retrofitting their facilities.

At the other end of the spectrum, the Power Authority believes that large commercial and industrial customers require the least assistance. The Power Authority believes these customers are well served under current programs, but acknowledged that many of the demand response programs would be better coordinated under the administration of just one agency.

Finally, Board Member Vial questioned why there has been little emphasis on real time pricing. Power Authority staff agreed that real time pricing has not been a priority, and that the infrastructure to implement a real time pricing program does not currently exist. Staff did indicate, however, that a recent \$35 million investment in meters should help to incentivize these programs.

Freeman concluded that it is important for the Power Authority to build on the momentum of conservation, and he acknowledged that technology finally is being priced such that real time pricing makes sense and likely will be an integral part of the Power Authority's program.

Laura Doll Named as New Executive Director Laura Doll of Austin, Texas was approved as the Chief Executive Officer of the Power Authority at the October 5 Board meeting. Most recently, Doll was Director of Customer Service for Grande Communications. She also has held the positions of Senior Vice President for Planergy, as well as Chief Administrative Officer for Austin Energy. Doll received a master of public affairs from the University of Texas at Austin, and a bachelor of arts degree from Virginia Polytechnic Institute. She will receive an annual salary of \$200,000.

COMPUTER RECORDS CONFIDENTIALITY BILL VETOED (AGAIN)

Governor Davis vetoed SB 147 by Senator Debra Bowen (D-Marina Del Rey) on October 8. The bill would have required employers to prepare and distribute by hard copy or electronically, a company monitoring policies and practices notice to each employee, to collect and verify their understanding of the notice, and fi

Greetings:

As many of you know the Governor held a press conference tonight- below is the Summery. Jan had a live Satellite feed-broadcast state wide-outside the governors office at the end of the press conference in which NBC, ABC, CBS, CNN, Fox, and several of their local, LA, Bay Area affiliates as well as most of the Capitol Press Core including the Wall Street Journal, Sacramento BEE. LA Times, Bloomberg, SF Chronicle, SJ Mercury News, AP and others. WE will keep you posted of others. Just a reminder we will also be holding a press availability tomorrow at 11:30 a.m. in which we will be discussing further IEP's reaction to the Governors Press Conference and other events in the Legislature this week.

As always we will keep you posted...

Katie Kaplan

FOR IMMEDIATE RELEASE 04/05/2001

GOVERNOR GRAY DAVIS DELIVERS ADDRESS TO CALIFORNIANS ON ENERGY

SACRAMENTO

Governor Gray Davis today delivered an important live address on energy from his office in Sacramento. The following are his remarks as prepared for delivery:

"Good evening. I'm speaking to you tonight from Sacramento on the most difficult issue facing California: our energy crisis.

"Simply stated, we have two problems: supply is too low and costs are too high. Both result from the flawed deregulation scheme created in 1996. But no matter how we got into this mess, you hired me to solve problems. And that's what I'm doing.

"The only long-term solution is to build more power plants. We must also cut back on consumption and stabilize the utilities. But prices won't fall and supply won't be truly reliable until we generate more power than we consume.

"Yet in the 12 years before I took office, not a single major power plant was built in California. Not one. Since I became Governor, we've licensed 12 major power plants. Ten more are in the pipeline. And we're doing this without weakening our commitment to clean air and clean water.

"Deregulation required the utilities to sell off many of their power plants to independent generating companies. The generators are free to charge whatever they want because they're governed only by federal regulators who refuse to control wholesale energy prices.

"This past winter, the prices charged by the generators shot through the roof, driving the utilities to the brink of bankruptcy.

"In January, with the feds still refusing to do their job, California stepped in to purchase the power the utilities could no longer afford to buy. We didn't take over to save the utilities. We took over to keep the power on and the economy strong. That's not all:

We also negotiated long-term contracts for electricity at vastly lower prices. I used my emergency powers to seize control of low-cost power contracts the utilities were about to forfeit to the generators. We began negotiations to buy the utilities' transmission system. We cut red tape and offered cash incentives to speed up construction of power plants. We're launching an \$800 million conservation program. We're moving to establish a public power authority to build more power. If the private sector fails to build all the plants California needs, we'll build them ourselves. And because I share your concern that the generators are ripping us off, we're using every legal remedy to root out and punish illegal conduct.

"We can't fix 12 years of inaction overnight. But we're making real progress.

"Now, as you know, I have fought tooth and nail against raising rates. It's become increasingly clear, however, that with rising natural gas prices, the feds' failure to control costs, and the state's lack of supply, that some rate increases are needed to keep our lights on and our economy strong.

"But I remain committed to protecting average Californians from massive rate hikes. So I'm urging the Public Utilities Commission to adopt a plan that will protect average consumers, reward those who conserve and motivate the biggest users to cut back.

"Under my proposal, more than half of you won't pay a penny more. For the rest, the average increase will be 26 and a half percent. For many of that group, rates will rise only about 10 percent. The heaviest users will see their rates rise 34 and a half percent on average. That includes business paying their share. This is in addition to the 9 percent surcharge we've all been paying since last winter.

"But all Californians can reduce their bills through conservation.

"Here's the point: The more you use, the more you pay. The more you conserve, the more you save. Conservation is our best short-term weapon against blackouts and price-gouging. By flexing your power, you'll help secure our energy future.

"Unlike the PUC, my plan includes funds to restore the utilities to financial stability -- If they agree to three main conditions:

"They must provide low-cost regulated power to the state for 10 years. Agree to sell us their transmission system. And dismiss their lawsuits seeking to double your electricity rates.

"My proposal raises rates fairly, assures us of long-term power, stabilizes the utilities and promotes conservation.

"Our emphasis on conservation is critical. In order to make it through the summer, we must cut demand by at least 10 percent.

"Already we've launched programs to cut back commercial lighting, and reduce consumption in office buildings, schools and government facilities.

"Friends, we have a power shortage but we are far from powerless. We are 34 million strong and if each of us does our part, we can minimize disruptions and get through the summer. We are Californians. We've withstood earthquakes, floods, fires, and droughts.

"Yes, this mess is man-made, but with your help and God's blessing, we'll get through this as well.

"Thank you and good night."

CUSTOMER-AFFECTING LOUISIANA PSC discusses creating a 'pool' of CLECs

The Public Service Commission yesterday discussed a staff report on creating a "pool" of competitive local exchange carriers (CLECs) to provide service to CLEC customers whose providers are unable to pay their debts to incumbent local exchange carriers (ILECs). The pool aims to enable CLEC customers to continue receiving reliable service without having their business revert to ILECs such as BellSouth Telecommunications, Inc.

The commission took no action on the issue at yesterday's session but plans to discuss it again next month, a commission staff member told TR. Meanwhile, the state's CLECs are addressing the issue at a meeting today in Baton Rouge, the staff member said.

SECTION 251/252 KANSAS Arbitrators say SW Bell doesn't have to combine UNEs for Sprint

Two state Corporation Commission arbitrators have determined that the law doesn't require Southwestern Bell Telephone Co. to combine unbundled network elements (UNEs) at the request of Sprint Communications Co. L.P. that aren't combined already. Originally the arbitrators ruled that SW Bell had to provide Sprint UNE combinations that SW Bell ordinarily provides to itself when provisioning telecom services for its customers.

The arbitrators said they based their reversal on a U.S. District Court for the Western District of Michigan (Grand Rapids) decision, which stated, "Under the [federal Telecommunications Act of 1996] it is the duty of the requesting carriers, not the incumbent [local exchange carriers], to combine the elements." The court explained that it couldn't insert a bundling

requirement and added that the state also was precluded from imposing such a requirement.

The ruling will be sent to the KCC for action. The arbitrator's ruling is available at <http://www.kcc.state.ks.us/scan/200101/20010119165748.pdf>. (Docket no. 00-SCCC-1046-ARB)

UNIVERSAL SERVICE KANSAS KCC to take a look at how USF dollars are spent

The state Corporation Commission has determined that it needs to monitor how nonrural and rural telecom carriers are using the universal service funds they receive from the state and federal governments. Carriers must use the funds "only for the provision, maintenance, and upgrading of facilities and services," according to section 254(e) of the federal Telecommunications Act of 1996.

Parties must file comments by March 9 detailing any mechanisms the KCC can use to monitor whether the support is being used appropriately. Replies are due March 30. (Docket no. 01-GIMT-595-GIT, In the Matter of a General Investigation to Ensure Compliance with Section 254(e) of the federal Telecommunications Act of 1996)

INTERNET MISSOURI Sen. Kinder aims to enact UETA

Sen. Peter D. Kinder (R., District 27) has introduced SB 220 to make electronic transactions as legally binding as paper transactions if the parties involved agree to conduct business electronically. SB 220 also would repeal the Missouri Digital Signatures Act.

Certain types of transactions still would have to occur manually. The proposed bill, for example, wouldn't supersede laws that govern the creation and execution of certain types of documents, such as wills, codicils, or testamentary trusts.

It has been referred to the Senate Committee on Commerce and Environment.

CUSTOMER-AFFECTING NEW YORK Legislators wants rate disclosure and per-second billing

Assemblyman Scott M. Stringer (D., District 67) has introduced two bills to modify telecom pricing practices.

AB 1968 would require long distance service providers that use access codes to disclose their rates. The carriers would have to provide intrastate and interstate rates and "the effect of such variables as time of day and call duration" each time a caller uses the access code. The companies also would have to provide the rate information to local exchange carriers, who would have to share the information with their customers semiannually.

The second measure, AB 1668, would require all charges based on call duration to be charged and prorated by the second. The proposed law would apply to charges for both landline and wireless calls and all service providers and "aggregators," such as hotels and hospitals.

Both bills have been referred to the Committee on Corporations Authorities and Commissions. The text of AB 1968 is available at <http://assembly.state.ny.us/cgi-bin/showtext?billnum=A01968>, and the text of AB 1668 is available at <http://assembly.state.ny.us/cgi-bin/showtext?billnum=A01668>.

INTERNET ILLINOIS Legislation would tax Internet sales

Rep. John (Jack) McGuire (D., Joliet) has filed HB 278 to subject Internet purchases shipped to Illinois addresses to the state's sales tax. The measure was filed yesterday and hasn't been formally introduced in the House yet.

INTERNET OKLAHOMA Bill allows state agencies to adopt digital signature rules

Rep. Fred Perry (R., District 69) has prefiled HB 1322 to allow state agencies to adopt their own rules governing the use of digital signatures. The rules would have to meet or exceed the rules adopted by the Secretary of State. The bill wouldn't require any person to use or permit the use of electronic or digital signatures.

HB 1322 would set up certain requirements for citizens to become certification authorities in Oklahoma. The applicant would need to register with the Secretary of State and pay a filing fee. Additionally, the applicant would need to provide the Secretary of State a bond, certificate of insurance, or other evidence of financial security in the amount of \$100,000.

CUSTOMER-AFFECTING -- SERVICE QUALITY UTAH PSC seeks comments on service quality rules

The Public Service Commission has asked for comments by Jan. 29 on proposed service quality rules, most of which would apply only to Qwest Corp. (1/11/01 p.m.) The rules would require Qwest to install 90% of all new, transfer, and

change orders within three business days or on the customer's requested due date. Beginning in July, the company would have to install 95%.

The draft rules also would allow Qwest to have a maximum of five held orders per 1,000 new, transfer, and change orders at the end of any month. Beginning Jan. 1, 2002, the company could have only four such held orders. If it missed an installation commitment, residential customers would receive a \$10 credit, and small business customers would receive a \$40 credit.

Qwest would have to repair 80% of all out-of-service troubles within one business day and repair 85% of them starting in July. It would have to repair 90% within two business days. If Qwest missed a repair commitment, it would have to credit residential customers \$10 and business customers \$40.

The proposed rules also address reporting requirements, billing, and disconnection. The rules are scheduled to be submitted to Administrative Ru

Janet Yellen Named to the Academy of Arts and Sciences Semiconductor Technology Takes First Place in UC Berkeley B-Plan Competition Haas Leads Western Business Schools in Quirky Wall Street Journal Ranking Berkeley Team Wins Advertising Case Competition New Staff Haas in the News Happening at Haas?? Haas Celebrations

JANET YELLEN NAMED TO THE ACADEMY OF ARTS AND SCIENCES Janet Yellen, the Eugene E. & Catherine T. Trefethen Professor of Business Administration, was named a fellow of the American Academy of Arts and Sciences on April 26, 2001. Members of this year's class included 211 distinguished scholars, scientists, artists, business executives, educators, and public officials. They were honored for their achievements in fields ranging from mathematics to medicine, from computer science to literary criticism, and from public affairs to the performing arts.

"Janet Yellen is well-deserving of this honor," says Ben Hermalin, associate dean of academic affairs. "She is one of the leading economists of her generation. Her work covers so many areas within economics that it is difficult to characterize, except to note that it is all uniformly excellent and always exhibits great clarity of thought. Her works are always about matters of interest, usually of importance to policy debates, and they provide tremendous insights into these matters."

Yellen's work includes major contributions in international economics, macroeconomics, microeconomics, labor economics, and the economics of social policy. Her writing has often focused on federal economic policy issues. She has served as Chair of the Council of Economic Advisers and as a member of the Board of Governors of the Federal Reserve. Her writings on bundling and advertising (micro) and "near-rational" theory of business cycles are much cited, as are her papers on neighborhoods, crime, and teen pregnancy.

She graduated summa cum laude from Brown University with a degree in economics in 1967 and received her Ph.D. in economics from Yale University in 1971.

"You cannot help but learn from -- and be persuaded by -- reading a Yellen article," says Hermalin. "Although presumably not a factor in her receiving this honor, it is a pleasure to observe, nonetheless, that Professor Yellen is also an excellent teacher and a valued citizen of the Haas School and campus."

The academy has numbered among its members each generation's finest minds and most influential leaders, from George Washington and Ben Franklin in the eighteenth century to Daniel Webster and Ralph Waldo Emerson in the nineteenth and Albert Einstein and Winston Churchill in the twentieth. The current membership of 3,600 Fellows and 600 Foreign Honorary Members features more than 150 Nobel laureates and 50 Pulitzer Prize winners.

The new class is composed of 185 Fellows, along with 26 Foreign Honorary Members from 14 nations. New Fellows are nominated and elected by current members of the academy. More information is available at <http://www.amacad.org/news/new2001.htm>.

SEMICONDUCTOR TECHNOLOGY TAKES FIRST PLACE IN UC BERKELEY B-PLAN COMPETITION RAPT Technologies, which has developed a dramatically faster and more cost-effective technology for etching and polishing optical and semiconductor materials, has won the third annual UC Berkeley Business Plan Competition. The Haas MBA organizers of the competition announced the three winning teams, which share more than \$90,000 in cash and prizes, at Wednesday's final awards ceremony.

"The quality of the plans was extremely high," said Michael Powell, managing director of Sofinnova Ventures and a final round judge. "The teams all had their acts together. I would have taken any one of these teams to my partners."

RAPT's technology is able to etch or polish materials without making contact. It is 10 to 10,000 times faster than existing technologies and operates at atmospheric pressure. The idea came from Jeff Carr of the Manufacturing and Materials Division at Lawrence Livermore Laboratory. He was joined by Haas evening MBA student Peter Fiske and Mona Alves, founder, president, and CEO of CHAT Communication Services.

In addition to the \$50,000 first prize, RAPT received the \$5,000 People's Choice Award, based on votes from the audience -- and independent from the judges -- at the awards ceremony.

The second prize of \$25,000 went to biotechnology venture Arotea Biochips. Arotea aims to enhance drug discovery with its rapid and easy-to-use protein measurement system. Arotea developed a patent-pending biochip for parallel analysis of 100 to 10,000 protein samples and is designed to be bio-compatible with virtually all proteins and capture agent libraries.

Haas evening MBA student Thomas McVey joined the Arotea team, which also includes students from Boalt Hall School of Law and UCSF. Arotea had previously won second prize for best management team in the Haas Social Venture Competition on April 14.

TruVideo, a wireless video infrastructure company, received the third prize of \$10,000. TruVideo offers digital image quality over broadband that is superior to existing technologies. The company intends to take advantage of the convergence of wireless technology and the Internet to become the standard video platform for the emerging web-enabled wireless device market.

The TruVideo team consists of three Haas MBA students, Joseph DelCallar, Steven Stokols, and Raj Manghani, as well as engineering undergraduate Greg Chew and professor of electrical engineering Avidah Zakhor.

All six of the finalist teams have had at least one team member enrolled in "Opportunity Recognition," a course on how to commercialize new technologies taught by Andrew Isaacs, executive director of the Management of Technology program.

More than 65 venture capitalists, angel investors, and successful entrepreneurs served as judges and evaluated the business plan submissions. Another 26 entrepreneurs, professors, and professionals served as mentors to the teams that qualified for the first round and helped them develop their plans.

The keynote speaker at the awards ceremony was Nick Sturiale, MBA 2000, who was the founding CEO of Timbre Technologies. Timbre Technologies, a semiconductor software company that won the 1999 business plan competition, and was sold in February to Japanese company Tokyo Electron Limited for \$138 million.

To date, teams from the 1999 and 2000 competitions have raised well over \$90 million in venture financing, including 1999 teams: +???????Alloptic- \$19.7M www.alloptic.com); +???????AudioBasket- \$29M www.audiobasket.com); +???????GetRelevant- \$4.855M www.getrelevant.com); +???????Hotpaper- \$2M, Acquired for \$10M by GoAmerica www.hotpaper.com); +???????Timbre Technologies- \$2.8M (no website); and +???????ZipRealty- \$27.7M www.ziprealty.com).

and 2000 teams: +???????DeltaClick (formerly known as iJacker)- \$1.5M www.deltaclick.com); +???????Onwafer (formerly known as AMS)- \$350K www.onwafer.com); +???????Opient- \$400K www.opient.com); and +??????? Skyflow- \$3.5M www.skyflow.com), winner of the 2000 competition.

HAAS LEADS WESTERN BUSINESS SCHOOLS IN QUIRKY WALL STREET JOURNAL RANKING The Wall Street Journal ranked the Haas School as the best MBA program in the West in the newest and latest ranking of business schools in a special section of the newspaper on Monday, April 30.

Although the Haas School ranked only 21st out of 50 in the survey, the school's showing outscored all other business schools from the West Coast through the Rocky Mountain states - including Thunderbird (25); UC

Future of Kyoto Protocol Minus U.S. Is Uncertain By John J. Fialka and Geoff Winestock Staff Reporters of The Wall Street Journal

07/16/2001 The Wall Street Journal A2 (Copyright (c) 2001, Dow Jones & Company, Inc.)

Diplomats from around the world gather in Bonn starting today to address a seminal question: Will there be a Kyoto protocol on global warming without the U.S., or none at all? The key player in answering that question appears to be Japan, whose position may well determine whether other industrialized nations move ahead despite the Bush administration's vigorous opposition. The Kyoto protocol will be the central issue at a United Nations convention, which

initially was intended to complete the pact after talks in The Hague broke down in November over relatively minor differences between the European Union and the U.S. Since then, however, President Bush rejected the treaty as "fatally flawed," throwing its future into doubt. The protocol, brokered by former Vice President Al Gore in 1997 and later signed by former President Clinton, requires industrial nations to reduce their emissions of carbon dioxide and five other gases thought to be warming the planet by 5.2% below 1990 levels. The Bush administration wants an alternative that is less punishing on the energy-intensive U.S. economy, and that imposes tougher requirements on China, India and other fast-developing nations. President Bush on Friday announced a series of steps to reduce the impact of heat-trapping gases, in lieu of the Kyoto protocol. The president unveiled a \$120 million National Aeronautics and Space Administration project to study climate modeling, among other things. The Department of Energy, meanwhile, has signed two agreements to study carbon levels, and the White House also awarded \$25 million in grants for similar studies elsewhere. Finally, the Department of Treasury started a \$14 million forest-conservation program in El Salvador. Still, the U.S. turnabout on Kyoto continues to shock Europe, and European leaders vow to go it alone. "To wait for the U.S. is to wait for someone who has refused your invitation," European environment commissioner Margot Wallstrom said this week. But under the terms of the protocol, the Europeans need ratifications from industrial nations that emit 55% of the developed world's "greenhouse" gases, and European nations don't account for that level of reductions themselves. Reaching that amount without the U.S. isn't possible without the support of Russia and Japan. Japan's position is most up in the air, and it accounts for 8% of total emissions. Japan's environmental minister, Yoriko Kawaguchi, paid a series of last-minute calls on U.S. cabinet officials on Friday. Japanese officials want the Kyoto protocol to come into force, but they appear reluctant to take a position against the Bush administration. To push its case, the EU has spent the past two weeks trying to build a constituency around the world to put the protocol into effect, a move that would allow key provisions to acquire legal force, such as an international emissions-trading system and penalties for noncompliance. Ms. Wallstrom visited Asia and Australia last week, and British Deputy Prime Minister John Prescott was in Tokyo on Thursday. The EU strategy has been to offer to make it easier for these wavering countries to sign up. For example, the EU was previously reluctant to allow "sinks" such as forests, which soak up carbon dioxide and hence reduce net emissions of greenhouse gases, to be counted toward national targets for emission reductions. But in a bid to win support from key countries, especially Japan, it is now offering more flexibility on sinks. Paula J. Dobriansky, an undersecretary of state who will lead the U.S. delegation, said the U.S. will not block other nations that want to pursue the protocol, but it will intervene in Bonn if the talks affect other U.S. interests. "We plan to be very active and constructive in that regard." The Bush administration is still studying alternatives to the treaty. Meanwhile, U.S. companies are divided on the protocol. Eileen Claussen, head of the private nonpartisan Pew Center on Climate Change, has formed a group of 36 major companies that includes DuPont Co., Enron Corp., Weyerhaeuser Co. and Boeing Co., to argue for action on global warming. While they don't agree on every aspect of the Kyoto formula, she explains, "they all want to get this process started in a way that spreads out the pain but gets something done." Meanwhile, the Global Climate Coalition, whose membership includes the U.S. mining industry, the National Association of Manufacturers and other large industrial trade associations, supports the Bush antitreaty stance. Taking more time to discuss the protocol, says Glenn Kelly, its executive director, "will continue the Kyoto quagmire and allow diplomats to continue to collect frequent-flier miles."

Business/Financial Desk; Section C E-Commerce Report As the shakeout proceeds, some business-to-business marketplaces show their staying power. By Bob Tedeschi

07/16/2001 The New York Times Page 4, Column 1 c. 2001 New York Times Company

EARLIER this year, Forrester Research, the Internet consulting firm, predicted that the universe of business-to-business e-marketplaces would shrink to a mere 180 in the next two years, from 1,000 or more today. It was a bleak forecast, but one that surprised few who had watched such sites search in vain for customers in 2000. The shakeout is proceeding apace, with the rate of mergers and failures picking up where the consumer e-commerce sector left off. But just as some survivors have begun to emerge from the consumer e-commerce rubble, so, too, have some of the so-called B2B marketplaces started to show some staying power. In recent weeks, Pantellos, an online marketplace for the utilities industry, said it had handled nearly \$200 million of transactions since it rolled out in January. ChemConnect, an online chemicals exchange, recently crossed the \$1 billion mark in transactions handled so far this year. Intercontinental Exchange, a trading site for electric power, gas and oil,

06/24/2001 The New York Times Page 13, Column 1 c. 2001 New York Times Company

When the European Commission indicated it was likely to block the proposed merger between General Electric and Honeywell, American politicians from George W. Bush on down cried foul, with some alleging that the decision was politically motivated. They're almost certainly wrong about that, but it is true that the E.C.'s case against the merger is far from watertight. Mario Monti, Europe's competition referee, may have made a bad call on this play. Nonetheless, our politicians should lower their voices. Mr. Monti is one of the good guys in today's global economy. He should not be made the target of attempts at political intimidation. To put the G.E.-Honeywell affair in context, you need to realize that this case is a triple switcheroo: it contradicts not one but three pieces of conventional wisdom. First, the conventional view is that globalization weakens governments, because it forces them to compete for private investment. Broadly speaking, this view is right. (Conventional wisdom usually is.) There are, however, exceptions to the rule, and antitrust policy is one of those exceptions. In today's world, no company can compete effectively unless it can operate freely on both sides of the Atlantic -- which it can do only with a green light from antitrust authorities in both the United States and Europe. The result is that instead of eroding the power of those authorities, globalization has extended their reach: American regulators can block European mergers, and vice versa. Second, this case inverts traditional roles. Until recently, only the U.S. seemed to take antitrust policy seriously. Europeans might have U.S.-style legislation on the books, but they often seemed to feel that cartels, like extramarital affairs, were nothing to worry about as long as the participants were discreet -- and they were scornful toward puritanical Americans who insisted on enforcing the letter of the law. Lately, however, Europe has gotten serious about antitrust, giving the competition commissioner broad powers to block mergers and investigate allegations of anticompetitive behavior. Mr. Monti, an American-trained university professor who assumed that office in 1999, has used those powers aggressively. General Electric and Honeywell are by no means the first companies to find Mr. Monti blocking what they thought was a done deal. Was Mr. Monti right to block this particular deal? It's a complicated issue. Let's just say that the case against this merger is similar to the case for breaking up Microsoft, though it seems a lot weaker. On the

other hand, you don't need as strong an argument to block a merger as you do to break up a going concern. We're in a gray area, with the precise shade of gray a matter of opinion. Even if you disagree with Mr. Monti's opinion, however, his sincerity is not in doubt. The best answer to those who claim that this is really a protectionist ploy is Mr. Monti's track record: he has repeatedly shown himself willing to oppose the demands of powerful European interest groups. Why would he suddenly become a tool of protectionists? And that leads us to the third switcheroo. Europeans are accustomed to cozy cohabitation between politicians and businessmen; Americans tend to insist on at least the appearance of an arms-length relationship. But just at the moment when the Europeans have placed competition policy in the hands of a sternly upright professor, the United States has acquired an administration that seems oblivious to normal concerns about conflict of interest. It's not yet clear whether the Bush administration really is a government of, by and for big corporations to an extent not seen since Warren G. Harding was president, or whether it just looks that way. But the stories keep accumulating. Intel's chief lobbyist says that his highly inappropriate meetings with Karl Rove were "quite useful" to its merger case -- and Mr. Rove didn't even get a slap on the wrist. According to the outgoing chairman of the Federal Energy Regulatory Commission, the head of Enron offered to support him at the White House if he changed his policy positions. And it took three months -- and a sharp prod from Jake Tapper at Salon -- before Treasury Secretary Paul O'Neill honored his promise to sell his Alcoa stock. As a consumer, I'm not sure I trust these people to protect me from the market power of giant corporations. And so it's nice to know that Mr. Monti is out there, looking after my interests.

Money and Business/Financial Desk; Section 3 BOOK VALUE Looking at E-Business From Both Sides Now By FRED ANDREWS

06/24/2001 The New York Times Page 6, Column 1 c. 2001 New York Times Company

BOOKS about e-business have proliferated over the last year. Undeterred by the dot-com crash and financial travails of many Internet companies, business publishers have turned to churning out an ever-widening array of guides to help well-established companies prosper on the Web. The books range from simplified manuals to weighty analyses of the dynamics of e-business ventures. Here are two examples at opposite ends of the spectrum: "D2D: Dinosaur to Dynamo" by David Stauffer (John Wiley & Sons, \$27.95), and "Place to Space: Migrating to E-Business Models" by Peter Weill and Michael R. Vitale (Harvard Business School Press, \$35). At first blush, "D2D" is a once-over-lightly account, a scissors-and-paste recycling of other books and the business press, duly footnoted, to be sure. The pages are salted with so many diverting lists, special boxes and eye-catching headlines ("Why the Web Can Be Farmer-Friendly") that the main text is an annoying weave through an obstacle course. With short paragraphs and lots of space between lines, the book cried out to be skimmed. But Mr. Stauffer, who has written books about America Online and Cisco Systems and many articles explaining how companies have adapted to the Internet, has assembled a fascinating menagerie of 20 businesses that have taken to e-business with great success. His brief histories include the obligatory e-favorites -- Enron, General Electric, Charles Schwab -- as well as peers like Ford Motor and Bertelsmann. But he also tells you about Snap-on Inc., DoveBid industrial auctioneers, the Antevia Inc. relocation service and Powell's Books of Portland, Ore., a thriving "independent" whose 68,000-square-foot flagship is one of the nation's largest bookstores. Powell's began in 1970, buying lightly used tex

Legislative Weekly July 13, 2001 Issue 28, Volume 3 A weekly publication from the California Manufacturers & Technology Association detailing legislative and regulatory developments in Sacramento

FRIDAY THE 13TH SURPRISE FOR CALIFORNIA BUSINESSES The budget impasse will keep lawmakers working over the weekend. In addition, a deadline looms for a vote on the Governor's Memorandum of Understanding (MOU) to keep Southern California Edison (SCE) out of bankruptcy. The Assembly and Senate Democrats are making a final run at their own versions of the plan. A Senate version is still in the works, while the Assembly Energy Costs and Availability will hold an informational hearing Saturday afternoon on ABX2 82 (Keeley D-Boulder Creek). ABX2 82 currently allocates the SCE undercollection almost entirely to noncore customers (above 20kw), pays SCE two times net book value for transmission, and leaves open the possibility of a contribution from SCE above the \$400 million tax refund provided in the Governors MOU. The sketchy outline of a Senate plan would impose all undercollections to noncore customers, impose a \$300 million haircut to generators and an additional \$800 million from SCE. Direct access rights would be suspended under ABX2 82 until 2003 and a study would be authorized by March 31, 2002, on how to expeditiously phase in direct access for customers over 20kw (and green direct access under 20kw). Some of California's largest businesses have already been hit with rate increases over 100%. CMTA supports an equitable sharing of the costs of the SCE undercollection (as well as DWR contract costs) among all customer groups, and will oppose a solution to the SCE problem that unfairly shifts these costs to California businesses.

MORE OR LESS ENERGY There seems to be no shortage of bad business bills making their way through the Legislature. Issues range from imposing strict liability on generators that reduce or discontinue electricity generation, to subjecting generators to felony criminal penalties for making basic cost/benefit business decisions. Generator Liability A measure, ABX2 51 (Reyes D-Fresno), that makes an electricity generator strictly liable for any damages that are proximately caused when the generator reduces or stops generating electricity for economic reasons, passed (7-0) from the Assembly Judiciary Committee on July 3, 2001. Since negligence and intent need not be proven in order to establish strict liability, under ABX2 51, a generator could be held strictly liable for damages that resulted if electricity supplies were curtailed when the generator was temporarily shut down to perform routine maintenance, unscheduled maintenance or due to other external business factors. ABX2 51 also would make it difficult for a generator to permanently close a facility, even if the facility was not operating profitably. Despite the fact that electricity shortages are driven by any number of factors within and beyond their control, ABX2 51 would result in generators shouldering all liability and responsibility for electricity shortages. CMTA will be actively advocating against this measure before it is heard on the Assembly Floor. Felony Fuel Shortages ABX2 65 (Cardoza D-Merced) is a vaguely worded measure that does not explicitly identify what types of activities would be considered felonious. The measure allows an individual or entity to be prosecuted for "creating a fuel shortage" defined as: (1) The diminution by contrivance or artificial means of any of the supply of fuel to a point below that needed to meet consumer demand; (2) Restricting output or withholding capacity from bidding into the market; and, (3) Economic withholding by submitting bids at prices above the producers' marginal cost. Fluctuations of in-state and out-of-state generation; maintenance of facilities; weather; customer demand; and drought are just a few of the many components that converge to impact day-to-day energy supplies. ABX2 65 does not allow for the natural swings in supply and demand which are common in a market economy, and add one more unpredictable component to the market, thus further complicating price and supply fluctuations. In addition, the bill provides that producers only should receive marginal costs for their products. This precept flies in the face of a free market economy. Businesses should be able to receive a reasonable return on the products they produce and supply. Limiting a business' profits to marginal costs only further discourages investment in the State's energy infrastructure. Second, entities already may be prosecuted for illegal business practices, conspiracy, collusion and intentional market manipulation under the State's Cartwright Act and the Federal Sherman Anti-Trust Act, among others. Enforcement of existing state and federal laws is sufficient to address the alleged illegal business practices the bill purports to remedy. Third, the measure establishes that a person or entity who violates provisions of the bill is "guilty of a felony and may be punished in state prison and a fine not to exceed 10 percent of the corporation's gross corporate assets." These fines and penalties are excessively punitive. Fourth, the bounty-hunter provisions of the bill provide an incentive for employees and interest groups to investigate businesses for profit. Other bounty-hunter legislation passed by the Legislature has resulted in many frivolous lawsuits. Some of the costs associated with these suits are absorbed by businesses and some of the costs are passed on to consumers in the form of higher prices. In any event, the bounty-hunter provisions have the potential to unnecessarily increase energy costs. The regulatory branch of our government already has the authority to investigate alleged unfair business practices. This authority should not be passed on to employees and interest groups. ABX2 65 establishes a terrible precedent and has

the very real potential to reduce existing energy supplies and to discourage future energy infrastructure investment within the State. Office of Ratepayer Advocate Following the charge of Pacific Bell, CMTA and other business lobby groups have successfully slowed the progress of SB 201 (Speier D-Hillsborough) which repeals the sunset of the Office of Ratepayer Advocate (ORA). CMTA does not oppose the continued existence of the ORA, but is advocating against language inserted into the measure that significantly expands the ORA's authority. The ORA has exercised broad authority to supervise and regulate utilities, arguably beyond the authority it was granted when it became a stand-alone office. While there is ample legislative history in Public Utilities Code Section 309.5 indicating that the ORA should be independent of the Commission, the PUC's full authority was not automatically extended to the ORA. CMTA joined Pacific Bell in proposing amendments to limit the ORA's authority and to require the PUC to issue written orders when ruling on the ORA's discovery requests. Written rulings by an Administrative Law Judge or Commissioner would provide additional information to the ORA, utilities and the public explaining the basis for decisions. In addition, CMTA supports requiring the ORA to pursue alternative dispute resolution prior to filing a complaint. Many courts today utilize alternative dispute resolution because it often leads to a more efficient dispositio

US Lawmaker: Revoke 6 Pwr Cos Mkt-Based Selling To Calif ???? Updated: Tuesday, April 24, 2001 08:16 AM?ET
 ????? ? (This article was originally published Monday)

LOS ANGELES (Dow Jones)--A U.S. Congressman from California asked federal regulators Monday to revoke the authority of six generators to sell power at market-based rates in the state because they abused that authority in the past, according to a letter seen by Dow Jones Newswires.

Congressman Bob Filner of San Diego accused the following companies of controlling power prices in California: AES Corp (AES, news, msgs), Duke Energy Corp (DUK, news, msgs), Dynegy Inc (DYN, news, msgs), Mirant Corp (MIR , news, msgs), Reliant Energy, Inc (REI, news, msgs), and The Williams Companies, Inc (WMB, news, msgs).

"Each of the companies was required, as a condition for the authority to sell at market-based rates, to demonstrate that they did not possess market power in the California generation market," Filner said in a letter to Federal Energy Regulatory Commission Chairman Curt Hebert. "It is clear that these firms, do, in fact, have market power and therefore do not satisfy the prerequisite for authority to sell at market-based rates under FERC rules."

FERC granted the generators market-based rate authority in 1998 for three years, and is in the process of determining whether to renew that authority.

Filner's letter comes on the heels of a meeting Thursday between California Gov. Gray Davis and 22 federal lawmakers from the state, where all agreed that FERC needs to take more action to curb skyrocketing wholesale power prices in

California.

The lawmakers have not, however, reached a consensus on how the FERC should keep prices in check. At least one other Congressperson, Democrat Jane Harman, said Thursday that she favored revoking generators' market-based rate authority.

The state's grid operator filed a letter to FERC in March claiming generators overcharged the state \$6.2 billion for electricity they sold in the state's power market between May 2000 and February 2001. FERC has ordered refunds for overcharges totalling \$124.5 million for January through March, 2001.

Calif Gov Forms Team To Speed Power Plant Construction ???? Updated: Tuesday, April 24, 2001 03:34 PM?ET ????? ?
LOS ANGELES (Dow Jones)--California Gov. Gray Davis said Tuesday he has formed a task force to help speed the construction of new power plants in the state, according to a press release.

The team will examine construction schedules and shorten the startup time for power plants to be built and develop methods to overcome potential delays during construction, the release said.

The task force will comprise members of engineering and construction firms, and will be led by Ambassador Richard Sklar, who recently completed service as the U.S. President's Special Representative for Economic Reform and Reconstruction in Southeast Europe.

Sklar is the former owner of a construction machinery manufacturing firm and former president of a project management firm as well as former general manager of San Francisco's Public Utilities Commission, the release said.

Other members of the task force include project management executives from Bechtel Group Inc, URS Corp. ????????(URS, news, msgs), and Fluor Corp. (FLR, news, msgs) unit Fluor Daniel.

"To keep up the momentum and ensure we have 15% more supply online than demand by 2004, this project management team will work to expedite all phases of the power plant construction process," Davis said.

Davis also said Tuesday his energy advisor and staff director, John Stevens, is leaving the administration, but will continue to work with the governor on energy-related issues.

US Sens Unveil Bipartisan Bill To Cap Western Pwr Prices ???? Updated: Tuesday, April 24, 2001 12:17 PM?ET ????? ?
WASHINGTON (Dow Jones)--U.S. senators Dianne Feinstein, D-Calif, and Gordon Smith, R-Ore., Tuesday unveiled bipartisan legislation to require federal regulators to impose cost-based electricity price controls throughout the western U.S..

The bill was unveiled at a press conference designed to ratchet up pressure on the Bush administration to relent in its opposition to price controls in response to a pending electricity supply crisis in the region this summer.

The measure would require the U.S. Federal Energy Regulatory Commission to limit the prices power suppliers can obtain to their cost of production plus a reasonable rate of return. The bill would allow FERC to determine what rate of return power providers could obtain. The cost-based price controls would remain in effect until March 1, 2003.

The bill also targets a FERC decision deemed to be exacerbating California's electricity crisis by driving up natural gas costs in the state. It would require FERC to end a temporary suspension of a natural gas transportation rate cap for sales into California. The bill would mandate that natural gas providers disclose to FERC commodity and transportation prices for sales into California.

This is another hit that grew out of the media advisory we sent out at the end of last week. Also, be on the look out tomorrow for another direct access story in the Orange County Register. That's when the reporter on the story has told us it will run.

Suppliers lobby California lawmakers for direct access for consumers By Kate Thomas OGJ Online Staff HOUSTON, June 8 -- The California Public Utilities Commission is scheduled to set a date formally ending retail choice for California consumers at its June 14 meeting, despite behind-the-scene maneuvering to keep choice alive for big power consumers. Large California electricity users and marketers have mounted a lobbying campaign in the legislature to keep direct access alive as an option. Sources said it has become a pivotal negotiating point in California Gov. Gray Davis's efforts to win Republican support for his proposed bailout of Southern California Edison Co. Davis ushered in the end of retail choice for electricity consumers when he signed a bill Feb. 1 that authorized the state to buy power on behalf of Pacific Gas & Electric Co. and Southern California Edison. The retail choice provision was added as amendment to the legislation. But it also left it up to the California PUC to set a date suspending the right of retail customers to select and use an alternative energy supplier. Davis appears willing to give suppliers and big businesses what they want in exchange for supporting his proposal to keep Southern California Edison, Rosemead, Calif., out of bankruptcy protection, sources said. He and the utility signed a memorandum of understanding under which the state would buy the company's transmission assets in exchange for various concessions on the part of Southern California Edison. But the deal also required various actions by the PUC and the California legislature. It also had deadlines under which certain actions were supposed to take place. So far little has happened. Earlier this week, the Alliance for Retail Energy Markets complained the PUC seemed ready to scuttle chances for achieving progress on either front by moving ahead to set a date to end competition. "There's no point for the PUC to support an order when it might be superseded by legislation," said Tracy Fairchild, a spokeswoman for the marketing organization whose members include Shell Energy Services, a unit of Shell Oil Co.; Enron Energy Services, a unit of Enron Corp.; both of Houston; GreenMountain Energy Co., Austin, Tex.; Commonwealth Energy Corp., White Rock, BC, and Strategic Energy LLC, an affiliate of Kansas City Power & Light Co., Kansas City, Mo. Opt out provision It isn't clear if PUC Commissioner Carl Wood has the support of other commissioners to set the date, Fairchild said. The commission also regularly postpones and pulls items off the agenda at the last minute if there is no consensus. But with a just-enacted rate increase that relies heavily on big business to carry the extra load the commission may not be amenable to giving large consumers an opt out provision. Suppliers have been lining up support wherever they can find it. Earlier this year, Vincent Viola, chairman of the New York Mercantile Exchange, weighed in on behalf of California suppliers and large retail customers. In a letter to Gray, he argued releasing medium and large commercial and industrial buyers from the

obligation of using state-supplied power would free billions of dollars of state capital from the risks of volatile energy markets. "It seems that medium and large businesses have been deemed unable to negotiate fair and reliable supply contracts on their own behalf," he said. He noted if industrials and medium sized businesses were allowed to pick up a supplier, the role of the state would be rolled back to cover the less than 50% of the market that includes homeowners and small business owners. Viola also touted the use financial market instruments to protect against unexpected energy price moves, rather than locking in prices under potentially high-priced fixed contracts. While retail electric deregulation is in trouble in many parts of the country, big business is managing to keep its options alive. Nevada recently all but rescinded its deregulation law that would have given all classes of customers the right to choose a supplier and ordered incumbent Sierra Pacific Resources, Reno, to halt the sale of its power plants. But users of one megawatt or more of electricity were exempted at the last minute and can still buy from suppliers other than the regulated utility units of Sierra Pacific Resources.

SECTION 251/252 WASHINGTON WUTC sets line sharing, OSS transition, collocation prices

The Utilities and Transportation Commission has set a \$4 flat fee for use of the high-frequency portion of the loops in operating areas service by Qwest Corp. and Verizon Northwest, Inc. The commission also determined that Verizon may recover up to \$1.98 million and Qwest may recover up to \$5.5 million of their operation support system (OSS) transition costs. In addition, the commission addressed several collocation elements in its order, which was issued yesterday.

This decision addresses Part A of a second generic proceeding to determine costs and prices for network elements. During the first generic proceeding, the commission set the costs and prices for unbundled network elements (UNEs), including the unbundled loop. The first proceeding, which was split into three phases, set costs and established deaveraged prices for interconnection and UNEs. The second proceeding addresses network elements not included in the first proceeding.

The WUTC rejected the proposal espoused by many of the competitive local exchange carriers (CLECs) for an exemption from making any contribution to the recurring costs of the loop. Instead, the WUTC set a \$4 flat fee for line sharing. The commission also said it was premature to determine whether a non-zero price for the high frequency spectrum UNE would lead to overearning for Qwest or Verizon.

When the commission examined cost recovery issues related to the modifications Qwest and Verizon made to their OSSs to support a competitive environment, it determined that Verizon's proposed rates were just and reasonable. Verizon's nonrecurring charge for OSS transition cost recovery is \$3.27 per local service request, and its nonrecurring charge for OSS transaction costs recovery is \$3.76 per local service request.

The WUTC rejected Qwest's proposed OSS transition recovery costs and ordered the company to charge OSS transition and transaction rates equal to Verizon's approved rates. The commission noted that Qwest's proposed costs were too high--more than twice the level reported by Verizon--because the company doesn't perform its own OSS modifications. Qwest relies on Telcordia Technologies, Inc.

The commission allowed Verizon to collect a maximum of \$1.9 million and allowed Qwest to collect a maximum of \$5.5 million for OSS transition costs. Multiplying Verizon's proposed collection derived the value assigned to Qwest's OSS recovery by the approximate ratio of Qwest's access to Verizon's access lines within the state.

The commission also took up a variety of collocation issues. Verizon doesn't have to continue offering its Verizon-owned splitter option beyond Dec. 15, 2000, on lines not currently using the company's splitters. The commission found Qwest's assumption that the average cable length is 100 feet to be reasonable. It approved Verizon's estimates for planning and engineering time. Other collocation issues addressed in the order include Verizon's costs for cage enclosure and building modification, efficient splitter configuration, Verizon's jumper costs, and Verizon's environmental conditioning.

Hearings for Part B of this proceeding are scheduled to begin March 26. The order is available at <http://www.wutc.wa.gov/webdocs.nsf/6f30f546379903ad8825652a005e07f2/d0c1a5d5db085e78882569e50082ac29!OpenDocument>. (Docket no. UT-003013, In the Matter of the Continued Costing and Pricing of Unbundled Network Elements, Transport, and Termination)

CUSTOMER-AFFECTING CONNECTICUT DPUC tells WorldCom to change collect call notification policy

The Department of Public Utility Control has ordered WorldCom, Inc., to provide advance notice before imposing a collect call blocks on customers' telephone numbers. The DPUC's decision adopts a draft order released last month. (1/17/01 p.m.)

In March 1999 the DPUC launched an investigation into WorldCom's blocking procedures in response to complaints that the company had prevented the completion of collect calls from prison facilities. Families of inmates said WorldCom didn't notify them that collect calls would be blocked, even though they always paid their collect call charges. Under the company's current tariffs, WorldCom can block collect calls from correctional facilities without notice.

WorldCom places collect call blocks to prevent "high-toll fraud situations." The company identifies end users with unusually high numbers of collect calls. It then assesses the end user's payment history and whether the end user has verified that the calls are legitimate. If WorldCom is unable to verify the legitimacy of the calls, it places a block on the end user's line.

The department determined that WorldCom's procedures are reasonable for most customers but concluded that the company needs to make more of an effort to notify a "small segment of the end user population" that is being maligned by the company's procedures.

The department, however, removed language from last month's draft that said the imposition of a collect call block constituted "a form of termination of service." The department instead simply ordered WorldCom to revise its notification procedure to "ensure that every end user subject to the imposition of collect call blocks on intrastate services shall be provided advance notification."

If WorldCom can't reach a customer by phone and can't provide written notice by overnight mail, it must use a "live agent" to find the person. WorldCom can initiate a collect call block without actual notice only after trying the options for three days.

The department gave WorldCom until Feb. 25 to change its procedures and directed the company to submit a written copy of the new procedures by Feb. 28. WorldCom also must file status reports each month through June. (Docket No. 99-03-37, DPUC Review of MCI WorldCom, Inc.'s Collect Calling Notification and Termination Policies)

STATE & LOCAL GOVERNMENT MICHIGAN Gov. Engler makes high technology a priority

One of the initiatives Gov. John Engler (R.) outlined in his State of the State address is ensuring "unfettered access to the information economy." During his speech yesterday, Engler said local governments shouldn't be allowed "to erect stoplights and expensive tollbooths on the information highway."

The governor said he has asked the Public Service Commission, the Michigan Economic Development Corp., and the e-Michigan office to recommend immediate reforms. The Economic Development Corp. assists businesses seeking to expand or relocate within the state, and e-Michigan oversees the government's initiative to provide information electronically.

Engler said, "We need to eliminate excessive access fees. We need to curb lengthy negotiation. We need to curtail costly delays. Th

Enron's Skilling Vows to Meet or Beat Profit Projections 2001-07-25 13:34 (New York)

Enron's Skilling Vows to Meet or Beat Profit Projections

New York, July 25 (Bloomberg) -- Enron Corp. will meet or beat its profit projections this year and next, Chief Executive Jeffrey Skilling said, criticizing analysts who've recently lowered their forecasts for the largest energy trader. Enron said July 12 that it expects to make \$1.80 a share this year and \$2.15 in 2002. "We will hit those numbers, and we will beat those numbers," Skilling told a meeting of analysts and investors in New York. Enron shares have fallen about 13 percent since it made the profit forecasts. Skilling blamed the decline on analysts who downgraded U.S. energy companies because of falling prices for power and natural gas. Analysts have also cited concern about unpaid power bills by Enron customers in California and India, and losses by Enron's broadband trading unit, which may hurt Enron's profits. "All of these are bunk," Skilling said. "These are not issues for this stock." The shares of Enron fell 96 cents to \$42.33 in early afternoon trading today. Enron makes much of its money from profits from arranging trades of power, gas, oil and other commodities, Skilling said. It returns are based more on the volume of trades and energy contracts than on the prices of the commodities themselves, he said. "The growth of our sales is not driven by the economy," Skilling said. "It's driven by

the growth of markets." The refusal of a state government in India to pay \$64 million in power bills is not going to hurt Enron's earnings, Skilling said. "In India, we have government guarantees on the performance of our contract," Skilling said. "We're convinced we'll be paid in full" for the \$875 million the company has invested so far, plus unpaid power bills. Enron owns 65 percent of Dabhol Power Co., which invested about \$3 billion in a power plant in India. In California, Enron is owed more than the state's power grid manager has accused the company of overcharging, Skilling said. California is negotiating refunds with energy traders and generators after power prices soared in the state, leaving its two largest utilities so far in debt they could no longer buy electricity for their customers. The state has threatened to sue if power sellers don't agree to \$8.9 billion in refunds. Enron will cut its losses as it waits out a "meltdown" in broadband communications, Skilling said. The company's plan to trade space on fiber-optic telecommunications network helped its stock rise 87 percent last year. The stock has plunged 49 percent this year as the collapse of Internet companies darkened the outlook for broadband companies, and natural gas prices dropped from record highs in December. Houston-based Enron is selling more power in Europe, and more energy-management contracts to smaller commercial customers in the U.S., company executives said. Energy management contracts are agreements to buy energy for customers and find ways to cut their energy consumption. Enron also is poised to profit from a Bush administration proposal to expand competition for wholesale power, Skilling said.

USA: Enron says would not pay California refund. By Timothy Gardner

07/25/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW YORK, July 25 (Reuters) - Energy firm Enron Corp. would not pay its "minuscule" portion of the nearly \$9 billion California claims energy companies owe the state for overcharges during the Western power crunch, Enron President and Chief Executive Officer Jeff Skilling said on Wednesday. California alleges that electricity generators and marketers owe the state \$8.9 billion for overcharging it during the power crisis from mid-2000 to last spring. Governor Gray Davis, a Democrat, said he is prepared to go to court to retrieve the money. But Enron, the No. 1 U.S. natural gas and electricity marketer, does not intend to pay its portion of the alleged overcharges, which Skilling said was "minuscule." "The \$9 billion number is bogus to begin with," Skilling told analysts at a meeting about Enron's second-quarter earnings in New York. Skilling said Enron's share of the alleged overcharge is \$38.5 million. He said Enron should in fact recover \$32 million in net purchases from California. At least one sector of California's electricity regulation system agrees that Enron's involvement was small in the power crisis, in which electricity prices reached records and rolling brownouts darkened many areas. Sales records kept by the California Independent System Operator, which manages most of the state's power grid, show Enron accounted for 0.4 percent of the alleged \$9 billion overcharge. The Federal Energy Regulatory Commission is meeting on Wednesday in its biweekly commissioners meeting, in part to consider the refunds after a federal mediator rejected California's claims. On July 12, FERC Chief Administration Judge Curtis Wagner swung the issue back to the commission for further action. Wednesday's meeting is the last scheduled before the commission takes a month-long break. STILL ROUNDS TO BE FOUGHT IN CALIFORNIA Enron's problems in California are far from being settled. A committee of the California Senate investigating suspected price gouging during the power crunch recently found Enron in contempt for refusing to disclose confidential sales and bidding records. The California Senate last used the contempt ruling in 1929 against a cement company, but eventually the state's Supreme Court threw out the ruling, saying the charges were too vague. Just before the California Senate voted to hold Enron in contempt, the Houston-based company sued in a California court on a claim that FERC, not the California Senate, had jurisdiction. "They (California) are making political noise we don't like," said Skilling. He said if the situation got worse the company could reduce its market share there. "We'll walk away from the situation and reserve out," he said. Although Enron claims little involvement in the alleged overcharge, the company says it has learned from the crisis. Skilling said that looking forward, Enron will avoid dealing with intermediaries that the company contends helped lead to the power crunch. "We're focused on retail in California; we're going direct to customers without dealing with an intermediary," said Skilling. Shares in Enron, which reported earnings slightly better than expected on July 12, were down 34 cents to \$42.90 in early trade on the New York Stock Exchange. That is down from its peak this year of more than \$81, hit in mid-February in the depths of the Western power crunch. - ((Timothy Gardner, New York Energy Desk, +1 646-223-6058; fax +1 646-223-6078, timothy.gardner@reuters.com)).

FOCUS Utilities selling to California pressured by re-regulation, FERC talks

06/26/2001 AFX News (c) 2001 by AFP-Extel News Ltd

---- by Ben Morgan-Sanjurjo ---- NEW YORK (AFX) - Shares of utilities with significant market exposure to California are expected to remain under pressure from fears that re-regulation could chip away at company revenues, dealers said. There are also concerns that federally supervised talks, begun yesterday, designed to address allegations that electricity sellers overcharged California for power, may result in a 9 bln usd bill, they said. Power marketers involved in the negotiations with utilities and state legislatures include Enron Corp, Calpine Corp, Duke Energy Corp, Williams Companies Inc, Reliant Energy and Dynegy Inc New. Fulcrum Global Partners analyst Mike Barbis said that the Federal Energy Regulatory Commission's (FERC) proceedings to mediate between California's power buyers and sellers will end "unfavourably for the sellers." California Governor Gray Davis is seeking a 9.0 bln usd refund from western utility groups it claims inflated power bills. "In our view, the political playing field for power generators and marketers has shifted," said Barbis. "We would avoid those companies with the largest exposure to California including Mirant, Reliant Resources and Dynegy," said Barbis. Negotiators have 15 days starting yesterday to come to an agreement. If the talks fail, FERC commissioners will render a final ruling. Morgan Stanley analyst Kit Konolidge said: "We think these numbers are way overstated and any real refunds will be far less." "Realistically, we might never see the real number," said Konolidge. Power generators will likely agree to a smaller figure they can "live with to put this behind them." Additionally, FERC's decision last week to reintroduce price controls in California and eleven other Western states could also affect power marketers profitability, analysts said. CIBC World Markets analyst William Hyler said that "FERC's latest measures have to be viewed as a step away from a purely market-based solution." Power marketers will not be allowed to sell at a price of more than 85 pct of the cost of natural gas needed to serve the electricity load during non-emergency hours. The wholesale price will be derived from the price of gas either in northern or southern California. However, Hyler also said the "current initiative appears much more palatable than hard price caps, which ignore the impact of fuel cost and emission credits or cost-base pricing." Hyler further explained that the key issue is whether FERC's decision will attract or take away from additional investment in electricity production needed to moderate the supply/demand balance in California. "In the event new plant investments are curtailed, the validity of the price mitigation plan will obviously come under question," said Hyler. While Hyler does not expect much impact on power generators, "those companies with more of a trading focus on the western markets could be effected by the declines in regional volatility we might expect from the mitigation plan." The crisis began last year when Pacific Gas & Electric Corp, Southern California Edison Co and San Diego Gas & Electric Co, operating in a semi-deregulated market place were forced to buy wholesale power at ten times average costs. Power marketers increased wholesale power prices due to high natural gas prices, strong demand and tight supply, forcing them to highs of 202 usd per megawatt hour from 29 usd in less than one year. However, while utilities bought power at such high prices they were only allowed to sell to customers at lower fixed rates. Eventually, utilities stopped paying their bills

for the power they were purchasing, said Barbis. One result was the declaration of bankruptcy of PG&E. Analysts estimate that more than 14 bln usd is owed to power generators by utilities. At 2.30 pm, Enron shares were trading 50 cents lower at, Calpine Corp fell 36 cents to 38.61, Duke Energy Corp lost 20 cents to 39.30, Williams Companies Inc gained 9 cents to 32.45, Reliant Energy fell 40 cents to 30.15, Dynegy Inc declined 5 cents to 42.87 and Mirant Corp was up 7 cents at 31.07. The DJIA gained 16.37 points to 10,520.50, the S&P 500 fell 0.75 to 1,217.85, while the Nasdaq composite rose 7.34 points to 2,058.21. blms/cl/lj For more information and to contact AFX: www.afxnews.com and www.afxpress.com

BANDWIDTH BEAT: Enron's Keen On Asia's Young Market By Michael Rieke

06/26/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

A Dow Jones Newswires Column

HOUSTON -(Dow Jones)- If the U.S. market for bandwidth is nascent, the market in Asia is still in the conceptual stage. But if a market is underdeveloped and the potential is attractive, Enron is probably interested, and it is. Enron knows margins are usually very high in the early stages of any market. The company also wants to get established early to capture big market share, as it's done in energy markets in the U.S. and Europe. Enron is focused on Asia's four least-regulated markets - Japan, Hong Kong, Singapore and Australia - which account for 70% of the region's wholesale leased-line revenue, said Fred Cohagan, director of global wholesale services in Asia for Enron Broadband Services. Enron began operating a Tokyo pooling point for trading in March, the same month it opened an office in Singapore, said Cohagan, speaking recently from Singapore. The trading giant will begin operating pooling points in Hong Kong, Singapore and Sydney next quarter. Enron has a desk of five traders divided among Singapore, Sydney and Tokyo and has commercial people on the ground in Seoul and Hong Kong. Soon, the company will be willing to buy or sell bandwidth in markets for minimum three-month contracts, followed by six-month and one-year quotes. It will quote spot and forward markets - initially for STM1 capacity, then for STM4 and DS3. Potential players are well defined. About 50 companies have capacity in one form or another, whether through leases, indefeasible rights of use or equity ownership, Cohagan said. Because the cost of entering the Asian telecom capacity market is high, there are fewer companies of questionable financial status than in the U.S. and Europe. Prices for transpacific data capacity are four to six times higher than transatlantic prices, said Alan Mauldin, a researcher for Telegeography, a telecommunications research and data firm in Washington, D.C. Ron Banaszek, director of TFS Telecom, a bandwidth brokerage in New York City, gave a still greater spread between transpacific and transatlantic prices. An STM1 between Los Angeles and Tokyo is probably \$90,000 a month, compared with \$10,000 for an STM1 from New York to London, he said. That's because there's about three times as much capacity in the transatlantic market as in the transpacific market, Mauldin

File	dasovich-j/all_documents/11278.

Jeff,

My name is Kurt Lindahl. I recently joined Enron Global Markets on the LNG team. I'm the Lead Developer for the West Coast and have been charged with building a (several) LNG terminal(s) on the west coast. Michael McGarry, from Enron Engineering and Operational Services Company, is the lead Development Engineer on the project.

A key question in this effort is, "Where is the best entry point into the Socal/SG&E/PG&E pipeline systems. In other words, where can we site a LNG terminal and deliver natural gas into their systems, such that the amount of facilities they require is minimal? I spoke with Ben Asante who heads up the optimization department in ETS. He said that if we could get annual flow diagrams for the California intrastate systems, he could prepare a model in about 2 weeks time. Interstate pipelines have to file Annual Flow Diagrams at FERC, but I'm not sure what Intrastates' are obligated to file with the CPUC? That's

where I need your help. This is a hot subject, because the race to site an LNG terminal is intense.

Could you please call me at 713 345 5044 (O) or 713 515 2759 so that we can discuss. We want to keep this effort very confidential, so please maintain secrecy.

I will also want to talk to you about permitting and state approvals.

Regards,

Kurt Lindahl

Word on the Street -- Reliant Was Setup

Sender	susan.mara@enron.com

The feeling on the street is that Reliant was setup with the \$1900 sale. The word is that the bid for \$1900 power had been sitting there for months and that Reliant had an "understanding" with DWR and the ISO that the bid was not supposed to be taken except in dire need -- it's for a peaker and the price represents the opportunity cost of running it now, and using up its very limited emission credits, rather than running it during the real peak times this summer. The \$1900 represents the estimated cost to Reliant of Reliant having to buy power this summer on the market when it otherwise would have had its peaker available. The wors is that the state/ISO took the bid, when there was not dire need, just to make Reliant look evil and point to ever higher prices -- when? -- yes, the week before the Bush plan was to come out.

Press Release

Reliant Energy Urges Governor Davis to Trade Political Fingerpointing for Solutions

HOUSTON--(BUSINESS WIRE)--May 17, 2001--Reliant Energy strongly disagrees with California Governor Gray Davis' recent characterization of the company as being ``obstructionist" and opposing court orders.

Reliant Energy believes that these accusations are politically motivated attempts to demonize Reliant Energy as an outsider responsible for causing the state's energy crisis. The accusations are simply not based on fact. More importantly, the governor's attacks have done nothing to increase the state's supply of electricity or prevent the blackouts expected this summer. If anything, the comments have fostered an atmosphere of distrust and uncertainty that have further destabilized the market.

``Reliant hopes the governor and others will stop these baseless accusations and focus on true solutions to California's energy shortage," said Joe Bob Perkins, president and chief operating officer, Reliant Energy Wholesale Group. ``We are now being singled out because we believe in an open market, not government control of power generation, and we have offered solutions that do not jibe with the governor's political agenda. Contrary to the perception Governor Davis is attempting to promote, we have been focused on providing solutions that are fair to all parties in California since the outset of this crisis. In fact, earlier this week we provided the governor's office with an outline of a series of emergency measures that, if pursued quickly, could help mitigate the power crisis this summer. We are still waiting on a response."

Perkins pointed out many of the steps Reliant Energy has taken to keep the lights on in California, disputing the accusation of being ``obstructionist":

Reliant Energy has run its 30-to-50-year-old plants at the highest levels since their purchase in 1998. In 2000, Reliant nearly doubled the output from these plants to meet the needs of Californians -- running them at levels far exceeding the prior owner, Southern California Edison.

Reliant Energy invested \$80 million dollars in 2000 alone to upgrade plants to make sure the most power possible is available during peak times. In addition, the company improved emissions levels to clean up the environment and keep costs for emission credits to a minimum.

For the last two years, Reliant has encouraged the Investor Owned Utilities and the state to invest in long-term contracts to stabilize rates instead of relying on the spot market. In particular, Reliant Energy offered to sell power at two cents per kilowatt-hour if the buyer would purchase the natural gas required to generate the power, ensuring a transparent cost of power.

Reliant Energy has never shut down generation despite the prevalent concerns that continue to exist over credit issues. In contrast, just last week a major out-of-state supplier refused to continue to sell to California unless payment was forthcoming.

Reliant Energy has created an aggressive curtailment plan to encourage businesses to ``sell back" power voluntarily to add more power to the Western power grid. The company has met with many leaders in Western states to introduce the program, yet California officials will not even engage in a dialogue on the program.

``We welcome the opportunity to discuss these issues one-on-one with the governor," Perkins said. ``Unfortunately, he has repeatedly refused this request over the past year. Last week's meeting with generators was the first time the group

was allowed to speak with him directly, and obviously the purpose of that meeting was political grandstanding."

Perkins added that the governor's accusations of opposing court orders are unfounded. ``We have always worked within the law and are proud of our commitment to keeping the lights on. We have followed all court orders and worked closely with the FERC and others to cooperate fully with all investigations. When necessary, we have filed court challenges to orders that we believe violate our rights -- hardly an illegal action."

To participate in a telephone press conference tomorrow, Friday May 18 at 11 a.m. PDT, contact Maxine Enciso at 310/444-1303 or Richard Wheatley at 713/207-5881.

07/31/2001 Los Angeles Times Home Edition B-1 Copyright 2001 / The Times Mirror Company

The Securities and Exchange Commission has launched a preliminary inquiry into whether energy consultants advising Gov. Gray Davis used inside information to trade stocks of power companies doing business with the state, a source with knowledge of the matter said Monday. The federal agency began its review late last week, the source said, in response to a request from California Secretary of State Bill Jones. A Republican rival of Davis, Jones charged that stock trading by

consultants may have violated federal laws barring buying and selling based on information not available to the public. On Friday, top aides to the governor disclosed that five consultants had been fired for possible conflicts of interest between their official positions and their personal finances. As news of the SEC inquiry spread through the capital Monday, Davis officials were confronted by a flurry of questions about who in the administration owns energy stocks. Financial disclosure records filed by the governor's spokesman, Steve Maviglio, show that he owns between \$10,000 and \$100,000 in a Texas company he and his boss have accused of making "obscene" profits while California has been "on its knees." Maviglio said he bought the shares in Houston-based Enron Corp. in 1996. "It's not a crime to own energy stock," Maviglio said. He also owns 300 shares of San Jose-based Calpine Corp., which has the largest share of the \$43 billion in long-term state power contracts. Maviglio placed the order for the stock on May 31, one day after San Jose's mayor dropped his opposition to a controversial Calpine plant favored by the governor and others. Under the terms of Maviglio's purchase, the transaction was completed about three weeks later when the stock reached \$40 a share, a value of \$12,000. It has since fallen in value. "I viewed it as a good long-term investment," Maviglio said, adding that he purchased the shares for his retirement account based on publicly available information. The Davis administration has spared Calpine the kind of fierce criticisms that it has leveled at other electricity suppliers, such as Enron. But California's grid operator has identified the company as one of many energy merchants to overcharge the state millions of dollars. The fired consultants also owned shares in Calpine, ranging in value from several thousand dollars to more than \$100,000, records show. Another top Davis administration official, legal affairs secretary Barry Goode, disclosed in his economic interest statement that he recently held between \$100,000 and \$1 million in another out-of-state company accused of multimillion-dollar price gouging. In a statement, Goode said he sold his stock in Williams Co's. a month after he began working for the governor in February. Goode said the shares were supposed to be sold before he went on the state payroll, but his broker failed to do so. In light of the recent disclosures, Secretary of State Jones said the governor must do more to ensure the public that its interest comes first. "The governor should direct all of his staff to immediately file updated conflict of interest statements that reflect current holdings and any activity since their last statement of economic interest was filed," said Jones, who is seeking the GOP nomination for governor. Word of the SEC's entry into California's energy problems comes as the governor faces harsh criticism from lawmakers and others for the quick and broad hiring of highly paid private consultants to guide him through the crisis. In his written request to the SEC, Jones said that recently filed disclosure documents showed that at least one consultant bought and sold shares of two energy companies within the same month, raising "a red flag" about the possibility of insider trading. State law prohibits officials from participating in decisions involving their personal financial interests. The five consultants fired last week were among 11 named in Jones' letter, delivered to the San Francisco office of the SEC last Wednesday. It was not clear which individuals are the focus of the SEC's inquiry, or whether the agency's review would result in any charges. Two of the former traders said Monday that they had not been contacted by federal investigators and knew nothing of an inquiry into possible insider trading. But William Mead, fired Thursday, said it is no mystery why so many of his colleagues owned Calpine stock. Mead said he bought it 2 1/2 years ago and made so much money he recommended it to his colleagues last year, while they all still worked for the now-defunct California Power Exchange in Alhambra. Calpine power was not traded on that exchange, so there was no conflict of interest, he said. Mead and three other energy traders--hired by the state in February and March--were terminated by the Davis administration for allegedly buying power for the state from Calpine while owning the company's stock. Fired traders Herman Leung, Peggy Cheng and Constantine Louie did not list the date of their Calpine purchases on financial statements that the state required to be filed only two weeks ago. "But I'm sure they bought it while they were still at the power exchange, because that's when we discussed it," Mead said. "It was kind of like a hobby. I'm sure it wasn't done with the intent to manipulate." Former trader Elaine Griffin, who also owned Calpine stock and resigned two weeks ago to take another job, said she didn't know she owned energy securities until she checked with her financial advisor July 13, just before leaving her state job. Griffin said she and her husband own about \$10,000 worth of Calpine stock in individual retirement accounts managed by their advisor, who bought the stock Feb. 1 without their knowledge, she said, after research found it to be a good investment. "I kind of feel like we've been used for political reasons," Griffin said. "We would have disclosed anything right

*Message 835 of 1299***Nov. 13 UC summit conference on electricity**

Sender	lfried@uclink4.berkeley.edu
Recipients	['jdasovic@enron.com', 'tim.belden@enron.com']
File	dasovich-j/all_documents/2065.

Jeff and Tim,

Tim, I know Jeff knows all about the conference we are organizing and I hope you do as well.

Rob, I and the rest of the conference organizers are wondering if you could help us find out if Jeff Skilling from Enron would be willing to be one of our panelists? He has been an articulate critic of the current state of our electricity markets, and we definitely would like the genco perspective represented.

Naturally we are hoping to get a quick answer because our publicity about the conference will be going out shortly.

A brief description of the conference is appended below. Please let me know if you need any additional information.

Thanks very much for your help and advice. Lee

The summer of San Diego has prompted the School, in collaboration with UC's Energy Institute and Competition Policy Center, to sponsor a high-level summit conference on electricity deregulation. The focus, and the audience, will be national, but heavily informed and influenced by the California crisis. The conference will evaluate (1) the wisdom of deregulation and (2) how the pitfalls encountered so far can be avoided and remedied. The University will facilitate an open, honest and reasoned exchange between executive-level players from various perspectives: industry, regulators, consumers, legislators, academics, and market and system operators.

The format entails two roundtable discussions with six speakers and a moderator. During the panel sessions, the speakers will engage in a debate/dialogue on the current situation in electricity deregulation, where we have come from, what the future holds, and what solutions lie on the horizon. Each speaker will have uninterrupted time to speak, followed by Q&A and discussion. We expect a live audience of about 200, including a large press presence. One sponsor has tentatively offered to provide internet streaming video services. We hope to have a balanced group of sponsors ranging from the American Public Power Association to energy companies.

The speakers are being arranged at this time. We have commitments from: Loretta Lynch (Chair, CPUC), and PJM CEO Phil Harris. We have a preliminary acceptance from Steven Littlechild (England's former primary electricity regulator) and Laura Tyson (former Chair, President's Council of Economic Advisors and National Economic Council, currently Dean, Haas School of Business). We have invited FERC Commissioner Curt Hebert, and U.S. Representative Edward Markey, executive-level managers from several energy companies and state legislators. Former DOJ chief economist Carl Shapiro will be on one of the panels, as will economist Severin Borenstein, Director of UCEI and Professor of Business and Public Policy. Michael Florio from The Utility Reform Network (TURN) will be a consumer advocate on one of the panels. Lee Friedman, economist and Professor of Public Policy, will briefly provide an introduction to the panel discussions with his talk "Lighting the Stage: The Electricity of Deregulation."

A dinner for the panelists and organizers will be hosted at UC's Goldman School of Public Policy following the conference proceedings. We have reserved rooms for our speakers at Berkeley's landmark Claremont Hotel. We can reimburse those speakers who request it for coach airfare expenses and other ordinary local expenses.

For further information, please contact: Lee S. Friedman Professor of Public Policy Goldman School of Public Policy University of California 2607 Hearst Avenue Berkeley, CA 94720-7320 Ph: (510) 642-7513 Fax: (510) 643-9657 email: lfried@uclink4.berkeley.edu

Some Generators Say No As Calif Lawmakers Eye Haircut ???? Updated: Monday, July 16, 2001 04:52 PM?ET ????? ?

By Jason Leopold and Jessica Berthold

Of DOW JONES NEWSWIRES

LOS ANGELES (Dow Jones)--Some power suppliers said Monday they wouldn't accept a move by California state lawmakers to allow them to collect just 70% of what they are owed by Edison International (EIX, news, msgs) unit Southern California Edison.

At issue are bills scheduled for hearings Monday and Tuesday in the state Assembly and Senate to rescue Southern California Edison from the verge of bankruptcy, where it has teetered for six months.

Both bills aim to spread out the costs of helping the utility recover \$3.5 billion in wholesale power costs that it was forced to absorb as a result of a retail rate freeze. Discounts to unpaid power bills may be needed to make the rescue politically palatable. But some suppliers, which together are owed about \$1 billion by the utility, are balking.

"As we have said before, we fully expect to receive 100 cents on the dollar," said John Sousa, spokesman for Dynegy Inc. (DYN, news, msgs), which is owed \$265 million in California. (Generators' receivables due from Southern California Edison alone weren't immediately available.)

Reliant Energy Inc. (REI, news, msgs), owed a total of \$370 million, said it too expects to receive full payment.

Williams Cos. (WMB, news, msgs), which hasn't disclosed its California receivables, and Duke Energy (DUK, news, msgs), which is owed \$410 million, have said publicly that their companies would be willing to accept less than 100 cents on the dollar. But Duke spokesman Tom Williams said his company would only negotiate with the utilities, not the state.

Pat Dorinson, spokesman for Mirant Corp. (MIR, news, msgs), which is owed \$385 million in California, wouldn't say whether the company would accept less than what its owed. But he said the company wasn't included in the negotiations when the bill was drafted.

"We can't have a comprehensive solution if all parties are not at the table," Dorinson said. "No one has come to us and talked to us about what we are willing to do or not do. You'd think the people producing the energy might have an opinion on how things should be solved."

Suppliers said they weren't sure what action, if any, they'd take against the utilities if such provisions were approved as part of a deal this week.

The Assembly and Senate proposals were expected to be debated on Monday and Tuesday, with floor votes on Wednesday.

Assembly Speaker Pro Tem Fred Keeley, D-Boulder Creek, said a rescue plan for Southern California Edison could never pass the Legislature without concessions from generators.

The proposals in both houses call for generators to accept 70 cents on the dollar. In the Assembly, legislation introduced last week by Assembly Speaker Bob Hertzberg, D-Van Nuys, and Keeley, aims to establish a trust account, controlled by the state and the Public Utilities Commission, to reduce payments to generators who overcharged for power.

"Our proposal protects those who deregulation has hurt most - consumers - and ensures that California never sees a crisis like this again," Hertzberg said. "It holds accountable those who have taken advantage of us and it promises consumers that they will see rates go down rather than up."

Such a move may violate Constitutional protections regarding contracts, said Kenneth Klee, a law professor at UCLA and attorney at Klee, Tuchin, Bogdanoff & Stern LLP in Los Angeles who specializes in corporate reorganization, bankruptcy law and insolvency.

"The contracts clause of the Constitution, Article 1, Section 10, prevents the states from impairing the obligations of contracts," Klee said. "I haven't seen the bill, but it occurs to me that if the state is trying to tell Edison it can pay creditors 70 percent, that would be unconstitutional."

Klee's firm represents two independent generators in the legal wranglings with Southern California Edison.

California Lawmakers Take Edison Rescue Down To The Wire ???? Updated: Monday, July 16, 2001 04:19 PM?ET
????? ?

By Jason Leopold

Of DOW JONES NEWSWIRES

LOS ANGELES (Dow Jones)--It's coming down to the wire.

With just five days left before their summer recess, California lawmakers were to take their first concrete steps Monday toward relieving Edison International (EIX, news, msgs) utility Southern California Edison of the massive power costs that have left it unable to meet its obligations.

Edison officials have warned that if the Legislature doesn't act by Aug. 15, the deadline set in a memorandum of understanding signed with Gov. Gray Davis on April 9, the utility's creditors may drag it into Bankruptcy Court.

The plans under consideration aren't entirely faithful to the MOU and present their own risks, but Edison officials seemed relieved that progress was finally being made.

"This is the culmination of a long period of negotiations," Brian Bennett, vice president of external affairs for Edison International, said last Friday. "We're pleased that both the Assembly and Senate are moving."

Davis spokesman Steve Maviglio said Monday that the Assembly and Senate would hold hearings on their versions of the rescue Monday and Tuesday, with floor votes expected Wednesday.

The progress has boosted Edison International shares to their highest level since mid-March. Edison shares closed Monday at \$14.85, up 5 cents on the day and more than 32% in July.

Under the MOU signed with the governor, the state would buy Southern California Edison's transmission lines for \$2.76 billion and enable the utility to sell bonds backed by ratepayers to help it recoup \$3.5 billion in unrecovered wholesale power costs.

This week's events will test Edison's faith in the political process and its lobbying prowess. The utility's northern California counterpart, PG&E Corp. (PCG, news, msgs) unit Pacific Gas & Electric Co., pulled out of talks with the governor and filed Chapter 11 on April 6.

Lehman Brothers analyst Dan Ford said in a research note Monday that chances are good any action by lawmakers will arrive late or fall short of what's needed.

"We believe odds for a speedy and palatable plan are less than 50-50," Ford wrote.

Lawmakers are likely to pass a version of the MOU Edison signed with the governor, but they will be preoccupied with the need to approve a budget, he said.

"We expect the timing to slip and the deal to worsen for Edison shareholders," Ford wrote. "If a modified MOU does pass both the house and senate, we believe Edison will need to determine if they can stomach the alterations, as the governor is unlikely to stop an alternative plan to protect Edison shareholders."

Senate, Assembly Draft Bills

Assembly Democrats led by Speaker Robert Hertzberg, D-Van Nuys, and Speaker Pro Tem Fred Keeley, D-Boulder Creek, have introduced a 79-page version of the MOU that calls for the state to purchase the utility's power lines at twice their book value, as opposed to the 2.3 times offered by Davis.

Unlike the MOU, the bill doesn't indicate how much money Southern California Edison is allowed to recover.

"That's very disturbing to us," Bennett said. "But at least we have a bill."

The Hertzberg-Keeley bill also builds in a "haircut" for suppliers. Under the plan, funds raised by Southern California Edison on the strength of its pending sale of power lines to the state would go into a trust, from which power suppliers would be paid 70 cents

INDIA: Enron chief says many want Dabhol row to end.

07/10/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW DELHI, July 10 (Reuters) - Enron Corp chairman Kenneth Lay said on Tuesday that governments of several countries and some of the world's biggest banks wanted an early end to the row over its troubled Indian unit. "I think it's in everybody's best interest - the government of India, the government of the U.S., the investors, the government of Japan - we have many government financial entities involved in this project," he told reporters. "So you've a lot of interests here who would like to see this resolved and resolved very quickly," Lay said after a meeting with Finance Minister Yashwant Sinha. Lay said Monday's meeting with the finance minister did not yield any solution for the U.S. energy firm's \$2.9-billion Dabhol power plant, which is locked in a bitter payments battle with Maharashtra State Electricity Board (MSEB), a state utility. "Obviously we didn't come to any conclusion today. We didn't expect to come to any conclusion today. It will take some more work...but certainly we're very hopeful," he said. Lay met federal Power Minister Suresh Prabhu for nearly two hours on Monday and was to meet the chief minister of the western state of Maharashtra, where Dabhol is located, later on Tuesday. In May, Enron issued a preliminary termination notice after MSEB defaulted on payments, and the utility, Dabhol's sole buyer, stopped taking power from the project. Enron holds a 65-percent stake in the Dabhol Power Co. Its first phase of 740 MW was completed in 1998 while a second phase adding another 1,444 MW was almost complete when its contractor stopped work because of the dispute. Lay said the governments of Oman and Abu Dhabi were involved in contracts for liquefied natural gas for the second phase of the project. The project has been funded with a debt of \$2 billion. Of this, offshore lenders have contributed about \$600 million and the remaining \$1.4 billion by local institutions and banks. Lay said the biggest banks from United States, Europe, Canada and Japan were involved in the project.

Transmission Line Delays Hit Scottish Generators

07/10/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

LONDON -(Dow Jones)- Construction of a long-awaited transmission line that would boost access of Scottish generators to the English market remains on hold because of foot-and-mouth related restrictions, the National Grid Group PLC (NGG) told Dow Jones Newswires Monday. "The North Yorkshire Transmission Line Project, that went on hold with the onset of the foot-and-mouth epidemic late February, remains on hold because construction teams cannot access areas classified as infected," said the National Grid spokesman. The 75-kilometer transmission line between Teeside and the Vale of York would reduce the present bottleneck in northern England, allowing more Scottish-generated electricity through to customers in England. "This is particularly difficult for National Grid because we have an obligation to facilitate competition," said the National Grid spokesman. "This problem reduces the ability of players to compete, plain and simple." The National Grid spokesman could not estimate when construction would resume, but said, "Once we start, it will be at least two to three years before the transmission line will be available for use." The Department for the Environment, Food and Rural Affairs could not comment on when access restrictions would be lifted in the North Yorkshire area, but a spokeswoman said, "We cannot even begin discussion of lifting restrictions on access to infected areas, until four weeks after the last diagnosed case has been killed, and the area cleaned and disinfected." Generators in Scotland are hit hardest by the delay because it interferes with their plans to compete more actively in electricity markets in England and Wales. A spokeswoman for Scottish and Southern Energy said, "We do have to improve access to markets in England and Wales," and added, "While we understand the circumstances, we still look forward to the increased flexibility that the North Yorkshire line will provide." A spokesman for Scottish Power said, "As a Scottish company, we want the Yorkshire line, to further open the U.K. market to competition." The National Grid spokesman said some newly built generation is waiting to come on line pending completion of the line. Companies would not comment on their involvement, citing commercial sensitivity. According to National Grid, a 1,875 megawatt plant at Teeside is subject to operational restrictions until the new transmission line is complete. This plant enhanced the necessity for the new transmission line when it came on line in 1993, because existing lines could not accommodate the total capacity of the Teeside plant. The plant is owned by a consortium, with Enron Europe owning half the shares. Midlands Electricity (19%), Northern Electricity (15%), SWEB (8%), and SWALEC (8%) make up the rest of the consortium. Enron said the Teeside plant isn't subject to any operational restrictions. National Grid first applied for governmental consent for the new 4,840 megavolt amps transmission line in 1991. After two public inquiries, extensive planning, and conflicts with groups opposing the construction, they received consent to begin construction in July of 2000, and began in September of that year. -By Sarah Spikes, Dow Jones Newswires; +44-(0)20-7842-9345; sarah.spikes@dowjones.com

INTERVIEW:Early Resolution Seen On India Dabhol Pwr Spat Dow Jones, 05/04/01 Edison to Start Ad Campaign Urging Approval of Power-Line Sale Bloomberg, 05/07/01 Corporate Bond Alert: WorldCom, RadioShack on Docket (Update1) Bloomberg, 05/04/01

Six Western Power Providers Complete First Step to Form Independent Transmission Company

05/04/2001 Business Wire (Copyright (c) 2001, Business Wire)

PORTLAND, Ore.--(BUSINESS WIRE)--May 4, 2000--In an effort to ensure reliability and maximize cost efficiencies, six western utilities have been granted preliminary approval by the Federal Energy Regulatory Commission (FERC) to form an independent high voltage electricity transmission company serving six Western states. The independent, for-profit company, called TransConnect, will be a member of a planned non-profit regional transmission organization, RTO West. The framework for RTO West, which will span eight Western states, also was approved by FERC. Under the proposal approved by FERC, TransConnect could initially own or lease the high voltage transmission facilities currently held by Avista Corp., Montana Power Company, Portland General Electric, Puget Sound Energy, Nevada Power Company, and Sierra Pacific Power Company. Combining transmission resources into one independent company may create new opportunities to attract capital and improve the transmission infrastructure. Among other things, the FERC order approved TransConnect's governance structure and found that TransConnect met the Commission's independence requirements. The order also determined that TransConnect would qualify to file for innovative and incentive rates. Additionally, the order finds that the proposed structure for sharing planning and expansion functions is consistent with FERC's basic requirements, but reserves final approval pending further clarification by TransConnect and RTO West regarding the details and decision process for such sharing. "The TransConnect companies are pleased with the FERC order on the TransConnect filing and gratified that the Commission supports a for-profit business model that has the potential to provide very significant benefits," said Paul Mohler, a representative for the six TransConnect companies. There are a number of additional steps that must now be taken by the companies, including, among other things, preparation of a rate filing and various state and federal approvals. Ultimately, the outcome of TransConnect's proposal and the companies' decisions to move forward with the formation of this transmission company will depend on the economics and conditions imposed during the regulatory approval process and approval by the individual company boards of directors. TransConnect facilities are within the RTO West territory, which will operate more than 90 percent of the high voltage transmission facilities from the U.S.-Canadian border to southern Nevada. The RTO will not own transmission facilities, but will control each participating owners' transmission facilities.

INTERVIEW:Early Resolution Seen On India Dabhol Pwr Spat By Himendra Kumar Of DOW JONES NEWSWIRES

05/04/2001 Dow Jones International News (Copyright (c) 2001, Dow Jones & Company, Inc.)

NEW DELHI -(Dow Jones)- A prolonged electricity payment dispute between U.S.-based Enron Corp.'s (ENE) Indian unit, the Dabhol Power Co., and the Maharashtra State Electricity Board could be resolved within a month, the head of an independent energy think tank said Friday. The dispute over the controversial 2,184-megawatt, \$3-billion DPC project in India's western state of Maharashtra came to a head recently when the DPC's board authorized the management to proceed with a preliminary notice of termination - the first of three steps that lead to the abandonment of the project. Despite the move, Rajendra K. Pachauri, director of the New Delhi-based Tata Energy Research Institute, said he is optimistic of a resolution. "It's in everybody's interest to come up with a reasonable settlement. I think DPC will accept a renegotiated contract because they are in an impasse right now," Pachauri told Dow Jones Newswires in an interview. Pachauri is also one of the nine members of the committee appointed by the Maharashtra state government to renegotiate the MSEB's controversial power purchase agreement with DPC. "I do hope that within a month the whole thing can be sorted out. DPC wants the negotiations to be short and decisive and if all the parties are willing, an agreement won't be difficult," he added. The project has been mired in financial disputes since its main customer, the Maharashtra State Electricity Board, has failed to pay several of its bills. Dabhol has come under fire because of the relatively high cost of its power. Critics object to Dabhol charging 7.1 rupees (\$1=INR46.83) a kilowatt-hour for its power, compared with INR1.5/KWh charged by other suppliers. The state government has asked the committee to try to negotiate a revised agreement within a month. The committee's goal is to lower the power tariff and allow the sale of excess power to the federal government or its utilities. A restructure of the DPC's stakeholding may also be on the agenda. As reported, the negotiating committee's first meeting with the DPC management scheduled for Saturday has been postponed until 0530 GMT May 11 at DPC's request. DPC Must Run Plant At Full Capacity - Pachauri

Pachauri said that it is in DPC's interest to run its plant at full capacity and maximize sales. "Their sales won't be maximized unless the price is attractive. They really need to bring down the cost to the consumer. Our brief is very clear. We have to sit down with them and identify a strategy by which the Dabhol project can be viable for everyone," he said. "This will involve a complete financial engineering of the DPC. You'd need to restructure the project debts and bring down the interest rates (on debts) to the current levels in the market," he added. The DPC project - the largest single foreign investment in India - has a debt-equity ratio of 70:30. Pachauri said Dabhol should agree to charging between INR3.00 and INR3.25/KWh. "This is a reasonable range and should be acceptable to everyone," he said. He said if Enron decided to pull out of Dabhol, it wouldn't have a serious impact on foreign direct investments into India, particularly in the country's power sector. Texas-based Enron has a 65% stake in the DPC, and is the project's largest shareholder. Other shareholders include the MSEB with 15%, and General Electric Co. (GE) and Bechtel Enterprises (X.BTL) with 10% each. The DPC currently operates a 740-MW naphtha plant contributing around 0.7% to India's installed capacity. Enron has maintained that work will be completed by the year-end in the second phase of Dabhol project that will add 1,444 MW to it

India State Panel To Rework Power Pact With Enron Unit

04/23/2001 Dow Jones International News (Copyright (c) 2001, Dow Jones & Company, Inc.)

NEW DELHI -(Dow Jones)- India's Maharashtra state government will constitute a high-level committee to renegotiate a power purchase agreement with Enron Corp.'s (ENE) Indian unit Dabhol Power Co., the Press Trust of India reported late Monday, quoting India's Finance Minister Yashwant Sinha. "We have decided that the government of Maharashtra will constitute a negotiating committee to negotiate issues like the cost of power and use of power with DPC," the PTI quoted Sinha as saying soon after his meeting with the Maharashtra Chief Minister Vilasrao Deshmukh and federal Power Minister Suresh Prabhu. Dabhol has come under fire because of the relatively high cost of its power. Critics object to the company charging 7.1 rupees (\$1=INR46.82) a kilowatt-hour for its power, compared with around INR1.5/KWh charged by other suppliers. Enron has a 65% stake in the controversial 2,184-megawatt, \$3 billion Dabhol project, which supplies power to the State Electricity Board. Dabhol, India's largest private power plant, was scheduled for commissioning in two phases. The project's first phase, a 740-MW power plant, has already been commissioned. The committee, comprising representatives of the federal government, Maharashtra state government and Maharashtra State Electricity Board, will be constituted in a week's time, Sinha said. "We hope the DPC will respond positively to this and they don't take steps that will precipitate a crisis," Sinha said. He added that the cost of power supplied by DPC was too high. "We have to look if the state can use all the power generated and if the excess power can be wheeled out to needy states," he said. Dabhol has attracted India's largest single foreign investment. MSEB has 15%, General Electric Co. (GE) has 10% and Bechtel (X.BTL) has 10% in the project. Under a 1996 counter-guarantee agreement, the federal government is obliged to pay Enron if MSEB defaults. Enron invoked that guarantee in February, marking the first time in India's history that a company has invoked a federal guarantee, when the state utility said it couldn't afford to pay Dabhol. The state government finally paid \$17 million in outstanding bills. -By Himendra Kumar, Dow Jones Newswires; 91-11-461-9427; himendra.kumar@dowjones.com

Continental Airlines' Bethune Again Ranked Among the Top 50 CEOs in America By Worth Magazine

04/23/2001 PR Newswire (Copyright (c) 2001, PR Newswire)

HOUSTON, April 23 /PRNewswire Interactive News Release/ -- Continental Airlines' (NYSE: CAL) Chairman and Chief Executive Officer Gordon Bethune has, for the third consecutive year, been named one of the 50 best CEOs in America by Worth magazine. The complete list appears in the magazine's May issue. Other honorees include the CEOs of a wide range of successful corporations, including Microsoft, Enron, Alcoa, Dell Computer Company and Federal Express. Nominated by Wall Street analysts, Worth's Top 50 CEOs were selected for their leadership and vision and "based on our belief in the CEO's ability to deliver long-term shareholder value." "In a world of airline woes, Gordon Bethune is an island of relative contentment," said Worth magazine. "Every time American, United and Delta are nettled by labor disruptions, Continental gets a bump both in revenue and in its reputation for reliability." Bethune, who ranked 33rd on this year's list, joined Continental Airlines in February 1994 as president and chief operating officer. He was named chief executive officer in November 1994 and chairman of the board in September 1996. Worth is an upscale, monthly personal finance and business magazine for people who are passionate about business, investing and financial well-being. It reaches one million loyal readers with a median net worth of more than \$1 million. Edited by John Koten and started in 1992, Worth is the flagship publication of Worth Media. Continental Airlines is the fifth largest airline in the U.S., offering more than 2,200 departures daily to 133 domestic and 92 international destinations. Operating hubs in Newark, Houston, Cleveland and Guam, Continental (www.continental.com) serves more international cities than any other U.S. carrier, including extensive service throughout the Americas, Europe and Asia. Continental was named the 2001 Airline of the Year by Air Transport World, as well as the 1996 Airline of the Year, making it the only carrier to receive this honor twice in five years. Continental is in the top quarter of Fortune magazine's "100 Best Companies to Work for in America," and is ranked the nation's No. 1 airline in customer satisfaction for long and short-haul flights by Frequent Flyer Magazine and J.D. Power and Associates. Continental has received numerous awards for its BusinessFirst premium cabin (Conde Nast Traveler,

OAG, Entrepreneur and SmartMoney magazines), OnePass frequent flyer program (InsideFlyer's Freddie Awards) and overall operations and management (Fortune magazine). MAKE YOUR OPINION COUNT - Click Here <http://tbutton.prnewswire.com/prn/11690X54267387>

INDIA: Enron seeks lenders nod to scrap India contract.

04/23/2001 Reuters English News Service (C) Reuters Limited 2001.

BOMBAY, April 23 (Reuters) - The Indian unit of U.S. energy giant Enron Corp is seeking lenders' approval to terminate its contract to sell electricity to a virtually bankrupt Indian state utility, a source close to the issue said. The Dabhol Power Company (DPC), 65 percent owned by Houston-based Enron, will discuss the proposal with global and Indian lenders at a meeting in London on Monday, the source added. If the lenders agree, DPC will issue a notice to the Maharashtra State Electricity Board (MSEB) terminating the contract, the source added. Such a move would jeopardise the nearly \$3 billion invested in building a 2,184 MW power plant near Bombay on the west coast of India, and damage India's image as a friendly destination for foreign investors, analysts said. Enron is India's largest foreign investor and its power project has been mired in controversy since the mid-1990s over allegations of corruption and high costs. MSEB agreed through the contract to buy power from Enron but has now reneged on its commitment, saying it cannot afford such costly power. The utility currently owes 2.26 billion rupees (\$48.28 million) in over-due payments to Dabhol. (\$1=46.81 Indian rupees).

Abreast of the Market SBC Communications, PeopleSoft Gain on Positive Earnings Reports By Robert O'Brien Dow Jones Newswires

07/26/2001 The Wall Street Journal C2 (Copyright (c) 2001, Dow Jones & Company, Inc.)

NEW YORK -- Volume increased and market averages rallied, as a little improvement in the tenor of earnings reports proved to make a big difference in the way investors viewed Wall Street. SBC Communications gained \$2.58, or 6.3%, to \$43.38 after the telecommunications-service provider reported second-quarter earnings that beat Wall Street's forecasts, and chose to keep its forecasts for the balance of the year intact. PeopleSoft rose 4.16, or 12%, to

38.40 in Nasdaq Stock Market trading, after the Pleasanton, Calif., maker of enterprise software came through late Tuesday with better-than-expected second-quarter results. To be sure, any improvement in the earnings tone would be characterized as marginal, rather than material. After all, even SBC acknowledged weaker-than-expected revenue growth, owing to the weakness of the economy. And the technology sector included several prominent earnings disappointments as well as triumphs. Shares of storage-products maker QLogic lost 6.3, or 15%, to 34.44, after posting its quarterly results. Semiconductor device maker Microsemi, Santa Ana, Calif., shrank 10.46, or 16%, to 56.54, in Nasdaq trading. Still, after several weeks of dispiriting earnings performances and forecasts, Wall Street was primed to celebrate any improvement, no matter how marginal. "Investors have been sitting on their hands so long that any hint of positive visibility was going to be a spark for the buyers, and we saw that today with the way some institutional customers behaved," said Patrick Boyle, head of financial trading at Credit Suisse First Boston. But Mr. Boyle acknowledged that the market remains vulnerable to additional shortfalls in profits or economic data. Yet, yesterday, volume picked up, with 1.25 billion shares changing hands on the New York Stock Exchange, compared with 1.19 billion Tuesday. The Nasdaq Composite Index, which came into yesterday's trading off a string of three losses, posted a gain of 25.08 points, or 1.28%, to 1984.32. The Dow Jones Industrial Average rose 164.55 points, or 1.61%, to 10405.67. The Standard & Poor's 500 Stock Index advanced 1.6%, effectively erasing Tuesday's 1.63% setback. Two of the biggest contributors to that day's losses proved to be the engines of improvement yesterday, with power suppliers and oil stocks rallying impressively. Dominion Resources, a Richmond, Va., utility, climbed 2.50 to 59.75; Enron, Houston, advanced 1.72 to 44.96; and Public Service Enterprise, Newark, N.J., rose 2.38, or 5.6%, to 45.24. Some of the independent power producers that faded badly Tuesday on some pessimistic comments from Salomon Smith Barney perked up yesterday. The group got a lift from some comments from Credit Suisse First Boston, which jumped to its defense yesterday. Calpine, San Jose, Calif., recovered 1.91, or 5.6%, to 35.81. Kinder Morgan, Houston, rose 1.58 to 51.78, and El Paso, also of Houston, advanced 1.52 to 49.16, after the company reported better-than-expected second-quarter results yesterday. Oil exploration and production concern Amerada Hess, New York, a 3% decline Tuesday, snapped back, adding 3.60, or 5.1%, to 74.40. The company recorded better-than-expected second-quarter earnings. Likewise, Oklahoma City exploration concern Kerr-McGee, which lost 3.1% Tuesday, advanced 1.80 to 59.87 after issuing better-than-expected results. Texaco added 3.13, or 5%, to 67.55, on better-than-expected second-quarter results. Meanwhile, Schlumberger, New York, part of an oil-services sector that has been in steady decline recently, improved 2.78, or 5.2%, to 56.48, after the company recorded second-quarter results. Amdocs advanced 4.31, or 11%, to 42.01. The St. Louis provider of billing systems and services for cable television and Internet-service providers recorded stronger-than-expected fiscal third-quarter results late Tuesday. Emulex fell 50 cents to 22.31 on Nasdaq. Salomon Smith Barney reduced its rating on the Costa Mesa, Calif., data-storage products maker, following weaker-than-expected results turned in by QLogic. Ticketmaster advanced 1.84, or 14%, to 14.80 on Nasdaq. The Los Angeles Internet-site operator reported second-quarter results late Tuesday that proved to be stronger than Wall Street expected, drawing kudos from Thomas Weisel Partners. The firm said the stock remained one of its favorite names in the media sector. Leap Wireless shed 6.32, or 20%, to 25.04 on Nasdaq. The San Diego wireless-communications-services provider reported second-quarter results that missed Wall Street's forecasts. Qualcomm added 1.84 to 59.59 on Nasdaq. The San Diego wireless-communications-systems developer said it canceled the planned spinoff of its semiconductor business. Xerox fell 40 cents, or 5%, to 7.59. The Stamford, Conn., copier and printer maker lived up to Wall Street's projections for its second quarter, but warned that its return to profitability won't come in the third quarter, as the company previously forecast, but in the fourth quarter this year. Linear Technology declined 1.93, or 5%, to 37.79 on Nasdaq. The Milpitas, Calif., semiconductor manufacturer reported as-expected fiscal fourth-quarter earnings, though the company cautioned that its current-quarter sales will show a decline from the level of the quarter it reported. Aflac slid 3.35, or 11%, to 28.20, after the Columbus, Ga., supplemental life-insurance provider reported its second-quarter results. The company said it found the sales totals from its Japanese unit disappointing. Chris-Craft Industries declined 55 cents, or 0.8%, to 69.30. The Federal Communications Commission approved the \$5 billion purchase of the New York television station owner by Fox Television Stations, a unit of News Corp. The American depositary receipts of News declined 56 cents, or 1.6%, to 35.50. Furniture Brands declined 67 cents, or 2.4%, to 26.93. UBS Warburg said it turned cautious about the earnings outlook for the St. Louis furniture maker, after several other names in related businesses warned of profit shortfalls. Rail carriers ended mixed, with some names, such as CSX, Richmond, Va., recovering 1.70, or

5%, to 36.95, after losing 6% Tuesday. Credit Suisse=20 First Boston called Tuesday's selloff in the sector overdone, and urged=20 investors to take advantage of depressed prices in the group.=20 However, CSFB said it remained cautious about Burlington Northern, whose=20 earnings performance sparked Tuesday's slide. The stock, which lost 8%=20 Tuesday, eased another 69 cents, or 2.5

Economy Kyoto Spurned Is Mixed Bag for U.S. Firms --- Subsidiaries Abroad Will Have to Abide by New Emissions Rules A Wall Street Journal News Roundup

07/25/2001 The Wall Street Journal A2 (Copyright (c) 2001, Dow Jones & Company, Inc.)

The U.S. rejection of the Kyoto Protocol appears to give U.S. companies an advantage over their foreign rivals, which would be forced to invest to reduce greenhouse-gas emissions. But longer term, some U.S. companies could find themselves less energy efficient in their domestic operations than their overseas competitors. U.S. multinationals seem resigned to the fact that their operations abroad will need to conform to the Kyoto rules. Few sectors would be as affected by curbs on carbon-dioxide emissions as the auto industry, whose cars and trucks are one of the world's biggest sources of the gas. In Europe, the auto industry, including units of the Big Three auto makers, already has signed a voluntary agreement to cut 25% from 1995 levels of the amount of carbon dioxide that the European industry's new vehicles belch out by 2008. But in the U.S., most major auto makers continue to oppose calls by environmentalists and rising numbers of politicians to force a similar result by toughening the nation's automotive fuel-economy rule. The Kyoto agreement, approved this week by 178 countries, but not by the U.S., at a United Nations convention in Bonn, calls for industrial nations to reduce their emissions to 5.2% below 1990 levels during an accounting period that runs from 2008 to 2012. The accord must still be approved by legislatures of at least 55 countries, representing more than 55% of emissions from the industrialized world. Foreign companies are hollering that they will have to abide by stiffer environmental regulations than their U.S. rivals. "We could be placed at a disadvantage to oil and gas companies operating in the U.S.," said Chris Dawson, a spokesman for Petro-Canada, a Calgary, Alberta, integrated oil company. "The markets must be open, and everyone must be operating on the same playing field." The Bush administration, which faults Kyoto for being too costly for U.S. businesses, has promised to develop its own framework to reduce global warming. Indeed, this week's approval of the Kyoto agreement raises the possibility that a compromise regulatory regime can be worked out. Democrats in Congress say that they will now mount a strong campaign to set up a U.S. regime to regulate carbon dioxide, which could give the U.S. standing to enter the Kyoto accord later. Secretary of State Colin Powell yesterday said: "We are committed to working with all nations of the world to find a consensus in the near future." Although the European Union looks certain to ratify Kyoto, questions remain over the commitment of some other key countries, especially Japan, whose heavy industry could be hurt by Kyoto, especially compared with the U.S. Japan was only dragged into the deal in Bonn after receiving concessions, which reduced the cuts it will have to make in its emissions. A big appeal that led to the original accord was that the parties to it can engage in several types of international emissions trading, a concept promoted for years by the U.S. before it abandoned Kyoto. The U.S. had been expected to be the major buyer of such credits, especially from Russia. Jonathan Pershing, who heads the International Energy Agency's environmental division, estimated that the world trading market in emissions credits would have been roughly \$42 billion a year, including the U.S. Computer models, he said, show the withdrawal of the U.S. would shrink the market and also drop the demand price for

Russian credits sharply, leaving annual trade among nations at about \$3 billion. Mr. Pershing believes U.S. companies may not be able to use the market, at least initially. Later they may, he said, but "maybe at a higher cost" of entry. Some U.S. companies want the U.S. to rethink its position on Kyoto and gain entry for its companies in the emerging market. "It would give us an opportunity to get more mileage out of the capital we have to meet this [climate change] challenge," said Thomas R. Jacob, a senior international adviser for DuPont Co., which operates in 70 countries. DuPont is one of 36 multinational companies that have formed an alliance with the Pew Charitable Trusts to support efforts to curb climate change and to express interest in emissions-trading possibilities. Enron Corp. -- which has a big trading operation, as well as utilities -- expects that Kyoto would offer it business opportunities. Those include, for example, helping companies switch from coal to cleaner-burning natural gas, and helping companies finance pollution-control equipment, said Jeff Keller, Enron's director of environmental strategies. He believes the U.S., eventually, will join the group of signers. Many European companies are already well on their way to meeting Kyoto's targets. "We're way ahead of Kyoto," boasts Pasquale Pistorio, chief executive of French chip maker STMicroelectronics NV. Increased energy efficiency saved the company \$40 million last year, he said, and STM has targeted zero carbon dioxide emissions by 2010. STM takes advantage of a Kyoto provision allowing it to plant trees, which reduce carbon dioxide in the atmosphere, in order to offset the company's emissions. In the United Kingdom, big oil companies BP PLC and Royal Dutch/Shell Group were early supporters of Kyoto, and both companies subsequently declared they would hew to the standards of the protocol even before it was passed. To assist in achieving these reductions, the companies separately have set up internal emissions-trading floors, where various company units can trade credits.

National Desk THE NATION FERC Scrutinizes Charges of Bias in Grid Controller Energy: Davis-appointed panel that heads Cal-ISO violates U.S. law, critics say. Remedies could include scrapping it. RICARDO ALONSO-ZALDIVAR TIMES STAFF WRITER

07/25/2001 Los Angeles Times Home Edition A-17 Copyright 2001 / The Times Mirror Company

WASHINGTON -- The Federal Energy Regulatory Commission appears headed for a showdown with Gov. Gray Davis, perhaps as early as today, over political control of the powerful nonprofit corporation that runs California's electricity transmission grid. Responding to an industry complaint that the grid operator lacks required independence, FERC could immediately disband its governing board, which was appointed by Davis. But several observers said Tuesday that such a politically provocative step seems unlikely in the heat of summer. They predicted the commission will find som

Financial Post: Editorial Ontario should open power market Kenneth L. Lay National Post

04/05/2001 National Post National C19 (c) National Post 2001. All Rights Reserved.

In the face of the California crisis, it is all the more important for legislators and policymakers -- and for the public generally -- to remember why a competitive market structure is so important for electricity consumers. The time is right to leave behind the central planning, socialized risk structure that resulted in the billions of dollars of stranded costs and stranded debt left to consumers in many regions of North America (not just Ontario) by poor management, bad planning and enormous cost overruns. That can't happen again, and will not happen again in a competitive open market. In a restructured and competitive electricity market, the risk and cost of new investment in generation will be borne by investors and shareholders rather than by ratepayers. This protects consumers from bearing the cost of bad decisions. Last week, the government and Ontario Power Generation (OPG) announced an end to the freeze of Ontario's bulk power rates that has been in place for about eight years. That will represent an increase of 12% to 15% in bulk power rates. It was explained on the basis of the need to pay for the mistakes of the past. At Enron, we cannot think of any other jurisdiction in North America where a price freeze has been in place for that length of time. In future, a competitive market can deliver lower prices than a regulated structure can. This is borne out by the experience in Pennsylvania, England and other European markets. Pennsylvania estimates that consumers have saved US\$3-billion over the past three years. In England's first year of customer choice (June, 1999 -- June, 2000) consumers saved in excess of (ps)299-million (\$673-million). In Germany, industrial prices have fallen by over 50% since 1995. In Finland, industrial prices have fallen over 23% since 1995. Competition gives customers choice, which gives suppliers and retailers a strong incentive to improve customer service, lower prices and develop demand-side (load management) solutions. This leaves the issue of timing for the opening of the market. The Electricity Market Readiness Plan adopted by the Ontario Energy Board and the Independent Market Operator targets the systems, processes and other requirements of the wholesale and retail markets to be ready for a market opening in October/November, 2001. This represents a realistic and achievable approach to market opening. We see real benefits to opening the market this fall, rather than waiting until 2002. Major institutions are gearing up for a market opening later this year, and the momentum is ours to lose. Indeed, many participants, including large industrial customers, have already entered into the commercial arrangements necessary for market opening and the post-market opening period in the expectation of market opening later this year. Those commercial arrangements with respect to power procurement, power supply, risk management, and settlement and dispatch services have helped and are helping industrial consumers lock in prices. Opening the market in the fall will preserve those arrangements for which parties have bargained, leaving just those consumers who have chosen to enter the market unhedged, and giving them seven or eight months to experience the operation of the market prior to the summer of 2002. This was a key consideration in the decision to open the New York market in November, 1999, rather than the spring of the following year. Remember that, although Ontario's demand traditionally peaks in the winter, we would expect prices to peak in the summer months. Moreover, because the summer is the period of peak demand across the Eastern interconnect as a whole, the summer months generally see relatively more operational/transmission related constraints than the winter. A fall opening will also enhance the efforts to "decontrol" or divest OPG assets. Those entities which might have an interest in acquiring OPG assets will, for valuation purposes, want to have as much information as possible about pricing in the Ontario market. Opening in the fall will give those entities a longer period of time over which to observe the way the price-setting mechanisms in the Ontario market actually operate. Accordingly, opening in the fall will help reduce uncertainty over the valuation of Ontario Power Generation assets. This would mean that the decontrol initiative will attract more potential buyers, and that those buyers will pay more than they otherwise would in the face of uncertainty. Focusing on getting the market open this fall will help maintain the commitment of those, like Enron, who have already devoted significant resources and capital to the market, while attracting more new players, sooner, into the province. The Ontario government should have confidence that the best way forward is to proceed with the implementation of that plan and with the opening of the Ontario wholesale and retail markets in the fall of 2001. The case for open markets is strong.

April 5, 2001 Houston Chronicle California lawmakers want windfall profits tax on energy companies Reuters News Service SACRAMENTO, Calif. -- A coalition of California lawmakers Wednesday introduced a bill that would slap a windfall profits tax on power generators they claim have made a killing from the state's unfolding power crisis. "This says to the large generators who are gouging us that we are going to set a reasonable rate of return, and reasonable profits, and anything beyond that would be returned to the state of California," said Assembly member Dion Aroner. "They've been gouging us, and it is time to gouge them. We're sick of paying these outrageous bills to the Texans." A spokesman for Gov. Gray Davis, who has been scrambling to address his state's escalating energy emergency, said he would have no comment on the bill until it reached his desk. Aroner said the bill, proposed by a coalition of Democratic women, calls for the state to establish a formula to determine "reasonable" profits for generators and tax back anything over that amount. Major power generators, many of them based in Texas, have reported sharply higher earnings as wholesale power prices skyrocketed in the Western U.S. spot market. Last year at this time, prices were \$30 to \$40 per megawatt hour of electricity. This year, that same electricity costs between \$300 and \$400. Those high price

TO:?????AD HOC GROUP ON THE ELECTRICITY CRISIS

Assemblyman Joe Nation put a bill in the hopper Friday, January 26th, which he believes is congruent with our thinking (see attached).? He is seeking our comments and possible endorsements.

Please send your comments directly to Joe Nation at <joe@joenation.com>, and let me know whether you believe we should work with him and consider endorsing his bill.

Thanks, David Teece

Scottish Power reportedly considering 3 bln usd bid for Enron's Portland

04/29/2001 AFX News (c) 2001 by AFP-Extel News Ltd

LONDON (AFX) - Scottish Power PLC is considering a move to bolster its U.S. West Coast operations by bidding for Enron Corp unit Portland General for around 3 bln usd, reports the Observer, without citing sources.

Enron last week broke off talks with U.S. utility Sierra Pacific over a deal said to be worth 3.1 bln. This opened the door to Scottish Power, the report says.

An unnamed City source said Portland, which sells power to 725,000 customers in and around the Oregon state capital, would be a perfect fit for the PacifiCorp business in the north-west U.S. which Scottish bought in 1999 for 4.7 bln stg. Scottish has consistently said it wants to build up its business in the U.S.

PacifiCorp has some 1.5 mln residential, commercial and industrial customers spread in Oregon, California, Washington, Wyoming, Utah and Idaho.

"Portland sits in the middle of PacifiCorp territory in Oregon," the source said. "There would be added customers and big synergies in infrastructure, operations, and head office functions. It would make sense."

Scottish Power unveils results this week.

UK PRESS:Scottish Power Mulls Bid for Enron's Portland

04/29/2001 Dow Jones International News (Copyright (c) 2001, Dow Jones & Company, Inc.)

LONDON -(Dow Jones)- Utility giant Scottish Power PLC (SPI) is considering a move to bolster its American West Coast operations by bidding for Enron Corp's (ENE) Portland General in a deal that could total \$3 billion, The Observer newspaper reports.

-London Bureau; Dow Jones Newswires; 44 (0)20 7842 9279

ScottishPower Mulls Bid for Portland General, Observer Says 2001-04-29 11:30 (New York)

Glasgow, Scotland, April 29 (Bloomberg) -- ScottishPower Plc, the U.K.'s No. 2 utility, may bid for Enron Corp.'s Portland General Electric Co. in a transaction worth as much as \$3 billion, the Observer newspaper said. ScottishPower spokesman Gordon Laidlaw declined to comment on the newspaper's report. Portland General has 725,000 customers in Oregon. Its operations and infrastructure could fit with PacifiCorp, the biggest utility in the U.S. Northwest, which ScottishPower bought for \$10.7 billion in 1999, the paper said. Last week, Enron's planned sale of Portland General to Sierra Pacific Resources was canceled after both companies agreed that the California energy crisis had made regulatory approval too difficult. ScottishPower has asked Oregon regulators to allow it to raise customer prices in the state by 24 percent for three months from May 2 to cover costs it expects to incur in the period. The company is losing about \$1 million a day because of a failure at a plant in Utah.

India's MSEB Hopeful Of New Power Pact With Enron Unit By Himendra Kumar Of DOW JONES NEWSWIRES

04/29/2001 Dow Jones International News (Copyright (c) 2001, Dow Jones & Company, Inc.) NEW DELHI -(Dow Jones)- India's Maharashtra State Electricity Board is hopeful of renegotiating its power purchase agreement with the U.S. energy major Enron Corp.'s (ENE) Indian unit Dabhol Power Co., MSEB Chairman Vinay Bansal said late Sunday.

The \$3 billion, 2,184-megawatt Dabhol project has been mired in financial disputes after MSEB, its main customer, failed to pay several of its bills. The project has the largest single foreign investment in India.

The Dabhol project has been in trouble since December when the government of Maharashtra state, where the Dabhol project is located, said the company charged exorbitant prices for electricity, and thus demanded a new price agreement.

Meanwhile, the board of Dabhol Power at its meeting in London April 25, had authorized DPC's managing director to proceed with a preliminary move toward terminating its troubled joint venture power project in western India.

"We are at a point of renegotiating the power purchase agreement with Dabhol Power Co. A committee has been constituted with the government of India participation. I am hopeful of a positive outcome," Bansal told Dow Jones Newswires in a telephone interview.

He said he hadn't heard anything from DPC's management on the preliminary termination notice. "It's true that the DPC board has authorized the company's managing director to issue a preliminary termination notice. I am not sure why, when or whether he will use it," Bansal said.

The preliminary termination notice is the first of three steps that end in the abandonment of the project, agreed to by investors when the joint venture was formed.

Bansal said that if the preliminary notice of termination is issued by the DPC's managing director, there will be a six-month suspension period in which the two sides will be "negotiating to remedy the defect." "If the dispute cannot be resolved even after the negotiations, the final termination takes place. Thereafter, MSEB or a third party may buy the Dabhol unit. The compensation price will be decided by the arbitrator whose decision will be based on which of the two parties has defaulted," Bansal said.

Enron India spokesman Jimmy Mogal refused to comment on the DPC board's decision when reached by Dow Jones Newswires, saying it was an internal company matter.

ASIA/PACIFIC Chinese Delisting May Signal Cleanup China announced the first delisting of a company, signaling a new effort to clean up its stock exchanges by ridding them of their most troubled companies. The decision to delist Shanghai Narcissus Electrical Appliance follows months of heated talks between the company and the Shanghai Stock Exchange. Shanghai Narcissus was once the country's second-largest maker of washing machines but this month reported its fourth straight annual loss. The delisting could pave the way for the China Securities Regulatory Commission to delist as many as 12 similarly unprofitable companies. But pressure from local governments, which control many indebted listed firms, could slow reforms. U.S., Singapore Rated Most Competitive The U.S. and Singapore kept the top spots as the world's most competitive nations, and strong growth in Hong Kong moved it back to sixth place from 12th, according to an annual survey. Japan, once a leader, fell to 26th in the poll of business leaders by the International Institute for Management Development in Lausanne, Switzerland. Canada slipped one spot to No. 9. The top 10 places were filled out by Finland, Luxembourg, the Netherlands, Ireland, Sweden and Switzerland. Dabhol Board May Take Preliminary Step U.S. power

company Enron's Indian unit, Dabhol Power, may take a preliminary step toward ending its \$3 billion project near Bombay, as part of a dispute over payments by its main customer, the Maharashtra State Electricity Board, or MSEB, a Dabhol board member said. At a meeting today in London, Dabhol's board will consider a preliminary termination notice, according to Don Sturmer, a vice president at Bechtel Enterprises and member of the board of Dabhol Power, in which Bechtel owns 10%. Mr. Sturmer said the "procedural" step would allow Dabhol to suspend deliveries as it negotiates its dispute with the MSEB. Enron holds a 65% stake in Dabhol. Besides Bechtel, other shareholders are General Electric of the U.S., with 10%, and the MSEB, with 15%. Intel Cuts Stake in CyberWorks Venture U.S. semiconductor maker Intel has scaled back its stake in Network of the World, the debt-burdened interactive television service it has been developing with Hong Kong telecommunications and Internet company Pacific Century CyberWorks. Intel's move means CyberWorks will have to bear a greater share of any further investment in the service. CyberWorks disclosed in its annual report yesterday that Intel exercised part of an option that allows it to exchange its stake in the venture, known as NOW, for shares in CyberWorks. The transaction reduced Intel's stake to around 35% from 40%.

CMS Preferred Bidder on 320 MW Saudi Power Plant, MEED Says 2001-04-25 03:19 (New York)

Riyadh, Saudi Arabia, April 25 (Bloomberg) -- CMS Energy Corp., a U.S. power provider based in Michigan state, is the preferred bidder to develop what may be Saudi Arabia's first privately owned power plant, Middle East Economic Digest reported, without citing sources. CMS, together with a local partner, AH Al-Zamil Group, is negotiating details with the government-owned Saudi Petrochemical Co. to build a 320 megawatt plant in the kingdom's largest purpose-built industrial town at Jubail, 190 miles north-east of the capital, Riyadh, London-based MEED said. CMS, for which the Industrial Bank of Japan is acting as financial advisor, is bidding against the U.S.'s Enron Corp. and the local Xenel Industries, the weekly magazine said. The magazine did not say what the plant will cost to build. The Saudi government has pledged to increase the kingdom's electricity generating capacity from about 23,000 megawatts now to 60,000 megawatts in 2023 at a cost of \$100 billion, according to Saudi American Bank. It has decided to open up the power and water industry to foreign investment to share the costs.

April 25, 2001 Houston Chronicle Bill could force refund from Reliant PUC would have power to order profits returned By JANET ELLIOTT Copyright 2001 Houston Chronicle Austin Bureau AUSTIN -- Reliant Energy customers could get refunds of up to \$590 each under legislation the utility industry is fighting. Rep. Sylvester Turner, D-Houston, and other supporters of House Bill 2107 held a news conference Tuesday to counter intense lobbying against the bill giving the Public Utility Commission of Texas the authority to order excess earnings refunded. Turner said the utilities recently took the unusual step of holding a luncheon for legislative staffers to "trash the bill." "If HB 2107 does not pass, the Legislature will allow utilities to enjoy the benefits of the regulated market and the windfall of the restructured market at the expense of ratepayers," he said. The lawmakers announced that Enron and Shell, two companies entering the electricity market, are supporting the bill, which may be debated by the full House next week. They join the city of Houston and business and industrial electricity customers backing the bill. Turner said the backing of Enron and Shell shows that the legislation is pro-competition, not anti-business as the utilities are saying. Turner said data compiled by the Public Utility Commission showed that Reliant, TXU Electric and three other investor-owned utilities have been allowed to overcharge customers \$4.9 billion under the state's 1999 electric deregulation bill. Reliant's overcharges are estimated at \$2.2 billion. Utility companies say they are against the bill because it's too soon to say if the market forces that have turned nuclear and coal-fired plants into valuable properties will last. "Reliant Energy does not support the bill as proposed because the bill would require utilities to make payments to customers based on an estimate of stranded costs, and we believe that the only way to determine the true value is through market valuation, which will take place in 2004," said Alicia D

By Jason Leopold

OF DOW JONES NEWSWIRES

LOS ANGELES (Dow Jones)--A California Senate committee investigating manipulation in the state's wholesale power
market approved a measure late Thursday, authorizing the committee to depose the chief executives of major energy
companies to provide insight into the companies' trading practices.

The Senate Select Committee to Investigate Market Manipulation voted 28-6 in favor of deposing some of the energy
sector's most powerful chief executives.

The move comes a day after the committee held Reliant Energy Inc. (REI, news, msgs) and Enron Corp. (ENE, news,
msgs) in contempt for refusing to provide documents on its electricity trading and sales practices. The full Senate is
expected to vote on the contempt charge and decide the punishment to impose.

Sen. Joe Dunn, D-Santa Ana, the committee chair, would have carte blanche to depose executives, such as Enron
Chairman Ken Lay, who has been singled out by Attorney General Bill Lockyer for gouging consumers in the state.

Representatives of the energy companies under investigation were not available for comment.

The committee has been investigating whether energy companies knowingly manipulated the state's wholesale electricity
market to drive up prices and create artificial shortages.

It has yet to uncover a "smoking gun." But has secured the testimony of former Duke Energy (DUK, news, msgs) power plant employees who told the committee that the company reduced output at a San Diego power plant during power emergencies to drive up power prices.

The state's Independent System Operator, however, conceded that it ordered the fluctuations in capacity at the power plant.

HEADLINE: Energy secretary, former Gov. Wilson speak on energy crisis

BYLINE: By Rick Jurgens

BODY:

??SAN FRANCISCO _ Two prominent Republicans came here on Thursday to promote free-market solutions to the energy crisis that has hit California and threatens to spread nationwide.

??Spencer Abraham, energy secretary in the Bush administration, only briefly mentioned the state's current troubles and instead regaled 600 attendees at a Bay Area Council banquet with the promises of new technologies.

??Earlier, former Gov. Pete Wilson focused on the past as he offered 90 people at the Public Policy Institute of California a rambling defense of the 1996 electricity industry restructuring law he signed.

??At the heart of electricity industry restructuring is a traditional Republican theme: a preference for market forces and competition over regulators and government planning. But the fate of California's electricity industry restructuring plan now rests in the hands of Gray Davis, the state's Democratic governor. ?

??Abraham never mentioned Davis.

??"I didn't come here to play the blame game," he said in a news conference.

??California's electricity problems are merely the most intense in a nation facing "rising demand, stagnant supplies and an energy (infrastructure) that is out of date and in need of repair," he said.

??Picking up on an initiative that has emerged as a priority for some advocates of restructuring, Abraham stressed the need for enhanced federal authority to meld regional networks of high-voltage transmission lines into a national grid.

??But Abraham's main pitch was that California technology companies could contribute "intellectual capital and ingenuity to the world of megawatts."

??Looking far into the new century, he offered a vision of an energy industry replete with micro turbines, fuel cells and hybrid engines.

??"Our carbon-based economy itself may pass from the scene to be replaced, perhaps, by a hydrogen- based economy," he said.

??Wilson's concerns were more prosaic. He defended restructuring _ now plagued by soaring prices and rolling blackouts _ as a step forward from the previous structure, where electricity came from regulated monopolies.

??"There were flaws," Wilson said of the restructuring bill that he signed into law in 1996. "I acknowledge that. They were less important than launching California on the path to deregulation."

??Restructuring was the only way to bring down power costs that were higher than in other states, and to break a regulatory logjam that had limited power plant development, he said.

??Wilson criticized the law's retail rate freeze. Although it triggered a financial crisis for the state's utilities, the freeze was largely "a self-inflicted wound," insisted upon by utilities seeking to be repaid for costly investments in nuclear plants and contracts with small generators, he said.

??Wilson also said it had been a mistake to forbid the utilities to sign long-term contracts with generators. Those were ruled out because regulators feared such contracts would give utilities an unfair advantage as competition developed, he said.

??Noting that he had been singled out for criticism by Davis, Wilson fired back, saying that Davis had been too slow to invoke the "virtually dictatorial" powers that the governor has in emergencies, including electricity shor

Enron CEO Skilling Reinvents Company, Unnerving Investors 2001-05-01 03:09 (New York)

Enron CEO Skilling Reinvents Company, Unnerving Investors

(Published in May issue of Bloomberg Markets.)

Houston, May 1 (Bloomberg) -- A year ago, Enron Corp. CEO Jeffrey Skilling put up a banner in the lobby of his company's Houston office tower that welcomed visitors to "The World's Leading Energy Company." Skilling, 47, has now decided that the company's tag should be more ambitious: "The World's Leading Company," the banner says today. It's no shock that even the CEO isn't sure how to describe Enron, for it's a company swept by constant change. In the 1990s, Skilling transformed a regulated gas-pipeline company into the largest competitor in the business of trading energy, mainly natural gas and electric power. Now Skilling is pushing the company into Internet trading of all sorts of things: paper products, plastics, metals, fiber-optic bandwidth, commercial credit, pollution emission controls, and even weather derivatives. All of this morphing unnerves investors, and some of the company's ventures may not be growing as fast as Enron says, according to analysts and industry insiders. They say the company is overstating the value of the new businesses it's entering. Some investors are increasingly concerned about a lack of clarity regarding where the company is going -- and what exactly it does now. "Owning Enron is a bit of a leap of faith," said John Hancock Advisers Inc. mutual fund manager Greg Phelps, who invests \$1.1 billion in utility stocks and doesn't own any Enron. "I want to buy a stock where I have absolute certainty about the business and direction it's headed."

Exuding Nervous Energy

Skilling, a man who exudes nervous energy and speaks in rapid-fire bursts, says his track record should ease investors' concerns. In the first quarter of 2001, Enron's profit from operations rose 20 percent to \$406 million as revenue almost quadrupled to \$50.1 billion. Enron shares have soared more than 11-fold since the start of the decade, four times the gain of the Standard & Poor's 500 Index. Enron's shares have dropped 25 percent this year, closing at \$62.72 on April 30. Enron isn't merely a trading company, Skilling says. It's a logistics concern that ties together supply and demand for any given commodity and then figures out the most cost-efficient way to deliver that commodity to its destination. Skilling, who joined Enron in 1990 after leading McKinsey & Co.'s energy and chemical consulting practices, is unapologetic about moving the company in so many different directions. "In five years, we'll be a different company," he said. "We're not finished reinventing ourselves."

\$65 Billion in Assets

Enron owns \$65 billion in assets, including 32,000 miles of pipeline that span 21 states and transport 15 percent of all of the natural gas consumed in the U.S. The company owns an 18,000-mile fiber-optic network in the U.S. and controls 51 power plants and other energy projects in 15 countries on four continents. Pinpointing what Enron does isn't easy. Some businesses are simple to grasp: In 2000, Enron won \$16.1 billion in energy management contracts from such giant corporations as Owens-Illinois Inc. and International Business Machines Corp. The bulk of Enron's money -- 93 percent of revenue and more than four-fifths of profit in 2000 -- came from wholesale energy operations and services: what it calls "the financialization of energy."

Cloaked in Secrecy

This is largely the gas and electricity trading business it pioneered. Enron cloaks the details of that business in secrecy, citing competitive reasons, which makes its bread-and-butter activities as difficult to understand as the abstract Joan Miro

lithograph that looms behind Skilling's desk. "Enron keeps a lot of facts close to the vest," said Andre Meade, an analyst at Commerzbank Capital Markets. "That makes constructing earnings models a real challenge." Even many of Enron's employees are shielded from the intricacies of Enron's business. Signs in stairwells and on office walls forbid employees from freely moving around the building into trading rooms and other off-limits areas. For now, Wall Street is betting that behind closed doors, Skilling and company will figure out how to extend Enron's trading prowess into fast-growing industries. Of the 22 analysts who track Enron, 19 of them rate the stock a buy. Enron traded at 40 times 2000 earnings on April 30. That's exactly double the price-earnings ratio of 20 for rival Duke Energy Corp., the biggest U.S. utility owner and energy trader, and 42 percent higher than the S&P 500's April 30 multiple.

'GE of the New Economy'

"Enron is uniquely positioned to be the GE of the new economy," said Merrill Lynch's Donato Eassey. "This isn't a management team to bet against." With analyst expectations so positive, some longtime Enron holders are selling stock. "Especially with its high valuation, the stock's risky, and I don't see much upside," said Timothy Ghriskey, senior portfolio manager at Dreyfus Corp., which controls funds that sold about 1.55 million Enron shares at the end of 2000. "If they fail to deliver for one reason or another, things could get ugly." Enron says its 2001 sales will swell to at least \$160 billion. Analysts and investors say there are several trouble spots that could slow its growth.

More on CPUC's Actions Today

Sender	alan.comnes@enron.com
Recipients	[tim.belden@enron.com, 'mike.swerzbin@enron.com', 'michael.driscoll@enron.com', 'alan.comnes@enron.com']
File	dasovich-j/all_documents/10434.

There is 4 proposed decisions that came out today. The CPUC is set to vote on=20 them tomorrow. Here is a quick overview:

1) Two decisions address how much money is collected for going forward=20 electric energy costs and how much of that is paid to CDWR. Average rates are=20 to increase 3c/kWh. Further the AB1x 1 c/kWh is to continue. Thus, the=20 total increase, relative to rates in effect in year 2000, is 4 c/kWh=20 (\$40/MWh). Lynch was very unclear how this rate would be implemented for=20 residential customers (a tiering proposal will be heard separately and take=20 30-45 days to implement). One of these decisions addresses how to measure=20 past undercollections but as far as rate increases go, they are to cover on=20 ly=20 going forward costs. 2) One decision addresses QF issues. I have not seen the PD (It is expected=20 out shortly). The Wood PD revises his revised PD of last week (yes, a=20 revised, revised PD) as follows: a) Requires QFs to be paid on a going forward basis (as of 4/1/01). Utilities=20 to pay within 15 days upon presentation of an invoice. No help for past due=20 amounts, however. b) Change the SRAC energy index from Topock to Malin. Such a change will=20 lower the SRAC energy by =01&4 c/kWh=018. This is a 15% to 25% hit to SRAC=20 relative to the status quo, which is based more or entirely on Topock. c) Calls for workshops to further refine the gas basis for SRAC and address=20 other factors in the SRAC formula such as heat rates and O&M factors=20 d) Works with Section 390, as is, does not depend on a legislative change i) Thus the reason why SRAC is based upon a border price index. e) Overall cap (i.e. 7.9 c/kWh) is dropped. The fourth decision addresses an investigation of the utility holding=20 companies. Basically the CPUC is going after utility holding companies for=20 funds to reduce the past undercollections.

Alan Comnes

Further Notes taken by Sue Mara during the press conference:

Lynch and Wood Running the meeting

Lynch started out castigating FERC for the "failure to act", sellers for high=20 prices forcing CA into this action. Has some charts in the press package. =20 Talked about how wonderful the Govs proposals have been. Said net short is=20 34%. Sellers "have us over a barrel" for those sales. Attorney General=20 continues investigation of the sellers. These

are all for going forward costs -- this doesn't address the "\$ for the hot dog, which is being taken care of in Sacramento." She said these proposals ensure reliability and allow Treasurer to issue bonds. Continues to castigate FERC throughout the call. Wants new appointments to FERC from the states -- "our cries have fallen on deaf ears"

Lynch announced the following votes for tomorrow:

1. Wood's proposal -- modified -- Order the IOUs to pay the QFs beginning 4/1 on a going forward basis only. Modified existing formula in Section 39 (Legislative change to this section did not pass yet). Shifts the gas index from Topoc (where Wood says the prices are being manipulated) to Malin, where prices have been more stable.
2. Sets the CA Procurement Adjustment -- Orders the IOUs to pay the DWR for purchases. At one point she said that the order would be for all power purchased by the state beginning Jan 19; at another point she said that the payments are for going forward costs. "It's time to pay the power bills for California." CPA calculated based on the "residual" method, rather than the proportional method. Payments to DWR made on the proportional method, however.
3. Lynch alternate setting a 3 cents/kWh increase in accordance with AB 1X (The ALJ decision said no rate increase.) Makes the 1 cent temp charge permanent (didn't say if its additive with the 3 cents) Believe this covers ALL needs on a going forward basis. According to ABX 1, small customers with 130% over baseline get no increase, small customers with 200% increase get a 9 % increase -- the rest get socked, I guess. Adopted TURN's accounting proposal. Will look at rate design in a future proceeding. Take IOUs 30-45 days to charge the rates; will conduct a rate design proceeding during that time period (see # 5).
4. Orders an investigation into the Utility holding company structure to see if it is best for the public utilities.

A new proceeding was also identified.

5. Lynch is issuing an Assigned Commissioner ruling proposing a new rate structure. (I presume to have rates that increase greatly with more use) Need information from DWR to calculate rates and DWR has not yet provided it. Described the need to have a record on this. As mentioned in #3 above -- would expect this to be completed with a decision in 30- 45 days.

In one of the above orders, Lynch said that she orders the utilities to go after sellers using all legal means for the unjust and unreasonable prices.

I'm still listening.

SACRAMENTO -- California's energy meltdown involves a far more diverse group of wholesale electricity merchants than suggested by Gov. Gray Davis, who has aggressively blamed a handful of Texas companies, state records show. During the first three months of this year--one of the worst stretches of power shortages during the crisis--an assortment of public and private entities charged the state prices averaging well above some of those paid to Texas firms, according to documents released to The Times on Monday by the Department of Water Resources, which now buys power for California. Among those setting and collecting some of the highest average prices per megawatt-hour were a Canadian public utility, a subsidiary of San Diego Gas & Electric's parent company, and the Los Angeles Department of Water and Power, the report shows. Their average prices ranged from \$498 a megawatt-hour charged by Powerex, the trading arm of British Columbia's BC Hydro, to \$292 an hour by the DWP. In fact, some of the biggest private power companies singled out for criticism by Davis and other state officials--Dynegy Inc., Duke Energy and Mirant--charged less than the average prices the state paid for the period. Those companies' average prices ranged from \$146 to \$240 per megawatt-hour, according to an analysis of the documents. The figures cover the various types of spot and longer-term power purchased by the state during three months that included rolling blackouts and more than a month of razor-thin reserves, leading to continuous power emergencies. Davis spokesman Steve Maviglio said the governor has directed his sharpest barbs at private out-of-state generators because, in general, they have reaped the highest profits over the longest period. "You have to look at the whole picture," Maviglio said. "The governor was expressing his displeasure with the arrogance of the generators who wear cowboy hats," he said. "Their profits were 100% to 400% above last year. . . . Just because there are other entities who are charging us more [per megawatt-hour] doesn't change the fact that we are getting ripped off by companies from Houston, Tulsa, Atlanta or Charlotte." The report by the Department of Water Resources was provided to The Times on the same day the state released 1,700 pages of documents on California's electricity purchases on the volatile spot market for the year's first quarter. The records detail how the state spent nearly \$8 billion buying power in the first five months of the year, and underscore the complexity of the state's energy problem. They also show that patterns of high prices are not limited to a few generators. Oscar Hidalgo, a spokesman for the water resources agency, said that the reports together show that prices were extremely volatile early in the year. "All the prices were high," he said, noting the downward trend in costs since his agency began buying power in mid-January. The average price per megawatt-hour for all state purchases went from \$316 in January to \$243 in May. Spot prices fell from an average of \$321 per hour to \$271, the reports show. In the first quarter of the year, some public entities' prices far exceeded those of the biggest private companies. For example, Houston-based Enron, one of the nation's biggest power traders, charged an average of \$181 per megawatt-hour. And Atlanta-based Mirant, which sold the most to the state, a total of \$706 million, charged an average of \$225 per megawatt-hour. By contrast, a Calgary, Canada, firm, TransAlta Energy, averaged \$335 a megawatt-hour, and the Sacramento Municipal Utility District had average charges of \$330 per megawatt-hour. A spokesman for Enron, Mark Palmer, said recently that the "vilification of Enron was based on politics, not facts."

Spokesmen for BC Hydro could not be reached late Monday to comment on its huge sales to the state. In the past, the utility has defended its pricing practices, saying it has offered last-minute hydroelectric power that helped keep California's lights on. A spokeswoman for Semptra, the parent company of San Diego Gas & Electric, said late Monday the company was unable to comment because it had yet to see the figures released by the state. Officials at DWP, who could not be reached Monday evening, have defended their pricing, saying the costs of producing the power needed by the state were extremely high. More Power Bought Than Projected Hidalgo, of the Department of Water Resources, said his agency's efforts, coupled with conservation by business and consumers and falling natural gas prices, have begun to tame the state's market. Still, the state had to purchase \$321 million in power in April and May, about 10% more than Davis' analysts had projected. Hidalgo said that was because of hot weather in May and other supply problems in April. He said reports will show that power purchases fell short of state projections in June and early July. The reports also will show that prices paid by the state were down in June and July, partly because spot prices have fallen sharply, often to well under \$100 a megawatt-hour. A summary Department of Water Resources report released Monday credited Davis' program of nurturing new power generation and establishing long-term power contracts with "moving the California electric energy industry closer to normalcy."

Enron Mandates SSSB For Credit-Linked Note Issue

05/02/2001 Capital Markets Report (Copyright (c) 2001, Dow Jones & Company, Inc.)

LONDON -(Dow Jones)- U.S. energy group Enron has mandated Schroder Salomon Smith Barney as bookrunner for a multi-currency credit-linked notes trust transaction. The transaction will consist of tranches in intermediate maturities. A launch will follow a European roadshow, subject to market conditions. UBS Warburg will be joint lead manager.

UK: Enron plans multi-currency credit-linked bonds.

05/02/2001 Reuters English News Service (C) Reuters Limited 2001. LONDON, May 2 (Reuters) - Enron Credit Linked Notes Trust has mandated Salomon Smith Barney and UBS Warburg to lead manage a multi-currency transaction, the banks said on Wednesday. The issue will consist of tranches in intermediate maturities and will be launched following investor presentations in Europe.

Enron to Sell Credit-Linked Notes in Several Currencies 2001-05-02 08:34 (New York)

Enron to Sell Credit-Linked Notes in Several Currencies

London, May 2 (Bloomberg) -- Enron Corp. plans to raise money by selling credit-linked notes in several currencies, according to Salomon Smith Barney, which will manage the sale with UBS Warburg. The sale will follow presentations to investors in Europe and will consist of issues of intermediate maturities, Salomon said in a faxed statement. Investors usually regard notes maturing in five to seven years to be intermediate maturities. Salomon declined to provide details on the size or timing of the sale. Credit-linked notes are typically backed by a pool of assets owned by the issuer. The payments on the notes are often linked to the creditworthiness of those assets. Houston-based Enron has branched out from its gas pipeline business to include trading in financial contracts such as gas and electricity futures and derivatives on corporate bankruptcies. Enron owns \$65 billion in assets, including 32,000 miles of pipeline that span 21 states and transport 15 percent of all of the natural gas consumed in the U.S. Other assets include an 18,000-mile fiber-optic network in the U.S. and 51 power plants and other energy projects in 15 countries. Last week Enron agreed to cancel its \$3.1 billion sale of Portland General Electric Co. to Sierra Pacific Resources, after both companies decided the California energy crisis had made it too hard to win approval. The state of California has banned power plant sales by utilities until 2006 amid an electricity shortage. Southern California Edison and PG&E Corp.'s Pacific Gas & Electric Co., California's two largest utilities, have run up more than \$14 billion in debt from buying power at soaring prices. The two utilities are nearly insolvent. Enron has \$15.8 billion in bonds outstanding, of which \$2.7 billion mature this year, according to Bloomberg figures. Enron is rated ``BBB+'' by Standard & Poor's and ``Baa1'' by Moody's Investors Service.

Saudi Gas Proj Consortia Seen Selected 2H May -Sources By Dyala Sabbagh Of DOW JONES NEWSWIRES

05/02/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.) DUBAI -(Dow Jones)- Consortium leaders and members for the three core gas ventures on offer in Saudi Arabia are expected to be announced in the second half of May, sources familiar with the negotiating process have told Dow Jones Newswires. As previously reported, the Saudi Arabian committee negotiating with international oil companies, or IOCs, on the so called Gas Initiative, recently submitted its proposals for consortium leaders to the kingdom's Supreme Petroleum Council for approval. Saudi Arabia invited international oil companies in October 1998 to participate in proposals for downstream gas projects and upstream gas enhancement. A series of meetings between the negotiating committee and shortlisted IOC's have taken place in the past year. Royal Dutch/Shell Group (RD), BP Amoco PLC (BP), Exxon Mobil (XOM), Chevron (CHV), TotalFinaElf (TOT) and ENI SpA (E) have been shortlisted for core venture number one, the \$15 billion South Ghawar Area Development. Exxon, Shell and BP have been dubbed as the frontrunners with ExxonMobil seen as the

strongest contender. For core venture two, the Red Sea Development, Enron Corp. (ENE) and Occidental Petroleum Corp. (OXY) are bidding jointly and Exxon Mobil, TotalfinaElf, Marathon Oil Canada Inc. (T.M), Shell and Conoco Inc. (COCA) have also been listed. Among these, TotalfinaElf and Shell are seen as strong possibilities. For core venture three, the Shaybah area, TotalFinaElf, Conoco, Phillips Petroleum (P), Enron & Occidental, Exxon Mobil, Shell and Marathon Oil have been listed. Conoco and TotalfinaElf are said to be frontrunners here. Role Of Consortium Leaders Still Unclear Sources have said some companies currently under consideration will be struck off the list in the final selection. Consortium leaders are expected to be responsible for directing further detailed negotiations on the projects at hand, such as pricing and finance. They are also likely to get the largest stake in any project as well as operatorship. But the IOCs are still in the dark as to what their exact roles will be in the event they are selected, industry sources said. Still, despite lacking a comprehensive framework, some deals are expected to be initialed this year. And once sealed, IOCs are also expected to start talking to local companies about contracting out participation on parts of the projects. The three ventures have a combined value of about \$25 billion with each one having on average eight individual components. How these components will be dealt with or allocated is also as yet undetermined. Saudi Arabia has about 2.5 billion cubic feet of gas a day in its system currently and will have about 4 bcf/day by 2003. By 2025, it will need an estimated 14 bcf/day to meet its own consumption requirements and for possible export. By Dyala Sabbagh, Dow Jones Newswires; 9714 3314260; dyala.sabbagh@dowjones.com

GEORGIA -- New Edge brings broadband services to Augusta

REGIONAL Verizon Wireless expands calling plan in D.C. area

AFFILIATE OHIO Wireless companies violated separate affiliate requirements

The Public Utilities Commission has determined that Ameritech Mobile and AirTouch Cellular violated state law by failing to maintain separate cellular wholesale and retail operations. The PUC's order addresses a complaint filed in 1993 by Westside Cellular, Inc., dba Cellnet.

The PUC pointed to the testimony of Alan Ferber, general manager of Ameritech Mobile's wholesale operations. He acknowledged that Ameritech Mobile's operations aren't structured as required by the PUC for sales and marketing. From that statement, the PUC concluded that Ameritech Mobile wasn't separating its wholesale and retail operations "in the normal course of business."

The PUC also found that Ameritech Mobile's practice of establishing wholesale rates for nonaffiliated carriers by first consulting with its retail employees about the potential impact on its retail business in violation of the commission's orders in dockets 84-944 and 89-563.

Between 1995 and 1998, the commission said, Ameritech Mobile violated the PUC's requirement for nondiscriminatory treatment of nonaffiliated wholesale customers. The company either didn't substantiate the more favorable treatment afforded to its retail affiliate or didn't substantiate that its retail affiliate paid anything at all to Ameritech Mobile's wholesale cellular service, the commission concluded.

The commission found that AirTouch Cellular violated a prohibition on its retail affiliate having any involvement in the operations of its wholesale affiliate between 1991 and 1998. During that period, AirTouch Cellular's nonaffiliated wholesale rate was at least determined partially by concerns related to the affiliated retail arm, the commission said.

Based on AirTouch Cellular's own admission, the PUC found that the company violated the provisions of the commission's orders in docket nos. 84-944 and 89-563. The commission found that AirTouch Cellular failed to capture all billable minutes that should have been charged to AirTouch Cellular's retail arm, while charging Cellnet for all of its minutes.

The PUC found that imposing statutory penalties against the companies isn't warranted in this case because it's a "case of first impression."

The commission's order is available at <http://www.puc.state.oh.us/docket/ORDERS/2001/0114/93-1758.pdf>. (Docket no. 93-1758-RC-CSS)

SECTION 251/252 MINNESOTA Qwest to refile controversial SGAT

Qwest Corp. asked the Public Utilities Commission to pull off the agenda for yesterday's commission meeting its proposed statement of generally available terms and conditions (SGAT), the PUC staff told TR. The company filed its original SGAT in November 2000, but the proposal generated a lot of discussion because its prices differed from those set by the PUC. Staff said it expects Qwest to refile the SGAT "relatively soon." (Docket no. P-421/M-00-1590)

WIRELESS ARIZONA Ban on drivers' use of handheld cellphones dies in committee

A bill that would have banned the use of handheld wireless phones, personal computers, or any other electronic device while driving died in the Senate Commerce Committee, the legislative staff has told TR. (1/9/01 a.m.) The staff said SB 1005, which was sponsored by Sen. Tom Smith (R., District 26), received "tremendous" opposition from the wireless phone industry.

Last year Smith introduced a similar bill that also died in the Senate. That bill, unlike SB 1005, didn't include an exception for hands-free devices. (1/24/00 p.m.)

Violators who weren't involved in a car accident would have been subject to a \$50 civil penalty. Violators involved in an accident would have been subject to a \$100 civil penalty. The officer at the scene of an accident would have had to report on the accident form whether an electronic device was in use at the time of the accident.

The bill would have required wireless phone packaging to include the warning: "The use of a cellular telephone while operating a motor vehicle has been known to be a cause of traffic accidents, and the use of a handheld cellular telephone while operating a motor vehicle is prohibited by law in the state of Arizona."

FUTURE OF REGULATION MISSISSIPPI Sen. Carlton aims to pass UETA

Sen. Neely C. Carlton (D., District 22) has introduced SB 2678 to enact the Uniform Electronic Transactions Act (UETA). The bill aims to facilitate e-commerce by giving electronic records and signatures the same legal effect as their pen and paper counterparts.

In addition to enacting UETA, SB 2678 would repeal the sections of Mississippi Code that make up the Digital Signature Act of 1997.

SB 2678 has been referred to the Senate Committee on Fees, Salaries, and Administration.

MERGERS MONTANA PSC would gain authority over utility mergers under bill

A bill to grant the Public Service Commission authority over utility mergers has been referred to the Senate Energy and Telecommunications Committee. Under SB 276, the commission would have the authority to allocate some or all of the gain or profit of an acquisition to the utility's ratepayers.

The bill would prohibit the commission from approving an acquisition or transfer of a public utility unless, after notice and hearing, it finds the (1) acquisition to be in the public interest, (2) the acquisition won't diminish the utility's ability to provide adequate and reliable service, (3) the costs of and rates for supply service wouldn't be increased, and (4) the applicant has the financial ability to operate and maintain the utility.

This bill would affect Montana Power Co. plan to sell its electric distribution assets, the PSC staff explained to TR. Currently the commission only has implied authority over utility acquisitions or transfers. This bill would clarify that authority.

Sen. Ken Toole (D., District 27) is the measure's sponsor.

CUSTOMER-AFFECTING OREGON Lawmakers take aim at 'slamming'

A bill introduced in the House would prohibit "slamming," or the unauthorized switch of a customer's telecom service provider. HB 2214 would make it illegal to combine an offer to provide local or long distance telecom service with an offer to participate in a sweepstakes or promotion involving a prize.

The bill, which was requested by Attorney General Hardy Myers (D.), would prohibit using any device, scheme, or artifice to defraud with the intent to change a subscriber's telecom provider.

HB 2214 would authorize the AG to impose a maximum civil penalty of \$25,000 for each violation of the Act. The bill also would allow any person who suffered a loss of money or property as a result of slamming to recover actual damages or \$200, whichever is greater.

HB 2214 awaits consideration in the House Smart Growth and Commerce Committee.

CUSTOMER-AFFECTING NEW JERSEY Bill would establish no-call list

Assemblyman Kevin J. O'Toole (R., District 21) has introduced AB 3065 to require telemarketers to identify themselves and their businesses or organizations before aski

The key to the energy proposal President Bush unveils today can be found on a wall in the three-room suite that houses his National Energy Policy Development Group, next door to the White House in the Eisenhower Executive Office Building. On the wall hangs a huge erasable board that serves as a giant checklist to guide the preparation of the administration's eight-chapter energy policy, which Bush formally unveils in Minnesota today. For each chapter, there's a

check mark for two rough drafts, a peer review, a final draft, two more rounds of recommendations on the drafts, then graphics and photos. Toward the end of the checklist is an all-important box to check: "Concurrence of the OVP." The OVP -- Office of the Vice President -- has driven every aspect of the energy report. No proposed recommendation has survived without the consent of one man: Vice President Cheney, the administration's indispensable man -- and chair of the energy task force. The release of the energy report shines a new spotlight on Cheney, a quiet conservative from Wyoming who has been given credit for running the show without annoying or upstaging his boss. The handling of the energy task force so far reflects Cheney's personality near perfectly: It is a closely held process with a high regard for the concerns of industry. This close involvement of Cheney is partially a strength, because the effort has been efficient and well-managed. But Cheney's strong role is also potentially the report's weakness. He is about to undergo a blast of unwanted scrutiny as critics seize on his finances and oil industry ties in an effort to discredit the policy. Democrats and environmental groups are charging that his judgment on energy matters is suspect because of his chairmanship until August of Halliburton Co., a Dallas-based energy services firm that is expected to benefit from several parts of President Bush's policy. Cheney, 60, made \$36 million last year, most it in compensation from Halliburton, including salary and his exercise of stock options and sale of restricted stock. "He is seeing the problem entirely from the side of the energy producing industry that made him a millionaire, not from a consumer struggling to make ends meet," said Philip E. Clapp, president of the National Environmental Trust. An official close to Cheney called such suggestions "an outrage," and said his expertise in the industry and knowledge of its technology were crucial to "trying to solve a problem of this magnitude." Although the plan has extensive recommendations about using technology to conserve energy and produce power more cleanly, the heart of the report is its conclusion that the United States needs hundreds more power plants, natural gas pipelines, oil wells and nuclear reactors. Several administration officials acknowledged that Cheney had handed ammunition to his critics by declaring in a speech in Toronto on April 30 that conservation "may be a sign of personal virtue," but is not a sound basis for a comprehensive energy policy. "Given his background, he should've been real careful," said Sen. Charles E. Schumer (D-N.Y.), who has offered an alternative energy plan that he says focuses equally on supply and demand. "I think they've had some real stumbles." Sen. Craig Thomas (R), who succeeded Cheney as Wyoming's lone House member in 1989, said he does not expect such criticism to rattle the circumspect Cheney. "He'll just say, 'All right. That's the way it is, folks. I'm doing my job. Here's my plan,'" Thomas said. As always when questions are asked about Cheney's influence, White House officials argue vigorously that the energy plan is Bush's plan. An official close to Bush said Cheney and other task force members had updated the president often since beginning their work on Jan. 29. "At several critical decision points, the group has come to the president to ask him to make judgments and decisions," the official said. Cheney's directions are carried out by the task force's executive director, Andrew Lundquist, his deputy, Karen Knudsen, and four other staff members. Cheney also chairs the task force itself, which includes the secretaries of energy, interior, treasury, agriculture, commerce and transportation and the head of the Environmental Protection Agency. Aides say Cheney met with only half a dozen of the interest groups seeking input into the policy, including Enron Corp., the Houston energy conglomerate that is a large and longtime Bush contributor, and the Edison Electric Institute, an energy trade group. Vance Meyer, a spokesman for Enron, said the firm's chairman, Kenneth Lay, and another executive had a 30-minute meeting with Cheney. Edison assembled 15 or 20 chief executives to meet with Cheney. But Lundquist and Knudsen, representing Cheney, met with half of the 400 or so groups -- industry, environmental, regulatory and academic -- that requested access. Exactly which groups the Cheney advisers met with is being kept secret by the White House. The task force's stealthy operation reflects Cheney's distaste for publicity. Following news reports about the private nature of the energy deliberations, Democrats on the House Energy and Commerce Committee and Government Reform Committee requested information about the groups the task force met with. Cheney's counsel, David S. Addington, rebuffed the members of Congress, arguing that there was no legal requirement to comply with the request. In a seven-page response to the request, Lundquist wrote that the meetings "were simply forums to collect individual views rather than to bring a collective judgment to bear." White House officials have declined to disclose the list of meetings or attendees. Aides said representatives at the meetings included 118 energy industry or corporate groups, 40 renewable energy providers, 22 unions, 13 environmental groups, five academics, 63 governmental groups, six energy efficiency proponents and a consumer group. Environmentalists complain that the meetings reflected Cheney's predispositions. The vice president met with industry leaders, while dispatching aides to speak to environmentalists, several of which were grouped into one meeting. The meetings of 22 labor representatives, who gathered in groups, were publicized by the White House, but sessions with industry were not. Cheney, who declined to be interviewed for this article, told the Associated Press that he hasn't consulted with any officials from Halliburton and rejected the notion that the task force's work is compromised by his private meetings with industry officials who give money to the Republican

Party. "Just because somebody makes a campaign contribution doesn't mean that they should be denied the opportunity to express their views to government officials," he said. Cheney chaired nine meetings of the Cabinet-level task force, mostly in his ceremonial office. Each of the meetings, attended by t

I reviewed the Cal ISO filings below (in Sue's note) to determine general consistency with FERC orders on interconnection procedures. Potential issues are identified below and you all can decide if Enron should protest/intervene (the West Developers may want to review this too). Since I am not familiar with the Cal ISO procedures, I cannot determine whether protest is necessary (for example, PJM, NY, and NEPOOL have certain interconnection policies that would not be acceptable outside the pool, but that work ok for the pool). The TOs have also filed Amend. 39 interconnection procedures, but I have not looked at those to see if they mirror these. Maybe one of the paralegals could check that. In addition, one of you should review the filing letter and procedures to make sure that the statements made by Cal ISO are correct.

(Filing letter) The Cal ISO states that these procedures are filed in response to FERC's orders and that the Cal ISO and Market Participants are examining policies that will ensure that the ISO Controlled Grid is expanded to support competitive markets. It also states that it would have liked to propose complementary changes to its long-term planning and expansion process, but other priorities have prevented it from doing so. Discusses the two previously methodologies regarding interconnection procedures -- "No Grandfathering of Transmission Rights" and "Advance Congestion Cost Mitigation" (which was apparently rejected last year. (Filing Letter at 10) -- Cal ISO does not propose a method of sharing upgrade costs, but states that the procedures do not preclude such a provision. This is one we have used in other Inter.

Agreements: If required by law or if the Parties mutually agree to allow one or more third parties to use the Interconnection Facilities or any part thereof (whether by transfer of the Interconnection Facilities to an RTO or otherwise) and such use decreases the capacity of the Interconnection Facilities available to TO or the Facility or otherwise causes any detriment to TO or the Facility or benefits any party (including TO) other than Generator, or if TO is compensated for the costs of the Interconnection Facilities (in whole or in part) for any reason, Generator will be entitled to compensation from TO based upon the pro rata use of the Interconnection Facilities by TO, all third party users, and Generator, for the greater of (i) whatever costs Generator incurred in connection with the Interconnection Facilities, plus interest at the Interest Rate from the date of Generator's payment of the costs in connection with the Interconnection Facilities and (ii) the value that TO receives for the Interconnection Facilities. Notwithstanding the foregoing sentence, the Parties may use any other mutually agreed upon methodology to determine such compensation. 3.3 If one or more third parties are to use the Interconnection Facilities in accordance with Section ____, Generator's obligation to reimburse TO for the operation and maintenance costs incurred by TO in connection with the Interconnection Facilities shall be based on the pro rata use of the Interconnection Facilities by TO, all third parties users, and Generator, or on some other mutually agreed upon methodology; provided, however, that, under no circumstances shall Generator's share of TO's operation and maintenance costs be greater than its pro rata use of the Interconnection Facilities. (Procedures) The timelines for submitting applications and responding to system impact studies (SIS) and facilities study (FS) are fine, per previous FERC orders (in fact, Cal ISO asks for 60 days to complete the Facilities Study -- PGE just filed requesting 90 days). 5.7.3.1.1.(c) I would add "on a non-discriminatory basis" after "unless otherwise agreed by the ISO, and the Interconnecting PTO" 5.7.4.2 allows the generator to perform its own SIS and FS, subject to review by the Cal ISO and TO (this is a good provision that has not been adopted by many utilities). 5.7.4.2.1 -- The SIS will identify adverse impact on "Encumbrances" (undefined). Someone needs to check this provision since I am not familiar with this Cal ISO rule. 5.7.4.2.2 -- A New Facility Operator is entitled to amend its Completed Application once without losing its queue spot. Other utilities allow amendments as long as the change is not "material", which has only been defined by the utility and approved by FERC in several cases. This Cal ISO proposed provision could be problematic to other generators in the queue if it is not limited to "material", (unless Enron is making the

one time change!) In any event, check with West Developers on this provision. 5.7.4.3 -- This provision requiring a New Facility Operator to execute (or have filed unsigned at FERC) an Interconnection Agreement within 10 days (if no upgrades) or within 30 days (if upgrades) can be a problem. Cal ISO does not file a pro forma Interconnection Agreement in these procedures. If Cal ISO tenders a poor interconnection agreement draft (which happens all the time with other utilities), then there is no way that Enron would typically want to execute it within those time limits. For example, Duke did not file an pro forma interconnection agreement, but does allow 90 days for negotiation. In my experience, the negotiation of the interconnection agreement can take a long time. It would be advisable for the Cal ISO to file a pro forma at FERC, then you can protest, if necessary, and at least there will be a fairly decent interconnection agreement to use. 5.7.4.4.1(a) -- The Queuing Milestones appear to be fairly rigid and quick: require the New Facility Operator to comply with the ISO tariff and the TO tariff and within 6 months of its Completed Application Date, satisfy all applicable Data Adequacy Requirements of state and local siting and other regulatory authorities. I don't know that 6 months is achievable. FERC has approved milestones in other cases, but most contain language requiring reasonable movement toward the milestones. For example in Duke ER01-794 Section 41.5: (Transmission Provider may reasonably extend any such milestone dates in the event of delays not caused by the Generation Interconnection Customer, such as unforeseen regulatory or construction delays that could not be remedied by Gen. Int. Customer through the exercise of due diligence, and may also reasonably extend milestone dates to which the Gen. Int. Customer has not agreed and which the Gen. Int. Customer has challenged at the Commission pending a Commission determination as to the reasonableness of such dates.) In addition, the Cal ISO only allows one extension of 30 days -- probably not enough. 5.7.4.4.1 (b) -- requires a New Facility License within 15 months after satisfying the Data Adequacy Requirements. 5.7.5 -- does not provide for transmission credits for "network upgrades" (upgrades other than the costs of interconnection). The Cal ISO recognized this exclusion in its filing letter at 11, but thinks that such issues are appropriately addressed as part of the process to revise the ISO's long-term grid planning process. Enron has argued and won at FERC for transmission credits in other utility cases, but I don't know what is appropriate under Cal ISO system, so please check this carefully. ----- Forwarded by Christi L Nicolay/HOU/ECT on 04/11/2001 08:02 AM -----

Cal-ISO/FERC -2: Companies Allegedly Gamed Power Market Updated: Friday, June 8, 2001 05:29 PM ET Email this article to a friend!

Printer-friendly version

LOS ANGELES (Dow Jones)--The California Independent System Operator has filed a motion with federal energy regulators asking that four major power suppliers in California be stripped of their ability to charge market rates because they have allegedly gamed the wholesale electricity market. Duke Energy (DUK, news, msgs), Dynegy Inc. (DYN, news, msgs), Mirant Corp. (MIR, news, msgs) and Reliant Energy Inc. (REI, news, msgs) have been identified by the ISO as exercising market power - the ability to influence electricity prices - in California's wholesale power market.

The ISO, which manages the state's high-voltage transmission system, recently made a similar filing against AES Corp. (AES, news, msgs) and Williams Cos. (WMB, news, msgs), claiming those companies have profited excessively in California by exercising market power. The ISO wants the Federal Energy Regulatory Commission to revoke generators' authority to charge market-based rates for their power supply.

Tom Williams, spokesman for Duke Energy, said the company had just received the FERC filing and is reviewing the allegations. "We've obviously just got the filing and we're reviewing it and we are going to respond with our own FERC filing. But we're also gratified that market forces are at work in California and prices have come down," Williams said.

Richard Wheatley, a spokesman for Reliant, said the ISO's allegations are "nothing new." "It's similar in nature to issues and allegations that have been raised against other generators," Wheatley said. "The ISO is incorrect in asking for emergency relief. The situation in California remains to be an imbalance between supply and demand. The blame game prohibits lasting solutions from being reached and the business climate in California will be affected by finger pointing."

Steve Maviglio, press secretary to Gov. Gray Davis, said the governor "strongly supports any attempt to bring prices down for Californians and to break the grip a handful of generators have on the electricity market."

The ISO has asked FERC to terminate by June 28 Dynegy's ability to charge market prices for power from its Southern California power plants and to schedule a hearing to determine rates based on the energy company's production costs. The grid operator also wants Dynegy to refund billions of dollars, retroactive to May 1, "of the difference between cost-based rates...and the market revenues actually received." Similar requests were made with FERC against Duke, Reliant and Mirant.

"The ISO has submitted compelling evidence that the exercise of market power is more pervasive than the commission has acknowledged...", according to the filing. In the filing, generators have also been accused of "megawatt-laundering," in which suppliers sell power out-of-state that is resold to California at a higher price.

California consumers have spent \$7 billion for wholesale electricity in 1999, \$27 billion in 2000 and could pay as much as \$50 billion this year.

Charles Robinson, the ISO's chief counsel, said he is "optimistic" the state will prevail "in one forum or another and will be able to get the relief we're seeking." He said FERC should implement an "effective" market mitigation plan that will put the brakes on skyrocketing wholesale power prices. FERC set up a market mitigation plan, which went into effect June 1, to

stabilize wholesale power prices when operating reserves dip below 7%. Robinson said that plan wasn't good enough.

Wholesale power prices were at a seven-month low Thursday, due in part to the new FERC plan, cooler temperatures, low natural-gas prices, and conservation measures, energy officials said.

Every three years, FERC reviews generators' ability to charge market rates for electricity. Generators were first allowed to charge market rates three years ago, but it is unclear whether FERC has ever stripped suppliers from their right to charge market prices.

Kinder Morgan and Calpine Announce Plans to Develop New Natural Gas Pipeline To California

Sonoran Accepts Binding Bid for 400,000 Dekatherms/day

HOUSTON, May 2 /PRNewswire/ -- Kinder Morgan Energy Partners, L.P. (NYSE: KMP - news) and national independent power company Calpine Corporation (NYSE: CPN - news) today announced plans to jointly develop the Sonoran Pipeline, subject to a successful open season and all other approvals. As proposed, the Sonoran Pipeline will be a 1,160-mile, high-pressure interstate natural gas pipeline from the San Juan Basin in northern New Mexico to markets in California. The project will provide much needed natural gas transportation capacity to California to serve rapidly growing electric generation demand. In addition, producers will be able to move more natural gas from the San Juan Basin through the Sonoran Pipeline. This will benefit California consumers, as access to these abundant natural gas supplies has been constrained due to a lack of pipeline infrastructure.

The interstate pipeline will be evaluated and developed in two phases, which will be subject to the jurisdiction of the Federal Energy Regulatory Commission (FERC). The first phase will run from the San Juan Basin to the California border, with the second phase extending from the California border to the San Francisco Bay area. The first phase of the pipeline is expected to be completed in the summer of 2003.

"This exciting project will enable us to grow our core business and extend our natural gas transportation service into new markets," said Richard D. Kinder, chairman and CEO of KMP. "We don't currently transport natural gas into California, but we do own and operate the largest independent products pipeline on the West Coast, headquartered in Orange, Calif. We will utilize our expertise as a major natural gas pipeline operator and transporter to build the Sonoran Pipeline, and we look

forward to expanding our relationship with Calpine, one of the leading power plant developers in America."

According to Pete Cartwright, chairman, president and CEO of Calpine, the project will serve several important purposes for Calpine. "The Sonoran Pipeline will help ensure a diverse supply of natural gas in California. With our existing plants in California, and our plans to bring on line an additional 9,000 megawatts of capacity, it is essential that we have a dependable, competitively priced source of natural gas. This important new pipeline will allow us to better control our costs in the California market to help lower energy prices and build needed generation. This project is a great example of two energy companies joining forces and utilizing their complementary strengths to provide real solutions to California's energy crisis."

The project is expected to be developed in two phases.

Phase One:

Phase One will consist of approximately 460 miles of 36-inch, high- pressure natural gas interstate pipeline originating from interconnects with TransColorado Gas Transmission Company, Transwestern Pipeline Company and various points at the Blanco Hub in San Juan County, N.M. near the Colorado- New Mexico state line; thus providing access to the major producing basins in the western U.S. The pipeline will continue westward with delivery points on the California/Arizona border near Needles with a 20-mile, 24-inch lateral to Topock. The pipeline will initially transport up to 750,000 dekatherms (Dth) of natural gas per day and can be economically expanded with compression to transport up to 1.0 million Dth per day. A binding "open season" will be held this month and potential shippers will be given the opportunity to commit to firm capacity on the new line. Given sufficient shipper support in the open season, Sonoran Pipeline, LLC (Sonoran) proposes an in-service date in the summer of 2003. The estimated cost of phase one of the project is approximately \$624 million. The open season will seek at a minimum, 20-year term commitments at a fixed transport rate of \$0.39 per Dth for firm transportation. Sonoran proposes to charge shippers actual fuel on Phase One via a fuel tracker. Fuel is estimated at 1.3 percent. Sonoran has already received an acceptable binding bid from Calpine Energy Services, L.P. for 400,000 Dth per day.

Phase Two:

Phase Two will be an extension of Phase One and consist of approximately 590 miles of 36-inch and 42-inch high-pressure interstate natural gas pipeline continuing from Needles on the California border to points within California, terminating near Antioch in Contra Costa County. Depending on shipper interest, Phase Two will transport from 1.0 to 1.5 million Dth of natural gas per day. A non-binding "open season" will be held on Phase Two simultaneous with the Phase One open season, and potential shippers will be given the opportunity to express their interest in obtaining firm capacity to California delivery points. Sonoran has already received a non-binding bid from Calpine Energy Services, L.P. for 500,000 Dth per day for Phase Two. The estimated cost of Phase Two is approximately \$1.1 billion.

The pipeline could connect with several gas pipelines, utilities and suppliers, such as Kern River, Mojave, Elk Hills, Pacific Gas and Electric Company, Southern California Gas and numerous gas-fired power plants, including Calpine's, along its route. Additionally, Sonoran would consider other potential connections in accordance with shipper requests.

After finalizing precedent agreements, in which shippers make binding contractual commitments to capacity on the line, Sonoran Pipeline will file an application for approval of the project with the FERC. Sonoran expects to utilize existing right-of-way corridors as much as possible to minimize potential environmental impact. Shippers seeking additional information on the project should contact Vice President Scott Parker at (630) 691-3689 or Project Director Ron Hapbach at (630) 691-3622.

Based in San Jose, Calif., Calpine Corporation is dedicated to providing customers with reliable and competitively priced electricity. Calpine is focused on clean, efficient, natural gas-fired generation and is the world's largest producer of renewable geothermal energy. Calpine has launched the largest power development program in North America. To date, the company has approximately 31,200 megawatts of base load capacity and 6,800 megawatts of peaking capacity in operation, under construction, and in announced development in 28 states and Canada. The company was founded in 1984 and is publicly traded on the New York Stock Exchange under the symbol CPN. For more information about Calpine, visit its website at www.calpine.com.

Kinder Morgan Energy Partners, L. P. is the nation's largest pipeline master limited partnership with an enterprise value of mo

Does someone at the Chamber want to see this? -----Original Message----- From: Dan Douglass [mailto:douglass@earthlink.net] Sent: Thursday, September 27, 2001 1:16 AM To: ARM; Gary Ackerman; Vicki Sandler; Anderson, Robert; Max Bulk; John Yurkanin; Steve Huhman; Mike Day; Paul Fenn Subject: _____

Attached for your review and comment is a revised draft of the application for rehearing to be filed on Friday the 28th. There are two primary changes. The California Chamber of Commerce has been added to the application and an argument has been added that the Decision contradicts the most recent legislative intent expressed in ABX2 9 that direct access continue, at least for aggregation and community choice purposes.

Any and all comments will be very much appreciated. Also, I would appreciate it if Sue Mara would forward the document to her contact at the Chamber so that they can also review the draft. Thanks!

Dan

HEADLINE: Davis firm on demand for \$8.9 billion refund

BYLINE: Ed Mendel

DATELINE: SACRAMENTO

BODY:

??Gov. Gray Davis had a tough message for federal regulators yesterday after the failure of settlement talks in California's bid to get an \$8.9 billion refund from electricity suppliers: "See you in court."

??The governor said California will seek a full \$8.9 billion refund for electricity overcharges, even if federal regulators award the maximum refund of \$5.4 billion allowed under their guidelines.

??"Our message is just order what you are going to order," Davis said of the Federal Energy Regulatory Commission. "We believe you should order \$8.9 billion. But you order what you think is fair. We will take what you order, then we will see you in court."

??Davis, joined by his negotiating team, made the remarks at a news conference a day after two weeks of closed-door talks with suppliers in Washington failed to reach an agreement.

??An administrative law judge made a recommendation to the regulatory commission that Davis' top negotiator, Michael Kahn, chairman of the California Independent System Operator, expects to result in a refund of more than \$1 billion.

??Davis said that a revealing decision will be made by the commission, which he hopes has embarked on a "new path" with the appointment by President Bush of two new members, Pat Wood of Texas and Nora Brownell of Pennsylvania.

??"Are they on the side of consumers, as the federal power act envisions them being," Davis asked, "or are they just there to do the industry's bidding, as they have so often in the past?"

??Kahn said rules adopted by FERC cut off the refund period at last October, trimming \$3 billion from the \$8.9 billion overcharge claimed by California dating to May 2000.

??He said FERC has no jurisdiction over municipal utilities, such as the Los Angeles Department of Water and Power, that sold power to the state. The municipal districts overcharged the state by about \$600 million, according to Kahn.

??As a result, he said, the maximum refund that FERC could order for California is about \$5.4 billion.

??"We made it clear to everyone that if we did not settle for \$8.9 billion, we would seek redress in court for the remainder of the money above \$5.4 billion," Kahn said.

??Calpine of San Jose and several other generators have expressed interest in the state's offer to negotiate one-on-one with the state while the federal regulators consider their decision, Kahn said.

HEADLINE: THE NATION; ; Referee Shift Seen in Refund Talks; Power: Participants say mediator was swayed by arguments that California estimates were based on faulty analysis.

BYLINE: RICARDO ALONSO-ZALDIVAR, TIMES STAFF WRITER

DATELINE: WASHINGTON

BODY:

??For the better part of 15 days of closed-door negotiations, the federal mediator in California's price-gouging case bandied about the possible dimensions of a settlement.

??Curtis L. Wagner Jr. went as high as \$4.5 billion, fully half of what California said it had been overcharged by out-of-state electricity suppliers.

??But Wagner got no takers for that figure. And in the end, when talks ended Monday with no deal between the state and the energy generators, he said publicly that \$1 billion was closer to the truth.

??Participants in the talks, speaking on condition that they would not be identified, said Wagner appeared to have been persuaded by the power suppliers that California's \$8.9-billion overcharge estimate was based on unreliable economic analysis.

??The state's analysis "is fatally flawed and cannot be used to . . . determine overcharges or refunds," William Tabors, an MIT economist retained by one of the companies, said in an affidavit that is part of a transcript released by the judge.

??"I certainly think Tabors was very persuasive," said an industry lawyer.

??By contrast, at another point, Wagner questioned whether California regulatory agencies were truly independent of Gov. Gray Davis, saying their representatives to the talks might as well put on "clown suits."

??Now the issue is about to

Tuesday, March 20, 2001 Small Power Firms' Cutbacks Contribute to Blackouts Outages: Alternative generators of solar, wind and biomass energy, and smaller gas-fired plants, haven't been paid since November.

By JULIE TAMAKI, Times Staff Writer

SACRAMENTO--The rolling blackouts that swept California on Monday were sparked in part by a crucial group of small energy producers that have cut supplies to the state's utilities because they are not being paid. California's power supply dropped Monday when alternative producers reduced output or went offline, cutting their usual deliveries to utilities in half. The lost electricity--more than seven times the cuts the companies were making just weeks ago--could have served 3 million homes. "I think we're just getting at a breaking point for many of these businesses," said Ed Tomeo, president of UAE Energy Operations Corp., a San Ramon company that operates a biomass plant and a small gas-fired plant. Tomeo said he expects to take his gas-fired plant offline today because he's run out of money to buy natural gas. Tomeo's firm is among the nearly 700 alternative energy producers that generate more than a fourth of the power consumed in California. Collectively, the group estimates it is owed \$1.5 billion by the state's two largest utilities. Big out-of-state power producers are getting paid because the state stepped in to buy electricity for the foundering utilities. But the California producers of solar, wind and biomass energy and, typically, smaller gas-fired generators, have received no payments since November from Southern California Edison and only partial payments from Pacific Gas & Electric Co. for December and January deliveries. Edison's debt to the producers is estimated at \$835 million as of March 1. PG&E's debt to the producers was \$651 million as of March 8. Jim Detmers, director of the California Independent System Operator, the agency that operates the state's power grid, said Monday's shortfall from the alternative producers was mostly caused by reduced output by about a dozen companies that have been cutting back electricity deliveries for the past two months. Detmers said he could not say whether the action was orchestrated, but it appeared to be a business decision. The cuts have grown from about 400 megawatts a day in early February to 3,000 megawatts over the last several days, according to state officials. Assemblyman Fred Keeley, a Boulder Creek Democrat, said he did not blame the small producers, who are formally referred to as "qualifying facilities," for shutting down. "Although I feel it is unfortunate for consumers, I don't blame [them] at all," Keeley said. "They're the only ones generating electricity and not getting paid." Keeley said he will revive efforts to pass legislation that would ensure that the alternative energy producers get paid while cutting their rates. A previous effort to slash the rates paid to the group, SB 47X by Keeley and Sen. Jim Battin (R-La Quinta), appears doomed. Gov. Gray Davis huddled for more than two hours with Democratic legislative leaders Monday, after keeping his distance for several weeks, and an agreement emerged to give small generators a choice: Take a higher price in exchange for short-term commitments to buy their power, or accept a lower price in exchange for a multiyear commitment to buy their power, sources who attended the meeting said. And the governor and Legislature would quickly devise a way to ensure that the producers start getting paid, at least for power they continue to produce. As long as the utilities are collecting money from their customers, Davis later told a labor group, "they're going to make the payments." The alternative producers' rates are pegged to the price of natural gas, which has skyrocketed in recent months. Driving down and stabilizing their prices is a critical factor in Davis' overall plan of buying power without imposing additional consumer

rate hikes. As a growing number of unpaid producers have dropped offline, state officials have been forced to purchase replacement supplies on the pricey spot market. A worst-case scenario materialized Monday, when a lack of electricity supplies forced state officials to order rolling blackouts. "A number of plants are out for maintenance, but it's very clear to me that there are a significant number that are off due to nonpayment," said Jan Smutny-Jones, executive director of the Independent Energy Producers. "My concern is that this is a prelude to what we'll see this summer." PG&E spokesman John Nelson described the alternative producers as victims of the state's energy meltdown. "Many of these generators are relatively small enterprises that cannot afford to continue operating on a daily basis." Nelson said his company's inability to fully pay the producers it has contracts with is caused by the rate freeze that bars PG&E from passing the true cost of electricity on to customers.

CABLE, BROADCAST, DBS, CE, PHONE PLAYERS DUEL OVER ITV POLICY

04/06/2001 Public Broadcasting Report (c) Copyright 2001 Warren Communications News, Inc. All Rights Reserved. Cable operators, programming networks, broadcasters, DBS providers, consumer electronics interests, Bell companies, ISPs, sports leagues, software developers, electronic program guide creators, personal video recording firms and consumer groups all battled over possible interactive TV (ITV) regulations at FCC. In comments filed in response to Commission's ITV inquiry, 28 entities debated whether federal govt. should regulate nascent interactive market in wake of AOL's takeover of Time Warner (TW) earlier this year. They also feuded over how govt. should define interactive services if it chose to regulate them. Pushing for "technologically neutral nondiscrimination safeguards" on such vertically integrated MSOs as AOL TW, group of major programmers urged FCC to mandate that all broadband distributors carrying any ITV signals forward signals for all programmers on their cable systems. Group, consisting of Disney, Univision, USA Networks and Viacom/CBS, also called on Commission to ban discriminatory routing or caching practices that would permit cable operators to send their affiliated programming at faster speeds than rival networks. Programmers contended that consumers shouldn't have to buy additional set-top box to receive unaffiliated ITV services. "It is far easier and requires far less intrusive government regulation to prevent monopoly power from distorting a relatively new market than it is to combat monopoly power already unleashed in a more developed market," group said. Public interest groups, ALTV, APTS, BellSouth, EarthLink, Gemstar-TV Guide International, MSTV, NAB, PBS (PBR March 23 p3) and SBC Communications all made similar arguments in favor of FCC's adopting ITV rules. For instance, joint filing by Media Access Project, Consumers Union, Consumer Federation of America and Center for Media Education called on Commission "to move expeditiously to begin a rulemaking establishing open access for providers of enhancements on all platforms, whether cable, DBS, DTV or new technologies yet unknown." They contended that agency's failure to act would allow cable MSOs to "become the gatekeepers of what has thus far been a gateless online community" and devastate

independent content providers. Without safeguards, they said, "ITV is likely to become a digital mirror image of the current closed multichannel cable model." Regulatory opponents countered that imposing ITV restrictions on cable systems would discourage them from starting new services, hampering development of emerging industry. Opponents, including AOL, TW, AT&T, Cablevision Systems, Charter, Canal Plus Technologies, Comcast, NCTA, NFL, OpenTV, Progress&Freedom Foundation and group of 4 programmers, declared it was too early to impose obligations on ITV providers. They said early regulation would be unworkable, creating administrative nightmare. Calling even "the threat of regulation" of ITV market "a major mistake," NCTA, for example, argued that "there is simply no basis for assuming a problem and proposing regulatory solutions." Saying FCC deliberately had refrained from imposing similar rules on cable high-speed data services, which are much further along in development, NCTA said Commission should refrain from regulating ITV services for same reason. It also warned that agency had very limited authority to regulate ITV services under Communications Act and easily could violate First Amendment rights of cable operators if it tried to do so. Calling inquiry "a peculiar and misguided proceeding," NCTA said First Amendment "would seem to preclude the very regulations suggested by the notice which would interfere with cable operators' constitutionally protected editorial judgments." Taking different tacks, DBS providers EchoStar and DirecTV said in separate filings that they wanted FCC to keep close tabs on cable operators so they wouldn't use their market power to keep interactive TV services from other multichannel operators, including satellite TV companies. DBS companies said they were concerned that cable companies might have unfair advantage in marketplace if both industries were regulated in same way by Commission. DirecTV said it was "premature" for agency to fully regulate ITV services, but it favored "continued monitoring by the FCC of the potential for anticompetitive behavior by cable operators." "Regulatory intervention at this nascent stage of ITV development makes little sense," DirecTV said: "There are as yet no dominant providers of ITV services, and the marketplace is still in the process of sorting out the technological standards" that it will follow during future delivery. EchoStar said there was "absolutely no basis for imposing" ITV carriage obligations on distributors lacking market power in any relevant market such as itself. Such action would penalize new entrants and favor incumbent cable operators, filing said. FCC/CAPITOL HILL In action that will significantly limit number of low-power FM (LPFM) stations to be licensed, FCC released decision April 2 saying LPFM stations must meet same 3rd adjacent channel interference protection requirement as full-power stations. Order implements requirements of rider on FCC appropriations bill signed into law in Dec. Commission expects to complete action on its LPFM licensing window in few months, it said in order, and then will direct Mass Media Bureau to open window to allow LPFM applicants that didn't meet 3rd channel requirements to try to come into compliance. FCC Chmn. Powell said action allowed Commission to begin granting construction permits for at least some LPFM stations, and agency had begun independent testing to determine impact of LPFM stations on full-power FM stations and translators. As part of order, FCC also implemented congressional mandate that denies LPFM license to former pirate radio operators. FCC Comr. Furchtgott-Roth issued separate statement saying he supported move to implement congressional mandate but believed FCC should have delayed LPFM licensing while it went through rulemaking process in order to comply with Administrative Procedure Act.

Sen. Cochran (R-Miss.) introduced S-604 to reauthorize PTV's Ready to Learn and Ready to Teach programs. Bill also would graduate Mathline, a component of programs providing professional development models for teachers of mathematics, to TeacherLine, more comprehensive professional development tool for K-12 teachers. Citing research by U. of Ala. and U. of Kan., Cochran said Ready to Learn was having positive impact on children and their parents. Studies showed that Ready to Learn families read books together more often and for longer periods than nonparticipants. Surprisingly, studies said Ready to Learn children watched 40% less TV and were more likely to choose educational programs when they did watch, he said. Advent of digital broadcasting, which allows broadcast of multiple video channels and data simultaneously, will make it possible for instructional materials to be distributed on full-time, continuous channels when teachers and students need it, Cochran said.

FCC regulatory fees would increase average of 7.75% for FY 2001, agency said in proposed rulemaking released March 29. Fees generally followed previous 2 years' practice of across-board increase to meet congressional mandate for FCC to recoup larger portion of its operating budget through regulatory fees. Congress required Commission to collect

Public Service Says 1st-Qtr Profit Fell 5.9 Percent (Update2)

(Updates with profit from operations in second paragraph and possible expansion in California in second section. For more on the California electricity crisis, see {EXTRA <GO>}.)

Newark, New Jersey, April 17 (Bloomberg) -- Public Service Enterprise Group Inc., owner of New Jersey's largest utility, said first-quarter profit fell 5.9 percent because of a rate cut and higher fuel costs. Profit from operations fell to \$254 million, or \$1.22 a share, from net income of \$270 million, or \$1.25, a year earlier, spokesman Paul Rosengren said. Revenue rose 13 percent to \$2.81 billion from \$2.48 billion. The company has been trying to expand outside New Jersey as the state opens its energy markets to competition. Talks to buy Cinergy Corp., owner of Cincinnati's utility, for about \$5.6 billion fell apart in March, possibly because it offered only a slight premium, according to newspaper reports. The company's Public Service Electric & Gas utility has 3.5 million New Jersey customers. Utility profit fell 11 percent because of a 2 percent power-rate cut and costs to refinance debt, the Newark, New Jersey-based company said. Profit at PSEG Power, the company's U.S. trading and power- generation unit, fell 19 percent because of higher fuel costs and interest expenses. Public Service uses natural gas to fuel some of its power plants. Gas prices more than doubled from a year ago. A \$2 million charge for a debt payment and a \$9 million gain from an accounting change made net income \$261 million, or \$1.25 a share, the company said. Public Service had 208 million shares outstanding in the latest quarter. It had 216 million shares outstanding a year earlier. Operating profit of PSEG Energy Holdings, which includes international business, rose 88 percent. Public Service expects to have 3.7 million customers outside the U.S. after some acquisitions are complete, the company said.

California

Public Service is talking with California officials about expanding six power plants in the state, Rosengren said. The plants, owned 50 percent by Public Service, generate enough power for 150,000 U.S. homes and might be ``substantially

enlarged" with turbines Public Service has on order, provided the state confirms payment for power, he said. He declined to provide details on the size of the expansion. Shares of Public Service rose 90 cents to \$46.08. They have fallen 5.2 percent this year.

Enron Bandwidth Unit Reports Loss For First Quarter

04/17/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

HOUSTON -(Dow Jones)- Enron Broadband Services was the only one of Enron Corp.'s (ENE) business sectors to report a loss for the first quarter of 2001, company executives said in a conference call with analysts Tuesday. Before interest and taxes, Enron reported a loss for Broadband Services of \$35 million for the first quarter of this year compared to a break-even quarter a year ago. "Only one sector is down from what we expected and that's broadband," Enron President and Chief Executive Jeff Skilling told investors. "The other sectors are up, significantly up." Enron Corp. reported earnings of \$405 million on revenues of \$50.1 billion for the first quarter of 2001. The per-diluted share earnings were 49 cents, compared with 40 cents in the year-ago period. Company executives also revised upward their per-share earnings goal for 2001 from \$1.73 to the \$1.75-\$1.80 range. The Broadband Services loss came on \$83 million in revenues compared to \$59 million last year. The total value of contracts for the first quarter 2001 was \$45 million, compared with \$31 million in the first quarter 2000. Broadband Services delivered 43,400 terabytes of capacity in the first quarter 2001, up from 6,005 terabytes a year ago. For all of last year, the company delivered a total of 72,406 terabytes of bandwidth. Skilling said the company has contracts to deliver 40% of its goal of 570,000 terabytes this year. "We're making excellent progress in creating a commodities market," he said. Broadband Services did a total of 580 transactions in the first quarter of 2001, double the 236 transactions it did in the fourth quarter of last year. In all of 2000, the company did 321 trades. In the first quarter, Enron added 70 new customers, bringing its total up to 120, Skilling said. He added that 70% of those customers are carriers or network service providers. Skilling said he is disappointed with the slow growth of the long-term deal origination segment of the bandwidth operation. "We face one big issue in this market, the counterparties have no credit capacity," he said. The Broadband Services loss wasn't due to increased costs of seeking video-on-demand partners to replace Blockbuster Inc. (BBI). Enron and Blockbuster canceled an exclusive agreement to distribute movies via the Internet in the first quarter. Enron will seek to make deals with motion picture companies directly. The biggest snag in making those deals are Hollywood's desires. "They want to keep as much of the money as they can," said Ken Rice, chairman and chief executive of Broadband Services. -By Erwin Seba, Dow Jones Newswires, 713-547-9214

USA: Enron CEO uses naughty word on conference call.

04/17/2001 Reuters English News Service (C) Reuters Limited 2001.

(Editors note language) By C. Bryson Hull HOUSTON, April 17 (Reuters) - Enron Corp.'s top executive Tuesday publicly fired off the same vulgarity that brought President George W. Bush embarrassing headlines when he unwittingly uttered it in front of an open microphone last fall. But unlike Bush, Enron President and Chief Executive Officer Jeff Skilling says he knew the microphone was on when he called a fund manager an "asshole" during a conference call to discuss first-quarter earnings with analysts. Bush made headlines on the campaign trail last year when he remarked to Vice President Dick Cheney that a New York Times reporter was a "major-league asshole," not knowing that a microphone had picked up his remark. Skilling laid down the insult after an exchange with Richard Grubman, managing director of Highfields Capital Management in Boston, who asked to see Enron's balance sheet and was told it would n

A.01-06-020; PG&E Reply Comments

Sender	dwa3@pge.com
Recipients	['jyoung@igservice.com', 'kbhensman@aeraenergy.com']
File	dasovich-j/notes_inbox/12321.

All --

Attached are PG&E's Reply Comments in the PG&E California Gas Transmission open season docket, A.01-06-020.

After readying the "hardcopy" comments for service by U.S. Mail, a couple of typos came to our attention. We have corrected the typos in this e-mail.

This e-mail contains two files:

1. A "redline" version showing typo corrections/changes from the hardcopy version sent out by U.S. Mail.
1. A file showing the redlines "accepted."

David W. Anderson, PG&E Law Department 415-973-6659

File	dasovich-j/all_documents/8927.

Hi All,

Calpine appreciates the opportunity to comment on the proposed amendments to AB 1X. The proposed amendment would delete language now in section 80110 which provides: "The department shall have the same rights with respect to the payment by retail end use customers for power sold by the department as do providers of power to such customers."

That language is extremely useful for maintaining that the department may directly bill customers if, for example, the CPUC does not adopt a sufficient rate recovery mechanism. It is very important to use that we keep that language intact. I don't believe this should be a problem for any of you but please call me at (916) 443-2500 if it is. Thank you.

File	dasovich-j/notes_inbox/12029.

<http://www.newdem.org/westcoastretreat/>

Jeff and Mona - Above is a link for the New Democrat Network (NDN) West Coast Retreat. We are Executive Council Member of the NDN. You can attend for all or portion of the retreat. There will local, state, and federal elected officials attending.

Jeff - The NDN has been helpful by trying to moderate the tone of the energy debate in DC and they did not include price caps in their energy plan (though some of the West Coast members support them). They will hold an energy panel and Speaker Hertzberg will attend

Mona- Note that the schedule is technology heavy and TechNet is a sponsor of the event.

Sorry for the late notice. Let me know if you are interested.

Thanks - Chris (202) 466-9158

Happy Hour This Friday

Sender	nraykhelson@hotmail.com
Recipients	['evmba_social@haas.berkeley.edu']
File	dasovich-j/deleted_items/790.

Hello Gang!

Last year, we had a successful tradition of hosting Friday night Happy Hours in the heart of Silicon Valley and my favorite place - the famous city of Palo Alto. So, to continue this EvMBA tradition, you, your significant others, and friends are invited to taste the best garlic fries in town and drink some specialty beers at Palo Alto's Gordon Biersch located at:

640 Emerson St. (near Hamilton) Palo Alto 94301 (650) 323-7723

The gathering will take place this Friday, October 26th, at 6:00 and continue through the night with a possibility of dinner and dancing afterwards.

See you all there,

Natalia Rachelson

SCE MOU update

Sender	richard.costigan@asm.ca.gov
Recipients	[]
File	dasovich-j/notes_inbox/11665.

<<7-25-01.pdf>> Good afternoon:

Attached is today's energy paper. Please note that this morning there was new action on the SCE MOU. Currently there is a meeting that began at 2:00 pm, room 127 of the State Capitol to discuss proposed changes in the SCE MOU. It is my understanding that all interested parties were invited. Copies of the proposed bill were being distributed from the Speaker's office. There are some indications that there maybe, and again I stress maybe, session on Friday. That question may not be answered until later tonight or in the morning.

Also, the Governor will be signing the budget tomorrow.

Don't make summer plans just yet.

Direct Access Package

Sender	jeff.dasovich@enron.com
Recipients	[jbradley@svmg.org]
File	dasovich-j/all_documents/10559.

Hi Jason:

Per my voice mail, here's the package of materials for customers to use to make sure key policy makers know that maintaining customer choice in California is critical. As I mentioned in the voice mail, the Legislature's likely to move this week on a variety of fronts, so it's important that the business community make its voice heard immediately and clearly. If you could forward this along to the SVMG members, it would be very helpful to the fight for customer choice and greatly appreciated. Information on how to contact the key legislators is included. Also included are "form" letters that folks can print out, sign, and send. If you have any questions, don't hesitate to give me a call at 415.782.7822.

OOPS, here is the attachment to the PUC Draft Ruling on Rates

Sender	lgoldseth@svmg.org
Recipients	['lgoldseth@svmg.org']
File	dasovich-j/all_documents/12302.

The PUC issued two draft decisions yesterday on PG&E and SCE rates. The drafts, along with appendices that have the proposed rates for the utilities, can be found at:

<http://www.cpuc.ca.gov/cyberdocs/Libraries/WEBPUB/Common/tcsearchresultsdsp.asp?pagenumber=1&FT=false&fromQSearch=yes&desc=Published+Comment+Decisions>

For those unwilling to read long regulatory documents, a three page summary of the RTP issues prepared by CEC staff is attached.

Comments on the PUC drafts are due today. Both drafts propose having a workshop on RTP on May 21. So we will be busy.

Enron California Template

Sender	jermeier@earthlink.net
Recipients	['sue_nord@ees.enron.net', 'jdasovic@enron.com']
File	dasovich-j/eci/11.

Sue:

To follow up from yesterdays' call with us, we are going to revise the California ETI tariff(s) to parallel your national Enron template.? We are also looking at Pacific Bell's Tariff CAL. PUC No. 175T to determine their current Dedicated Transport service tarified rates, and will advise.

We have a PDF version of the Master Sales Agreement, and are incorporating some minor revisions - and maintaining the Contract as governing over the tariff.? I believe we also needed input from Enron Broadband Sales on the California customer Forms for filing with the updated tariffs.

If you could pass along the template so we can change the services, that would be greatly appreciated.? Please let us know any questions,

Jeremy Meier Blumenfeld & Cohen 4 Embarcadero Center, Suite 1170 San Francisco, CA 94111 415 394-7500 ? ?

DO NOT MISS THIS EXCELLENT OPPORTUNITY.....

In cooperation with the San Jose Silicon Valley Chamber of Commerce, the Silicon Valley Manufacturing Group is excited to invite you to participate in a discussion, "Closing California's Era of Limits". Senator McClintock will be the key note speaker and the discussion will focus on energy. This event is free of charge and will provide an opportunity to meet not only with our leadership but with many distinguished others in the energy field.

Great Conversation and Great Food: The breakfast will be held at Bella Mia located at 58 S. First Street on this Friday, May 18, at 8:00am. There will be plenty of parking in the rear, off Second Street, between Santa Clara and San Fernando streets.

If you would like to attend this great event, please contact Salina at 408-291-5282 or <mailto:s.lee@sjchamber.com>

Enviro Dispatch Language

Sender	jmball@ns.net
Recipients	['robbiz@cwo.com', 'rventurini@teamgsi.net', 'taschehoug@thermoecotek.com', 'wfhall2@duke-energy.com', 'smccab...']
File	dasovich-j/notes_inbox/12531.

Attached is the proposed language from Assembly Member Calderon's office regarding environmental dispatch (e/d). As you will recall, e/d language was removed from the final version of the siting bill, SB 28x, signed by the Governor so that there would be more time to work out a compromise. Since then, Asm. Calderon has been meeting with various stakeholders on this issue including IEP members and came up with the attached language. The language deviates from our initial discussions which centered around limiting e/d to out-of-market and RMR contracts. The language now targets the plants that will operate above and beyond their air permits per the Governor's recent executive order. Please review this language and get back to me with any issues. If there are more serious concerns with this, I will schedule a conference call to discuss further.

THANKS.

Julee Malinowski-Ball Senior Associate Edson + Modisette 916-552-7070 FAX-552-7075 jmball@ns.net

California Update--09.20.01--Noon PDT

Sender	jeff.dasovich@enron.com
Recipients	['vicki.sharp@enron.com', 'j..kean@enron.com', 'tim.belden@enron.com']
File	dasovich-j/sent_items/174.

Getting alot of inquiries.

The PUC has not yet voted on suspension of DA or related matters. Likely to get to those items on the agenda within the next 30-60 minutes. Looks as if the decision will 1) suspend DA beginning Sept. 20th and 2) include contract renewal in the suspension. In addition, it appears that the proposal would give the Commission some latitude to enact retroactivity back to July 1 if deemed necessary (this is unclear and we're trying to get more details on this provision). Three key senators have sent a letter to the PUC asking the PUC to provide recommendations to the Legislature on the conditions under which DA should be re-instated (since the letter is dated September 18th--though sent only yesterday--it appears that the Senate had an idea that the PUC was going to suspend).

KEEP IN MIND THAT THE DECISION HAS NOT BEEN VOTED ON YET AND THE PROVISIONS LISTED ABOVE MAY CHANGE.

We'll report back as soon as something happens.

For folks who want to listen in, the number is:

415.228.4550 code = 92105

DIRECT ACCESS UPDATE

Sender	douglass@energyattorney.com
Recipients	['curtis_l_kebler@reliantenergy.com', 'barbara.klemstine@pinnaclewest.com']
File	dasovich-j/notes_inbox/2637.

I have just heard?from a member of AREM?that Linda Serizawa, Commissioner Wood's advisor, has stated that Commissioner Wood is at this moment drafting the decision on direct access.? She indicated that a draft order would be released, but would not say when.? She stated that ABX1-1 directed the CPUC to set a date at which time a customer would no longer have the right to switch to an ESP, and indicated that this order, as it is currently drafted, establishes that date.? Apparently there was great hesitancy when making the statement "as it is presently drafted," indicating that Wood is getting a lot of pressure not to set the date.?

It seems that now is the time for WPTF, and its member companies, to exert as much influence as possible on Bilas, Duque and Brown to ask that the order be held until such time as the Legislature first has the opportunity to correct ABX1-1.? ? ? Final SJ City Council Hearing of the Metcalf Energy Center

Sender	cguardino@svmg.org
Recipients	[cguardino@svmg.org]
File	dasovich-j/all_documents/28120.

Good Afternoon,

On Tuesday, June 26 the San Jose City Council will be hearing the Metcalf Energy Center item for the final time. As you are aware, the SVMG has endorsed the need for this energy project from the beginning stages. However encouraged we have been, the Metcalf Energy Center continues to witness objection from some groups. It is important that the SVMG be present at this hearing to provide as much support as possible!

We need at least 10 member company representatives to attend the evening session of the SJ City Council Meeting tomorrow at 7:00pm to speak on behalf of this very needed energy project. This will provide an opportunity to see your work pay off. Thanks to those who have already committed to representing the SVMG at tomorrow's hearing (Terry Thomas, Lockheed Martin and Don McIntosh, AMD), but we need a handful more to sign on.

Please help to endorse the Metcalf Energy Center! For more information or to sign on to participate e-mail lgoldseth@svmg.org or call 408-501-7870.

Sincerely, Carl

Angelides Investor Memo - Timetable Update

Sender	jeff.dasovich@enron.com
Recipients	['mkahl@ka-pow.com', 'ann.cohn@sce.com', 'jdasovic@enron.com', 'kmccrea@sablaw.com']
File	dasovich-j/sent/11837.

FYI. My understanding is that the decisions would actually go out prior to Aug. , with "effective date" in Aug., , thus providing time for the appeals process. Do others have a similar or different view? Do we intend to stay in touch, in view of the fact that there's been some "breathing room" provided by the PUC delaying its DA vote, and given the heavy lifting that is still needed to get the core/noncore agreement teed-up and through?

Happy 4th to all.

Best, Jeff ----- Forwarded by Jeff Dasovich/NA/Enron on 07/03/2001 12:41 PM -----

I apologize. I thought I'd put you on my "big" distribution list. When and if I do any updates to smaller groups. I'll put you on those, too. Look forward to meeting and discussing next time I'm in Houston.

Best, Jeff

Kristin Walsh/ENRON@enronXgate 07/06/2001 12:12 PM

To: Jeff Dasovich/NA/Enron@Enron cc: Subject: California Updates

Jeff, Hope everything in California is going well and hope you had a good 4th of July. Earlier today, I was meeting with some people from EES/ENA and they mentioned that you send out regular updates on California. I would be very interested in being added to the distribution list. This would help us see if there are any discrepancies in what we independent report and give us insight on which issues need to be explored further. If you are ever in Houston, I would love to meet with you and discuss some of our common interests as it relates to commercial operations. Please let me know if you have any questions or are unable to add me to the distribution list.

Thanks, Kristin Walsh (713) 853-9510

MPAR - Executive Briefing Materials	
Sender	francois.thrower@smginc.com
Recipients	['dimeff@haas.berkeley.edu', 'mstjohn@haas.berkeley.edu', 'arif.joshi@smginc.com']
File	dasovich-j/all_documents/8202.

Executive Team:

By now I trust you have had a chance to review the following briefing materials:

Olympus Quick Tour CD-ROM Navigation Exercise Section I of the Olympus simulation manual Harvard Business Review articles:

1. "Introduction to Financial Ratios and Financial Statement Analysis"
2. "Assessing a Company's Future Financial Health"
3. "What is Strategy"
4. "Customer Intimacy and Other Value Disciplines"

During our pre-session meeting next week, we will be exploring in greater detail the Olympus simulation environment. As you are aware from the agenda, we will be immersed in the simulation over the weekend.

The following link is to an additional article from McKinsey Quarterly which I think captures well the strategic and financial issues you'll face in the Olympus simulation.

<http://mckinseyquarterly.com/pdf/whis00.pdf?tk=:932>: (you will need Adobe Acrobat to view this article)

I look forward to meeting you next week.

Could be me, but that doesn't look like your email address. You get this email from Jeremy (good guy who works with Steve)? ----- Forwarded by Jeff Dasovich/NA/Enron on 10/11/2000 05:01 PM -----

Jeremy Meier <jermeier@earthlink.net> 10/11/2000 03:54 PM

To: Sue_Nord@EES.enron.net cc: jdasovic@enron.com Subject: Enron California Template

Sue:

To follow up from yesterdays' call with us, we are going to revise the California ETI tariff(s) to parallel your national Enron template. We are also looking at Pacific Bell's Tariff CAL. PUC No. 175T to determine their current Dedicated Transport service tariffed rates, and will advise. We have a PDF version of the Master Sales Agreement, and are incorporating some minor revisions - and maintaining the Contract as governing over the tariff. I believe we also needed input from Enron Broadband Sales on the California customer Forms for filing with the updated tariffs. If you could pass along the template so we can change the services, that would be greatly appreciated. Please let us know any questions, Jeremy Meier Blumenfeld & Cohen 4 Embarcadero Center, Suite 1170 San Francisco, CA 94111 415 394-7500

Marybeth:

I apologize. As I mentioned, this situation is extremely fluid. I also mentioned this morning that in yesterday's meeting w/the Governor, it was agreed that the meetings would continue, every day, until the thing got resolved. I was just informed that I've been elected by my management to be on today's call (Steve Kean and I will be our representatives). It starts at 1PM. We are scheduled to talk at 2:30 PM. I'm hoping--but not altogether hopeful---that the call will end before 2:30.

I can't apologize enough for the scheduling problems, particularly since I'm the one who originated the request to chat with Laura.

We can do it one of several ways; it's completely your call: 1) play it by ear, and I can let you know around 2:15 if I think the call's going to wrap up by 2:30. 2) we can reschedule (I would of course very much like to brief Laura on what's going on). 3) you can decide it's too much trouble and throw up your hands, which I would understand.

Let me know how you 'd like to proceed and please give my sincere apologies (and best) to Laura. I have to get on the call right now, so if you need to speak to a live person, give Joseph a call at 415.782.7841.

Best, Jeff

Next Week's Energy Committee Meeting

Sender	lgoldseth@svmg.org
Recipients	['lgoldseth@svmg.org']
File	dasovich-j/all_documents/13026.

Energy Committee Members: As many of you kindly brought to my attention last week, Monday, May 28 is a recognized holiday. Therefore, the energy committee meeting scheduled for that day has been postponed. Unfortunately, the Motorola site on Kifer Road is not available next week.

Thanks to Mike Brown and the kindness and flexibility of Motorola, the energy committee has been offered a meeting room at Motorola's San Jose site located at 3041 Orchard Parkway for Wednesday, May 30 at 3:00pm. Due to a very limited space capacity (20-25 people only), we need to know by close of business Friday, May 25 how many people expect to participate on Wednesday's meeting.

However, we do hope to accommodate all committee members who plan to participate in this meeting and do not want to exclude any member because of limited capacity. If your organization has a meeting room that can accommodate our group (40-50 people) on May 30 from 1-5pm (to accommodate the Business Continuity Subcommittee as well) please let me know ASAP. I would like to give Mike confirmation by this Friday if we will be using the Motorola facility.

Please RSVP before close of business on Friday by responding to this e-mail or calling 408-501-7870.

RE: CA Instrate Gas matters

Sender	susan.landwehr@enron.com
Recipients	['leslie.lawner@enron.com', 'jeff.dasovich@enron.com']
File	dasovich-j/notes_inbox/11907.

Jeff/Leslie/Barry---attached is a guideline that we developed on what our "global" message on price risk management would be as we talk to PUCs across the country and was intended to address the issue in both power and gas markets. It's a good starting point and should obviously then be tailored to each state's situation.

I am happy to jump on a call to discuss. I will be in Michigan on Monday, but could be available between 9:30 and 12:00 eastern. (6:30-9:00 pacific--sorry Jeff!!). If you could leave me a voice mail about what time to talk and whose number to call that would be great. #612-339-4599

If we decide to talk later in the week, I am not open on Tuesday until about 3:30pm central but Wednesday I'm pretty much available all day.

Jeff Dasovich Sent by: Jeff Dasovich 07/13/2001 05:21 PM

To: Leslie Lawner/ENRON@enronXgate cc: Barry Tycholiz/ENRON@enronXgate, Susan M Landwehr/NA/Enron@ENRON Subject: RE: CA Instrate Gas matters

I can make time. Let's try to let Leslie vacation. Also, I'm having a memo prepared that should be ready first thing Monday AM on the CA Commission's policies regarding utility use of hedging instruments. Just let me know when you'd like to talk.

Best, Jeff

ADV: Power & Water Conference

Sender	postmaster@lawseminars.com
Recipients	['jdasovic@enron.com']
File	dasovich-j/all_documents/28657.

Note: If you do not want to receive notice of any upcoming programs, please reply to this email with "remove" in the subject line. You also can limit notices to specific topics by replying and specifying the topics. Thank you.

Dear Mr. Dasovich,

Power & Water conference: Water is a critical path for every energy project and this year it has become more important than ever. A new administration adds yet another complicating factor to the Pacific Northwest's water and energy uncertainties. This program's distinguished faculty, including Judith Johansen (now CEO of PacifiCorp) and former Senator Slade Gordon, will provide insights that will help anyone dealing with water and energy supply issues to move more surely through these troubled times.

When/Where: August 16 & 17 at the Renaissance Madison Hotel in Seattle.

Program Co-chairs: Randall J. Hardy of Hardy Energy Consulting and Elizabeth Thomas of Preston Gates & Ellis LLP.

Information or registration: reply to this announcement; call us at (800) 854-8009; or visit our web site: <http://www.lawseminars.com/htmls/seminars/01powa>.

Best, Jeff

John Shelk 06/26/2001 01:22 PM

To: Jeff Dasovich/NA/Enron@Enron cc: Subject: Re: Follow Up On California Information

Alan and I spoke about point #2 on the comparison benchmark. At this point, we may be able to just say it is based on a comparison of the contracts with today's forward market and gloss over the exact forward curve we used. Of course if there is a way to come up with a similar number using publicly available data (or if we are willing to provide our numbers if pressed) then all the better. In the mean time, should I hold off on using the \$13.8 billion number until I hear back from you about the conversation with Steve?

Also, do I understand correctly from Alan that the \$13.8 billion figure is NOT comparing the long term contracts California signed with recent spot market prices, but rather is a comparison of the contracts to our present forward pricing curves? From you e-mail, it is the latter, I take it.

As to point #1, on the deal last year, we just need a similar "back of the envelope" calculation on what California could have saved had California taken us up on the offers we and others made. Any guidance on where to get that would be most helpful.

I could be wrong about what I think Loretta's doing so make sure that somebody verifies before you pass on what I've said. Could be totally wrong; but hope I'm right.

Best, Jeff -----Original Message----- From: Wong, John S. [mailto:jsw@cpuc.ca.gov] Sent: Wednesday, July 18, 2001 10:11 AM Subject: ACR Inviting Comment On DWR/CPUC Proposed Rate Agreement

Attached is an assigned Commissioner ruling (ACR) inviting comment on the proposed rate agreement between the California Dept. of Water Resources and the California Public Utilities Commission. Interested parties may file comments with the Docket Office on or before August 1, 2001.

Please note that there are three attachments to the ACR. Attachment A, the proposed rate agreement, is being forwarded to you as a separate PDF document. Attachment B, the relevant Water Code sections, is contained in the body of the attached Word document. Attachment C is the two page letter from the DWR, the Dept. of Finance, and the Treasurer's Office to President Lynch dated July 2, 2001. Attachment C was previously distributed to the A.00-11-038 et al service list in the Chief ALJ's ruling dated July 5, 2001. Today's ACR and all three of the attachments can also be accessed at the CPUC's web site.

Davis' energy fix

Gov. Gray Davis' recent plea for a quick presidential energy fix in the form of price caps is an ominous sign that he has given up on his own solutions. Apparently Gov. Davis has completely run out of ideas on how to fix the energy crisis he ignored for two years until it was too late, and his begging for price caps comes in the face of bipartisan opposition to such a short-sighted solution.

The fact is that last December, Davis' energy advisers at the ISO asked the FERC to remove price caps because they were constricting supply and threatening blackouts. Even President Clinton's FERC chairperson opposed price caps because they can lead to blackouts.

If the governor's only solution is to blame Washington for his own problems, then he ought to consider forfeiting his paycheck because he will have completely abdicated his responsibility to provide Californians with solutions. Here are some unsolicited suggestions: Let's make California an energy-independent state by 2004. Let's invest in our own home-grown energy sources and use energy more efficiently. Let's ensure we have healthy utilities and that our state isn't burdened for decades by high energy costs.

XMS Upgrade Transition Plan - All XMS Users Please Read!!

Sender	enron.announcements@enron.com
Recipients	[all.users@enron.com]
File	dasovich-j/all_documents/13499.

Concur Expense (XMS) Upgrade!

On July 2, 2001, Enron=01,s Corporate Expense Management Solution will unde= rgo=20 an upgrade to version 6.0.2.
=20 The Integrated Solution Center (ISC) has developed a transition plan=20 containing several important deadlines
affecting=20 all XMS users.

Transition Schedule

Important Date #1 - Monday, June 18th ? American Express transactions will no longer be loaded into the current X=
MS=20 system starting June 18th. Beginning June 18th, all AMEX transactions will= =20 be loaded into the new Concur
Expense (XMS) system. ? Beginning June 18th, the ISC will be solely responsible for adding new= =20 users to the
current XMS system. On July 2nd, new users created in SAP HR= =20 will be automatically loaded into the new Concur
Expense (XMS) system. =20

Important Date #2 - Wednesday, June 27th ? This marks the deadline for entering new expense reports into the current=
=20 XMS system. All open expense reports in XMS must be submitted and approved= =20 by June 27th. All users will be
locked out of XMS after this date!!

Important Date #3 - Monday, July 2nd ? The new version of Concur Expense (XMS ver. 6.0.2) goes LIVE!!!

For a list of frequently asked questions (FAQ), please click on the followi= ng=20 link:
<http://isc.enron.com/site/xmsfaqs.htm>

If you have any other questions on any of the above items, please contact t= he=20 ISC Call Center at 713-345-4727.

C4C Trivia Bowl Clarification

Sender	owner-evmba_social@haas.berkeley.edu
Recipients	[evmba_social@haas.berkeley.edu]
File	dasovich-j/notes_inbox/4385.

I apologize that the earlier note from our MBA Social chair didn't reach you earlier. I want to clarify a couple of questions
and reach out to you to participate in tonight's competition.

Evening MBA's are eligible to compete. Tonight will be the only night to try out. I understand that all of you have class until
around 9:30 pm. I will not start the competition until 9:45 pm to give you a chance to attend. In addition, if you miss the first
set of category competitions there will be two more throughout the night that you can jump in and tryout for. The following

is the breakdown of how the competition will run:

1st set - Science & Art/Literature (Starts at 9:45 pm) 2nd set - Sports & Entertainment (Starts 5 minutes after the end of set #1) 3rd set - History & Geography (Starts 5 minutes after the end of set #2) 4th set - All Categories for top 2 runnerups in first 3 sets (Starts 5 minutes after the end of set #3)

I will ask 15 questions for each set and take the top person who answers the most questions in the set. The second and 3rd place finishers of each set will then be paired in a 4th set of competition where I will ask 15 questions from all the categories. The winner of that set will be the 4th member of the team.

PS - Beckett's is giving us \$1 off on pints of Guinness and Caffrey's.

Address again is:

Beckett's 2271 Shattuck Ave. (Between Bancroft and Kittredge) Berkeley, CA 94704 510-647-1790

File	dasovich-j/notes_inbox/12638.

Note: If you do not want to receive notice of any upcoming programs, please reply to this email with "remove" in the subject line. You also can limit notices to specific topics by replying and specifying the topics. Thank you.

Dear Mr. Dasovich,

Energy Restructuring in the Southwest conference, co-sponsored by Energy Newsdata Corporation

When/Where: July 19 and 20, 2001 at the Alexis Park in Las Vegas

While California's electric system stumbles from crisis to crisis during a continuing state of emergency, states and municipalities throughout the Western region are reexamining and, in some cases, reversing their policies regarding restructuring of the electric services industry. This has resulted in ever-changing and confusing laws and policies affecting utilities, energy service providers and consumers in Arizona, Nevada and New Mexico.

This conference will help lay the groundwork for a better understanding of current market and regulatory conditions in the Southwest, and the faculty of expert speakers will provide insight as to how evolving policies will shape markets of the future.

Program Co-chairs: Arthur O'Donnell of California Energy Markets and Fred Schmidt of Hale Lane Peek Dennison Howard & Anderson.

Haas Alumni Network & Online Community presentations

Sender	tj@haas.berkeley.edu
Recipients	[eveningmba@haas.berkeley.edu]
File	dasovich-j/deleted_items/2071.

Dear Evening MBA students, We enjoyed providing you with an overview of the Haas Alumni Network and our online services at our pizza presentations in mid-November. Some of you were unable to attend our session because your class was not held on that Thursday night and we tried to find a suitable classroom/presentation space for a session this week, but there is nothing available during your 7:30 p.m. break. So, we have decided that we will hold more information sessions about the Haas Alumni Network next semester in order to accommodate your needs. In the meantime, if you have any questions, please consult the Haas Alumni Network brochure you received in your mailbox earlier this semester, visit our website (<http://www.haas.berkeley.edu>) for detailed overviews and updates, or contact my office at 510-642-7790 for assistance with registration to the Online Community. Good luck with your final projects and exams. Tenny Frost Director, Alumni Relations

**Outstanding Teacher Nominations**

|            |                                    |
|------------|------------------------------------|
| Sender     | owner-eveningmba@haas.berkeley.edu |
| Recipients | [eveningmba@haas.berkeley.edu]     |
| File       | dasovich-j/all_documents/10564.    |

Hello Everyone, Each year, we have an opportunity to recognize a faculty member who has distinguished him/herself among his/her peers. Faculty who receive the Outstanding Teacher Award are recognized for this important accomplishment by both the UC Berkeley Campus and the Haas School of Business. The award really does mean a lot to the faculty members, so if you feel strongly about a teacher's performance, I urge you to reward them with a nomination. Last year's award went to David Levine (Core: Macroeconomics) with honorable mentions to Michael Katz (Elective: Competitive Strategy) and Jonathan Berk (Core: Finance). All teachers that receive nominations will be recognized in the SAC Newsletter.

Thanks to those of you that submitted nominations from your Fall 2000 classes. We are currently soliciting nominations for Spring 2001 courses. Just submit a written recommendation to me via e-mail based on the guidelines listed below. Alternatively, you may submit a hard copy to the Evening MBA office. Only nominations with a written explanation will be considered. The more compelling your recommendation, the greater the weight it will carry. The Spring 2001 nominations will be considered with the Fall 2000 nominations to determine the winner. Please try to have your nominations in by April 9th.

Thanks, in advance, for your support of this important and prestigious award.

Michael Plumb Chair, Student Advisory Committee (SAC)

All -

It is with no surprise (I've only known I was leaving for 6 months now!) and yet still with a heavy heart that I wish you all farewell and the best for the future. I am in my last week here at the Lazy E and I am getting around the part that I dreaded the most - goodbyes. I have and will be sending notes to most of the people I have worked with over the past 3 1/2 years (whether they like it or not), but you are the folks I have learned the most from and will miss the most painfully. It's hard to believe the roller coaster we have been on - both the ups and downs - and I don't think it would have been as manageable, tolerable, or fun without you. I really have had more fun in this job than I could ever have imagined coming in. Everyone has been a great friend and mentor, and I will always appreciate the time you have spent with me, indulged my questions, put up with my wandering attentions, and made sure I got home safely in a clean cab...

Unfortunately I am sure there will probably be more "good bye" emails to come your way over the next few weeks, so I'll keep this brief and close for now. But I hope for the absolute best for all of you and your families, and do not underestimate the impact you have had on me or the high esteem I hold you in. Best regards, Scott

Greetings all,

Scott Bolton and I wanted to give you the "low-down" on the strategy meeting taking place next week in New Orleans.

The meeting will be held at the Hilton New Orleans Riverside. The hotel address is: Poydras at the Mississippi River, New Orleans, 70140.

We have reserved a block of sleeping rooms (16 total) at a rate of \$189.00 per night. The room reservations are for the nights of January 19 and 20, checking out January 21. Each meeting attendee will need to call the hotel directly to make reservations. The number to call to make reservations is 504.584.3999. Tell the reservationist that you need one of the rooms in the "Enron Communications" block. If you want a confirmation faxed or mailed, it must be requested at the time of booking. Those flying into New Orleans on January 20 need to tell the reservationist that they will need the hotel room on January 20 as opposed to January 19 and 20. Room reservations must be made no later than January 12. Each person will be responsible for his/her hotel room and charges.

The meeting is scheduled to begin at 9:30 AM on January 20 and end around 2:00 PM on January 21. The meeting will be held in the Cambridge Room.

We will be sending out a formal agenda by Thursday this week. During the meeting, we will be developing our team's objectives and strategy for 2000, hearing from a number of ECI commercial people, and conducting lots of Q&A. Please

contact myself or Scott to confirm your attendance as soon as possible.

Best Regards,

Scott & Donald

I have electronic copies of the applications referenced in the below note from ALJ Wong. The servicing agreements between SDG&E and DWR and SCE and DWR are (based on a cursory review) virtually the same. The agreements seem pretty straight forward. The only area of real interests are the service fees (i.e., the costs being assessed DWR by the UDCs for system changes necessary to do the DWR billing and the ongoing costs of that billing).

Protests on the applications are due on Friday the 29th. Let me know if you would like copies of the applications.

Jeff - Cynthia Sandherr said you were once again the person to write to. We talked in the fall of 1999 when I was thinking about bringing the energy seminar to San Francisco in 2000. We did manage Alaska last year after all, so now I am trying to resume the regular alternation between California and Houston. I am several shades whiter of head as a result of bringing the Alaska trip to closure. ? We did manage Alaska last year after all, so now I am trying to resume the regular alternation between California and Houston. I am several shades whiter of head as a result of bringing the Alaska trip to closure. ?? 17 senior military and civilians in our group this year, who are really interested in gas and electricity matters, especially in CA. 14 students including a BGen from Croatia, and 3 faculty. We would like to call on you and hear Enron's thoughts on gas and electricity matters, both from a California perspective and from the point of date-certain national legislation. ? At this point, the time that looks best for us would be Monday afternoon, 9 April. I am hoping this will be possible for you - it will be just about 3 years to the day since we last visited your California offices, in the very first moments of electricity deregulation. ? Draft schedule attached for your consideration of where we are in the planning process. ? Best regards, ?

#### Re: Yellow Book

|            |                                 |
|------------|---------------------------------|
| Sender     | jeff.dasovich@enron.com         |
| Recipients | ['dkasler@sacbee.com']          |
| File       | dasovich-j/all_documents/10108. |

Hi Dale:

Please call me to discuss your question. (415.782.7822) Customers could try to "bypass" the utility, but until Dec. '95 (PUC final policy decision) and AB 1890, it was against the law to have direct access, so you may be misinterpreting the yellow book just a bit. There were other forms of "bypass" at that time, but DA as we think of it today was illegal. Give me a call

and we can try to clear things up (specific references to where in the YB you're getting this impression will be helpful). Glad to talk to you on Friday and be happy to talk more if you have any other questions, or desire any follow up.

Best, Jeff

Dale Kasler <DKasler@sacbee.com> 03/19/2001 11:10 AM

To: "'jeff.dasovich@enron.com'" <jeff.dasovich@enron.com> cc: Subject: Yellow Book

Jeff, The Yellow Book is in the mail. I read it over the weekend and found it to be a very good backgrounder for this whole thing. Thanks for lending it to me, and thanks again for your time Friday. A followup question: You had told me Friday that the arrival of QF's and other non-utility generators, including plants in neighboring states, had large customers chomping at the bit for competition, but frustrated because the big IOUs still controlled the grid and held the customers captive. But the Yellow book said that already some large customers had found ways to bypass the IOUs and get direct access/retail wheeling. Could you explain? Thanks, Dale. PS - Please don't forget to call Steve Kean to let him know I'll be calling him. Thanks.

Go ahead without the gas, unless you can get into my American Express account and find out what those numbers are. Thanks a million.

Best, Jeff

Joseph Alamo 06/25/2001 07:10 PM

To: Jeff Dasovich/NA/Enron cc: Subject: Expediting Your Expense Report

Jeff -

FYI: due to a change [again] in the system for Expense Reporting, \*must\* have submitted your current Report by Wednesday, the 27th. Otherwise, will have to start over in the "new" system, however that will be unavailable until Monday, July 2nd ...or so I understand.

Except for whatever you incurred today, I'm current with your receipts \*except\* whatever you spent on gas with your last (6/18 - 6/21) rental car (you noted it but neither indicated amount(s) nor supplied receipts!).

Thanks,

Joseph

To: SNord@enron.com cc: Robbi\_Rossi@enron.net Subject: Collocation Decision(s) discussed 10/27

Sue:

Attached please find the DC Circuit's federal decision remanding certain FCC physical collocation rules back to the FCC for reconsideration. This is the Federal Court of Appeals "advanced services" case Steve Bowen was discussing on the conference call last Friday re EBS.

The DC Circuit reviewed the FCC's Advanced Services First Report and Order and affirmed certain aspects of collo (eg cageless, central office and adjacent collo, and cost recovery). The Court, however, remanded back to the FCC its rules on physical collocation and cage-to-cage cross connections (as Steve mentioned). Correct me if I am mistaken, but apparently EBS/ETI is now facing the hurdle of these uncertain collo rules in the field.

The FCC has recently reopened the Advanced Services Report and Order per the DC Cir, has initiated a new proceeding at the FCC (Order on Reconsideration and Second Further Notice of Proposed Rulemaking in CC Docket No. 98-147 and Fifth Further Notice of Proposed Rulemaking in CC Docket No. 96-98). Comments at the FCC were filed last month and Reply Comments on these advanced services collo rules are due in November.

We can send you a (lengthy) copy of the FCC Advanced Services remand Order on Reconsideration too if you want. Let me know if you have questions,

### APX withdraws proposal for an Adjustment Bid Market in CA

|            |                                                                                                                    |
|------------|--------------------------------------------------------------------------------------------------------------------|
| Sender     | jwu@apx.com                                                                                                        |
| Recipients | ['alp@ncpa.com', 'jstremel@apx.com', 'anders.glader@greenmountain.com', 'altomczyk@wptf.org', 'mheinrich@apx.c...] |
| File       | dasovich-j/all_documents/10074.                                                                                    |

I would personally like to thank each of you for your support in exploring the possibility of an adjustment bid market in CA.

The active participation in our February 21st Conference and the innovative ideas and suggestions were very helpful. They clarified a viable approach for action we proposed to the CAISO.

APX proposed the adjustment bid market to the CAISO board meeting on February 28th. The implications of not moving forward were identified and your support was extremely helpful in creating momentum for the CAISO to take action.

In the CAISO board meeting on March 15th, the CAISO staff proposed a comprehensive proposal for moving forward. That proposal created a day ahead and hour ahead energy market as well as simultaneously resolving transmission congestion and potentially ancillary service requirements through a new commitment and dispatch approach. Although the software changes and system changes are significant, the CAISO staff feels confident that this can be accomplished by summer.

With the comprehensive plan, there will be no need for using the existing CONG software at the CAISO to alleviate congestion among SCs with adjustment bids.

APX stands ready to cooperate in finding solutions for this summer. We will focus on the development of forward markets for power. We have the capability to provide forward markets for transmission if there is sufficient interest. If you have interest in such markets or other ideas where APX could provide products of value to you and the market please contact me.

Thank you for your support.

John Stremel Vice President Automated Power Exchange, Inc. 5201 Great America Parkway, Suite 522 Santa Clara, CA 408.517.2120 jstremel@apx.com

Scott, etal --

My final concern.

Is anyone at EES concerned with this outcome -- (1) Accept EES' tiering but use 60% of current usage as baseline, (2) all above 60% is DJ Index, and (3) demand below 60% is paid at \$500/Mwh (or the ISO price)?

This is an adaption of our proposal. Would this be painful?

My big fear is that somehow the CPUC uses our filing against us. We need to make sure that these discussions don't get away from us to allow that outcome.

Jim

| File       | dasovich-j/deleted_items/825.                              |

It's time for the Halloween Ball this Saturday! If you are thinking of participating one full-time social activity this semester, this is it!! Last year, the Halloween Ball was a big success, I anticipate this year will be a blast as well. So, go get your new costume and get ready to mingle with the full-time students this Saturday. Please see below for details. Make your check out to "C4C" and drop it off in Jennifer Sang's mailbox in the student lounge.

-----Original Message-----

From: Linda Ng [mailto:lng@haas.berkeley.edu] Sent: Sunday, October 21, 2001 3:24 PM To: Tai, Tony Subject: UPDATED: C4C Halloween Ball Information

Hi Tony, this version of my message is corrected/updated - I had forgotten in my earlier one to say that checks are payable to C4C.

C4C HALLOWEEN BALL - THIS SATURDAY!!! Don't miss out on the "HAAS FREAK SHOW", it's the wildest party of the semester! Everyone is invited - bring your friends and significant others! Costumes are a must!

Date & Time: Saturday, October 27th 8 pm to 2 am

Location: Curve Bar & Restaurant 747 Third Street San Francisco, CA 94107 (415) 896-2286 <<http://www.curvebar.com/>> (Located across from PacBell Park)

Ticket Info: Tickets are free for C4C members, \$25 for all others and \$30 at the door, so buy early. Tickets are on sale this week at Haas - just leave a check payable to "C4C" in Jennifer Sang's (first-year, full-time program) mailbox in the MBA lounge. She'll make sure your ticket is reserved at the door. Don't miss out on the fun - there will be great music, dancing, appetizers, cash bar, costume contest, and raffle prizes!

All proceeds from the party will be donated to Special Olympics, so you are guaranteed to have an awesome time while also supporting a terrific cause!!!

Subject:

Ken Lay spoke with several California CEOs this morning and urged them to get personally involved in pushing for a comprehensive set of reforms. Three expressed willingness to help.

Scott McNealy (Sun): contact person - Piper Cole (piper.cole@sun.com); scott.mcnealy@engeng.sun.com. Mcnealy wants, by close of business today, a "cheat sheet" of the talking points to use with politicians (the "8 or 10 elements of the solution") with the expected comeback he may hear from the political leaders and our response to that comeback. He says he hasn't spent time working on issues in Sacramento so we may also want to include a list of suggested contacts. Kevin Sharer (Amgen): contact person - Sarah Jensen, VP of Engineering and Operations (805.447.6785); ksharer@amgen.com. Sharer wants the same information as McNealy and he and McNealy both indicated their willingness to call a meeting of other California CEOs. Sharer will also be having breakfast with Hertzberg one week from today. Robert Day (Trust Co of the West): said that he is very close to the mayor of Los Angeles. He urged Ken to call the mayor (mentioning Day). Ken would like some talking points for that call.

Jeff - please put these items together.

Content-Type: multipart/mixed; boundary="-----B38FC1A91B245AEBF4048D17"

Sue:

Attached please find the DC Circuit's federal decision remanding certain FCC physical collocation rules back to the FCC for reconsideration. This is the Federal Court of Appeals "advanced services" case Steve Bowen was discussing on the conference call last Friday re EBS.

The DC Circuit reviewed the FCC's Advanced Services First Report and Order and affirmed certain aspects of collo (eg cageless, central office and adjacent collo, and cost recovery). The Court, however, remanded back to the FCC its rules on physical collocation and cage-to-cage cross connections (as Steve mentioned). Correct me if I am mistaken, but apparently EBS/ETI is now facing the hurdle of these uncertain collo rules in the field.

The FCC has recently reopened the Advanced Services Report and Order per the DC Cir, has initiated a new proceeding at the FCC (Order on Reconsideration and Second Further Notice of Proposed Rulemaking in CC Docket No. 98-147 and Fifth Further Notice of Proposed Rulemaking in CC Docket No. 96-98). Comments at the FCC were filed last month and Reply Comments on these advanced services collo rules are due in November.

We can send you a (lengthy) copy of the FCC Advanced Services remand Order on Reconsideration too if you want. Let me know if you have questions,

Subject: Re: CA Government Affairs

Jeff Dasovich, who works in my group in San Francisco, will call you regarding your e- mail. Thanks.

To: Richard Shapiro/NA/Enron@Enron cc:

Subject: CA Government Affairs

Hi Rick, I read the article in the article in Enron Business that mentions your group's efforts in California. I'd like to speak with you in order to find out if your efforts with the California government could possibly assist my client. I am the EES Account Manager for Pilkington North America. Pilkington is a large scale glass manufacturer with a plant in Lathrop, California. They, like many other PG&E ratepayers, are going to be subjected to load curtailment this summer. Being a large scale glass manufacturer who consumes a great deal of energy, they feel that being subjected to a curtailment would jeopardize the safety of the Lathrop community. If the plant withstood a full scale meltdown in their furnace, caused by a curtailment, a plant of that size would require an enormous group of emergency service personnel. Such a significant presence at the facility would jeopardize the safety of the rest of that small community.

Pilkington has already forwarded a letter to PG&E documenting this and it is currently under review. I would like to know if you or a member of your group could pursue any political avenues with this letter. Please call me at 215-599-7047 at your earliest convenience.

Thank you, Steve Beck

Halligan, Mr. Mark Baldwin with Interstate Gas Services will be representing Transwestern Pipeline Company during Tuesday's hearing. Transwestern is a party of record in this proceeding. Mr. Baldwin is Transwestern's California consultant, and is well versed in state regulatory matters and, in particular, this docket. On behalf of Transwestern, Mr. Baldwin will address the following issues: 1. The PD in light of recent events in both the natural gas and electricity markets in California. 2 A comparison of certain features of the PD and the alternative settlement (Comprehensive Settlement) supported by SoCalGas Company and the majority of the stakeholders, including Transwestern Pipeline. 3. The relationship between the CPUC's decision in this proceeding and the ongoing investigation of the sufficiency of infrastructure for both natural gas and electricity. My understanding is that the CPUC prefers the speakers be brief. With your permission, Mr. Baldwin's remarks will be limited to no more than 5 minutes, with an opportunity for questions to follow. Please let me know if there are any other guidelines the CPUC would like parties to follow in this proceeding. Also, please let me know if there are any questions that I can answer for you. **RED Index shows Texas, NY, and Maine advance on retreating**

|            |                               |
|------------|-------------------------------|
| Sender     | distribution@caem.org         |
| Recipients | [jdasovic@enron.com]          |
| File       | dasovich-j/notes_inbox/11811. |

Note to Jeffrey Dasovich

The July Update to the Retail Energy Deregulation Index (RED Index), published twice a year by the Center for the Advancement of Energy Markets (CAEM) shows Texas, Maine, and New York are making the most measurable strides in

promoting sustainable competition among electricity providers, as customers throughout Pennsylvania retreat to their default providers due to increasing wholesale prices.

The RED Index, which is the only known tool that objectively ranks states by 22 attributes on how they are restructuring their power markets, today released the U.S. rankings for all 50 states and the District of Columbia, in a 187 page report. Key results included: 1. Pennsylvania 66 2. Texas 65 3. New York 64 4. Maine 62 17. California 34

"These numbers underscore the importance of building a healthy foundation on which electric competition can grow," said Ken Malloy, CEO of the Center.

"While California's crisis has brought a lot of positive attention to Pennsylvania's model, many customers in the Keystone State are returning to their original utility suppliers. It underscores how important it is to put the right fundamentals in place if consumers and suppliers are to benefit over the long haul," Malloy said.

In rankings that included all of North America, the province of Alberta actually would rank above all the states with a score of 68.

The mid-year RED Index also found that 62% of states expressing an opinion indicated that their commission is not "less likely to take action on energy restructuring as a result of the California crisis."

CAEM is an independent, nonprofit, think tank based in Washington, DC whose mission is to promote an effective transition from the monopoly to the competitive model of regulation.

For information about obtaining a copy of the RED Index, go to [www.caem.org](http://www.caem.org).

For more information, please contact: Nancy Etkin at 703-532-6887 or [netkin@caem.org](mailto:netkin@caem.org)

If you do not wish to receive announcements from CAEM, please put "remove" in the subject line in a reply to this email.

FYI.? In case you have not yet seen. ? -----Original Message----- From: Andy Brown [<mailto:ABB@eslawfirm.com>] Sent: Wednesday, February 14, 2001 4:54 PM To: Katie Kaplan (E-mail); Carol Hudson (E-mail); Steven Kelly (E-mail); [smutny@iepa.com](mailto:'smutny@iepa.com') Cc: Julee Malinowsky-Ball (E-mail); Eric Janssen; Douglas Kerner Subject: FERC Valentine: Order on ISO Amend. 36: Creditworthiness Importance: High

The FERC issued an order today on ISO's unilateral relaxation of the creditworthiness standards for PG&E and SCE.? The decision is available at <http://www.ferc.fed.us/electric/bulkpower/ER01-889-000.pdf>.? In the order, the FERC allows the utilities to self schedule for their own generation, but does not allow the relaxation of creditworthiness standards as it would apply to transactions with third parties.? Stated differently, the utilities can schedule at the ISO for load served by their own resource, but they have to meet the ISO tariff creditworthiness requirements if they are buying generation from anyone else.? This means that ISO can't "dump" imbalance / AS costs on the utilities if DWR doesn't buy it.? It also indirectly addresses the Reliant, et. al. / ISO TRO suit, as well as Duke's suit against ISO and DWR.? ABB

## IEP Response to ISO Report

|            |                                                                                                                    |
|------------|--------------------------------------------------------------------------------------------------------------------|
| Sender     | kaplan@iepa.com                                                                                                    |
| Recipients | ['carol@iepa.com', 'cabaker@duke-energy.com', 'andybrwn@earthlink.net', 'abb@eslawfirm.com', 'steven@iepa.com']... |
| File       | dasovich-j/all_documents/10338.                                                                                    |

Greetings:

IEP has been responding all day to pres questions on the ISO report and=20 filing at FERC. We issued the below statement and are also holding a press= =20 availability tomorrow at 1:00 p.m. Today=01,s television interviews have=20 included, Fox, ABC and NBC.? Thank you to those of you who have forwarded= =20 your company positions to IEP and if you would like to include anything els= e=20 additional please let me know and we will incorporate it into Jan=01,s=20 responses.? In addition to the below points we have been indicating that=20 people have been playing by the rules, timing is rather coincidental,=20 economics don=01,t keep the lights on, and the alleged cost calculation the= ISO=20 has historically used do not include many fixed costs or real costs=20 associated with running the units.?=20

?

Once again if you have any other thoughts please forward them to me.

Thanks!

?

?FOR IMMEDIATE RELEASE ?March22, 2001

Statement by Jan Smutny-Jones, Executive Director of Independent Energy Producers, In Response to Report Issued by the Independent System Operator

???"More than ever, we're looking forward to a fair and impartial hearing= =20 before the Federal Energy Regulatory Commission to deal with the ISO?s late= st=20 round of unsubstantiated charges.

???"Until then, what seems increasingly clear, is that the ISO?s real agend= a=20 is to get out of paying for power it?s already purchased and used by renegi= ng=20 on its obligations and changing the rules after the race is over.

???"Generators have been playing by the rules and have been offering to sel= l=20 power at substantially lower long-term contract rates since last summer. ?H= ad=20 the PUC allowed this, California wouldn?t be facing today?s energy crisis. = ?

???"This latest attempt by the ISO to poison the atmosphere against the=20 generators and use them as scapegoats is clearly more about politics than= =20 trying to solve the problem and keep the lights on in California."

Jeff - please call me regarding the growing turmoil surrounding the allocation of Socal and PG&E backbone capacity. In case you did not know, we own 550 MMcf/d on El Paso for a 5 year term in addition to 25 MMcf/d of incremental capacity on Kern's emergency open season. We need to be very plugged in to discussions/meetings/regulatory proceedings in California. (GIR/Gas Accord etc.)

Do you have adequate resources to handle the gas issues in CA? I imagine that you are totally booked just dealing with the power issues.

Please advise.

Regards,

Stephanie

Dear Energy Committee Members:

After nearly a year of acting as one of your two co-chairs, it is time for me to focus more completely on my duties at Exodus Communications and to bring in new leadership to the Energy Committee. In light of this change, John Redding

and I felt it important for the Committee to choose a well qualified and experienced replacement co-chair that will lead the Energy Committee to continued successes.

After taking nominations for over three weeks, we held formal elections during yesterday's regular committee meeting. Paul Stephens, Joe Desmond, and Nayeem Sheikh were nominated, and responded with intelligent answers to questions given by the committee and it's leadership. After over an hour of questions and thorough answers from the three nominees, your committee selected Joe Desmond to replace myself as your new co-chair.

Joe has a wealth of impressive experience in energy and leadership and a thorough knowledge of energy and the associated issues facing the SVMG companies. He has been an active and valued member of the Energy Committee, and has provided much leadership on salient issues, including Blackout Notification, Real Time Pricing, and Direct Access.

Please welcome and join me in congratulating Joe Desmond as your new co-chair. Along with John Redding, I am certain these two will lead the Committee on the important energy issues of your company, and improve upon the already lengthy list of successes this Committee has achieved for all SVMG companies. They will help to grow the recognition and stewardship the SVMG Energy Committee has attained amongst our peer groups and state and federal policy makers.

I know that Joe will come to speed immediately on leading your Committee. Nonetheless, I will wane my involvement over the next several weeks and assist Joe in transitioning into his new role. We are lucky to have such great leadership by both John and Joe, and I know we will have many more great successes to come. Congratulations and thank you to all of our three nominees, and welcome Co-Chair Joe Desmond.

KC Mares Outgoing Co-Chair, SVMG Energy Committee and Director of Electrical Energy and Utilities Management  
Exodus Communications, Inc. 408-884-6825 kc.mares@exodus.net

All-- Attached are my proposed edits to the "framework" in redline form. The vast majority are simply editorial changes designed to clarify language without changing the intended meaning. I would call your attention to Sections 5.1 and 6.3 as the potentially more substantive suggestions. Since the change to 6.3 primarily adds detail to what is clearly described as a small customer proposal and not an agreed-upon item, I would hope that it won't cause any problems. The proposed change to 5.1 is not intended to change the agreed-upon allocation of costs, but simply to provide us with some badly needed "cover." Edison undercollections would be recovered out of "headroom" in existing rates (as was our shared intention), and those rates could only change as provided in Section 4. Thus, core customers would not escape any of the charges that they are expected to bear, but we would provide less of a fat target for others to shoot at. I can be available to discuss this further if needed after the Senate Judiciary committee hearing on the MOU scheduled for Thursday morning (415-254-3597). The proposed letter is another matter altogether. It is so replete with language that we find troubling that an attempt to edit it seemed fruitless. Lenny will circulate a much shorter proposed alternative that simply states what the attached document is, without attempting to characterize people's reasons for supporting it. If that approach is not acceptable, then TURN will not sign on to the letter itself but rather will provide a sentence or two of explanation over our separate signature. Hopefully one or the other of these approaches will work. Thank you all for your hard work on this effort, but I must confess that I did not personally find it to be "oddly satisfying." MIKE

At 04:56 PM 6/27/2001 -0700, Delaney Hunter wrote:

*Folks- If you can believe it, here are the final draft and cover letter. Please look over both of them carefully. If you are good to go let me know -- I still have your signatures from the last cover letter and will use those if all are amenable. If there are BIG issues with either document please reply to ALL members yourselves - don't make me have to send them out to everyone. Thanks to all, Delaney*

Kern River solicits interest in Kramer Junction

Kern River Gas Transmission, a Williams-owned pipeline, is considering building a new meter station at a proposed Kramer Junction interconnection with Southern California Gas. In May, SoCal Gas announced plans for a 200 million cfd system expansion, called the Kramer Junction Interconnect project, including a 32-mile pipe that would link with Kern River and Mojave Pipeline. The project is slated for completion at the end of December (GD 5/16).

Kern River is proposing to construct a meter station at Kramer Junction, with primary firm delivery of up to 500 million cfd. Such new capacity, the pipeline said, is reserved to facilitate a reduction in the facilities otherwise required for [Kern River's] planned 2003 Expansion Project. To do so, Kern River will allow existing 2002 and 2003 expansion project shippers to acquire capacity at the Kramer Junction in return for relinquishing equivalent firm delivery entitlements at the Wheeler Ridge, which interconnects with SoCal Gas.

To maximize the reduction of design requirements and associated costs in its 2003 expansion project, Kern River said it will allocate capacity at Kramer Junction as follows: Capacity will be allocated to any shipper requesting delivery point entitlements to be re-aligned from Wheeler Ridge to Kramer Junction under certain conditions; Capacity will be allocated pro rata among shippers that have no excess entitlements but request to replace Wheeler Ridge entitlements with Kramer Junction entitlements; and Available capacity will be allocated pro rata among shippers that have excess entitlements and request to replace Wheeler Ridge entitlements with Kramer Junction entitlements. Uncommitted Kramer Junction capacity will be made available to all shippers on a first-come, first-served basis, with requests made no earlier than 25 days before the delivery point is in service, Kern River said. In addition, capacity at Kramer Junction delivery point that is committed to the Kern River 2002 or 2003 expansion projects in this request process will also be available on a first-come, first-served basis.

Interested parties should contact Jeff Leishman at 801-584-6682. VK

Attached is an ACR issued today requesting comment on the Rate Agreement reached by the CPUC and DWR (which I will send under separate cover). The ACR highlights certain aspects of the Agreement and asks for parties to evaluate the

effects of the Agreement and indicate what they believe the consequences of its adoption would be. Comments are due by August 1st.

The Agreement itself basically calls for DWR to set its revenue requirement based on "Bond Related Costs" and "Operating Expenses" and for the Commission to implement such revenue requirement. It is up to DWR to determine whether the revenue requirement is just and reasonable prior to submitting it to the Commission.

Please let me know if Enron is interested in Commenting on the Agreement.

Jeanne Bennett

From: Wong, John S. [mailto:jsw@cpuc.ca.gov] Sent: Wednesday, July 18, 2001 10:11 AM Subject: ACR Inviting Comment On DWR/CPUC Proposed Rate Agreement

Attached is an assigned Commissioner ruling (ACR) inviting comment on the proposed rate agreement between the California Dept. of Water Resources and the California Public Utilities Commission. Interested parties may file comments with the Docket Office on or before August 1, 2001.

Please note that there are three attachments to the ACR. Attachment A, the proposed rate agreement, is being forwarded to you as a separate PDF document. Attachment B, the relevant Water Code sections, is contained in the body of the attached Word document. Attachment C is the two page letter from the DWR, the Dept. of Finance, and the Treasurer's Office to President Lynch dated July 2, 2001. Attachment C was previously distributed to the A.00-11-038 et al service list in the Chief ALJ's ruling dated July 5, 2001. Today's ACR and all three of the attachments can also be accessed at the CPUC's web site.

Tom, Kari Dohn has agreed to speak at our March 11, 2001 dinner. Thank you very much for your help. I look forward to seeing you in Sacramento on March 11, 2001. Thanks, again. Patricia.

-----Original Message-----

From: TRiley@enron.com [mailto:TRiley@enron.com] Sent: Tuesday, February 13, 2001 4:13 PM To: Patricia Linn Cc: MCurtis@enron.com; Jeff.Dasovich@enron.com Subject: RE: Top Level Energy Person

Patricia,

Good hearing from you.

From our contact with the Governor's office, we feel Kari Dohn, formerly in the Governor's office, and recently appointed Chair of the Electricity Oversight Board, would be an ideal candidate.

Kari would likely be most receptive if the request came from the CSU. You can tell her she was referred to you by Jeff Dasovich of Enron. Kari's number is 916-324-3501.

Let me know if there is anything else we can assist you with. I look forward to seeing you in Sacramento next month!

Regards,

Tom Riley

From: "Patricia Linn" <plinn@calstate.edu>@ENRON@EES Sent: Wednesday, February 07, 2001 2:13 PM To: <tom.riley@enron.com> Subject: Top Level Energy Person Importance: High

Greetings Tom, in preparation for our upcoming Board of Governors' meeting, I would like to ask you for your help in getting a speaker for the evening. The March 11 (Sunday) Board meeting in Sacramento is focused around CSU Legislative Day scheduled for Monday, March 12. The Board meeting is scheduled to begin at 4:00 pm followed by a dinner. We will invite the CSU Trustees to attend the dinner along with other key CSU leaders; we normally have about 30-40 individuals attend the dinner.

This year, we would like to invite someone from the Governor's office to come and talk a little about the energy crises in California. Can you help us identify someone in Davis' administration that may be interested in speaking to this distinguished group of individuals?

Again, briefly, Meeting date/time: Sunday, March 11, 2001 at 4:00 pm; dinner is scheduled for 6:45pm; in Sacramento.

I look forward to hearing from you soon.

Patricia Castillo Linn, CFRE Senior Director, Advancement Programs and Vice President, CSU Foundation The California State University Office of the Chancellor 401 Golden Shore, 6th Floor Long Beach, California 90802-4210 562/951-4821 562/951-4983 FAX

| Sender     | rebecca.cantrell@enron.com                                                                           |
| Recipients | ['susan.mara@enron.com', 'steve.walton@enron.com', 'ray.alvarez@enron.com', 'alan.comnes@enron.com'] |
| File       | dasovich-j/all_documents/13470.                                                                      |

Another gas item which I had not gotten around to adding to the table yet:

Docket No. CP01-106 Response to Kern River Petition for Declaratory Order Due: June 11 (?) Affects the California Emergency Project to add 135 MM/d of capacity approved by FERC on April 6 with an expected in-service date of July 1, 2001. On April 5 SoCal Gas notified Kern River that, pursuant to the terms of a 1989 agreement between them, SoCal Gas was entitled to first rights, and was asserting such rights, on this or any capacity expansions into California on Kern's system. We will support Kern River's petition. Comments are being drafted. SoCal Gas has asked FERC not to approve the shortened comment period of June 11; FERC has not responded yet.

Subject: FW: Calif Gov To Make 'Important' Energy Announcement Thurs

-----Original Message----- From: Luo, Jay Sent: Wednesday, April 04, 2001 8:05 AM To: RRQ Revenue Requirements Department Cc: Hapner, Dede Subject: Calif Gov To Make 'Important' Energy Announcement Thurs Calif Gov To Make 'Important' Energy Announcement Thurs LOS ANGELES (Dow Jones)--In a highly unusual move, California Gov. Gray Davis Tuesday requested radio and television stations in the state to clear five minutes of time Thursday evening so he can make an important announcement regarding the state's energy crisis. Davis is expected to deliver a speech at 6:05 p.m. PST and will likely talk about the state's conservation efforts, a 4,000 megawatt shortfall expected next month, the need to bring new

generation online, recent rate hikes ordered by the California Public Utilities Commission, and the possibility for further rate increases this summer to keep the state's three investor-owned utilities solvent, sources close to Davis told Dow Jones Newswires. The source said Davis is not expected to discuss a final agreement to buy the power lines owned by PG&E Corp., unit Pacific Gas & Electric, Edison International's unit, Southern California Edison, and Sempra Energy's unit, San Diego Gas & Electric. Davis' press secretary, Steve Maviglio, would not comment on Davis' speech. In a memo to the media, Davis' office said the governor will "deliver an important live address on energy from his office in Sacramento. During this historic address to the people of California, the governor will speak in detail about California's energy emergency and make an important announcement." The last time a California governor interrupted a broadcast schedules was in 1992, when Republican Gov. Pete Wilson delivered a speech about the state's budget problems, a spokesman in Davis' office said. But Davis' staff said "this is the first time in recent memory that a Governor has asked for time statewide to deliver a live address to the people of California." -By Jason Leopold; Dow Jones Newswires; 323-658-3874;

Great. Thanks. I intended, and will be sure, to include Karen on the stuff that I pull together today. Karen, if there's anything else I need to do to coordinate.

Best, Jeff

Subject:

Ken Lay spoke with several California CEOs this morning and urged them to get personally involved in pushing for a comprehensive set of reforms. Three expressed willingness to help.

Scott McNealy (Sun): contact person - Piper Cole (piper.cole@sun.com); scott.mcnealy@engeng.sun.com. Mcnealy wants, by close of business today, a "cheat sheet" of the talking points to use with politicians (the "8 or 10 elements of the

solution") with the expected comeback he may hear from the political leaders and our response to that comeback. He says he hasn't spent time working on issues in Sacramento so we may also want to include a list of suggested contacts. Kevin Sharer (Amgen): contact person - Sarah Jensen, VP of Engineering and Operations (805.447.6785); ksharer@amgen.com. Sharer wants the same information as McNealy and he and McNealy both indicated their willingness to call a meeting of other California CEOs. Sharer will also be having breakfast with Hertzberg one week from today. Robert Day (Trust Co of the West): said that he is very close to the mayor of Los Angeles. He urged Ken to call the mayor (mentioning Day). Ken would like some talking points for that call.

Jeff - please put these items together.

FERC Judge Rips Calif, Generators; Demands Sales Data

06-29-01??06:05 PM EST ??by?Bryan Lee ??]?Of DOW JONES NEWSWIRES WASHINGTON -(Dow Jones)- The U.S. Federal Energy Regulatory Commission judge overseeing settlement talks between California and power sellers ripped into both sides Friday in an effort to spur progress in the moribund negotiations, according to sources. "It's fair to say that everybody got their rap on the knuckles," said one source. Curtis Wagner, FERC's chief administrative law judge, read a statement during the confidential settlement negotiations dressing down California regulators and market institutions for a lack of political independence. Wagner, in what one source described as a "tirade," complained that the California Independent System Operator's politically appointed board, headed by Michael Kahn, lacks necessary independence as a market institution. Further, Wagner complained that the California Public Utilities Commission and investor-owned utilities in the state were deferring too much to the politically compromised Kahn in negotiations. The lack of independence was such a "joke" that the parties might as well wear "clown suits," Wagner said, according to those familiar with his comments. However, Wagner didn't spare the power providers from strong criticism. He took generators to task for exercising market power and deriving obscene profits, the sources said. Sources described the incident as perhaps a ploy by Wagner to jump-start the fast-track settlement talks, scheduled to conclude July 9. California Gov. Gray Davis is demanding nearly \$9 billion in refunds for power sales in California during the past year. As the negotiations got underway Monday, Wagner dismissed that amount as too high, suggesting a more reasonable figure of between \$1 billion to \$2.5 billion. However, California ISO Chairman Kahn has held fast to Davis' demand for \$9 billion. Wagner instructed the negotiating parties to work during the weekend to develop concrete figures on power sales, revenue, costs and proposed refund amounts for his consideration on Monday, according to the sources. -By Bryan Lee, Dow Jones Newswires; 202-862-6647; Bryan.Lee@dowjones.com (This story was originally published by Dow Jones Newswires) ?

PR01: 174 FOR IMMEDIATE RELEASE 04/26/2001

GOVERNOR DAVIS SIGNS EXECUTIVE ORDERS TO PROVIDE POWER TO CALIFORNIA SACRAMENTO Governor Gray Davis has signed three executive orders to increase stabilization, conservation and generation of power in California. Executive Order D-34-01 Many numerous and complicated statutes, regulations, policies and procedures are delaying deployment of the energy conservation funding outlined in SB 5X and AB 29X signed by the Governor two weeks ago. Executive Order D-34-01 will speed up implementation of the measures. Together, the two bills provide over \$850 million for energy conservation and distributed generation programs designed to save over 2,000 megawatts this summer. With the Executive Order, the Energy Commission will not have to go through the cumbersome process of guideline adoption to approve funding. The programs in the demand reduction program that will be streamlined included: Public Agency Loans and Grants (ECAA); Time-Of-Use and Real-Time Meters; Municipal Program; and Cool Roofs/Building Materials Executive Order D-33-01 Governor Davis signed Executive Order D-33-01 to extend the conservation rebate of the "20/20" program to the customers in the territory serviced by the San Diego Gas and Electric Company. The program is designed to help the state avoid the likelihood of blackouts this summer and reward consumers who significantly conserve energy. In addition, it could save the state up to \$1.3 billion in power costs by reducing the amount of electricity the state must buy during expensive summer peak periods. Executive Order D-32-01 In Executive Order D-32-01, Governor Davis orders the transfer of funds from the Energy Commission to the Department of Water Resources for implementation of the power plant construction incentive program. Incentives will include: \$5,000 per megawatt (MW) of average electrical output on the first 100 MW and \$2,500 per MW for each MW above 100 MW, if brought on-line by July 1, 2001; \$4,000 per MW of average electrical output on the first 100 MW and \$2,000 per MW for each MW above 100 MW, if brought on-line between July 2, 2001 and August 1, 2001; and \$3,000 per MW of average electrical output on the first 100 MW and \$1,500 per MW for each MW above 100 MW, if brought on-line between August 2, 2001 and August 31, 2001.

| File       | dasovich-j/all_documents/10319.                        |

SD only is fine. I think we need to get in DeeDee Alpert's hands (Sen SD). Can you please get with Jeff Dasovich on how we do that? ----- Forwarded by Eric Letke/DUB/EES on 03/22/2001 11:53 AM

Peggy Mahoney 03/22/2001 11:32 AM To: Eric Letke/DUB/EES@EES cc: Max Eberts/HOU/EES@EES Subject: Re: public relations with Helix?

ok, but lets just release in San Diego. If your strategy is the legislature, as well as future sales, lets also say we are announcing our 100th agreement this year or something like that. Peggy

Max - can we see a draft by Fri at 12:00pm?

Eric - what number customer are they?

Thanks Peggy

Eric Letke 03/22/2001 08:47 AM To: Peggy Mahoney/HOU/EES@EES cc: Subject: Re: public relations with Helix?

I would like this to be visable (i.e., something we can point to with the legislature). I see your point but more than likely, if we ever source some customer's from SDG&E, it will be a select group. I firmly believe if we ever made a decision to source all of the customer's from SDG&E, it would be because we have choosen to leave CA.

I am willing to take a chance with this one. Your thoughts? ----- Forwarded by Eric Letke/DUB/EES on 03/22/2001 08:44 AM

---

Peggy Mahoney 03/21/2001 07:29 PM To: Eric Letke/DUB/EES@EES cc: Max Eberts/HOU/EES@EES Subject: Re: public relations with Helix?

As much as I want to do this, I am concerned about making a public statement in light of potential future changes. How about a customer testimonial that sales could use?

Peggy ----- Forwarded by Peggy Mahoney/HOU/EES on 03/21/2001 07:27 PM -----

Lyle White 03/19/2001 09:57 AM To: Peggy Mahoney/HOU/EES@EES cc: Subject: Re: public relations with Helix?

We have a fixed price contract for 6 years and 8 months with Helix Water District.

The fixed price contract avoids California price volatility and insures budget certainty for Helix. Helix strongly believes in direct access.

The contract is for 12 million kilowatt hours per year.

I will have total annual dollar and total contract value this Thursday. There is a new facility being added this summer that will expand the totals.

Helix serves the San Diego suburbs of La Mesa, El Cajon, and Spring Valley.

They are going to announce our agreement at their board meeting this Wednesday, March 21st.

After that announcement, the are willing to proactively participate in a press release expounding the benefits of our arrangement.

### SB 1x passes the Senate

|            |                                                                        |
|------------|------------------------------------------------------------------------|
| Sender     | cmicheli@carpentersnodgrass.com                                        |
| Recipients | ['steven@iepa.com', 'smccabe@mccabeandcompany.net', 'smara@enron.com'] |
| File       | dasovich-j/notes_inbox/3565.                                           |

SB 1x passed the State Senate late this afternoon by a vote of 25-12. Senator Soto spoke in support arguing that the money should be returned to taxpayers.? The flate rate of the refundable tax credit will be determined by the FTB.? Senator Scott said that FERC has failed to act.? This bill will regulate the price of electricity in CA.? He said that the PUC will be allowed to review and adjust the base price for the tax, and that the PUC could allow additional exemptions (is this an unconstitutional delegation of authority?).? Also, a long-term contract arrangements are exempt from the bill. Senator Morrow spoke in opposition.? He said that the bill is not about relief.? Rather, it redistributes wealth and should be changed to refund the money to consumers. Senator Battin spoke in opposition.? He cited the planned Intergent plant in North Palm Springs.? THis bill does not solve the crisis.? It just discourages generators from building in this state. Senator Dunn said that emergency steps must be taken and that he supports this bill.? Otherwise, CA's wealth will go out of the state, primarily to Texas. Senator Polanco spoke in support and said that ratepayers are being gouged.? Billions in profits have been reaped by generators. Senator McClintock spoke in opposition and said that power plants are not being built here and that this bill will stop the construction of plants in CA. Senator Peace spoke in support and said that FERC has failed to enforce the law. Senator Perata spoke in support and said that generators have gotten caught red-handed and now need to pay a penalty. Senator Haynes spoke in opposition and said that the constitution will be violated by this bill

and that companies will sell to other states, rather than California.

Senator Bowen spoke in support of the bill.? She asked why we should have the welcome mat out to CA when these companies are charging 300% more in their prices then just a year or two ago.? She also indicated that the Legislative Counsel has given them an opinion that this bill is constitutional because it only applies to the electrons flowing into the state.? Whatever that means? No Republicans voted for the bill.? No Democrats voted against it.? Final vote was 25-12. However, if the Assembly or Senate adjourns the Special Session without passing this bill and/or AB 128x, then both measures will die.

To: Steven J Kean/NA/Enron@Enron cc: Charlene Jackson/Corp/Enron@ENRON, Celeste Roberts/HOU/ECT@ECT, Vince J Kaminski/HOU/ECT@ECT, Ashley Baxter/Corp/Enron@Enron Subject: Presentation to faculty and students at Berkeley

Steve,

I am a lead recruiter at the University of California at Berkeley for Enron Analyst/Associate program.

I contacted several friends who work at Berkeley and received an invitation from one of them to make a presentation at the weekly Faculty Seminar of the Dept. of Industrial Engineering and Operations Research.

The students and faculty members from the business school will be also invited.

Berkeley in general, and Department of Industrial Engineering and Operations Research in particular, are important centers of academic research on electricity markets (S. Oren works very closely with Severin Borenstein).

My presentation will focus on the Analyst/Associate program. I shall also have an opportunity to discuss the power markets in California (I expect many questions) before many experts who are very important to shaping public opinion and regulatory agenda.

Please, let me know who in you group could help me in preparing this presentation and in presenting Enron's point of view in a more effective way.

Vince

FYI. The name of my friend who invited me:

Shmuel S. Oren, Professor Dept. of Industrial Engineering and Operations Research 4117 Etcheverry Hall University of California Berkeley, CA 94720-1777

PLEASE FORWARD TO INTERESTED FOLK...

Business and the Environment Day at UC Berkeley April 19th -

Seating is limited for all events - Come Early! Free admission

12:45-2:00 pm: Second Annual Haas Earth Day Lecture on Business and the Environment Amory Lovins, CEO (Research), Rocky Mountain Institute "Natural Capitalism: The Next Industrial Revolution" Introduction by Dean Laura Tyson Wells Fargo Room, Haas School of Business at UC Berkeley

Amory Lovins, co-author of Natural Capitalism, will discuss how changes in natural capital (the natural environment and ecosystems that support all human and economic activity) are already affecting the way we do business, and how leading corporations are gaining competitive advantage through superior environmental performance. He will talk about how corporations can employ advanced resource productivity strategies to move toward becoming ecologically sustainable, reduce environmental impact, and improve the bottom line.

Mr. Lovins is the co-founder and CEO (Research) of Rocky Mountain Institute (RMI), a nonprofit organization that assists businesses, communities, and governments to create more wealth and employment, protect and enhance natural and human capital, and increase profit and competitive advantage through resource and operational efficiency. The Wall Street Journal named Mr. Lovins one of 39 people world-wide "most likely to change the course of business in the '90s"; Newsweek has praised him as "one of the Western world's most influential energy thinkers"; and Time recognized him with one of their Hero of the Planet awards.

Sponsored by the Haas School of Business and Net Impact at Haas For more information, contact Eric Strand at strand@haas.berkeley.edu

3:00-5:00 pm: Energy and Resources Group Energy Forum Dr. Severin Borenstein, UC Energy Institute Prof. Richard Norgaard, Energy and Resources Group, and others "Re-De-Regulation: Planning, Learning, Blundering and the Future of Electricity in California" Sibley Auditorium, Bechtel Engineering Center

Sponsored by the Energy Resources Group, UC Berkeley

6:00 - 8:00 pm: Ninth Annual ERG Lecture on Energy Dr. Arthur Rosenfeld, California Energy Commission Sibley Auditorium, Bechtel Engineering Center

Dr. Rosenfeld, UC Berkeley Professor Emeritus in Physics and in the Energy & Resources Group, is a present member of the California Energy Commission. His work on energy efficiency is widely recognized as the standard against which other studies are judged.

**Update on California Legislation---Afternoon of 07.16.01**

|            |                                                                             |
|------------|-----------------------------------------------------------------------------|
| Sender     | jeff.dasovich@enron.com                                                     |
| Recipients | ['richard.shapiro@enron.com', 'skean@enron.com', 'james.steffes@enron.com'] |
| File       | dasovich-j/all_documents/28771.                                             |

Here's the latest that we have on the legislation ("82XX") released on Friday. The Assembly Energy Committee will hold an "informational" hearing on 82XX at 1:30 PM PDT today. "Informational" means that there won't be a vote today. Attended a meeting this morning with the business groups with Assemblyman Dutra (self-proclaimed pro-biz Democrat, who's an "author" of 82XX), Hertzberg's chief staffer, and Hertzberg's outside legal consultant. The DWR contracts continue to be the roadblock to a rational solution. Dutra is unhappy with the process thus far----claimed he wasn't familiar with the "more recent version" of the bill, and was unhappy that there would be a hearing today---informational or otherwise--before he and the bill's other authors had agreed to final language from their perspective. Dutra said that he was working to remove the Direct Access suspension and asked the biz groups to hold their fire until the amendments come out tomorrow. PUC President Lynch continues to oppose striking a deal in which the Commission gives up all review of DWR's "revenue requirement" and simply flows all DWR costs through rates (but Davis and his administration are putting her under enormous pressure to buckle under and agree). As a result, details of any "rate agreement" between DWR and the CPUC, and any public announcement by DWR of its "revenue requirement" is could be postponed until next week, unless there's a breakthrough with Loretta. The Governor's consultants now claim (and will reportedly testify at the hearing today) that there is enough room in the 3 cent rate increase to cover both Edison's and DWR's revenue requirements. (They cite lower gas prices and FERC's price cap as the driving force for the newly-found headroom, though many remain very skeptical.) However, if the deal is applied to PG&E, it is unlikely that the 3 cent rate would be sufficient, according to the same consultants. The plan (at this point) is to have the bill--with amendments--discussed in the same committee tomorrow, and voted out of the committee. The bill would then be taken to the full Assembly for an up or down vote on Wednesday. It is unclear whether, at this point, there is agreement among Assembly Democrats to vote the bill out of the full Assembly on Wednesday. In addition, Senate Democrats continues to work on their own version of an Edison "MOU," and the working relationship between the Assembly side and the Senate side appears strained. The Republicans in the Assembly are staunchly opposed to 82XX and are generally being ignored by the Democrats, since the Democrats need no Republicans to get a majority vote to pass bills. Meanwhile, Edison continues to twist.

Will report back after the 1:30 hearing today.

If anyone has questions, don't hesitate to contact me by pager @ 888.916.7184.

Best, Jeff

#### [RESEND] INVITATION - SVMG April Breakfast Club, April 24, 2001

|            |                                 |
|------------|---------------------------------|
| Sender     | landrade@svmg.org               |
| Recipients | ['landrade@svmg.org']           |
| File       | dasovich-j/all_documents/11030. |

Apologies, in case you have previously received and responded to this message. -M

+++++ Dear Silicon Valley Breakfast Club Member:

Please plan to join us for the April meeting of the Silicon Valley Breakfas= t Club, scheduled for Tuesday, April 24, from 8:15am until 10am, hosted by EPRI in their Cafeteria located on their campus at 3412 Hillview Ave in Pal= o Alto. Our host requests attendees please park in the parking lot above Building 1.

Our speaker this month is Bob Therkelsen of the California Energy Commissio= n (CEC). Bob Therkelsen is the Deputy Director for the Systems Assessment an= d Facilities Siting Division at the CEC. He manages the staff and programs

responsible for carrying out the Commission's energy facility siting and compliance monitoring functions. Mr. Therkelsen has worked at the Energy Commission since 1975 as a technical expert, project manager, supervisor, and manager. Prior to joining the Energy Commission, he worked as a wildlife ecologist and environmental consultant. Mr. Therkelsen has a Bachelors of Science in Biological Science from the University of California= a at Irvine and a Masters of Science in Ecology from the University of California at Davis. Mr. Therkelsen will brief us on the ten generation facilities that have bee= n approved during the past 18 months and where each is in the construction process, and the 14 generation facilities currently working through the CEC process. Everyone agrees this new generation is a key part of the long-ter= m solution to the energy crisis. Don't miss this presentation on major generation facilities and how quickly each will come on-line!

The Silicon Valley Breakfast Club is a monthly gathering of District Staff Members from State and Federal offices and Member Company representatives o= f the Silicon Valley Manufacturing Group (as well as representatives from our Chambers of Commerce and other top trade associations representing our region). Each month=01,s meeting starts with a half-hour of coffee and conversation, followed by a top speaker on a topic of interest to everyone, and then a roundtable discussion of the hot issues being discussed in your offices in both Sacramento and Washington. Please mark your calendars for the fourth Tuesday of each month from 8:15 a.m., until 10:00 a.m., and pla= n to join us. Locations vary as each month is hosted by a different employer or association.

So that we can plan accordingly, please call the Manufacturing Group office= s at 408-501-7864 to confirm your attendance no later than Thursday, April 19= , or you can e-mail your response to landrade@svmg.org.

For directions to ERPI please access our Breakfast Club web page at [http://www.svmg.org/protected/bfast\\_club/index\\_f.htm](http://www.svmg.org/protected/bfast_club/index_f.htm). When the dialog box pops up, please enter the following:

user: breakfast  
passcode: breakfastmember

We look forward to seeing you on Tuesday morning, April 24th!

Here's what I heard on the D.C. call today re: the Senator Lieberman hearings:

June 13--6 witnesses consisting of: (1) 4 of the 6, pro-price cap economists; and (2) 2 anti-price cap economists. June 20--FERC Commissioners and Gov. Davis.

-----Original Message-----

From: Comnes, Alan Sent: Monday, June 11, 2001 1:33 PM To: Alonso, Tom; Alvarez, Ray; Badeer, Robert; Belden, Tim; Calger, Christopher F.; Dasovich, Jeff; Driscoll, Michael M.; Fischer, Mark; Foster, Chris H.; Guzman, Mark; Heizenrader, Timothy; Kaufman, Paul; Mainzer, Elliot; Mallory, Chris; Mara, Susan; Motley, Matt; Perrino, Dave; Platter, Phillip; Richter, Jeff; Scholtes, Diana; Swain, Steve; Swerzbin, Mike; Williams III, Bill; Wolfe, Greg Cc: Steffes, James; Sharma, Ban; Briggs, Tom; Shelk, John Subject: Additional FERC Actions Likely On MONDAY Importance: High

FERC has set a meeting for Monday18 June 10 am PDT wherein it has noticed its California and WSCC-wide dockets. The meeting has been timed in advance of congressional hearings (by Senator Joseph Lieberman) that were set for later in the week.

Expect FERC to respond to intense political pressure to expand its current price mitigation measures, possibly to a WSCC-wide scope or to all hours, or both.

As far as I know Hebert is still President of the FERC, which would speak to less intervention rather than more.

We will forward information as we learn it.

Alan Comnes

US FERC To Meet June 18 On Western US Electricity Prices

06/11/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

WASHINGTON -(Dow Jones)- The U.S. Federal Energy Regulatory Commission has scheduled a special meeting June 18 to address pending matters involving electricity markets in California and neighboring Western states.

The commission's meeting notice provides no details, except to list for discussion four cases involving price mitigation in, and the structure of, volatile power markets in California and 10 other Western states.

The meeting comes as members of Congress are placing enormous political pressure on the commission to take more drastic action to contain runaway electricity prices in the region.

Last week, House Minority Leader Dick Gephardt, D-Mo., joined 21 Western-state congressional lawmakers to request an opportunity to appear before the commission to argue their case for cost-based price controls in the region's electricity markets.

"At least twice, FERC has determined that the Western electricity market is 'dysfunctional' and that prices are 'unjust and unreasonable' under the Federal Power Act. Despite these findings, and contrary to the law, the commission has failed to bring these rates to just and reasonable levels," the lawmakers said in a letter to FERC Chairman Curt Hebert.

| File       | dasovich-j/sent/11838.                                                                                |

It's going to be extremely difficult for anyone who has consumed electricity to avoid paying for it. It will be particularly difficult for Enron to exempt itself from costs incurred by the state on behalf of Enron's customers. Prior to us pushing amendments on this bill, can we discuss on the 11:30 call today. Harry and I have discussed this at length, and I just want to make sure that we don't blow up the whole enchilada by trying to get an amendment here.

Best, Jeff

Harry Kingerski 07/03/2001 09:28 AM

Hedy, Scott, Bev - the language currently says the bond surcharge will apply "to all electric power delivered in California by electric corporations ..." I know this is a longshot, but is there any chance of having this amended to either

1) exclude volumes under DA contracts as of the effective date of this act, or 2) more generally leave it to the PUC to adjust the surcharge for customer classes based on their contribution - or lack thereof - to DWR's purchasing requirements.

The justification for this exemption is grounded in excluding customers who have not caused the DWR problem; e.g. large San Diego customers or PGE/SCE customers who have been DA the last couple years or parts thereof. (We can give you some specific language.)

Hedy or Scott - could you please call me when you get in - 713 853-5786. Thanks.

Hedy Govenar <hgovenar@govadv.com> 07/02/2001 06:51 PM

Senator Burton's office expects bond language back from Legislative Counsel sometime tomorrow, Tuesday. As soon as we get a copy we will forward it. If the language is acceptable to Enron, then Bev, Scott and I need to visit with Republicans to urge their support as soon as possible. We are continuing to coordinate with the big users and some other suppliers on this issue.

| Recipients         | ['evmba_social@haas.berkeley.edu', 'admittedf01evmba@haas.berkeley.edu'] |
| File               | dasovich-j/all_documents/13085.                                          |

Fellow Evening MBA Students (old and new),

Cindy Best and I would like to introduce ourselves as your new Social Chairs for the Evening MBA Association. Now that we've all survived the latest year (or the application process for you new Admits), it's time to PARTY!! The title "Summer Vacation" lost its meaning to most of us once we got "regular" jobs. We're going to bring that feeling of summer vacation back to you - even if you are working full time. We're going to organize for you and your families many events during the summer to help you make the most of your "vacation".

For those not able to commit any serious blocks of time to your fellow classmates, we will be organizing monthly happy hours at different locations around the Bay Area for brief but fun gatherings. The locations are not yet set, and we welcome any suggestions you may have for meeting places. The dates will be as follows (sorry North Bay - you're just too far out there!):

Date Event Fri 6/08 Happy Hour of the Month in SF - Location TBD Fri 7/06 Happy Hour of the Month in South Bay - Location TBD Fri 8/03 Happy Hour of the Month in East Bay - Location TBD

For those of you looking to broaden your horizons and participate in some real fun activities, we have some trips on the burner such as: a 4th of July fireworks/concert extravaganza at Concord Pavilion, a weekend camping trip, and others. As these events and dates become firm, we will send out more information. We don't want to overload you immediately, after all ... this is your vacation!

Our first event, however, is set and we would like to get some RSVP's of those interested. It's the musical "Oliver" at the top of Mt. Tam Amphitheatre on Sunday, June 17th. This is an outdoor summer performance and an all day event where you pack in your own lunch and enjoy the musical in a relaxing Sunday afternoon. This is a great way to spend Father's Day with your family! Concert-goers are bused in from parking lots near the 101 in Mill Valley. At the end of the day, the event organizers will either bus you directly back to your car, or take back all your gear for you, which frees you up to hike down Mt. Tam (optional). At the end of your optional hike, the buses pick you up from the end of your hike and take you back to your car and gear. It is a great summer event which takes full advantage of living in SF with your classmates and families. If you want to check out more information on it, the website for it is [www.mountainplay.org](http://www.mountainplay.org) and the number to buy

tickets is(415) 383-0155.

Cost: \$24/adult; \$17/junior(age 4-17) Car Pool RSVP: send an email to Tony by June 8th (tai@haas.berkeley.edu)

To minimize complications in purchasing and delivering tickets, you will need to purchase tickets individually. We recommend purchasing the tickets no later than next week. Please RSVP with your interest and if you are interested in car pooling, indicate your location. We will follow up with additional details, which are dependent on the group size.

Well, let the summer fun begin!! Look forward to hearing from you.

Cindy Best and Tony Tai

### Proposal for Transition to New Default Service Provider

|            |                             |
|------------|-----------------------------|
| Sender     | mona.petrochko@enron.com    |
| Recipients | ['west.ga@enron.com']       |
| File       | dasovich-j/notes_inbox/484. |

Sue and I attended an ARM meeting on Friday in which we focused on default provider role for the utilities. The outline of the proposal is attached. As SDG&E (and believe it or not, PG&E) have indicated an interest to be a wires only company, the structure proposed for default provider may have some potential. Essentially, it is modeled after the gas industry:

1. No utility default for large customers (need to define, 50 kW and above?); UDC provides a PLR role only. 2. Default for res and small commercial is a fixed price. Utility has unlimited ability to hedge. No ex-poste reasonableness review. 3. Create a phase-in for competitive default provider.

What it does:

1. Creates a more competitive environment for large C&I. (EES) 2. Provides stability for res/commercial with a transition period to full competition. (ENA) 3. Provides the utility with more certainty around regulatory treatment (live and die by the fixed price) 4. May also provide a mechanism for limiting exposure for SCE & PG&E for uncollectibles, going forward. Does not solve existing balance. Needs further discussion.

Please review and comment. This is a strawman. May be useful in our strategy development.

Mona

10:15 AM -----

"Leslie, John" <jleslie@LUCE.com>@LUCE.com> on 09/18/2000 10:01:35 AM Sent by: "Johnson, Roseann" <RJohnson@LUCE.com> To: "ARM Members (E-mail)" <ARM@phaser.com>, "Leslie, John" <jleslie@LUCE.com> cc: Subject: Proposal for Transition to New Default Service Provider

To ARM Members:

I have enclosed two documents that are based upon our discussions at Friday's ARM meeting. First, I have enclosed a reproduction of the flip-charts that we created during the meeting. Admittedly, these are a bit difficult to understand. Second, I have drafted an outline of the proposal to provide a transition mechanism to bring on new default service providers.

Please circulate your comments on the proposal by Wednesday, September 20.

-John

Be happy to discuss. My preference would be to have a brief call to discuss, since Mr. Filner is on a mission to tan a few hides over the price spikes in S.D. At congressional and FERC hearings in S.D. last week, Mr. Filner called generators and marketers quite a few ugly names, fingered them as the cause for the high prices, and demanded that Congress and FERC make them give all the money back to S.D. consumers. Fairly sensitive item, to put it mildly. I'm at 415.782.7822.

Best, Jeff

Because so many on this list have supported California's energy efficiency investments, I wanted you all to see this important update (and to note my personal appreciation to PG&E for pursuing this issue with skill and diligence at an extraordinarily difficult time):

CONTACT: Peter Miller or Craig Noble at (415) 777-0220

Energy Efficiency Funding Protected in PG&E Bankruptcy Case Public Purpose Programs Essential to Help Keep the Lights on, Says NRDC

SAN FRANCISCO (May 16, 2001) - A judge in San Francisco federal court today ruled that approximately \$260 million that had been tied up in the Pacific Gas and Electric Company (PG&E) bankruptcy proceedings will be released to fund California energy efficiency programs. These funds come from a small surcharge on utility customers' monthly bills and provide desperately needed electricity savings that will help protect the reliability of the state's overstressed power grid, said NRDC (Natural Resources Defense Council).

"This is a victory for California consumers and the environment," said Peter Miller, NRDC senior scientist. "NRDC worked very hard to ensure that the state would make these important energy efficiency investments in the first place."

In a ruling from the bench this morning, Judge Dennis Montali of the U.S. Bankruptcy Court in San Francisco ruled in favor of a motion by PG&E for authority to honor its obligations for public purpose programs. NRDC, Environmental Defense and Utility Consumers' Action Network filed a memo with the court in support of the utility's argument that it is merely a conduit for the public purpose funds and that the funds should be off limits to the utility's creditors. "PG&E is to be

commended for strenuous efforts here in a very good cause," said Ralph Cavanagh, NRDC energy program director.

California has aggressively promoted energy efficiency in buildings and equipment since the 1970s, reducing total peak electricity needs by about one-fifth or 10,000 megawatts (MW). Approximately half of those reductions have come from public purpose programs funded by a small surcharge on bills paid by customers of PG&E, Southern California Edison, and San Diego Gas & Light. Since 1998 alone, these programs have delivered about 500 MW of electricity savings.

"At a time when the difference between an intact grid and rolling blackouts is sometimes measured in the tens of megawatts, energy efficiency clearly represents the fastest, cheapest and cleanest solution to California's electricity dilemma," said Miller.

The public purpose programs provide financial incentives to businesses and consumers to design more energy efficient buildings and to buy energy efficient equipment, such as refrigerators, air conditioners, light bulbs and clothes washers. They also provide funding for investments in renewable energy, low-income energy services, and long-term research and development for clean energy technologies.

The Natural Resources Defense Council is a national, non-profit organization of scientists, lawyers and environmental specialists dedicated to protecting public health and the environment. Founded in 1970, NRDC has more than 400,000 members nationwide, served from offices in New York, Washington, Los Angeles and San Francisco. More information is available through NRDC's Web site at [www.nrdc.org](http://www.nrdc.org).

-----Original Message-----

From: Dasovich, Jeff Sent: Tuesday, June 19, 2001 5:11 PM To: Belden, Tim; Calger, Christopher F.; Steffes, James; Shapiro, Richard; skean@enron.com; Kaufman, Paul; Mara, Susan; Allen, Phillip K.; Yoder, Christian; Hall, Steve C. Subject: Call to Discuss Possible Options to Mitigate Effect of DWR Contracts--Privileged and Confidential Sensitivity: Confidential

PLEASE KEEP THIS NOTE, AND THE INFORMATION CONTAINED IN THE NOTE CONFIDENTIAL.

As folks are aware, we have been engaged in closed-door negotiations for the past two weeks regarding a possible market-based solution to California's electricity crisis. In the room are the major large customer groups, environmentalists, small customers (TURN), Independent Energy Producers, labor, the Western States Petroleum Association, and Enron. The negotiations were convened by the Speaker of the Assembly (Bob Hertzberg). When Hertzberg convened the meeting, he told the parties that he wanted to achieve a core/noncore structure, similar to the structure in place in California's gas market (i.e., large customers are required to buy gas from the market, with Direct Access available to all other customers). In effect, "core" customers (rez and small business) would be served by the utilities' retained generating assets and QF contracts; and large customers would go to market. The core/noncore structure would begin 1.1.03. The negotiating group has struggled over the past two weeks, but is close devising a framework for core/noncore in California (but who pays for the utilities' past debts and the costs of DWR power purchased between January and today remain very contentious). Unfortunately, with the release of the information regarding the DWR contracts last Friday, it is now clear that achieving a core/noncore structure will be very difficult unless something is done to mitigate the contracts. The problem is that, if core is served by utility gen and QFs, and large customers are in the market, there is no (or very little) need for the DWR contracts. Instead, they look like a significant stranded cost. Hertzberg and the negotiating group are looking to

Enron for creative ways to address "the DWR contract problem" in order to prevent the contracts from 1) killing the core/noncore deal and 2) forcing California to accept a structure focused on a state power authority headed-up by David Freeman that does not include Direct Access. Christian Yoder and Steve Hall are reviewing the contracts to analyze any "out clauses" that the buyer and/or the seller might have under the contract provisions. (My cursory review of the contracts suggests that "outs" for the state are minimal or nonexistent.) In addition, we've started batting around ideas about how the State might reform the contracts. All this said, want to let everyone know that we have made it extremely clear that Enron fundamentally opposes any and all attempts to unilaterally abrogate anyone's contract rights.

We'd like to have a quick call tomorrow (30-60 minutes) to brainstorm some options that we can offer Hertzberg to handle the contracts and keep the core/noncore solution alive. We'd like to try to have the the call at 1 PM PDT. Please let me know if this works for you, and if it doesn't, please let me know if there's a time after 1 PM PDT that works for you.

Thanks, Jeff

Hertzberg Press Conference Announcing New FERC Filing

Speaker Hertzberg began by announcing that he had received word that the 9= th=20 Circuit Court of Appeals had rejected the suit filed by Sen. John Burton a= nd=20 the Speaker asking FERC to impose price caps. A story from KFWB radio in L= A=20 said that the 3-0 decision was that the issue "does not warrant interventi= on=20 of this court."=20

The Speaker had received notice just moments before entering the press=20 conference and had no further details, nor had he talked to lead counsel o= n=20 the case.

Today=01,s announcement was regarding a request for rehearing of FERC=01,s= April=20 26 order. He said the genesis for the request came from discussions that= =20 occurred during his trip to DC following the order. Both sides of the aisle= e,=20 he said, indicated that there were opportunities to address what he said= =20 were errors in the original order.

Speaker pro Tem Fred Keeley said these errors included:

The April 26 order finds that wholesale electric rates will not be just an= d=20 reasonable absent commission intervention, but the commission does not=20 demonstrate that the price mitigation it orders will ensure just and=20 reasonable rates; Limiting price mitigation to system emergencies rather than on a 24/7 basi= s; Prices were pegged to the oldest, dirtiest and costliest plants, which=20 continues to allow inappropriately high wholesale prices; There is no relation between costs and pricing; Tying price mitigation to establishing a Regional Transmission Organizatio= n.

This is a request for a "different type" of order that they characterized as a "middle ground" with a "market approach" rather than another request for price caps. He did not elaborate on how the filing takes a market-based approach since it asks for intervention by FERC, but said FERC commissioners had indicated that this would be a more "palatable" approach. Hertzberg added that he had met with Republicans in the House dining room and told them he was not proposing price caps.

Keeley said the April 26 order was a "toothless tiger" that didn't implement penalties for violation. The request for rehearing asks for 100% penalties for any violations.

A copy of the filing and press release have been forwarded to Houston and are also available by contacting Scott Govenar.

#### Fw: CAISO's Grid Management Charge FERC filing

|            |                                                                                 |
|------------|---------------------------------------------------------------------------------|
| Sender     | steven@iepa.com                                                                 |
| Recipients | ['wscobee@caithnessenergy.com', 'wfhall2@duke-energy.com', 'abb@eslawfirm.com'] |
| File       | dasovich-j/all_documents/3550.                                                  |

Attached is the CAISO proposal to FERC seeking approval of its Grid Management Charge (GMC). This charge recovers the CAISO's costs of operation. The CAISO proposes to unbundle the GMC into three cost "buckets," one of which would recover the CAISO's costs associated with Grid Operations (vs. market functions). The Grid Operation costs total approximately \$71 million or 45 percent of total CAISO costs, and would be applied to all load including QF/cogeneration load "behind the meter." If the charge is not/cannot be applied directly to QFs, then it is likely to be passed through to the utilities which will then attempt to recapture the costs from QF/cogenerators.

Recently, IEP distributed an email asking the membership whether anyone was sufficiently concerned regarding this policy and/or the cost impacts to fund IEP's intervention in this matter. We noted that we had been involved over the past year attempting to negotiate a compromise with the CAISO, but to no success. Now, the issue is squarely at FERC. To date, IEP has not received a response to that email.

At this juncture, IEP is not planning on filing a response to the CAISO's GMC filing, other than perhaps a pro forma intervention (1-2 pages) so as to remain a party to the proceeding. An intervention such as this would not entail arguments as to why the CAISO's proposal is wrong and counterproductive. If any IEP member is interested in funding a more active, aggressive intervention opposing the CAISO's filing, please let me know ASAP but not later than Monday, November 20. Interventions are due November 22. "Paper Participation" in this proceeding, excluding any negotiations for settlement/appearances at FERC, etc, could approach \$20,000 in costs.

### CPUC Workshop on 4/17

|            |                                                                                                   |
|------------|---------------------------------------------------------------------------------------------------|
| Sender     | jeffery.fawcett@enron.com                                                                         |
| Recipients | ['ram@cpuc.ca.gov', 'mbaldwin@igservice.com', 'susan.scott@enron.com', 'jeff.dasovich@enron.com'] |
| File       | dasovich-j/all_documents/11097.                                                                   |

Mr. Meyers, I certainly understand and, unfortunately, I suspected as much. I'm sure there are quite a few parties with keen interest in this investigation. Because of flight schedules, the Transwestern contingent may not be able to stay until 4:30 p.m., so I'm not sure I could even commit to a presentation at the end of the day. We'd certainly be happy to be squeezed in during the day if another party's presentation was shorter than expected.

In any event, I was wondering if I might leave behind a copy of TW's presentation for others to take home? Like I said, its chief purpose is to introduce (or for most folks, reacquaint) Transwestern to the stakeholders in this investigation, and to provide specific information regarding its capability to deliver gas to California. Would it be possible to at least acknowledge during the day that our handouts are available to the attendees? We could either pass them out or have them on a table at the back. I'll wait to hear your guidance on the best way to do this.

As I said before, Transwestern is committed to working with the CPUC to fully develop the record and to cooperatively address any and all issues identified in this investigation. If I can be of any further assistance, please let me know.

Thank you.

-----Original Message-----

[mailto:IMCEANOTES+22Myers+2C+20Richard+20A+2E+22+20+3Cram+40cpuc+2Eca+2Egov+3E+40ENRON@ENRON.com] Sent: Friday, April 13, 2001 11:02 AM To: Fawcett, Jeffery Subject: RE: CPUC Workshop on 4/17

Mr. Fawcett, Thanks very much for your offer, but at this point I can't guarantee that you would be able to make a presentation. Virtually all the time has been now taken up by other presentations. There is an outside chance that you could make a 10 minute presentation, either at the very end of the day, or possibly squeezed in at some point during the day if other presentations end more quickly than expected. But I can't assure you that this will be possible. Richard Myers

-----Original Message----- From: Fawcett, Jeffery [mailto:Jeffery.Fawcett@enron.com << File: mailto:Jeffery.Fawcett@enron.com >> ] Sent: Friday, April 13, 2001 8:47 AM To: ram@cpuc.ca.gov Cc: Scott, Susan; Dasovich, Jeff; mbaldwin@igservice.com Subject: CPUC Workshop on 4/17 Mr. Myers, My name is Jeff Fawcett. I am a commercial representative of Transwestern Pipeline Co. and was its witness during the recent GIR proceedings. Given Transwestern's role as one of the principal suppliers of natural gas to the State of California, we are very interested in the

outcome of these proceedings and offer our assistance to the Commission in its investigation. Much has been discussed in the press recently about pipeline infrastructure in California, as well as the upstream capacity of FERC pipes that serve the California marketplace. I know there is much to be covered in the 4/17 workshop. However, if the schedule permits, Transwestern would like to offer a brief overview of its delivery system to California and its view of the key issues the Commission and stakeholders face as the investigation moves forward. TW's presentation should take no more than 10-15 minutes. Please let me know if the Energy Division would like TW to make such a presentation and, if possible, approximately what point during the 9 -4:30 session Transwestern will be invited to step forward. I'm available by return email or you may reach me by telephone at 713-853-1521. Thank you.

#### Federal Agencies Gear Up Hydro System to Meet Demand

PORTLAND, Ore., Dec. 8 /PRNewswire/ via NewsEdge Corporation - Due to an impending power shortage, federal agencies will increase generation at nearly all of the federal dams. This may cause some projects to operate outside the limits of the biological opinion under the Endangered Species Act as additional water is released for generation from upstream reservoirs, the Bonneville Power Administration said today.

The announcement came following a call by the Regional Emergency Response Team and Northwest governors for conservation of electricity when arctic air invades the Northwest beginning this weekend. The team comprises Northwest utilities, the Northwest Power Planning Council and representatives of the four Northwest states.

BPA officials said that this step must be taken in order to ensure that heavy demand for electricity can be met in the region through next week. Forecasters are predicting freezing temperatures on both sides of the Cascades. BPA supplies about 40 percent of the region's electricity, most of it generated at dams in the Columbia River Basin.

"Utilities in the region have assessed their generating inventories and determined that the region is clearly short of energy and in an emergency status," Delwiche said. "The BPA and other utilities must take extraordinary steps immediately to avoid potentially severe shortages next week."

Water is stored in reservoirs behind upstream dams and released in the spring to assist downstream migration of juvenile salmon. BPA manages the storage to ensure that enough water is available to both meet electrical generating requirements and flows for salmon. BPA has the authority to exceed guidelines of the biological opinion under emergency conditions.

"It is very important that everyone - residential and commercial consumers and industries -- do what they can to cut back on their use of electricity during this cold snap," said Greg Delwiche, BPA's vice president for generation supply. "Every kilowatt hour saved now means less need to draw water from the reservoirs."

SCE and Governor Reach Agreement on Plan To Restore Utility To Financial Health

PR Newswire 04/09/01, 7:02p (Copyright , 2001, PR Newswire)

ROSEMEAD, Calif., April 9 /PRNewswire/ -- At a joint press conference today with Governor Gray Davis, Edison International Chairman, President and CEO John E. Bryson announced agreement on a plan to restore Southern California Edison to financial health.

"This negotiated resolution with the Governor is far preferable for our company and our employees and for our customers than is going into bankruptcy," said Bryson.

"Through difficult negotiations over many weeks," Bryson noted, "we believe we have achieved a practical approach. Our customers and the state's economic vitality will benefit greatly from a financially healthy utility which can retain experienced and skilled employees and can invest the billions of dollars needed to maintain a sound electric infrastructure system.

"The blunt reality remains that we in California face a large challenge in restoring overall stability to the California electric system," Bryson said. "Our employees at Edison can make a large difference in helping to meet that challenge. Vital work remains to be done with the Governor, the Legislature, the California Public Utilities Commission, and other policymakers, but this agreement is a large first step toward restoring stability for much of Southern California."

Today's more detailed agreement follows the framework announced in a February 23 preliminary agreement with the Governor. It was approved by the Edison International and SCE boards of directors this morning. Implementation will require further action by the California Legislature and the state Public Utilities Commission. Both Governor Davis and Bryson have urged swift action by both bodies.

Major terms of the agreement include:

???-- The state will receive a primary utility asset -- SCE's 12,000-mile ??????transmission system. ?SCE employees will operate and maintain the ??????system through a contractual arrangement with the state.

???-- Edison International and SCE commit to no less than \$3 billion of ??????capital investment in utility infrastructure over the next five years.

???-- For the next 10 years, SCE will sell the output from its power plants ??????under cost-based, rather than market-based, pricing.

???-- For the next 10 years, Edison Mission Energy's unregulated Sunrise ??????power plant will sell its output exclusively to California under ??????cost-based pricing.

???-- SCE agrees to forego development of 20,000 acres of its Big Creek and ??????Eastern Sierra hydroelectric properties and grants conservation ??????easements in perpetuity to the state for land and habitat preservation ??????on these properties.

???-- SCE will gain a means of repaying the debt it incurred buying power for ??????its customers during the current rate freeze.

???-- Upon implementation of this agreement by the Legislature and CPUC, SCE ??????will drop its lawsuit against state regulators.

A copy of the Memorandum of Understanding will be available later today on Edison's investor Web site: [www.edisoninvestor.com](http://www.edisoninvestor.com).

Based in Rosemead, Calif., Edison International (NYSE: EIX) is the parent company of Southern California Edison, Edison Mission Energy, Edison Capital, Edison O&M Services, and Edison Enterprises.

One more that I meant to send. Have a good weekend!

----- Forwarded by Elizabeth Linnell/NA/Enron on 06/22/2001 10:57 AM -----

=09Elizabeth Linnell =0906/20/2001 08:22 AM =09=09=20 =09=09 To: Alan Comnes/Enron@EnronXGate =09=09 cc:=20 =09=09 Subject: Non-core state monitoring

Enron has hired the firm of Stateside Associates to provide State Legislati= ve=20 Monitoring and Regulatory Forecasting services on those states that aren=01= ,t=20 currently being actively monitored by the department. Stateside Associates = is=20 based in Arlington, Virginia and is the largest state and local issue=20 management firm. It has 50 employees and over 13 years of experience=20 providing high quality information resources. The professionals who monito= r=20 state legislation are all former state legislative staff members and=20 Regulatory Forecasting is provided by attorneys familiar with our issues.

We will receive an updated Legislative and Regulatory report every two=20 weeks. Everyone on the attached notification list will receive an email=20 alerting us that the report has been updated. If you're not on the list an= d=20 would like to be added please let me know. The list is currently set up=20 geographically, but we can add an issue-based distribution if needed.

At any time, we can access our report by clicking=20 [www.stateside.com/istatelink](http://www.stateside.com/istatelink) or by following the site link from the Gov't= 20 Affairs intranet site. The Enron logon is phoenix06 (not case sensitive). = 20 This logon must not to be shared outside Enron. =20

We will also receive email alerts about our issues. These will be sent to= 20 the designated recipients based on the issue or geography. =20

Because interaction with us is very important to Stateside, any Enron=20 employee may contact Stateside Associates for additional information (Speci= al=20 Request) pertinent to the monitoring service. For example, you may want to= 20 learn more about who is lobbying for a bill, what the deadlines are for a= 20 regulatory activity or to receive a list of who testified at a hearing. Th= is=20 follow-up research is part of the Stateside Associates=01, service. It wil= I not=20 result in any additional fees.

However, if a Special Request is made that is outside the scope of the Enro= n=20 program, it will be addressed with me prior to the commencement of any=20 work. Again, if Stateside responds to your request, there will be no=20 additional fee =01) so please use this feature.

Our principal Stateside Associates=01, contact is Todd Cohn, Manager,=20 Legislative Information Services. He can be reached at [tjc@stateside.com](mailto:tjc@stateside.com) o= r=20 703-525-7466. The Enron iStateLink website also features a roster of othe= r=20 Stateside professionals, including their email addresses. =20

You can learn more about Stateside on their website at [www.stateside.com](http://www.stateside.com).

I hope you find this service useful and look forward to your feedback.

JBennett <[JBennett@GMSSR.com](mailto:JBennett@GMSSR.com)> 07/25/2001 11:59 AM

To: "Harry Kingerski (E-mail)" <[Harry.Kingerski@enron.com](mailto:Harry.Kingerski@enron.com)>, "Jeff Dasovich (E-mail)" <[jdasovic@enron.com](mailto:jdasovic@enron.com)>, "Jim Steffes (E-mail)" <[James\\_D\\_Steffes@enron.com](mailto:James_D_Steffes@enron.com)>, "Sue Mara (E-mail)" <[smara@enron.com](mailto:smara@enron.com)> cc: Subject: FW: Joint ACR Regarding DWR's Revenue Requirement And July 27, 20 01 Workshop

Attached is an Assigned Commissioner's Ruling issued yesterday by Commissioners Lynch and Brown soliciting comments on the Revenue Requirement submitted by DWR on July 23rd.

The revenue requirement is increased from the \$9.2 billion submitted in May to \$13.072 billion, but covers a longer period of time (the period of January 17, 2001 through December 31, 2002). The revenue requirement is expected to pay for 118,930 GWh of power. The revenue requirement is divided among the three UDCs as follows (1) PG&E = \$5.2 billion; (2) SCE = \$5.8 billion; and (3) SDG&E = \$2.1 billion. The revenue requirement was divided among the three UDCs based on a uniform cost per MWh of net short energy purchased by DWR. The bond proceeds will be applied in a manner to supplement the revenue from the customers to DWR such that the net revenue requirement falls within the retail rate adjustments adopted by the CPUC for PG&E and SCE (i.e., the three cents), and assumes a comparable rate adjustment for SDG&E.

The ACR asks for comments on the revenue requirement submitted by DWR, particularly in the areas of (a) the relationship between the UDCs retained generation revenue requirement and the DWR revenue requirement ; and (b) DWR's request for the establishment of "specific charges payable to DWR for the power sold by DWR to retail end use customers" (e.g., should this be in a form of separate rate element or in the form of a gross revenue amount to be derived from rates).

The ACR also requests more information from DWR. Specifically it requests information on (a) the revenue DWR has already received from the UDCs; (2) how the revenue requirement for ancillary services was calculated; (c) more specifics on Operating Costs; and (4) a numerical illustration of the derivation of the 1.65 cents per kWh as representing the average portion of the 3 cent rate increase that DWR needs to generate its \$13 billion revenue requirement (a figure that was apparently reported in the press). DWR is suppose to serve this information on the Commission and parties to the proceeding by Thursday the 26th.

There will be a technical workshop held on Friday the 27th to address DWR's revenue requirement.

It is the Commission's intent after the receipt and review of comments to issue a PD and to vote on the revenue requirement at its August 23rd meeting.

Please let me know as soon as possible if you would like to submit comments on the revenue requirement or have me attend the workshop.

Jeanne Bennett

Thanks a lot. That sounds perfect. I'll give my mom Sharon's number, and she can call her and get a feel for things through her. About Jay's, I can get her to chill on that. I think that she's just generally excited, so anything sounds good. She just needs to come up first, and worry about other things later. And we can just let you think about what you want to do, and see what Jay has in mind all in good time. I totally understand wanting to approach him in the way that works best for you. I am at my office at 922-3430. Thanks again!

*From: Jeff.Dasovich@enron.com To: "Scott Laughlin" <scottwl@hotmail.com> Subject: Re: Date: Mon, 21 May 2001 15:16:07 -0500 No problem. Let's talk. I'm really comfortably having you and me and your mom and Keith talk about. I'm very interested in buying Jay's property, but I don't even the details yet. Here's my suggestion. If they want to come up that bad, they should. My agent is a very cool person up there. Here name is Sharon Burningham. She is with Coldwell Banker. Her number is 707.884.5270. ext. 308. You should feel free to tell your mom that Prentice and I have always have the intention of buying Jay's place, and we've had a sort of unspoken agreement that he'd give us the first "head's up" when he decided to sell. To be honest, we didn't expect it to be this quick, but hey, it is what it is. You can also tell your mom that I'm very happy to talk about partnering with her. But it's WAY to early right now. As we discussed, I need to spend some time with Jay---the other very important thing for me is that Jay's a very good friend, and I want to protect that, too. In the meantime, I think that it would be great for your mom and Keith to have Sharon take them around and show them some killer million--plus--dollar homes and have some fun cruising around and seeing what the area has to offer. I'm real happy to call Sharon, too. That sound like a plan? Where can I call you? Best, Jeff "Scott Laughlin" To: jdasovic@enron.com <scottwl@hotmail.com> cc: ail.com> Subject: 05/21/2001 02:38 PM Dude, I just talked to my mom, and they are chomping at the bit, if that's the right expression. My mom even wants to come up Wed and stay til Thurs night! I told her to chill a bit, that she might not be able to see Jay's property. She still wants to come up, so I told her we might be able to look at some other stuff, so do you think I should talk to an agent about this? They are damn excited, and I don't really know how to calm them down. They went to bookstores and looked at pictures of the area. They are probably talking about it all the time. I tell you this so you know what I'm dealing with over here. She also asked me if you were thinking of buying it, and I told her I wasn't sure. Do you want me to tell her that you're thinking about it? I know they'd totally respect your position, if we told them that. I'm not sure I even want them to come up this week, but they are so emphatic that it'd be nothing less than an insult to tell them not to. Anyway, give me some advise on this matter, please. Cheers! Scott Also, thanks for giving Cameron your car; I know she's psyched.*

According to this article, FERC officials have indicated that FERC might modify its 3 proxy price/refund orders to include sales made during Stage 1 and Stage 2 emergencies.

FERC Eyes Making More Calif Pwr Sales Subject To Refund

Updated: Wednesday, May 9, 2001 05:56 PM ET By Bryan Lee OF DOW JONES NEWSWIRES

WASHINGTON (Dow Jones)--The U.S. Federal Energy Regulatory Commission is considering orders that would broaden the scope of California power sales - subject to potential refund for overcharges, according to knowledgeable FERC

officials.

FERC has issued three refund orders to date, totaling nearly \$125 million for the first three months of this year.

In calculating the potential refunds, the commission limited its consideration to power sales made during Stage 3 power-grid emergencies declared by the California Independent System Operator.

Stage 3 alerts are the last step before the state's grid operator orders rolling blackouts because demand has outstripped the system's ability to deliver power.

The orders established proxy market-clearing prices for Stage 3 emergencies - and ordered power providers to justify the higher costs or provide refunds to the California ISO.

The orders were highly controversial, stirring criticism from California officials and others who complained that the orders were too narrow and failed to require refunds for unjust and unreasonable power costs during all hours.

The California ISO has placed its overcharges at \$6.2 billion for electricity purchased during a 10-month period from May 2000 through February of this year. The calculation wasn't limited to just grid-emergency hours.

By limiting refund liability to just Stage 3 emergencies, FERC sought \$69 million in refunds for January, \$55 million in February, and \$587,000 for March.

FERC Commissioner William Massey has decried the refund orders as "paltry" and "arbitrary" and called for the commission to order refunds for power sales during all hours, not just Stage 3 grid emergencies.

The broader refund orders under consideration by the commission won't go far enough to satisfy Massey, California officials and other critics, however.

In acting on requests for rehearing of the three refund orders, the commission is looking to also make sales during Stage 1 and Stage 2 emergencies subject to potential refund, according to FERC officials.

The commission on rehearing will adjust the refund orders to reflect the California power price mitigation plan FERC approved late last month.

Under the order, the ISO going forward will establish cost-based market-clearing prices for Stage 1, 2 and 3 emergencies. Power providers would have to justify power sales above the proxy market-clearing price - or make refunds to the ISO.

In light of the price mitigation order's consideration of all three stages of power-grid emergencies declared by the ISO, "It doesn't make any sense to have those stage 3 refund orders sticking out like a sore thumb," said a FERC official, who confirmed the commission's intent to adjust the refund orders on rehearing.

Could I get a copy of pl;an B (fax to 713 646-8525)?

-----Original Message-----

From: Dasovich, Jeff Sent: Tuesday, May 15, 2001 7:18 PM To: Kaufman, Paul; McCubbin, Sandra; Mara, Susan; skean@enron.com; Steffes, James; Kingerski, Harry; Guerrero, Janel; Robertson, Linda; Briggs, Tom; Hartsoe, Joe; Denne, Karen; mpalmer@enron.com; Tribolet, Michael Subject: Legislators' "Plan B" to "Enhance" Governor's MOU w/Edison and Status Report Sensitivity: Confidential

"Plan B" As folks know, there's a group of moderate Democrats in the CA Assembly that has been working on a "Plan B." They've been working on it because they're not satisfied with the Governor's MOU with Edison. The Plan B group has been talking to a broad array of stakeholders, including Republicans, to get input into how "Plan B" can improve upon the MOU. First the good news about Plan B: a fairly bright group of legislators is rolling up its sleeves and attempting to come up with a centrist solution to the problem, and they're at least creating the appearance of trying to be bi-partisan about it. (There is at least one idea in Plan B that is attributable to a Republican--Keith Richman--that Ken Lay met with a couple of weeks ago.) So the beginnings of a process to resolve California's crisis may be emerging. Now the bad news: because they are trying to build a consensus, Plan B is a mish-mash, isn't focused, includes some pretty bad ideas, excludes some good ideas (like re-establishing Direct Access immediately), and is going to require a lot more work to get right. Update on Efforts to Achieve a Settlement In the meeting with the suppliers that Steve Kean and I participated in yesterday, one of the financial consultants hired by the Governor criticized several of the Plan B proposals as unworkable. On today's call with the Governor's staff and suppliers it became somewhat apparent that the Governor isn't going drive a resolution, but will leave it to the Legislature to take the lead role. The staff emphasized repeatedly that the lawsuits, investigations, etc. were not on the table for discussion in any global settlement talks, and that attempting to bring them in to the negotiations was a nonstarter. Instead, the Governor's staff said that the group should focus on the size of the discount that suppliers would be willing to take. The suppliers pushed back, stating that including haircuts in the talks while excluding the lawsuits, investigations, etc. is one-sided and unworkable. The staff urged the group to begin negotiations with the Legislature, but made it fairly clear that the Governor would not be the one to pull the necessary principals together in a room to hammer out a solution; his staff implied instead that it's up to others, i.e., the suppliers, to get the process of negotiations underway. Next Steps If the Governor's financial consultants are prepared by Friday, they will brief suppliers on the ways in which the administration is attempting to resolve the State's creditworthiness issue to encourage suppliers to do power deals with CDWR. If they are not ready by Friday, the suppliers will meet separately to discuss next steps. Finally, there's been some confusion. My apologies. Sandi faxed to Jim and Harry yesterday a copy of "Plan B." Sandi mentioned that the Governor gave the Plan B group an analysis of the Plan. For those that have a copy of Plan B, see the 10-page memo dated May 12th, attached to the back of the Plan. The memo is from Joe Fichera to John Dutra, Fred Keeley and Joe Nation (3 of the Plan B Democratic legislators). Joe Fichera is the head of Saber Partners, a financial consulting group that the Governor hired to advise him on the crisis. If anyone has not yet received a copy of Plan B, please let me know and I'll get it to you.

Best, Jeff

HERE IS THE STORY WE WERE REQUESTED TO SEND YOU

This story appeared on <http://www.individual.com> November 15, 2000

Cal-ISO Declares Stage 2 Emergency; Directs SCE to Begin 'Load' Curtailment= =20 Program for Certain Customers  
ROSEMEAD, Calif., Nov. 13 /PRNewswire/ via NewsEdge Corporation - With the state's power reserves at less than 5%, the California Independent System Operator (Cal-ISO) has declared a "Stage 2 Emergency" and called upon Southern California Edison a= nd other investor-owned utilities to begin voluntary "load" curtailment progra= ms for certain customers within their service areas.

Cal-ISO attributed the Stage 2 emergency to a generation shortfall partially attributable to several power plants in the California market being down for scheduled maintenance.

At the same time, Cal-ISO and SCE are making urgent appeals for all customers to immediately reduce their electricity consumption.

Cal-ISO, the nonprofit agency that manages 75% of California's transmission power grid and secures power supplies for most of the state's consumers, said the Stage 2 status would be in effect from 5:30 p.m. to 8 p.m. The agency directed SCE to reduce its electrical load by 1,000 megawatts -- enough power to serve approximately a million homes.

To achieve this load reduction during Stage 2, SCE is required to activate its voluntary load curtailment program, under which large industrial, commercial, and agricultural customers who have agreed to have their power temporarily interrupted in exchange for reduced rates.

Should the situation worsen for any reason, and power reserves drop below 1.5%, Cal-ISO will declare a Stage 3 Emergency, the most critical status. Cal-ISO would direct utilities to "drop load," necessitating involuntary rotating outages for blocks of customers across their service areas until sufficient reserve levels are achieved.

Large energy users, such as industrial and commercial customers, can help the power-supply situation by turning off unneeded lights and auxiliary or redundant machinery where ever possible. The best ways to reduce power consumption at home are to turn off any unneeded electrical appliances and lights.

An Edison International company, Southern California Edison is one of the nation's largest electric utilities, serving a population of more than 11 million via 4.3 million customer accounts in a 50,000-square-mile service area within central, coastal and Southern California.

Hi Tom:

From our contact with the Governor's office, seems that Kari Dohn, formerly in the Governor's office, and recently appointed Chair of the Electricity Oversight Board, would be the hands-down best candidate.

Best, Jeff

Tom Riley/Western Region/The Bentley Company@Exchange 02/12/2001 01:02 PM To: Sandra McCubbin/NA/Enron@Enron cc: Jeff Dasovich/NA/Enron@Enron, Susan J Mara/NA/Enron@ENRON, Michele Curtis/Western Region/The Bentley Company@Exchange Subject: FW: Top Level Energy Person

If any of you have ideas on this, please respond ASAP. As you may know, I sit on the CSU Foundation Board of Governors, accountable to Chancellor Reed. Anything we can do to support the upcoming meeting will go a long way.

Regards, Tom

From: "Patricia Linn" <plinn@calstate.edu>@ENRON@EES Sent: Wednesday, February 07, 2001 2:13 PM To: <tom.riley@enron.com> Subject: Top Level Energy Person Importance: High

Greetings Tom, in preparation for our upcoming Board of Governors' meeting, I would like to ask you for your help in getting a speaker for the evening. The March 11 (Sunday) Board meeting in Sacramento is focused around CSU Legislative Day scheduled for Monday, March 12. The Board meeting is scheduled to begin at 4:00 pm followed by a dinner. We will invite the CSU Trustees to attend the dinner along with other key CSU leaders; we normally have about 30-40 individuals attend the dinner.

This year, we would like to invite someone from the Governor's office to come and talk a little about the energy crises in California. Can you help us identify someone in Davis' administration that may be interested in speaking to this

distinguished group of individuals?

Again, briefly, Meeting date/time: Sunday, March 11, 2001 at 4:00 pm; dinner is scheduled for 6:45pm; in Sacramento.

I look forward to hearing from you soon.

Patricia Castillo Linn, CFRE Senior Director, Advancement Programs and Vice President, CSU Foundation The California State University Office of the Chancellor 401 Golden Shore, 6th Floor Long Beach, California 90802-4210 562/951-4821 562/951-4983 FAX

This is a request for Enron to participate in an educational program for the California Society for Healthcare Engineering (CSHE). CSHE is a nonprofit organization dedicated to supporting the healthcare professionals in California by providing educational opportunities, interdisciplinary awareness, code review and is affiliated with the American Society for Healthcare Engineering and the California Hospital Association. Our membership roll averages about 1000 members representing over 150 hospitals and hundreds of architects and engineering firms.

Each year CSHE hosts a 2-3 day Institute featuring topics of current interest presented by professional, qualified, expert speakers and panelists. This year the Institute will be held on May 10 & 11th in Monterey. We expect about 200 attendees.

On Friday, the 11th, we will have a panel discussion on the topic of energy. It is scheduled from 9 am to noon and consist of 3 panel speakers. Each speaker will make a 20-30 minute presentation which will be followed by a Q&A period. We currently have 2 of the 3 speakers signed up: an energy engineering firm speaking on energy conservation, A VP from the California Hospital Association speaking on the legislative/regulatory issues that could impact healthcare facilities energy programs.

The 3rd speaker will be someone who can talk about the current energy market conditions (gas & electricity) and the possible future market conditions. We hope Enron will agree to be the energy market speaker.

I would like to emphasize the educational nature of our program. The audience will be knowledgeable and will expect professional presentations. Each of our facility members are dealing with the energy crisis daily and will be eager to learn. Enron can be very helpful with creating a better understanding of the variables and options available to hospitals.

I am the CSHE State Vice Chair and will become the State Chair at the Institute this year. I hope Enron will act favorably upon this request. We are preparing our program for printing now and a timely response would be appreciated.

Thank you for your assistance,

Anthony S. Moddesette Manager Plant Operations & Maintenance UC Davis Medical Center 4800 2nd Ave Suite 1500

Press Release SOURCE: El Paso Corporation

El Paso Announces Binding Open Season for Additional Capacity on Line 2000

HOUSTON, July 10 /PRNewswire/ -- El Paso Natural Gas Company, a subsidiary of El Paso Corporation (NYSE: EPG - news), announced today a binding open season for 320 million cubic feet per day (MMcf/d) of pipeline capacity from the Keystone and Waha areas of the Permian Basin in West Texas to the California border near Ehrenberg, Arizona. The binding open season, which began July 5, 2001 and closes on August 2, 2001, is in response to the interest expressed during El Paso's non-binding open season in March 2001 soliciting shippers for potential system expansions.

The expansion capacity will be made available by adding compression to El Paso's Line 2000 from McCamey, Texas to the California border near Ehrenberg, Arizona. The expansion capacity will be sold at El Paso's existing maximum California tariff rate, and the fuel charge is estimated to be 5 percent. The projected in-service date of the expansion facilities is mid-2003 subject to the receipt of all necessary regulatory, environmental, and right-of-way authorizations.

The receipt points on El Paso's system for this capacity will be the Waha and Keystone pools in the Permian Basin area of West Texas. The delivery points will be Southern California Gas Company (SoCal) and PG&E's proposed North Baja Pipeline, El Paso's bi-directional lateral (Line 1903), any future incremental capacity on the SoCal system from Ehrenberg, Arizona into the State of California, and any upstream points on El Paso's south mainline system where capacity exists.

"This system expansion will add incremental interstate capacity to California, Arizona, New Mexico, and West Texas to meet increasing natural gas demands including the demand for natural gas to generate electricity for the western United States," said Patricia A. Shelton, president of El Paso Natural Gas Company.

Interested parties can contact their transportation marketing representative or Mr. Jerry W. Strange at (719) 520-4687.

El Paso Corporation is committed to meeting energy needs throughout North America and the world with operations that span the energy value chain from wellhead to electron. The company is focused on speeding the development of new technologies, such as clean coal and liquefied natural gas, to address critical energy shortages across the globe. Visit El Paso at [www.elpaso.com](http://www.elpaso.com).

#### CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING STATEMENTS

This release includes forward-looking statements and projections, made in reliance on the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. The company has made every reasonable effort to ensure that the information and assumptions on which these statements and projections are based are current, reasonable, and complete. However, a variety of factors could cause actual results to differ materially from the projections, anticipated results or other expectations expressed in this release. While the company makes these statements and projections in good faith, neither the company nor its management can guarantee that the anticipated future results will be achieved. ## Politicians seek shelter as energy Armageddon looms

**Sender** jeff.dasovich@enron.com

Dan Walters: Politicians seek shelter as energy Armageddon looms

(Published April 4, 2001) There's been a subtle but unmistakable shift in the political atmosphere that envelops California's energy crisis. Politicians have concluded that the crisis is largely beyond their control and the die is more or less cast. Whatever fate decrees - massive summer blackouts, soaring utility bills or even the bankruptcy of the state's utilities - will happen, and politicians from Gov. Gray Davis downward are scrambling to insulate themselves from voters' anger and single out rivals for blame. No one is saying that publicly, of course, but the fatalistic mood is very apparent in the Capitol, whose denizens have dropped their preoccupation with energy and moved to other matters. Legislative committees are working on the hundreds of bills that had been stalled for three months while the special committees that had been holding almost daily sessions on the energy crisis have gone into semihibernation. Last weekend's Democratic state convention in

Anaheim was dominated by fears that when the crisis hits home, the party's dominance of the Capitol will backfire. "Just remember Jimmy Carter," state Controller Kathleen Connell warned fellow Democrats, adding that they will have "no excuses" for perceived failure to deal with the crisis forthrightly. "We will be accountable on Election Day 2002," she said. Next year's elections are very much on Davis' mind, since he'll be seeking a second term and polls indicate that his approval ratings have declined sharply in recent weeks. He devoted much of the weekend to defending his actions, saying, "I believe we've moved at warp speed to address this problem," and trying to pin blame on Republicans. Republicans, meanwhile, sense that the crisis gives them an avenue of escape from the dungeon of irrelevancy to which they had been exiled by heavy losses in the last three elections. The only remaining statewide GOP officeholder, Secretary of State Bill Jones, is running for governor by accusing Davis of mismanagement, and Republican Assembly members dumped their leader, Bill Campbell, on grounds that he had been insufficiently aggressive vis-a-vis Davis. The political positioning reflects the reality that the crisis shows every sign of worsening. Although Davis' office is distributing a brochure entitled "Meeting the Energy Challenge" to defend the governor's actions, it's apparent that none of the steps the governor has taken is bearing much fruit. The state is spending at least \$50 million a day on emergency power purchases, but what was supposed to be a short-term program has evolved into a monthslong drain on the state's rapidly shrinking budget reserves. The long-term supply contracts that were supposed to replace daily spot purchases have bogged down, and without firm contracts and a revenue stream to pay for them, Wall Street is reluctant to market the bonds the state wants to float. Many authorities now believe Davis' decision to step into the power purchase market in January was a strategic error because it gave power suppliers a deep new pocket to tap just as the utilities themselves ran out of credit. Davis, meanwhile, is refusing to embrace a rate increase approved by the state Public Utilities Commission, which sends a mixed message to Wall Street, and efforts to resolve problems with unpaid bills from power generators and have the state acquire the utilities' intercity transmission grid have stalled, perhaps permanently. The crisis may careen totally out of control as summer arrives, raising the specter of elderly and/or ill Californians dying from having their air conditioners or medical equipment shut down. And the utilities are closer to bankruptcy now than at any other point in the nearly yearlong crisis. Plan A isn't working, and there is no Plan B - except for bankruptcy. With Armageddon looming, politicians have retreated into the bunker, hoping to protect themselves from what could be a firestorm of anger. The Bee's Dan Walters can be reached at (916) 321-1195 or [dwalters@sacbee.com](mailto:dwalters@sacbee.com).

FYI. Many similar stories in the major papers today. Best, Jeff Figures show state lost big on extra power Posted at 9:53 p.m. PDT Monday, July 23, 2001 BY JOHN WOOLFOLK Mercury News State figures show California may have lost about \$14 million this month selling surplus electricity for less than it cost. The Mercury News disclosed last week that some power was being sold at a loss. But the new figures provide the first indication of just how much excess power the state bought in its desperate effort to avoid blackouts -- and how cheaply some of that power was sold when it turned out not to be needed. A Republican lawmaker said Monday the loss also shows Democratic Gov. Gray Davis' energy policies are needlessly costing consumers. "This whole thing is a mess," said Assemblyman John Campbell, R-Irvine, who requested details of the state's surplus power sales. "The government needs to get out of the power business before it costs Californians even more money." A state spokesman didn't dispute the \$14 million figure outright but said it is an approximation based on average prices and that the actual loss probably is less. "It's a number I'm sure he likes very much, but it's definitely an estimated number, and it could be far lower," said Oscar Hidalgo, spokesman for the state Department of Water Resources. Campbell responded that the loss also could be higher. The state has spent \$415 million on power so far this month. State officials last week confirmed that cool weather and consumer conservation have left California holding more power than it needs. The revelation was a stunning turnaround for a state that months ago was paying top dollar for power, expecting shortages this summer. Price that was paid The state bought 3.5 million megawatt-hours of electricity for July at an average price of \$118 per megawatt-hour, according to a response Friday by

the Department of Water Resources to Campbell's inquiry. The state has sold 178,000 surplus megawatt-hours in July at an average price of \$37, the department said. Based on those average prices, the state paid \$21 million for the surplus power, which it sold for \$6.5 million -- \$14.5 million less than it cost. A more precise calculation of the state's loss is difficult because purchased power is acquired at different times and prices and pooled as a "portfolio." Purchases included long-term contracts that averaged \$138 per megawatt-hour as well as cheaper spot-market buys. State officials last week said they were selling surplus at \$15 to \$30 a megawatt-hour, while some traders cited unconfirmed sales as low as \$1. Hidalgo noted that the surplus sales represent just 5 percent of California's July purchases, which totaled \$415 million. The \$6.5 million from sales will help lower the state's power bill, he said, adding that utilities routinely sell some extra electricity. "Despite the fact that we're in somewhat of a surplus, any power-buying operation in the world is going to have to plan for these types of situations," Hidalgo said. "It's not unique, and in fact it's normal operating procedure for any utility." Other Western utilities, including Portland General Electric in Oregon, have said they, too, are selling some surplus power at a loss and describe it as a cost of doing business. The suppliers buying the state's surplus electricity on the cheap include the big out-of-state energy companies that the governor has called price-gouging "snakes." Among them are Duke Energy, Dynegy Power and Marketing, El Paso Power Services, Mirant, Reliant Energy and Williams Energy. "Best bid" taken Hidalgo said the state took the best offers it could find. "It's only reasonable to get the best bid you can," he said. Campbell said the \$14 million loss is troubling because ratepayers or taxpayers will have to cover the cost, whereas a private utility could be forced to eat the expense if regulators determined it was unreasonable. State officials say what's more important is that the overall cost of power is dropping, from an average daily tab of \$64 million in May to \$25 million this month, in part because the state has so much power. Dan Walters: Blame game over California's energy crisis will continue for years (Published July 24, 2001) The wrestling match between politicians and Enron Corp. moved into a more intense arena over the weekend when a state Senate investigating committee sought contempt penalties because the huge energy company has refused to turn over internal documents. Although Houston-based Enron owns no major power plants in California, it has adopted the toughest stance of all energy companies against the multiple investigations of why wholesale energy prices spiked so high. And it has become, in turn, a whipping boy for California politicians. At one point last spring, state Attorney General Bill Lockyer said he wanted criminal charges against Enron and its chairman, Kenneth Lay. "I would love to personally escort Lay to an 8-by-10 cell that he could share with a tattooed dude who says, 'Hi, my name is Spike, honey,'" Lockyer said. With less colorful language, Gov. Gray Davis has often castigated Texas-based companies as price gougers -- even though Texas firms have been fairly minor suppliers to California. Some of it is just buzzword politics. Lockyer and Davis know that Californians dislike anything associated with Texas, and Lay has been one of President Bush's major political supporters. Enron, meanwhile, cites the rhetoric as evidence that Lockyer, Davis and legislative investigators are interested less in finding the truth than in seeking scapegoats. Enron also filed a lawsuit challenging the legality of the Senate's subpoenas of trading data. Most other energy companies have complied with the demands, creating Sacramento repositories of the data under elaborate confidentiality agreements worked out with the special Senate committee headed by Sen. Joseph Dunn, D-Santa Ana. But Enron has refused, and on Saturday, Dunn submitted a report asking the Senate for "an appropriate coercive sanction." Does Enron have something to hide? Or does it sincerely believe that what's happening in California is political scapegoating? Are the companies' fears about the confidentiality of the data sought by the Senate justified? Would data be selectively leaked to show the firms in the worst light? Would data be used by competitors? Or could the information find its way into the hands of class-action attorneys? Dunn, a prominent trial attorney himself, insists that confidentiality will be protected and that the information being sought is only for legislative purposes. But Enron and the other companies have some reason to be wary of turning over confidential information to politicians. Similar

information was leaked -- without penalty -- in last year's investigation of former state Insurance Commissioner Chuck Quackenbush. And there are indications that private lawyers are working closely with investigators. Mike Aguirre, the San Diego attorney seeking a "smoking gun" to prove collusion among energy companies, supplied Dunn's committee with a few dissident Duke Energy workers who alleged, in highly publicized hearings, that the firm had manipulated production at its San Diego plant to create artificial shortages and drive up spot market power prices. Duke then refuted the charges by releasing some excerpts from the records of the Independent System Operator, the controller of California's power grid, indicating that ISO had ordered the plant operational changes. Aguirre subsequently asked the governor's office to pressure the ISO -- now under Davis' direct control -- to release all of the Duke-related documents that would show, he says, that the firm actually manipulated the situation. Duke and other companies insist that the ISO-held documents are proprietary. Aguirre pleaded with one Davis adviser in an e-mail that "we need your help in properly getting this information out." But Aguirre, in an interview, said he had not yet obtained cooperation from Davis aides. The political and legal struggle to affix blame for California's energy woes will continue for months, perhaps years. The crisis will cost ratepayers at least \$50 billion, and they'll want to know why as they make out their utility bill checks. The Bee's Dan Walters can be reached at (916) 321-1195 or dwalters@sacbee.com <mailto:dwalters@sacbee.com>.

### Testimony to Support the SoCalGas Settlement Agreement

|            |                                                                               |
|------------|-------------------------------------------------------------------------------|
| Sender     | jblackwell@luce.com                                                           |
| Recipients | ['bdingwall@unitedgas.com', 'anchau@shellus.com', 'douglass@arterhadden.com'] |
| File       | dasovich-j/all_documents/488.                                                 |

To the Core Aggregator Group:

As you know, SoCalGas filed its formal gas industry restructuring settlement agreement with the CPUC yesterday (April 17). Over the past two weeks, the core aggregator group worked extensively with SoCalGas and the other settlement parties to make sure that the settlement language tracked the agreed upon principles that were included in the "term sheet" that was filed with the CPUC on April 3. Based upon my review of the document, I believe that the settlement agreement fairly reflects the deal that we reached with SoCalGas.

The CPUC's Presiding Judge in the case - - Andrea Biren - - has established the procedural schedule for an evidentiary hearing in this proceeding. Under this schedule, prepared direct testimony (in support of the settlement) is due to be submitted by May 5. Rebuttal testimony (opposing the competing settlement that was filed by SCGC and TURN) is due to be submitted by May 19. The hearing will begin on May 30.

In discussions with SoCalGas and the other settlement parties, it was agreed that all of the industry groups that have participated in the SoCalGas settlement should present testimony in support of the settlement. This means that the core aggregator group (or individual members of the group) should present one or more witnesses who can testify to the benefits that the settlement will provide to the core aggregation program. This effort must commence immediately in order to achieve a May 5 deadline.

I believe that it would be efficient for the core aggregator group (SPURR, REMAC, CUB, Greenmountain.com, utility.com, United Gas, Enron, TXU, Shell Energy Services) to jointly sponsor a single witness to testify concerning all the benefits of the settlement for the core aggregation program. This testimony would address the following features:

\* Core interstate unbundling \* Core storage unbundling \* Unbundled (daily) balancing for core customers \* Unbundled core backbone transmission \* Avoided cost billing credits (and process to redetermine) \* Core brokerage fee (and process to reconsider role of utility's core procurement department) \* Elimination of the cap on core customer participation in core aggregation, and reduction of the threshold for core aggregation groups \* Elimination of core subscription gas sales option

If a witness is to be engaged by the group, this will need to be done very soon. In addition, if the group wants to have one attorney representing the group, this also should be decided very soon. Alternately, individual core aggregators may prefer to proceed on their own.

I estimate that the fees for an outside expert witness to testify on the above-referenced matters would be approximately \$9,900. This estimate is based upon an hourly rate of \$180.00, and an estimate of 55 hours, as follows:

Activity Hours

Draft prepared testimony and 25 (possibly) rebuttal testimony

Prepare for hearings, including 20 responses to discovery requests and mock cross-examination

Hearing time 10

---

TOTAL: 55 Hours

At \$180 per hour, the expert witness fees would be \$9,900. This does not include "costs".

Our group should discuss, at the earliest possible time, how to proceed with the presentation of prepared testimony. Please respond promptly to this e-mail and provide your availability for a conference call within the next two days to discuss this matter.

Thank you for your attention to his request.

- John Leslie

Dan Walters: Davis plays in a virtual world while the energy reality continues

(Published July 11, 2001) California still has a very real and very severe energy crisis, to wit: The state is still running up massive debts as it pays more for power than it can recover from ratepayers and is having trouble borrowing billions of dollars to cover the debt. There is a strong possibility, perhaps a probability, that when summer's heat truly descends, there will be severe power blackouts as air conditioners demand more juice than California can generate or buy. One major utility, Pacific Gas and Electric, has filed for bankruptcy protection and a second, Southern California Edison, is on the brink of joining it. There is, however, a virtual energy crisis consisting of political spin, media leaks and made-for-television buzz words -- and it is rapidly becoming dominant, while the real situation fades into the background. This week's comic opera proceedings before a Federal Energy Regulatory Commission administrative judge in Washington had little to do with reality and everything to do with the virtual version. Gov. Gray Davis and other officials demanded \$8.9 billion in refunds from the generators and brokers who have been selling California power for the past year, alleging that California is, in Davis' words, "being gouged and ripped off." But the number itself was more or less plucked out of thin air -- an arithmetic exercise by the state power grid's traffic controller not intended for a refund

proceeding. And while Judge Curtis Wagner saw it as unrealistic, Davis and other state officials insisted on its validity. "There are refunds due that total hundreds of millions of dollars and maybe a billion dollars," Wagner said as a final negotiating session collapsed. But that's a far cry from the \$8.9 billion that Davis insists is due. "If you think California is going to settle for \$1 billion in refunds, we will see you in court," Davis said Tuesday. Why is Davis being so belligerent? Because it's good politics. Ever since he began berating out-of-state generators and accusing them of ripping off California, Davis' approval ratings have been climbing. If he settled for substantially less -- the power generators probably would agree to a couple of billion dollars to rid themselves of the matter -- Davis would be embarrassed. Politically, he's served by continuing to portray himself as fighting for California and against the out-of-state generators. That it's more political construct than reality is indicated by another event this week, Davis' release of state power purchase data from early in the year -- numbers that were made public only because a judge told him he had to do it. Davis and his minions have been accusing Texas-based generators and power brokers of particularly egregious price gouging -- clearly playing on Californians' instinctive mistrust of anything Texan and implying that Texan George W. Bush is a co-conspirator. But the power purchase records -- which were released only to journalists willing to pay a stiff fee -- indicate that less than 10 percent of California's power purchase dollars were going to Texas and the private sellers, in general, charged the state less than such publicly owned utilities as the Los Angeles Department of Water and Power. The clearly adverse position being taken by FERC and the purchase data that undercut his jingoistic sloganeering are not, however, deterring Davis from continuing to operate, at least for public consumption, in the melodramatic virtual world. One cannot, however, ignore reality forever. The likelihood of a pro-generator decision from FERC means that there will be no easy out for Davis, or for his pending deal to prevent Southern California Edison from slipping into bankruptcy court. The Legislature has refused to act on the Edison rescue plan while it awaited an indication of whether the utility's debts would be slimmed down by FERC. This week's farcical events make it more likely that the Edison deal will stall out permanently in the Legislature and its creditors will force the utility into bankruptcy court later this summer. That's part of that nasty old reality that cannot simply be wished away.

Dan Walters: Blame game over California's energy crisis will continue for years

(Published July 24, 2001)

The wrestling match between politicians and Enron Corp. moved into a more intense arena over the weekend when a state Senate investigating committee sought contempt penalties because the huge energy company has refused to turn over internal documents.

Although Houston-based Enron owns no major power plants in California, it has adopted the toughest stance of all energy companies against the multiple investigations of why wholesale energy prices spiked so high. And it has become, in turn, a whipping boy for California politicians.

At one point last spring, state Attorney General Bill Lockyer said he wanted criminal charges against Enron and its chairman, Kenneth Lay. "I would love to personally escort Lay to an 8-by-10 cell that he could share with a tattooed dude who says, 'Hi, my name is Spike, honey,' " Lockyer said. With less colorful language, Gov. Gray Davis has often castigated Texas-based companies as price gougers -- even though Texas firms have been fairly minor suppliers to California.

Some of it is just buzzword politics. Lockyer and Davis know that Californians dislike anything associated with Texas, and Lay has been one of President Bush's major political supporters. Enron, meanwhile, cites the rhetoric as evidence that Lockyer, Davis and legislative investigators are interested less in finding the truth than in seeking scapegoats. Enron also

filed a lawsuit challenging the legality of the Senate's subpoenas of trading data.

Most other energy companies have complied with the demands, creating Sacramento repositories of the data under elaborate confidentiality agreements worked out with the special Senate committee headed by Sen. Joseph Dunn, D-Santa Ana. But Enron has refused, and on Saturday, Dunn submitted a report asking the Senate for "an appropriate coercive sanction."

Does Enron have something to hide? Or does it sincerely believe that what's happening in California is political scapegoating? Are the companies' fears about the confidentiality of the data sought by the Senate justified? Would data be selectively leaked to show the firms in the worst light? Would data be used by competitors? Or could the information find its way into the hands of class-action attorneys?

Dunn, a prominent trial attorney himself, insists that confidentiality will be protected and that the information being sought is only for legislative purposes. But Enron and the other companies have some reason to be wary of turning over confidential information to politicians. Similar information was leaked -- without penalty -- in last year's investigation of former state Insurance Commissioner Chuck Quackenbush. And there are indications that private lawyers are working closely with investigators.

Mike Aguirre, the San Diego attorney seeking a "smoking gun" to prove collusion among energy companies, supplied Dunn's committee with a few dissident Duke Energy workers who alleged, in highly publicized hearings, that the firm had manipulated production at its San Diego plant to create artificial shortages and drive up spot market power prices. Duke then refuted the charges by releasing some excerpts from the records of the Independent System Operator, the controller of California's power grid, indicating that ISO had ordered the plant operational changes.

Aguirre subsequently asked the governor's office to pressure the ISO -- now under Davis' direct control -- to release all of the Duke-related documents that would show, he says, that the firm actually manipulated the situation. Duke and other companies insist that the ISO-held documents are proprietary. Aguirre pleaded with one Davis adviser in an e-mail that "we need your help in properly getting this information out." But Aguirre, in an interview, said he had not yet obtained cooperation from Davis aides.

The political and legal struggle to affix blame for California's energy woes will continue for months, perhaps years. The crisis will cost ratepayers at least \$50 billion, and they'll want to know why as they make out their utility bill checks.

-----"Easily the most serious, well-run and -----informative technology venture conference -----series you can attend"  
-----Technologic Partners' Outlook Conference attendee, -----June 2001

Dear Jeffrey:

As a VentureWire reader, you know that the internet has become an essential component of everyday life for both businesses and consumers, despite recent investment challenges. Though some dot-commerce plays face market disfavor and wary private and public investors, internet-based technologies and business models that demonstrate a defensible ROI are still making real money. And advances in internet technologies are almost exclusively the domain of the venture backed start-up.

Read on, or take a moment to link to the URL below for more details. VentureWire subscribers have a preferred rate\* for this conference - \$1795 - which represents a \$400 saving on the full list price. All you need do is register before July 27th, 2001 and ensure you enter the code VWIO at the bottom of the registration form.

Internet Outlook September 10-11, 2001 San Francisco Airport Marriott Burlingame, California  
<http://www.internetoutlook.net/docs/register.asp>

At this, the 6th annual running of Internet Outlook, we've assembled the most promising providers of the technologies that improve the performance, functionality and ROI of web sites, applications and data centers. Each year we've focused on the sectors and issues driving the internet's technology and investment train. And this year's no different. Join us in Burlingame for another packed event on September 10-11 and meet the entrepreneurs, investors and industry executives setting the pace and offering very real opportunities for liquidity events when the market turns up.

After significant research and analysis, we've invited up to 100 of the hottest emerging tech companies in the following categories to define their goals, plans and progress to the audience:

Content Management Customer Interaction Data Centers Information Management Managed Service Providers  
Messaging Infrastructure Personalization/Privacy Sales & Marketing Services Security Network Applications eComm  
Services Web Services/XML Web Performance Website Analysis

For a list of presenting companies, check out: <http://www.internetoutlook.net/docs/mmmlist.asp>

Leading business, technology and investment opinion and expertise from leading key note speakers and panelists will be the centerpiece of our general sessions. I must thank the following for accepting our invitation to deliver keynote addresses over the course of Internet Outlook - their remarks will be eagerly anticipated:

Roger S. Siboni President & CEO E.piphany

Martin Brauns President & CEO Interwoven

Amnon Landan Chairman, President & CEO Mercury Interactive

John Seely Brown Chief Scientist, Xerox and Chief Innovation Officer 12 Entrepreneuring

For a complete review of the agenda, please link to <http://www.internetoutlook.net/docs/agendamonday.asp>

All our events this year have bucked the trend, and filled up - in this, its sixth year, initial trends indicate Internet Outlook promises to do the same. To make sure of your place, and claim your VentureWire preferred rate, please take a moment to access the following link. Do not forget to enter the VWIO code on your registration.

<http://www.internetoutlook.net/docs/register.asp>

So, I hope September 10th and 11th works for you. It would be great if you could join us - in the meantime, if you have any questions, please contact me.

Sincerely,

Allan

Allan Cunningham Managing Director, Events Technologic Partners [acunningham@technologicp.com](mailto:acunningham@technologicp.com) 212-343-1900

If you'd prefer not to receive such messages from us, follow this link:

[http://venturewire.com/e\\_cancelSolicit.asp?e=jdasic@ENRON.COM](http://venturewire.com/e_cancelSolicit.asp?e=jdasic@ENRON.COM) and we'll make sure you don't in the future.

#### ABOUT THIS E-MAIL

Your registration to VentureWire included granting us permission to send you information about new features and other products from Technologic Partners. We are committed to protecting your privacy.

VentureWire and Internet Outlook are trademarks and service marks of Technologic Partners, L.P.

\* This special offer is only valid for VentureWire subscribers and is non-transferable. If you have already registered prior to receiving this offer, credits or refunds will not be given. It cannot be combined with any other offer.

Date: Wednesday, April 25, 2001 Issue: Electricity Crisis, Potential Natural Gas Crisis What is Happening: Check-in Session BACKGROUND "California could cut electricity consumption by as much as 4 percent this summer under a plan that aims to shift the way the cost of power is communicated and billed to the state's biggest users. The \$35 million program, which has been endorsed by Gov. Gray Davis and is being considered by state regulators, would entail installing 15,000 new meters and upgrading 5,000 more to reflect the hourly price of electricity. The state's largest users, (the 21,000 customers who consume more than 200 kilowatts of electricity at any given time,) would receive the meters and have the option of participating in "real-time" pricing. By using these meters, they can moderate their behavior to use less when supply is tight or more when it is available" (Contra Costa Times 4-24-01). RECENT CHANGES AND DEVELOPMENTS "SB 28X (Sher) passed out of the Assembly yesterday on a 67-4 vote. The legislation is expected to cost the state \$3.2 million to implement. Key provisions of SB 28x would: (1) Require cities, counties and other local agencies to submit initial comments on a power plant application within 45 days of its filing. (2) Require the California Energy Commission to issue final decisions on certifying "repowering" projects -- modernization of existing plants -- within 180 days, instead of a year. (3) Extend by 17 months -- until Dec. 31, 2002 -- an expedited siting process for temporary power plants, known as "peakers." (4) Mandate that power plants required to renovate their facilities to reduce air pollution do so by Jan. 1, 2004, under the auspices of the state Air Resources Board. (5) Require payment of unemployment-compensation benefits to workers left jobless in any week because of unscheduled power outages caused by shortages of supply. (6) Provide incentives for "distributed generation" in which homeowners or merchants produce electricity for themselves and others using solar panels, turbines or other such equipment. Utility fees, called "standby charges," would be waived up to 10 years for most such customers (Sacramento Bee 4-24-01). ? "Los Angeles County government expects to nearly double its energy bill for next year, from \$75 million to a whopping \$140 million, a hike that will cut into the county's surplus and could force service cuts if prices continue to rise through what all sides predict will be a difficult year in the state's energy crisis" (LA Times 4-24-01). "California has spent \$5.1 billion from the state budget purchasing electricity this year" (LA Times 4-24-01). WHAT THE REPUBLICANS ARE SAYING Assembly Republicans supported SB 28x, which passed Monday by a vote of 67-4, but some said it doesn't go far enough in solving the energy crisis. "We'd like to see more siting bills," said Assemblyman Tony Strickland, R-Thousand Oaks. "We need more electricity supply and generation. Anyone who thinks this is enough to solve the crisis is really in Disneyland." The Assembly Republican Caucus ? Member Services Division 916-319-3901 THE GOOD, THE BAD, AND THE UGLY "California's economy is decelerating, and the state is spending many billions of dollars -- how many, exactly, is still unknown -- on power purchases to prevent blackouts. The combined effect of these separate, if interrelated, factors is to hammer the state budget in ways that no one in the Capitol considered possible. The Davis administration's bean counters have concluded, Capitol sources said Monday, that the state's revenues for the 2001-02 fiscal year will run several billion dollars under forecasts, thanks largely to the severe decline in the state's high-technology industry. The state could absorb a sharp dip in its tax revenues if its reserves were available. Davis had anticipated starting the 2001-02 fiscal year July 1 with \$6.6 billion in general-fund reserves and ending it a year later with nearly \$4 billion still in the kitty. The newly discovered revenue shortfall would have reduced the reserves but not wiped them out. Those numbers, however, don't take into account the nearly \$6 billion that the state has committed to buying power, continuing at the rate of \$2 billion a month, and only a tiny portion of the outlay being covered by utility ratepayers. At current rates, the state will be in the hole by \$10 billion by July 1" (Sacramento Bee 4-24-01).

*Message 1016 of 1299***Commencement, Sunday, May 20**

|                   |                                    |
|-------------------|------------------------------------|
| <b>Sender</b>     | owner-eveningmba@haas.berkeley.edu |
| <b>Recipients</b> | [eveningmba@haas.berkeley.edu]     |
| <b>File</b>       | dasovich-j/all_documents/12171.    |

**CONGRATULATIONS GRADUATES!**

The commencement ceremony will be held on Sunday, May 20 in the Greek Theatre. Graduates should arrive at 8:15 a.m. (The ceremony begins at 9:00 a.m.) The ceremony will be followed by a champagne reception at the Kleeberger Sports Lawn, across the street from Haas.

You'll find commencement information at the Haas Alumni Network at:  
<http://www.haas.berkeley.edu/alumni/newgrads/evmba.html>

**ARRIVING/PREPARATION FOR CEREMONY:** The Greek Theater is just north of Haas, or left of us if you were to walk OUT of the Haas building. It is on the east side of Gayley/Piedmont. You should arrive back stage (by entering from the street side) by 8:15 a.m. Once back stage, please go to the MBA table (you'll see the Evening MBA staff there), and print your name on an index card as you would like it read by Diane. You will keep the card with you and pass it to her on stage. After you arrive, PLEASE stay backstage and assemble at the end of the area closest toward Haas (south).

**PARKING:** Anyone can park on campus on Sundays. Some lots will have attendant parking. Otherwise just buy a \$5 daily parking ticket from one of the machines and display it on your dashboard. If you do so, you can park pretty much anywhere on campus ("C," "F" or "S" lots) \*except\* in any VIP or otherwise reserved parking spaces. You can use your permit for your car. There is parking on the street, in Kleeberger, Foothill (up Hearst past Gayley/Piedmont and to your right), or at the corner of Hearst and Gayley.

A bit of personal parking advice: traffic gets very thick near the Haas School on Commencement day. Remember that there will be another department having its ceremony in the Greek Theatre after us, so it will be especially congested on the way out. Park strategically, i.e. a little bit down the hill and in the direction you eventually want to drive.

**RECEPTION:** The reception will be held across the street from Haas on Kleeberger field. If you have not picked up your two free tickets from us, please do so before graduation. If you must, you can get them from us backstage, before the ceremony--while supplies last. Otherwise, all tickets at the door will be \$5. You are admitted free in your cap and gown.

**RETURNING REGALIA:** You will need to return your gown and hood in order to avoid being charged for them. When you pick up your regalia in the Evening MBA office, we will give you a yellow card receipt. REMEMBER to BRING the receipt with you. After the reception, please tie the hood around the gown and attach the receipt (we'll bring staplers) and deposit it in a box located near the reception. You can keep the cap and tassel.

**WEATHER:** Remember that the ceremony will be held RAIN OR SHINE. There is no indoor facility on this campus large enough to accommodate Haas, and even if there were, it would not be available on short notice if it's raining. The ceremony is fairly long. Remember that MBAs, PhDs, and Undergraduates all take part. Graduates and guests will be out in the elements for about two and a half hours.

Both rain and shine each present challenges, especially for older or less physically vigorous guests. Here are some tips, based on our past experiences in the Greek Theatre:

RAIN - As you all know, the weather is unpredictable. If rain seems at all likely you should:

- 1) Bring an umbrella
- 2) Wear clothing that you are not very fond of, as the dye in the gown can run if it becomes wet.
- 3) Wear rain shoes.
- 4) Make sure your guests also have appropriate rain gear.

SHINE - If we are lucky, it will be sunny. On a sunny day, the Greek Theatre can be very hot, even when the air temperature is moderate. If it's sunny, you should:

- 1) Bring plenty of water to drink - there is a vendor selling drinks at the Greek Theatre, but the lines can be very long and graduates won't be able to leave during the Ceremony.
- 2) Advise your guests to bring hats, sunblock, water, etc.
- 3) Remind your out of town guests to dress in layers -- a sunny day here usually means foggy for part of the ceremony and sunny for the rest.

EITHER WAY: Graduates will be seated on folding chairs, down close to the stage. But your guests will be sitting on concrete for the duration. They might consider bringing cushions.

Look forward to seeing all of you there, RAIN or SHINE.

If you have any questions, please give us a call us at 510-642-1406.

CONGRATULATIONS GRADUATES!

---

=DJ LADWP, Run By Davis Adviser, Cashed In On Calif Crisis

Dow Jones Capital Markets Report via Dow Jones

By Jason Leopold Of DOW JONES NEWSWIRES

LOS ANGELES (Dow Jones)--On a single day in June 2000, the Los Angeles Department of Water and Power, the largest municipal utility in the country, raked in \$5 million selling California surplus power for \$1,000 a megawatt-hour - about 30 times the average price the utility charged the month before.

That sale, reported by the California Independent System Operator and confirmed by the LADWP in an interview last June, was one of many instances in which the municipal utility cashed in on California's power crisis.

On Monday, the Department of Water Resources, the agency that has been purchasing California's bulk power needs in lieu of the state's cash-strapped utilities, released a detailed report of spot-market power purchases showing the LADWP charged the state an average of \$242 a megawatt-hour for power from Jan. 18 through May 31 this year. That price is about \$35 higher than those charged by most of the out-of-state generators Gov. Gray Davis has criticized repeatedly as price gougers.

Potentially embarrassing for the Davis administration, however, is that the LADWP was formerly run by General Manager David Freeman, who in April became Davis' top energy adviser.

Steve Maviglio, press secretary to Davis, said Texas-based generators are primarily to blame for the high wholesale prices that crippled the state's two largest utilities.

"Anywhere they wear cowboy hats, they probably have handkerchiefs across their face, because they are robbing us blind," he said. "The bad guys are clearly the out-of-state generators."

Freeman's trademark is a white Stetson.

The former LADWP chief, who last September quipped that a "blind pig could make money" under California's faulty deregulation setup, didn't return calls for comment.

Freeman took a leave of absence from the LADWP in January to negotiate long-term power contracts on behalf of the state.

#### Power To Sell

According to the DWR report, the LADWP brought in \$331 million selling power to the state between Jan. 18 and May 31 this year.

The LADWP, which didn't take part in the state's deregulation debacle and which isn't under the jurisdiction of federal energy regulators, also cashed in throughout 2000. The utility has 7,000 megawatts of generation capacity but only needs about 5,500 MW to serve its retail customers, freeing it to sell as much as 1,000 megawatts to the ISO at prices comparable to what the generators were charging.

The LADWP did so well that it was able to pay down \$200 million in debt and will reduce its customers' rates in 2002.

"It just shows you that enterprise is where you find it," Freeman said in an interview last year.

Last July, ratings agency Fitch concluded that California's electricity shortage provided LADWP "an opportunity for the sale of surplus power at favorable prices which added to the municipal system's coffers."

According to a report by the ISO, manager of the state's electricity grid, the LADWP overcharged California for power from May 2000 through February 2001 by as much as \$20 million. Maviglio said the state will pursue refunds from the utility.

On Tuesday, an LADWP spokesman defended the utility's power prices, saying the costs of producing electricity were extremely high.

The ISO has estimated that the state was overcharged nearly \$9 billion for electricity sales in the 12 months ended May 2001. On Monday, settlement talks between state officials and generators over the refunds broke down.

Other municipal utilities, including the Sacramento Municipal Utility District and private companies like BC Hydro in Canada, have also racked up enormous sums selling surplus power to California at the last minute.

FYI. David Freeman and DWR....public power working for California. \*\*\*\*\*  
Power delivery efficiency questioned: Output at low-cost generating plants has been cut while costlier ones continue to operate. By Carrie Peyton Bee Staff Writer (Published July 31, 2001) California is sometimes deliberately cutting output

from low-cost power plants while running more expensive ones, utility and grid officials say. The sporadic episodes haven't cost much yet, but they illustrate a potentially troubling disconnect in the system that has quickly grown between two agencies that help deliver electricity to a power-strapped state. "We seem to be building this inefficiency into the system, and it doesn't seem to be getting better," said Mike Florio, a consumer advocate who sits on the governing board of the Independent System Operator. The trouble is that the ISO, created in 1996 to manage the power grid in a deregulated electric market, tries to run the grid by auctions that -- in theory -- provide the cheapest electricity for the state's consumers. Meanwhile, the state Department of Water Resources, which in January stepped in to buy power on behalf of cash-strapped utilities, isn't bidding at some auctions because it believes it can provide cheaper power if it doesn't. "We have an inefficient market and an inept government entity. It's sort of the worst of both worlds," Florio said, criticizing his agency and the DWR. ISO staffers decline to discuss the situation in detail, saying it involves confidential bidding behavior. But Pete Garriss, chief of operations for the power-buying arm of the Department of Water Resources, confirmed that the ISO has been asking his agency to take part in more auctions, but the state has declined. The state's role is to buy electricity for customers of utilities whose credit was no longer good enough to buy on their own, he said. "We're not in it to do those kinds of marketing functions," he said. "It's not necessarily a good fit." Some of the ISO auctions are used to lessen congestion on transmission lines. Others are used to stabilize the grid by slightly increasing or decreasing output when demand doesn't match forecasts. Generally, the highest-cost power plants should be the ones cutting back, a process the industry calls "decking." But since May, on ISO orders, Southern California Edison has repeatedly throttled back on the Mohave Generating Station, which produces some of the cheapest power available to California today, costing as little as \$10 to \$20 a megawatt-hour. Edison, which owns a majority share of Mohave, has cut its output by 5,660 megawatt-hours between May and July, about one-half of 1 percent, at the ISO's behest, according to data Edison provided to The Bee. The ISO could probably have saved the state's consumers \$370,000 at one plant if it had asked a higher-cost gas-burning plant to cut back instead of Mohave, a coal-burning workhorse in Laughlin, Nev., Florio said. The amount sounds like "small potatoes," but in some ways it is more alarming than the \$14 million the state lost recently by selling excess power for less than it paid, he said. Industry experts agree that such below-cost sales are common in a business where power needs fluctuate dramatically based on the weather. By contrast, "this is a dead weight loss. Higher costs are being incurred for no good reason," Florio said. "The question is, why is the ISO calling on Mohave and not (cheaper) gas plants? The answer is, the gas plants aren't bidding ... probably because they're contracted with DWR," he said. Four Corners, another low-cost coal plant partly owned by Edison, has also been throttled back at ISO request, Edison officials said. In addition, so few bidders have shown up at ISO auctions to ease stress on transmission lines that the system has fallen into disarray, with the ISO instead ordering across-the-board power production cuts that are boosting costs, Florio said. For its part, the ISO will say only that "we are making the most economical decisions we can based on the bids available," said spokeswoman Stephanie McCorkle. DWR's Garriss said the state and the ISO have been meeting repeatedly on bidding and other coordination issues, and he hopes to have a smoother-running system in place by next summer.

fyi, I asked Edelman to send me the direct access pitch they are using with the media this week, and here it is....

----- Forwarded by Karen Denne/Corp/Enron on 04/10/2001 08:56 PM -----

"Manuel, Erica" <Erica.Manuel@edelman.com> on 04/10/2001 11:38:44 AM To: "Karen.Denne@enron.com" <Karen.Denne@enron.com> cc:

Subject: RE: PR Update for Direct Access Coalition

Sure thing. Here's the pitch:

Looking for a new twist on the California energy story?? A conflict that's not being covered?

Tension is at fever pitch between the state's business community and policy makers/Davis Administration over the issue of direct access. Simply put, many forces are trying to kill direct access, which allows businesses and residential users to buy their energy from alternative energy providers instead of their local utility.? Yet for businesses this summer, the option to bypass their local utility if they can ink a better energy deal somewhere else may provide the thin margin that keeps them in business.? And PG&E's recent bankruptcy filing begs the question: why not let someone else provide power?

As California business screams for relief, the Department of Water Resources, legislature, utilities, some consumer groups and the PUC continue to erect barriers against direct access-which has been in a state of suspended animation since the passage of AB1x.? Each player has its own reasons to push for the demise of direct access.??

A large coalition of business interests is fuming (see direct access coalition list below).? Already rocked by record power prices and worried about recession, they fear that if direct access is not resuscitated soon through emergency legislation, it will be one more reason to raise prices, lay off workers, or shut their doors.? And they wonder: why are our state's policymakers killing direct access at the time businesses need it most as they confront escalating power bills?? It is widely assumed that the Department of Water Resources has not contracted for enough power this summer to avoid paying high prices in the spot market.? Yet, the more power DWR doesn't need to buy because large users have done it for themselves, the less financial exposure the state incurs.?

Last week, for the first time, Governor Davis suggested that he may be supportive of letting businesses shop for their own power, but it is unclear at this time how solid his support may be.? Meanwhile, the Legislature continues to run in circles and do everything it can to avoid meaningful action on this issue.? Direct access was one issue at the center of the fissure between Assembly Republicans when they replaced their leadership two weeks ago.? Senator Bowen's much-awaited "clean-up" bill, SB 27x, has been more than a disappointment-in fact it's perceived as ensuring there will be no customer choice.

But don't take my word. Edelman can arrange interviews with the California Chamber of Commerce, California Retailers Association, California Manufacturers & Technology Association, Calpine and other organizations fighting to preserve direct access as well as individual businesses/organizations who have chosen to bypass their local utilities and cut their own power deals in order to reap huge savings and/or gain certainty about their energy budgets.? These companies include high tech, hotel and grocery chains, school districts, and large retailers.?

This is a timely, controversial story that needs to be told-and it hasn't truly been covered so far by the mainstream media.? Please contact Erica Manuel or Stevan Allen at Edelman Public Relations Worldwide at (916) 442-2331 to arrange interviews or receive more information.

| Recipients | ['taschehoug@thermoecotek.com', 'wfhall2@duke-energy.com', 'steven@iepa.com', 'smutny@iepa.com', 'kaplan@iepa.... |
| File       | dasovich-j/all_documents/28093.                                                                                   |

Status Report Much of the first half of May was dedicated to organizing stakeholders and lobbying for the passage of SB 28x (Sher), which was the Legislature first attempt at siting reform and included several IEP-sponsored proposals. SB 28x was the last bill to be signed by the Governor and chaptered into law before the close of the first extraordinary session. The final version included:

? Conforming the timing of offsets for power plants to Clean Air Act requirements. ? Substituting CEQA-style hearings for the trial-like proceedings of the CEC. ? Streamlining the permit process for the modernization of existing power plant sites. ? Giving consideration to the positive environmental impacts of a proposed project. ? Improving the timeliness and coordination of state and local agency review. ? Extending the current deadlines for the expedited review for "peaker" plants and expanding the application to consider re-certification or replacement.

There was also a small number of instances where Edson + Modisette assisted on other issues at the request of IEP staff or IEP member companies. As always, Edson + Modisette is here if you need assistance on any other issues.

Since SB 28x is only a first step in making changes to the siting process, IEP member should now be thinking about what is next. A list of IEP proposals still on the table include:

? Permitting local agencies to make zoning changes or other decisions for power plants contingent upon CEC CEQA Compliance ? Giving deference to other state and regional agencies ? Easing the threshold for override of local land use requirements. ? Making the ISO responsible for determining interconnection requirements

Assembly Member Calderon's office is currently reviewing these proposals in conjunction with an effort to develop an environmental dispatch protocol. IEP has weighed-in on this issue and has strongly advocated that 1) reliability should always be the first priority; 2) protocol should be limited to RMR units and out-of-market calls only; and, 3) any follow-up to SB 28x should also consider IEP siting proposals left on the table. I circulated Asm. Calderon's proposed environmental dispatch language to IEP members last Friday which targets those generating units running beyond their air permits per the Governor's most recent executive order. In the short-term, I expect there will be additional stakeholders meetings on this and other siting issues as Asm. Calderon decides how to proceed and in what legislative vehicle.

All this action on the Assembly side does not rule out Senator Sher's part on the siting issue. Since SB 28x moved to the Governor's desk, Sen. Sher has ensured us and others that that was only the first step and he would like to continue pursuing additional siting reforms during this legislative session. SB 28xx in the second extraordinary session is currently a spot bill ready to take up that cause. There are pros and cons for either author to move forward on siting reform, but I would recommend for the time being that IEP let Asm. Calderon and Sen. Sher work out their turf wars while IEP shares its proposals with both.

There are also other siting bills with the potential to move forward. SB 86xx (Peace/Burton) was introduced last week which would require a developer to begin construction on a project within 6 months of receiving certification from CEC or lose its permit, and introduces the newly created California Consumer Power and Financing Authority into the siting process. Senator Morrow has called stakeholders together this week to provide input on SB 76xx which is currently in spot bill format. Asm. Wright still has his siting vehicle, AB 48xx, poised to move if needed; and Sen. Battin has several siting bills introduced also if needed.

I have mentioned this before, but it is worth repeating. With the interest in siting issues in the Capitol having waned only slightly, IEP members may want to consider meeting again to develop a second list of proposed siting reforms (in addition to the above issues left over from the first list). Such a list should take into account the Governor's Executive Orders and possibly what generators would be willing to give up to the enviros in exchange for "big ticket" reforms.

Please call if you have any questions about the above invoice or any of the siting issues pending before the Legislature.

Sincerely,

JULEE MALINOWSKI-BALL Senior Associate

Greetings: In order to keep everyone in the loop, the folks on today's call wanted to send out a brief summary of the call for the benefit of those who couldn't make it. Apologies for any omissions, inaccuracies, etc. Others who were on the call please chime in if I've gotten anything wrong, or missed anything.

Best, Jeff

SUMMARY Enron, Duke, El Paso and Williams were on the call, as was Michael Hoffman of the Blackstone Group (the Governor's financial advisors). On the subject of how the group would organize itself, it was agreed that the calls would be open to anyone who wanted to participate. A smaller group consisting of Duke, El Paso, Enron, and Williams would take the lead on walking the halls of Sacramento, meeting with policy makers, and advocating whatever plan the group develops. Folks agreed that achieving a comprehensive solution requires a tangible process; that is, the principals need to get in a room, face to face, for however long it takes to work out a resolution. It was agreed that the process should start no later than the beginning of next week, and that it should take place in Sacramento. It was decided that the Legislature and the Attorney General needed to be brought into the process as soon as possible, i.e., next week. There was some discussion regarding the release today of "Plan B." Plan B is a plan proposed by Democratic and Republican legislators as an alternative to the MOU that the Governor struck with Edison. After that call I received a copy of "Plan B." If you'd like a copy please send me your fax number. Folks on the call agreed to have the next "supplier-only" call-in meeting on Friday. Finally, Michael Hoffman said that they are hoping to have a "ratings agency level" presentation prepared by the end of the week. The goal of the presentation is to reassure capital markets that the bonds the state seeks to issue are solidly backed by retail rates.

The Agenda for Tomorrow's Call with the Governor's Staff Item #1: The Credit Issue Michael Hoffman said that the Governor's office wants to start tomorrow's meeting discussing the creditworthiness issue. Hoffman said that the Governor's folks are hoping to have completed by the start of tomorrow's meeting a draft of an agreement between the California PUC and CDWR. The agreement is designed to ensure that DWR gets paid for power services delivered. If the draft is ready, they'd like to discuss on the call tomorrow.

Item #2: Identify the Components of a Comprehensive Solution. It was agreed that our group should put on the table at tomorrow's meeting the universe of issues that need to be included in a comprehensive solution. Enron was asked to take a first stab at what those components are. The following is a brief outline, which is not intended to be definitive, but a starting point for discussion. Utility creditworthiness retail rates must reflect costs Increase supply streamline and otherwise reform the siting process Decrease demand establish real-time pricing implement demand buy-down and other conservation programs Create a real market Remove the State from the power-buying business as soon as possible (e.g., once new rates are in place and utilities are returned to creditworthiness; approximately 3-6 months) Return the

procurement role to the utilities Reinstate Direct Access immediately for all customers Within 18-24 months, create a "core/noncore" market structure for electricity, similar to California's market structure for natural gas Keep the industry in the hands of the private sector Reject proposals calling on the State to take over transmission, generation, etc. Resolve outstanding legal claims, investigations, etc. Resolution requires certainty and prompt payment (understanding that discounts on receivables is on the table for discussion)

**EXECUTIVE SUMMARY ? Multiple MOU Plans Debated ? California State Budget Faces One Last Hurdle**

Budget There is a small possibility that Sen. Burton will not recess the Senate on Thursday unless the Senate passes the budget that the Assembly passed last night (7-17). However a key Democrat, Sen. Sheila Kuehl, has been in Italy and is on a 16 hour return flight. No one knows if she has been told to return and without her presence, two Republican votes are still needed to pass any urgency measure for the budget. Kuehl's vote is crucial if they take the bill up on Thursday. MOU Mayhem There are currently three leading MOU plans being resuscitated by the California House and Senate deliberations. Senator Burton is hoping to keep the published schedule and adjourn for a month's recess on Thursday evening. Speaker Hertzberg is reportedly not thrilled with leaving until the Edison issue is resolved. However, rumor is that whether or not they recess on Thursday, their adjournment will mark the end of the Second Extraordinary session and all XX bills passed and signed will go into effect in 90 days (all others will be dead). Although Davis has stressed the urgency of passing a comprehensive "bail-out" plan and even threatened to call an emergency session to prevent legislators from taking a 30-day recess on Friday, there is no clear indication that legislators will comply with this request. ? Hertzberg's bill 82XX - Of the more obvious differences from Davis MOU, 82XX proposes to offer SoCal \$300 M less for its transmission lines in addition to penalizing Edison if it fails to act in good faith in closing the deal. It comes as no surprise that during bill deliberations, SoCal raised objections to the bill and warned of impending difficulties (bankruptcy) for So Cal were the bill left unamended. ? The Wright-Richman bill 83XX - We reported last week that 83XX remains the only measure fueled by bipartisan support. AB 83XX was heard in an "informational" hearing yesterday (7-17) and will be heard again today in the Assembly Energy Committee. Assemblyman Rod Wright, the Chairman of the Committee, presented AB 83xx with Dr. Keith Richman, a Republican Assemblyman from Southern California. They offered 83XX as an Edison bail-out, pure and simple. Wright was clear to distinguish his bill from 82XX, which he said has conservation easements and land requisitions, a renewable portfolio which will add an additional fee on ratepayers, and reasonable review for long term contracts. While the chances of the Richman bill being successful appear slim, reports that that Hertzberg will try to negotiate elements of his own bill (82XX) as amendments to the Wright/Richman measure suggest that at least Hertzberg feels Richman's 83XX stands a chance.

? The Byron Sher bill, SB 78XX (Polanco) - Previously presented by Sen. Polanco on behalf of Governor Davis, SB 78XX has received special attention from Senate President, John Burton. Although it has never been heard by a committee, SB 78XX is currently on the Senate floor and ready for a vote. The Senate Energy Committee and Senate Appropriations

Committee are both scheduled to have informational hearings on this bill today. Note, the meetings are informational because neither committee has possession of the bill. These hearings will provide information to committee members, avoid a formal vote, and simultaneously shield Burton/Polanco from claims that the details of SB78XX were never released. The Senate is scheduled to be in session tomorrow, ostensibly to vote on the state budget and SB 78XX. Given Burton's penchant for wanting to keep on schedule to recess tomorrow, there is no guarantee that he will hold the Senate in session once they hear SB 78XX. Thus, the Senate may never even see AB 82XX and AB 83XX unless either or both bills are passed out of the Assembly today and get special treatment by Burton to be heard tomorrow. Burton has previously adjourned the Senate to keep on schedule once they finish their business, even if the Assembly is behind them.

Paul,

We see what you refer to as " the Cavanaugh/Edison bill" as a re-play of AB 1421 from last year. That bill will destroy the retail market. We opposed 1421 and we'll oppose any son of 1421. We do not want to see it tied to any aggregation bill, the public goods charge extension or anything else.

Sue Mara

Paul Fenn <paulfenn@local.org> on 02/24/2000 07:03:12 PM To: Don Dame <DDame@ncpa.com> cc: Gary Ackerman <foothi19@idt.net>, Beth Bloom <bbloom@apx.com>, Bill Ross <billr@calpine.com>, Bob Anderson <Robert\_Anderson@apses.com>, Corby Gardin <jcgardin@newwestenergy.com>, Curtis Kebler <Curtis\_L\_Kebler@reliantenergy.com>, David Bobo <david-bobo@hlp.com>, Greg Blue <gtbl@dynegy.com>, Ken Czarnecki <Ken\_J\_Czarnecki@calpx.com>, Kent Wheatland <KEWH@dynegy.com>, Leah Bissonette <lbyssone@energy.twc.com>, Randy Hickok <rjhickok@duke-energy.com>, Rob Lamkin <rllamkin@seiworldwide.com>, Rob Nichol <rsnichol@newwestenergy.com>, robert berry <berry@apx.com>, Roger Pelote <rpelote@energy.twc.com>, Sue Mara <smara@enron.com>, Tom Delaney <tom\_delaney@enron.com>, Vicki Sandler <Vicki\_Sandler@apses.com>, Dan Douglass <douglass@earthlink.net>, Don Dame <DDame@ncpa.com>, Old Deuteronomy <mflorio@turn.org>, Sean Casey <sfc@cpuc.ca.gov>, Jim Price <jep@cpuc.ca.gov>, Paul Fenn <paulfenn@local.org> Subject: RE: WPTF, Community Choice

Don,

While the points you make are good ones, I think we should go for it this year.

First, the Cavanaugh/Edison bill will in part restructure Chapter 854 regarding the role of the default provider, and Edison will be asking for a solidification of its distribution role, so this it is the natural vehicle to redress aggregation. If we wait until next year it may be too late, because we will be pushing rather than pulling. I think Edison and PG&E may put up less of a fight in this context.

Second, while the League of Cities has not been involved, twelve cities and counties representing 2 million Californians passed a resolution last year asking the legislature for Community Choice. The leaders, from the Southern California Cities Joint Powers Consortium, San Francisco, Oakland, and Marin County, are actively involved in getting support from Bowen and Burton. Oakland is planning a statewide conference of cities and national leaders on Community Choice this Summer, which would coincide with committee hearings and attract media attention. In both Massachusetts and Ohio, we had weak support from the Leagues and did the job with about 35 municipalities represented. I am confident we will have that number in California this year.

Third, TURN is providing strong support for the bill. I believe CALPIRG, UCAN and other consumer groups will give strong support as a result of the national coalition for Community Choice legislation, RAGE, which has signed most of them on

the agenda over the past two years.

Finally, the PUC is looking into Distribution Competition this year, and both the ORA and Strategic Planning are actively interested in Community Choice as a strategy for making the market work.

As you described it, the legislation allows municipalities to implement Community Choice programs, and does not require it.

Regards,

Paul Fenn

At 02:17 PM 02/24/2000 -0800, you wrote:

*I truly believe that giving local public entities the right, but not the obligation, to provide default commodity service will advance competition and provide one more check against host IOU economic hegemony. To get legislation passed, however, will require at least three components: 1) An informed, supportive bill sponsor (Debra Bowen would be ideal, and lots of other legislative support). 2) A bit of national focus and support (say APPA and others) 3) And, vocal support from the League of Cities and other local government organizations. I do not believe we are yet close to at least two of the above three. I may make sense to generate more widespread support and debate before submitting a bill which will not pass. PG&E and SCE will mount a very effective attack on any bill giving default rights to local governments. If we try prematurely and fail, subsequent attempts may be doomed to failure as well. I believe that we should work the turf and see if we can generate some local govt. enthusiasm for such a bill, without which it will not likely pass. Although I hate to delay, the chances of success may increase if we wait 6-12 months and use the interim period to gain additional support. Any rebuttal??*

Dan Walters: Blame game over California's energy crisis will continue for years

(Published July 24, 2001) The wrestling match between politicians and Enron Corp. moved into a more intense arena over the weekend when a state Senate investigating committee sought contempt penalties because the huge energy company has refused to turn over internal documents. Although Houston-based Enron owns no major power plants in California, it has adopted the toughest stance of all energy companies against the multiple investigations of why wholesale energy prices spiked so high. And it has become, in turn, a whipping boy for California politicians. At one point last spring, state Attorney General Bill Lockyer said he wanted criminal charges against Enron and its chairman, Kenneth Lay. "I would love to personally escort Lay to an 8-by-10 cell that he could share with a tattooed dude who says, 'Hi, my name is Spike, honey,'" Lockyer said. With less colorful language, Gov. Gray Davis has often castigated Texas-based companies as price gougers -- even though Texas firms have been fairly minor suppliers to California. Some of it is just buzzword politics. Lockyer and Davis know that Californians dislike anything associated with Texas, and Lay has been one of President Bush's major political supporters. Enron, meanwhile, cites the rhetoric as evidence that Lockyer, Davis and

legislative investigators are interested less in finding the truth than in seeking scapegoats. Enron also filed a lawsuit challenging the legality of the Senate's subpoenas of trading data. Most other energy companies have complied with the demands, creating Sacramento repositories of the data under elaborate confidentiality agreements worked out with the special Senate committee headed by Sen. Joseph Dunn, D-Santa Ana. But Enron has refused, and on Saturday, Dunn submitted a report asking the Senate for "an appropriate coercive sanction." Does Enron have something to hide? Or does it sincerely believe that what's happening in California is political scapegoating? Are the companies' fears about the confidentiality of the data sought by the Senate justified? Would data be selectively leaked to show the firms in the worst light? Would data be used by competitors? Or could the information find its way into the hands of class-action attorneys? Dunn, a prominent trial attorney himself, insists that confidentiality will be protected and that the information being sought is only for legislative purposes. But Enron and the other companies have some reason to be wary of turning over confidential information to politicians. Similar information was leaked -- without penalty -- in last year's investigation of former state Insurance Commissioner Chuck Quackenbush. And there are indications that private lawyers are working closely with investigators. Mike Aguirre, the San Diego attorney seeking a "smoking gun" to prove collusion among energy companies, supplied Dunn's committee with a few dissident Duke Energy workers who alleged, in highly publicized hearings, that the firm had manipulated production at its San Diego plant to create artificial shortages and drive up spot market power prices. Duke then refuted the charges by releasing some excerpts from the records of the Independent System Operator, the controller of California's power grid, indicating that ISO had ordered the plant operational changes. Aguirre subsequently asked the governor's office to pressure the ISO -- now under Davis' direct control -- to release all of the Duke-related documents that would show, he says, that the firm actually manipulated the situation. Duke and other companies insist that the ISO-held documents are proprietary. Aguirre pleaded with one Davis adviser in an e-mail that "we need your help in properly getting this information out." But Aguirre, in an interview, said he had not yet obtained cooperation from Davis aides. The political and legal struggle to affix blame for California's energy woes will continue for months, perhaps years. The crisis will cost ratepayers at least \$50 billion, and they'll want to know why as they make out their utility bill checks.

FYI

DJ Siting Of Transmission Lines May Be Tied With FERC RTOs Copyright , 2001 Dow Jones & Company, Inc.

WASHINGTON (Dow Jones)--The White House energy-policy blueprint's call for federal eminent domain authority to site power transmission lines appears to be garnering cautious support from Western-state lawmakers who typically support private property rights.

They indicated the administration's policy call will win their support as long as states continue to have a say in the siting process and the rights of private property owners are respected.

The report of the National Energy Policy Development Group, a White House task force spearheaded by Vice President Dick Cheney, called for the Energy Department, in consultation with federal agencies and state and local government officials, to develop legislation granting authority to obtain rights-of way for electricity transmission lines.

The proposed legislative effort should advance "the goal of creating a reliable national transmission grid," the White House policy blueprint recommends, noting that similar siting authority already rests at the federal level for natural gas pipelines.

"The siting process must be changed to reflect the interstate nature of the transmission system," the White House report said.

Senate Energy Committee Chairman Frank Murkowski, R-Alaska, sponsored legislation in the last Congress to establish federal eminent domain authority for transmission lines.

The White House report cited instances when states vetoed transmission lines despite the benefits the proposed facilities would provide for the interstate power grid. For example, Connecticut recently scuttled an underwater power line designed to supply power-hungry Long Island, N.Y.

"The states ought to have the maturity to deal with this themselves," Murkowski said.

But pro-states' rights lawmakers said the traditional transmission-siting role of states must be preserved, but be backed up by federal oversight.

The siting of transmission lines is the "prerogative" of state and local governments, said Sen. Pete Domenici, R-N.M., who nevertheless suggested he could support some form of federal authority as a "backstop" to state and local authority.

"I have been a critic of this and I remain so," Sen. Larry Craig, R-Idaho, said of the administration's policy recommendation, citing the potential impact on the "rights of private property owners."

Nevertheless, Craig suggested the administration's recommendation could be accommodated as part of the U.S. Federal Energy Regulatory Commission's push to turn control of power grid assets over to independent regional transmission organizations, or RTOs.

"Out of that (RTO) concept, it may be possible to address what the president has asked for," Craig said.

Tying such eminent domain authority to the RTO process is an approach FERC likely would take.

FERC Chairman Curt Hebert suggested the White House's policy recommendation could be delegated to RTOs.

"America has to decide: Is electricity going to be an interstate commodity? If so, we have to treat it like one," Hebert said last week in support of the administration's policy recommendation.

Linking transmission siting with RTOs also was espoused by Pat Wood, chairman of the Texas Public Utility Commission and one of President Bush's nominees to fill two vacancies at FERC.

Having RTOs oversee expansion of the U.S. interstate transmission system is "probably a good way to go," Wood said at his confirmation hearing last week.

Wood said the market should identify transmission expansion needs. But if the market doesn't produce the needed results, then there should be "a fallback role for FERC to assure there isn't a train crash," he said.

Such a regional planning approach within FERC's RTO scheme likely will win support from state regulators, said Charles Gray, executive director of the National Association of Regulatory Utility Commissioners.

The administration's call for framing legislation in consultation with the states likely will blunt potential opposition from state utility regulators, Gray said.

They did it! The jackasses changed the hearing date to Sept 12 as of 3 pm today. A lady from FERC just called me to let me know.

My suggestion is we cancel our scheduled Board meeting, meet prior to the 12th, and get our story in line. Another notice will be published by FERC regarding participation in the Hearing.

I just copied from the FERC's web page the following notice. It appears that FERC will have a hearing in San Diego, possibly on Friday, Sept 15. However, an earlier date is equally likely because all four Commissioners are testifying at a Congressional Hearing in San Diego on Sept 11. I guess we need to agendaize this for our next meeting, and if the FERC holds its hearings on Sept 12, we may need to cancel our Board meeting, and attend this. I did call the office of External Affairs at FERC to register WPTF as a speaker. They were clueless, but promised to call me back.

UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION

NOTICE OF PUBLIC MEETING ON WHOLESALE POWER MARKETS AND TRANSMISSION SERVICES IN CALIFORNIA

(September 1, 2000)

On September 15, 2000, the Federal Energy Regulatory Commission is planning to convene a public meeting in San Diego, California to allow interested persons to give the Commission their views on recent events in California's wholesale markets. While the Commission is finalizing arrangements for a meeting on September 15th, the Commission may need to change the meeting to a different date within the week of September 11th. A further notice will be issued confirming the date. The meeting is scheduled to begin at 9:00 a.m., at the San Diego Concourse, the Copper Room, 202 C Street, San Diego, California 92101. All interested persons may attend the meeting. The meeting will be transcribed. A separate notice will be issued before the meeting, setting forth an agenda and identifying the panels of participants. Additional information may be obtained from the Office of External Affairs at (202) 208-0870. Information also may be obtained from the Commission's web page at [www.ferc.fed.us](http://www.ferc.fed.us).

I attended the hearings on PGE's two cash collateral motions today. Both were granted on an interim basis. The court set a final hearing for May 9 at 9:30 am. PGE is to file its pleadings by April 20 and any opposition is due by May 4.

The bondholder cash collateral motion was heard first. There was no opposition and the bond trustee (Bank of New York) consented to the relief. BONY and PGE are working on a final cash collateral stipulation.

Next was the gas supplier motion. PGE mentioned in its presentation that the basis of the pre-petition agreement was the waiver of termination rights in the event of bankruptcy by the suppliers in return for a security interest in the receivables.

Jim Lopes, PGE's lawyer, mentioned that he had learned a great deal about Bankruptcy Code section 556 in the last few months. Judge Montali nodded his head at that comment. Montali also asked whether PGE conceded that 556 applied. Lopes answered that he did not concede that it applied, but he was "very concerned."

I asked whether the post-petition security interest was available to suppliers that were not parties to the pre-petition agreements. The Court said that was up to PGE; Lopes said they were willing to talk about it, but they did not want to grant liens to all of their creditors and hoped creditors would rely on their administrative claims, which PGE believes will be paid in the ordinary course. Procedurally, the Court said it would not authorize any new security interests on the basis of the interim order resulting from today's hearing. Instead, that would have to be the subject of a separate motion with notice, and perhaps could be taken up at the final hearing. PGE also indicated that it is filing today a lawsuit against the CPUC seeking a TRO regarding a deadline of April 11 for the filing of certain advice letters. A hearing is tentatively scheduled on the TRO for 3 pm tomorrow, April 10.

There was also discussion of various administrative matters, like scheduling hearings, entering a case management order, etc.

A representative of a consumer group, the Coalition for Public Power, read a statement asking Judge Montali to rollback rates and to force PGE's parent to pay the utility's debts. The Judge let them speak, but made it clear that it was not an action item, and seemed generally to ignore them.

The courtroom was packed with attorneys, journalists and members of the public. After the hearing, the reporters all descended upon the attorneys for PGE and the CPUC. The courtroom is in an office building in SF's financial district; there were probably ten TV cameras set up on the sidewalk as well as several protesters carrying signs.

Please call me if you have any questions.

Date: April 27, 2001 To: Jan Smutny-Jones, Steven Kelly, Katie Kaplan Cc: IEP Board Members From: Julee Malinowski-Ball Re: Legislative Status Report Week Ending 4/27

**RECENT EVENTS**

-- Rule #1: Never assume an issue is done until the ink is dry from the Governor's signature (and even then you never know). The Senate Republicans agreed late this week to oppose SB 28x (Sher), which makes several IEP-sponsored proposals to the siting process, due to a controversial provision added in the Assembly Appropriations Committee regarding unemployment compensation. Assembly Republicans let it slide on process because CMTA and the Chamber's objections to the egregious language was so last minute. Senate Republicans had more time to look at the issue and agreed not to let it go forward. Since they control of the final vote in a bill requiring two-thirds, their united opposition stopped the bill, one vote shy. The author was granted reconsideration and discussions will be on-going over the next week on how to proceed. The best-case scenario at this point is getting one Republican to drop from the ranks. Worst-case scenario is the bill dies, and our language gets picked up in another vehicle starting the whole process all over again. The more likely scenario, however, lies somewhere in between. Parties will agree to some compromise language, send the bill back to the Assembly to make the appropriate changes, then bring it back to the Senate for a clean vote.

-- Long-term contracting was moved to the front burner this week by Asm. Wright (AB 57) and Senator Morrow (SB 997), both with different results. Both measures, which are almost identical, set forth a criteria which, if followed by an IOU when signing a long-term contract with an energy supplier, would eliminate the need for a reasonableness review by the CPUC. AB 57 passed out of the Assembly Utilities and Commerce committee with little discussion and a few technical amendments. SB 997 faced a longer, more difficult hearing in front of Senator Bowen's Energy Committee. IEP, along with the three IOUs testified in support of the measure, while TURN expressed great concerns with the concept of leaving the CPUC out of the picture. In the end, the Senate committee agreed to put the bill off for further discussions, passed a motion in support of getting the appropriate rule waiver so the bill can be heard again after Friday's policy committee deadline, and scheduled a stakeholder meeting for Thursday morning. Senator Burton announced on the Senate Floor Thursday morning, however, that all requests for rule waivers would be denied. AB 57 appears to be the only active vehicle on this issue, and IEP will be at the negotiating table providing input on the language as it moves forward.

-- AB 60x is scheduled for hearing next week in the Senate Energy Committee. IEP met with committee staff this week, which revealed some possible latitude in amending the bill. IEP and other member company lobbyists will be pushing hard for an opposed position from the rest of the committee before the hearing Tuesday afternoon. At this time, however, we do not have any alternative language for the bill. After further review by some IEP member companies, the previously drafted amendments appear unworkable and were withdrawn from consideration. We anticipate on waiting to see where the committee on Tuesday takes the issue before another attempt at drafting alternative language.

-- SB 1x (Soto/Scott) was amended this week before its hearing in the Senate Appropriations committee next week. The new language finds a backdoor to the price cap issue by imposing a 100 percent tax on the sale of electric power that exceeds a base price of \$80 per MW/hr. CMTA, the Chamber and CalTax will be coordinating strategy for the hearing with IEP and the generators, but despite the bill's multiple constitutional and legal problems, most admit the measure will move forward with little trouble. A new player on the scene will probably provide the most noteworthy testimony. InterGen North America, which is developing a 900 MW power plant in Palm Springs, plans on testifying that if this measure is signed by the Governor, they will absolutely pull the project and go to Oklahoma.

-- Newly amended this week is AB 67x (Cardoza), which now makes it a felony for a corporation that sells electricity or natural gas at unjust or unreasonable rates. Sponsored by Lt. Governor Bustamante, the measure establishes stiff fines and possible jail time, that could be subject to the state's "three strikes" law. AB 67x has already generated opposition from Republicans and constitutional questions from legal experts. Although Cardoza noted that several aspects of the bill are unresolved and could change, the intent will remain the same, and he insists that energy companies that take advantage of Californians will still face significant penalties.

-- SB 6x, (Burton), which establishes a State Power Authority, passed the Assembly this week by a 48 to 28 vote. The measure needs the Senate to concur on the Assembly amendments before it heads to the Governor's desk.

-- Attached are the most recent legislative tracking reports for both the special and regular sessions. Please call if you need copies of any of the bills.

#### UPCOMING EVENTS

MONDAY, April 30th Senate Appropriations Committee SB 1x (Soto) - excess profits tax SB 30x (Brulte) - local government incentives

Assembly Energy Costs and Availability Subcommittee on Natural Gas Costs and Availability Informational Hearing

TUESDAY, May 1st Senate Energy Committee AB 60x (Hertzberg) - California First

MONDAY, May 7th Senate Appropriations Committee SB 64x (Costa) - biomass incentive

ON THE SENATE FLOOR SB 28x (Sher) - siting proposals SB 6x (Burton) - State Power Authority

GOVERNOR DAVIS PRESSES FERC FOR ACTION ON WHOLESALE POWER RATES: Calls on Federal Regulators to Reduce Prices, Issue Refunds

GOVERNOR DAVIS NAMES KAHN CHAIR OF THE GOVERNOR'S CLEAN ENERGY GREEN TEAM

OFFICE OF THE GOVERNOR

---

---- PR00:238 FOR IMMEDIATE RELEASE September 12, 2000

GOVERNOR DAVIS PRESSES FERC FOR ACTION ON WHOLESALE POWER RATES Calls on Federal Regulators to Reduce Prices, Issue Refunds

SAN DIEGO - At a Federal Energy Regulatory Commission (FERC) hearing today in San Diego, Governor Gray Davis reiterated his call to federal regulators to intervene "to the fullest extent possible" to lower electricity prices in California.

"FERC bears responsibility to ensure that a workably competitive market exists before California consumers and California's economy are subjected to unconstrained, market-based electricity prices," said Governor Davis in a statement read by Energy Oversight Board Chairman Michael Kahn. "Consequently, I renew my prior request that the Commission act with utmost speed to intervene to the fullest extent possible to restore wholesale prices to fair levels and to remedy harms that have resulted from the exercise of market power."

Governor Davis noted that he and state lawmakers have taken dramatic action in recent weeks to provide rate relief. "While these actions should provide short-term rate predictability and longer-term benefits to customers in terms of improved supplies, the fundamental problem of exorbitant wholesale prices still exists and remains the responsibility of FERC to address," said the governor. "No combination of state actions can substitute for federal action to ameliorate the problems of California's wholesale markets."

Governor Davis has taken the following actions in reaction to rising electricity prices in San Diego:

On June 14, he called for emergency reduction of electricity use by all state facilities in the San Francisco Bay area in response to electricity emergency and rolling blackouts.

On June 15, he called on chairpersons of the Public Utilities Commission (PUC) to analyze the conditions that led to electricity shortages in the San Francisco Bay area the previous day, including a statewide perspective on the price and delivery of electricity. Report was completed, submitted to the governor and released on August 2.

On July 27, 2000, Governor Davis called on federal and state regulators to take swift action to extend the caps on wholesale electric rates in California and provide San Diego ratepayers with million of dollars in refunds.

In letters written by the governor to two state regulatory agencies and two California-based panels charged with overseeing California's power market, he called for a coordinated state effort to urge federal regulators to take strong measures to reduce power rates in both the short- and long-term.

On August 2, 2000, Governor Davis issued three Executive Orders designed to reduce energy consumption by state government and speed up the time it takes new power generating facilities to win approval from state agencies.

On August 9, 2000, Governor Davis called on the Public Utilities Commission (PUC) to establish a two-year plan that would cut electricity rates by nearly half for residential and business customers of San Diego Gas & Electric.

The governor also reached an agreement with the California Grocers Association that will save enough electricity to provide power to between 50,000 and 60,000 homes during periods of peak demand, as grocers agreed to reduce power

consumption by 10 percent during Stage One emergencies.

On August 10, 2000, Governor Davis wrote a letter to President Clinton urging him to expedite FERC's investigation to determine whether current electric rates in San Diego were unjust.

On August 22, 2000, Governor Davis called on President Clinton to release emergency funds from the Low-Income Home Energy Assistance Program (LIHEAP) to the state to help low-income Californians pay their rapidly-rising electricity bills.

On August 23, 2000, President Clinton responded to Governor Davis' request by releasing \$2.6 million in emergency funds to help low-income Southern Californians cope with the surge in their electricity bills. The President also asked federal regulators to speed up their investigation into the operation of U.S. power markets and urged the Small Business Administration to use its credit programs to help small firms hurt by the price increases.

On August 23, 2000, Governor Davis reached agreement with legislators on legislation to provide relief to San Diego ratepayers. The governor signed two bills into law on September 6, 2000.

Please see attached letter (below).

###

SEPTEMBER 12, 2000

STATEMENT OF GOVERNOR GRAY DAVIS

TO THE FEDERAL ENERGY REGULATORY COMMISSION CONCERNING ITS INVESTIGATION OF WHOLESALE PRICE ESCALATION IN CALIFORNIA

The Summer of 2000 has confronted California with an electricity crisis that seriously threatens the safety, health and well being of citizens and businesses throughout the state. At the heart of the crisis is the extraordinary run up in prices for wholesale electric energy and ancillary services, accompanied by deteriorating service and reliability. In San Diego, electric customers' bills have more than doubled this summer, threatening pe

Calif Probe Focuses On Dynegy,Mirant Plants-Commissioners ????? Updated: Monday, May 21, 2001 05:28 PM?ET  
????? ? By Jason Leopold and Mark Golden

Of DOW JONES NEWSWIRES

LOS ANGELES (Dow Jones)--California officials are focusing an investigation into the state's wholesale electricity markets on two power plants operated by two of the state's largest merchant power companies, Mirant Corp. (MIR, news, msgs) and a joint venture between Dynegy Inc. (DYN, news, msgs) and NRG Energy (NRG, news, msgs), according to two commissioners on the California Public Utilities Commission.

The CPUC and the state Attorney General are investigating whether output was withheld in order to maintain high prices over the past seven months at Mirant's Pittsburg plant in northern California and the Encina power plant, which is equally owned by Dynegy and NRG, near San Diego.

All power plants in the state are being examined, but investigators have found that the Encina and Pittsburg plants have reduced power during supply shortages, causing market prices to rise.

But so far, the commissioners said, investigators have found no activity that is clearly illegal.

"Is it unethical? Yes," one PUC commissioner said. "But is it illegal? No, unless there was collusion. This is the system we set up. What the generators are doing would be the appropriate thing to do if you are going to maximize your profit to shareholders."

Spokesmen for Mirant and Dynegy flatly denied the charges.

"What we did was both legal and ethical," said Mirant spokesman Chuck Griffin. "There was a very forthright attempt to keep these plants up and running. Unequivocally, we have never held anything back."

Some of the turbines at the Encina plant are peaking units, which are supposed to ramp up and down to meet demand, Dynegy spokesman Steve Stengell said. The plant is operated by NRG, but Dynegy markets the power from the plant and tells NRG how much power to generate based on what has been sold.

"We've done absolutely nothing to manipulate prices," Stengell said. "Electricity demand increases and decreases throughout the day. Our production increases and decreases to follow changing demand. Ultimately, the ISO determines the exact amount of dispatch."

A spokesman for Attorney General William Lockyer declined to comment on the ongoing investigation.

CPUC President Loretta Lynch told California newspapers last week that her office and that of Lockyer's have enough information to take legal action against generators next month, though she declined to name the companies involved and she said that the exact nature of the legal action is still under review.

"We get really tired of these assertions with no evidence to back them up," Griffin said. "This whole idea that any generation was held back at any time is completely bogus. It is pure political rhetoric."

Mirant's California power plants have run at full power during critical times except under one of two conditions, Griffin said. Either generating units were broken and had to be taken off line to be fixed, or they were beginning to run in a way that violated environmental restrictions and Mirant had to get permission to run at full power any longer.

"There are no other reasons than those two," said Griffin.

Nevertheless, several employees at the power plants involved have testified that generating units were ramped down even when the state's Independent System Operator had warned of tight supplies, according to one commissioner.

And a senior NRG employee at the Encina power plant in Carlsbad told Dow Jones Newswires that he was told by Dynegy's Houston trading floor to "ramp down" the large 951-megawatt plant on at least 10 occasions when he knew power supplies were tight.

"We would be told to ramp down the units even when we knew the state needed the megawatts," the employee said. "Then the spot price would go up, but we didn't really pay too much attention to that, because as far as we know everybody was doing this. We knew how much power other plants were operating at, and we knew they weren't at full capacity."

NRG spokeswoman Meredith Moore said that the ISO gives instructions to Dynegy and Dynegy tells NRG what to do. "And there have been conditions when the ISO told us to ramp down during Stage 2 emergencies," Moore said.

Also, one CPUC commissioner pointed out that the state's deregulation law doesn't require owners of power plants to bid all of their capacity into the market.

The state's incumbent utilities, who were forced to sell their power plants as part of deregulation, also may have contributed to the problem, according to an ISO study. By not securing nearly enough power in advance to meet their customers projected needs, the state's three main utilities contributed to 36 Stage 1 and 2 power emergencies last summer and forced the grid operator to pay a much higher price to keep the lights on.

The utilities argued that they underscheduled their load so they wouldn't have to pay the generators' high bid prices. The ISO market last year had a price cap, while other markets did not.

Mirant's Griffin, meanwhile, said all the finger pointing isn't solving the state's problem.

"If they are going to get to a solution in California, they have to get beyond silly political rhetoric," Griffin said. "The real solution to the problem is to get new supply, and if they are going to do that they have to make this market look attractive to the kind of people who can build power plants."

HEADLINE: California's power plan

ANCHORS: ALEX CHADWICK

REPORTERS: ELAINE KORRY

BODY:

ALEX CHADWICK, host:

California's rushing to get new power plants up and running. In January, Governor Gray Davis used emergency powers to speed the permit process. There has been progress, but NPR's Elaine Korry reports probably not enough to avoid more blackouts this summer.

ELAINE KORRY reporting:

Since January, California energy regulators have been slashing red tape to speed new power plants online. Their tracking 180 separate projects. Bob Thirkelsen, who oversees permitting at the California Energy Commission, says the governor's emergency directive has already paid off.

Mr. BOB THURKELSEN (California Energy Commission): And that has allowed us to, so far, permit 450 megawatts of new generation in a 21-day period.

KORRY: In a few cases, even quicker than that. Jim Michael is the president of Alliance Power, based in Denver, which sprinted through its permit process in under three weeks.

Mr. JIM MICHAEL (Alliance Power): Well, we're pouring concrete. We're on schedule, so we're gonna have power plants operating this summer.

KORRY: Alliance is building two small generators in Southern California. Michael says permitting projects that used to take months were, instead, completed in a day or two, allowing the company to meet critical deadlines.

Mr. MICHAEL: It was essential. Without that streamlining, these projects would have gone away. The turbines would have been sold to other projects outside of California and so we would have essentially failed.

KORRY: Yet there's still a major hitch. Despite the speedup in permitting, California will still fall far short of the governor's initial goal. He wanted 5,000 new megawatts of electricity, enough to power five million homes, to come online by July 1st. In a worst-case scenario, that's how much additional supply the state would need to keep the lights on this summer. Yet only half that amount, 2,500 megawatts, will be up and running by July. Jan Smutny-Jones heads the industry lobbying group the Independent Energy Producers Association. He's not surprised by the shortfall.

Mr. JAN SMUTNY-JONES (Independent Energy Producers Association): We said at the time that was a very ambitious goal. And we'll see how it plays out.

KORRY: Smutny-Jones says blackouts are a near certainty this summer. Their severity will depend on a number of unknowns. How hot will it get this summer? How much more can Californians skimp on electricity? And how much wattage will the power wholesalers themselves take off line? Power producers have been charged with deliberately shutting down plants to keep prices high. Smutny-Jones has a different explanation for the down time.

??Mr. SMUTNY-JONES: California's electric power system is rapidly aging. We have not built a power plant of an appreciable amount in over a decade. ?And there--while there's power plants being built now, the average age of these power plants is in excess of 36 years old. ?That's the average age, which means that a significant amount of the fleet is older than that. ?They break down.

??KORRY: The industry, itself, is partly to blame for the aging fleet. The Energy Commission did license small generators during the 1990s. And if bigger ones weren't built, it's largely because the energy producers, themselves, balked at building them. ?Chris Seiple, with RDI Consulting, says construction slowed everywhere; that is, until last year. ?Since 2000, he says, 90,000 new megawatts of energy have come online nationwide. ?That's more capacity in two years than was built during all of the 1990s. ?And now comes the Bush national energy policy, urging even greater production. ?According to Seiple, we could wind up with too much of a good thing.

??Mr. CHRIS SEIPLE (RDI Consulting): So we really expect that in--What?--50 markets we will go from a situation of having shortages to having too much supply.

??KORRY: In yesterday's speech, President Bush repeated the administration's claim that the nation will need at least 1,300 additional power plants over the next two decades. ?Seiple says an over supply would drive down prices, hurting the power wholesalers, but lower energy costs would suit most ratepayers just fine. Elaine Korry, NPR News, San Francisco.

??CHADWICK: It's 19 minutes past the hour.

HEADLINE: ?Pacific Sues Calif. Over Contracts

BYLINE: DAVID KRAVETS

DATELINE: SAN FRANCISCO

BODY:

???California's largest utility has sued the state seeking reimbursement of millions of dollars in energy contracts seized by the governor.

??San Francisco-based Pacific Gas & Electric Co. "has received no compensation for the damage to its property," the company said in a lawsuit filed Tuesday in San Francisco Superior Court.

??PG&E filed for bankruptcy protection in April and is struggling to repay \$14.4 billion to thousands of creditors.

??Gov. Gray Davis seized the energy contracts on Jan. 31 to keep the California Power Exchange from liquidating them. The now-defunct exchange, which had been the state's middleman for buying and selling power, wanted the contracts to recoup hundreds of millions of dollars that PG&E owed it.

??The governor's office acknowledged that California owes PG&E for the contracts, an amount that Davis wants a judge to determine. At the time they were seized, the state estimated their value at \$160 million, while the power exchange priced them at \$347 million.

??"We seized the contracts to have reasonable priced power and expected that price to be set in a neutral forum," said Steve Maviglio, the governor's spokesman.

??Under the contracts, the state buys electricity at a set price rather than paying higher prices for power bought at the last minute. Therefore, the contracts' value changes with the volatile price of electricity.

??"We believe the state has benefited from the value of our contracts, and as a result we should be compensated," PG&E spokesman Ron Low said.

??Low declin

Calif ISO Cuts Power Refund Estimate To \$6.1B From \$8.9B ???? Updated: Wednesday, July 18, 2001 11:53 AM?ET  
???? ?

By Mark Golden

Of DOW JONES NEWSWIRES

NEW YORK (Dow Jones)--California's estimate of how much the state was overcharged by power suppliers dropped to \$6.1 billion from \$8.9 billion when an adjustment requested by a Federal Energy Regulatory Commission judge was taken into account, according to data submitted to FERC last week.

The California Independent System Operator's estimate fell when the grid operator excluded power bought by utilities not under its purview, and its estimate could fall again as it works in other recommendations made by the judge following the conclusion of 15 days of talks between power suppliers and the state over potential refunds last week.

Even as the ISO continues to recalculate its refund estimate, however, the state is sticking to the original \$8.9 billion figure, which has been called arbitrary by critics. The \$6.1 billion estimate merely establishes "a potential framework for settlement discussions," Eric Hildebrandt, the ISO's chief analyst on the matter, told the FERC.

FERC administrative law judge Curtis Wagner, who has dismissed the \$8.9 billion figure as baseless and criticized California's delegation for not negotiating in good faith, estimated in his report on the talks that refunds due may amount to about \$1 billion. Power suppliers offered just over \$700 million.

Wagner has recommended FERC hold a 60-day hearing to set the level of refunds and has told the ISO to revise its estimate of what California is owed.

The ISO's original \$8.9 billion figure included electricity sales to municipal utilities and alternative energy suppliers that didn't go through the ISO's wholesale markets, the California Power Exchange or the California Department of Water Resources. Without direct knowledge of the prices of those purchases, the ISO made estimates.

"We know the volume (of the bilateral deals)," Hildebrandt said. "The refund amount was based on extrapolation of observed prices in the spot market."

Resetting The Baseline

Wagner told the ISO to recalculate its figure using only sales through the ISO and CalPX markets - which were set up by the state's deregulation law for California's three investor-owned utilities to purchase power - in addition to sales to the California Department of Water Resources.

The DWR has been buying power for the utilities since PG&E Corp. (PCG, news, msgs) unit Pacific Gas & Electric Co. and Edison International (EIX, news, msgs) unit Southern California Edison ran out of cash in January. DWR has also been covering the needs of Semptra Energy (SRE, news, msgs) unit San Diego Gas & Electric Co.

In arriving at his new estimate, the ISO's Hildebrandt also recalculated fair prices - the baseline against which refundable amounts are determined - by retroactively applying the price controls FERC imposed June 19. Those controls set prices by the operating costs of the least efficient generator needed to meet demand each hour.

But last week, after Hildebrandt completed his \$6.1 billion estimate, Wagner recommended to FERC commissioners that the June 19 price control formula be modified when used retroactively to determine refunds.

Those modifications, if applied to the ISO's estimate, would cut refunds much further. For example, FERC's price limits are now based on a monthly average of natural gas prices covering supplies throughout the state. Wagner recommended using power producers' actual gas costs. Since gas is considerably more expensive in southern California, using actual prices would cut potential refunds sharply.

Also, Wagner said that refunds should be ordered on sales only as far back as Oct. 2, which would reduce the total amount claimed by California by about one-third, according to Hildebrandt's previous monthly breakdown.

ISO staff is again recalculating the refund estimate to reflect some of Wagner's recommendations, but the ISO will still include sales back to May 2000, said spokeswoman Stephanie McCorkle.

"The reason we're not going back just to Oct. 2 is that all of the overcharges going back to May should be repaid," McCorkle said. "We just maintain that position."

#### FERC Baseline Questioned

In addition, Hildebrandt argues in his recently released estimate that when fair prices are calculated retroactively using FERC's new formula, the price cap should be based on the least efficient generator the ISO knows to have been available, not the least efficient generator actually used to meet demand.

That's because the FERC's new price controls require all available generators be made available to the ISO at any time, Hildebrandt said.

Applying that rule would raise the ISO's revised estimate substantially: to \$7.7 billion from \$6.1 billion.

One of the ways generators managed to manipulate prices higher, Hildebrandt said, was to not offer cheaper power from more efficient units. Considering only the least efficient generator actually used would make permanent the rewards for such withholding, he said.

"The judge is in error to suggest that the actual (least-efficient) unit used would have been called on if the must-offer requirement were in effect," Hildebrandt said in an interview.

In arriving at his estimate, Hildebrandt determined the difference between actual sales prices and what prices would have been for every seller and for every hour since May 1, 2000, had price controls been in effect. The ISO released only the total potential refund, not the company-specific shares.

Hildebrandt took issue with generating companies that have complained his numbers aren't justified.

"These are based on very tangible records," he said. "The idea that it's a black box is misleading."

WRAP: Calif Turns To Lawmakers As Power Bond Deal Stalls

Updated: Thursday, April 26, 2001 03:35 PM ET

By Jason Leopold

Of DOW JONES NEWSWIRES

LOS ANGELES (Dow Jones)--Frustrated by delays in securing regulatory decisions needed to support a massive issue of bonds to finance power purchases, California Treasurer Phil Angelides, Gov. Gray Davis and several lawmakers are working on an end run through the state Legislature.

The group is putting together legislation, aimed to be introduced in the state Assembly as early as Friday, that will directly authorize the state to sell \$10 billion in revenue bonds - in the process clearing the way for the state to close on \$4.1 billion in interim financing.

But there are pitfalls along that path as well, raising new questions about when the bonds will be sold. John Hallacy, managing director for municipal bond research at Merrill Lynch & Associates, said the bond market is still expecting the sale, but he's concerned that details on marketing of the bonds haven't been released.

Hallacy said if the bond sale is delayed it will be a problem for the state.

"Where will they get the money to buy power over the summer?" Hallacy said.

The state has been working since February to put together a bond deal authorized by previous legislation, but the effort has been hung up in part by the California Public Utilities Commission's difficulty carving revenue out of electricity rates to service the debt. The commission's standing proposal for calculating the so-called California Procurement Adjustment - the amount of electricity rate revenue available to the state - has been appealed by the state's struggling utilities, which argue the plan would leave them unable to meet their own obligations.

"The utilities effectively blocked the bond sale by appealing the PUC's action on how they calculated the CPA," an aide to Angelides said. "So now we're saying, 'Let's sell the bonds by revising the law and go to the Legislature to get what we need.'"

Legislature No Slam Dunk

Whether the legislative route proves more fruitful remains to be seen. As reported, Assembly Republicans said Wednesday that they wouldn't vote for the measure unless the governor releases details of the state's long-term power contracts, information the governor has thus far refused to divulge.

"Republicans believe it is fiscally irresponsible for the Legislature to ask ratepayers to shoulder the extraordinary weight of a \$10 billion bond before the governor finally discloses what the ratepayers are getting in return," Assembly Republican leader Dave Cox, R-Fair Oaks, said in a press release.

The treasurer needs Republican support if the bill is to win the two-thirds majority it needs to be implemented immediately.

California has spent about \$5 billion since mid-January buying power in place of the state's cash-strapped utilities, a total that is growing by about \$70 million a day. The state needs to move ahead with the bridge financing and bond deal to repay the state's general fund for power already purchased and to stretch out future power costs that can't be covered in full by electricity rates.

The situation is growing more urgent. Citing the "mounting and uncertain" costs of California's power crisis, ratings agency Standard & Poor's lowered the rating on California's general obligation bonds to A+ from AA. Further delays of the bond issue could put the state in a bind, S&P said.

"If the state cannot sell its proposed revenue bond as planned in a timely manner, the potential effect on the state's general fund could be severe without large further retail rate hikes beyond the sizable percentage increases recently implemented," S&P said.

Angelides has said that the state's budget surplus will be depleted if legislation isn't passed allowing his office to sell the bonds. In addition, the clock on the state's bridge financing deal is ticking. Commitments from bankers to fund the loan are due May 8, and the banks have said they won't sign up if the bond issue that will repay the bridge loan is in doubt, Angelides has said.

Keely Seen As Backer

Legislation needs to be introduced and passed and in "days" establishing the bond sale at \$10 billion, Angelides said Tuesday. His office said the treasurer has been in "long meetings" with legislators on the issue, working with the governor's office to drum up votes.

Assemblyman Fred Keeley, D-Boulder Creek, will likely carry the bill, AB8X, an aide in his office said Wednesday. The governor's staff is working with Keeley on draft language, said Davis spokesman Roger Salazar. Keeley didn't immediately return calls for comment.

Keeley is the author of AB1X, which authorized the state to purchase power on behalf of its cash-strapped utilities and issue bonds to pay for power going forward. The authorization for the bonds, however, depends on a complicated calculation of the CPA, which determines the funds available for debt service and, ultimately, the size of the issue.

PG&E Corp. (PCG, news, msgs) unit Pacific Gas & Electric, whose appeal is pending before the PUC, said the Public Utilities Commission's calculations on the CPA "grossly overstate" the revenue that will be left over after the utility covers its costs. The utility has since filed for bankruptcy protection, raising further doubt about the state's ability to tap the utility's revenue for its own purposes.

The PUC is also waiting for the California Department of Water Resources, which is handling the state's power purchases, to release details of its projected power costs, the amount of power needed and how much money the agency expects to spend in the spot market for power. Again, the state reluctant to release that information.

The state has set a rough target of June for the bond sale to go forward, although some have said it could be delayed until July or August. Hallacy, of Merrill Lynch, said the bond market "could deal" if the sale was conducted after June 30, because it will give it more time to prepare for the sale.

Economy Enron May Issue More Stock to Cover Obligations By Rebecca Smith and John R. Emshwiller Staff Reporters of  
 The Wall Street Journal

10/24/2001 The Wall Street Journal A2 (Copyright (c) 2001, Dow Jones & Company, Inc.)

Enron Corp. might have to come up with several hundred million dollars or more during the next 20 months to cover  
 potential shortfalls in investment vehicles it created. Covering such shortfalls could involve issuing additional Enron  
 shares, diluting the position of current shareholders. However, Enron Treasurer Ben Glisan said in an interview yesterday  
 that the company believes it can repay about \$3.3 billion in notes that were sold by those investment vehicles without  
 having to resort to issuing more stock. The notes were sold to investors during recent years by several entities -- known as  
 the Marlin Water Trust II, the Marlin Water Capital Corp. II, the Osprey Trust and Osprey I, Inc. The notes are coming due  
 during the next 20 months. Mr. Glisan said assets from the entities could be sold to pay off some of the notes. Also, Enron  
 is selling other assets. Proceeds from those transactions also could go toward repaying the notes, which ultimately are  
 guaranteed by Enron. He said it appears that asset sales will raise at least \$2.2 billion by the end of next year. This  
 amount includes cash proceeds of \$1.55 billion from the previously announced sale of Enron's Portland General Electric  
 utility unit. Enron hopes to complete that sale by the end of 2002. "There are a number of other assets we believe will raise  
 sufficient proceeds" to repay the notes, Mr. Glisan said. "But if we are wrong, we will issue equity." Mr. Glisan said a  
 worst-case scenario would involve issuing as much as \$1 billion in stock. Enron said it has about 850 million shares

outstanding. Making up any shortfall with equity has become more expensive because of the drop in Enron's share price. In 4 p.m. New York Stock Exchange composite trading, Enron shares were down 86 cents to \$19.79. The stock was once again one of the most actively traded with about 27 million shares changing hands. Early this year, Enron stock was more than \$80 a share. During the past week, shares of the energy-trading giant have dropped more than 40%. Early last week, Enron reported a \$618 million third-quarter loss, resulting from \$1.01 billion in write-offs. The company also disclosed a \$1.2 billion reduction in shareholder equity for the quarter as a result of terminating certain transactions related to a partnership that for a time was headed by Enron Chief Financial Officer Andrew S. Fastow. In July, Mr. Fastow ended his connection to the partnership in the face of growing concerns by analysts and major investors. On Monday, Enron disclosed that the Securities and Exchange Commission was looking into the transactions related to Mr. Fastow. Enron has said its dealings with the partnership were proper. The turmoil of the past several days prompted Enron to schedule a conference call yesterday morning with Wall Street analysts and others in an effort to reassure investors. Enron Chairman and Chief Executive Kenneth Lay said while "we are extremely disappointed with our stock price . . . our businesses are performing very well." Mr. Lay and other executives said Enron has adequate liquidity to meet its needs. Mr. Fastow, the chief financial officer, took part in the conference call. But neither he nor Mr. Lay would answer any questions concerning the Fastow-related partnership, which was known as LJM2 Co-Investment LP. Mr. Lay said the SEC was in the midst of an inquiry concerning that partnership arrangement, which has raised conflict-of-interest questions among analysts and others. Mr. Lay cited shareholder suits filed recently as another reason not to discuss the partnership questions. Mr. Lay said he was "very concerned about the way Andy's character has been loosely tossed about." He added "we continue to have the highest faith and confidence in Andy." Internal LJM2 documents indicate that Mr. Fastow and perhaps a handful of fellow Enron officials made millions of dollars in management fees and capital increases from running the partnership. Billions of dollars of Enron assets and stock were involved in LJM2-related transactions, according to Enron SEC filings. During the conference call, analysts -- even some who have been longtime Enron fans -- challenged executives about the Fastow partnership arrangement and the company's often opaque financial reports. "There's the appearance you are hiding something," said Goldman Sachs analyst David Fleischer. "You need to do everything in your power to demonstrate to investors that your dealings are above board." Mr. Lay responded, "We're trying to be as transparent as we can."

Business/Financial Desk; Section C Enron Tries To Dismiss Finance Doubts By FLOYD NORRIS

10/24/2001 The New York Times Page 1, Column 5 c. 2001 New York Times Company

Enron has ample access to cash, the company's chief executive said yesterday as he assured investors that there was no need for additional write-offs stemming from unusual financing activities. In a conference call with investors that was hastily scheduled after Enron's stock plunged on Monday, the chief executive, Kenneth W. Lay, strongly defended the company's chief financial officer and said there was no conflict of interest involved in transactions that the Securities and Exchange Commission was looking into. But he refused to go into detail on the transaction that Enron made with partnerships run by Andrew S. Fastow, the chief financial officer. In addition, Mr. Fastow, while declaring that Enron "expects to continue to have sufficient liquidity to meet normal obligations," declined to answer any questions about it. The conference call, which began just as trading opened on the New York Stock Exchange, at first seemed to be reassuring investors. Within minutes of the beginning of the call, the share price rallied to \$23.25. But it soon began falling, and ended the day down 86 cents, at \$19.79. The day's low of \$19.62 was the lowest since Jan. 12, 1998, and was down 78 percent from the high set by the stock in the summer of 2000. Until recently, most investors focused on the company's reported operating earnings, which showed good results as it became a leading player in ener

California is just figuring this out? As any second-year law student could tell you, the problem with conditioning fast-track permitting on selling electricity to California is that it violates the holding in the 1994 U.S. Supreme Court case *Dolan v. City of Tigard* (city could not require hardware store to "donate" land for a bike-path as a condition to granting a permit to expand the hardware's parking lot).

Steve

Subject: Davis' solutions may be in trouble: New plants built in California don't have to sell electricity here, state lawyers conclude

At least one state agency says you cannot cut exports. We should probably cite this in our Reliant complaints response.

Davis' solutions may be in trouble: New plants built in California don't have to sell electricity here, state lawyers conclude By Carrie Peyton Bee Staff Writer (Published April 4, 2001) California can't require builders of new power plants to sell electricity here, even as a trade-off for super-fast environmental review, lawyers at state Energy Commission have concluded.

Their position, reached despite Gov. Gray Davis' vow that new megawatts "will stay in California," emerged as part of a fast-track approval for expanding south state power plant.

It comes as the agency that oversees plant licensing is whittling away at the presumption that emergency "peaking" plants installed this summer will be temporary. Some of the peaking plants - to be used only at times of highest energy demand - are now proposed to stay in place 30 to 40 years.

Both issues have bubbled up quietly during California Energy Commission reviews, sometimes addressed only indirectly in staff reports.

"This is a major public policy issue for all of California. If we're building these plants on an expedited basis and we're not getting any electricity out of it, why are we doing it?" asked William Workman, Huntington Beach assistant city administrator.

The answer, according to the Governor's Office and the Energy Commission, is twofold. First, the plants are needed no matter what, because the entire West is power poor. And second, it looks like a California sales clause would violate federal interstate commerce law.

"We're not supposed to take protectionist action against our fellow states," said Bill Chamberlain, chief counsel to the Energy Commission. He said numerous Supreme Court decisions have held that a state can't use its regulatory powers - such as permitting processes - to give its residents an economic advantage.

Although there is no guarantee, the Governor's Office, power plant builders and the state Environmental Protection Agency say most of the plants being rushed to life will probably end up selling to the state Department of Water Resources.

"The people who are building these power plants know very well that we expect it to be used in California, and we're confident that it will be," Davis spokesman Roger Salazar said.

Cal-EPA Secretary Winston Hickox said the "preponderance" of new peaking plants will devote their electricity to California.

"We will do everything that we can to encourage that the energy produced as a result of our bending over backward to be accommodating is sold to California. We're not there yet, but I believe we'll get there," Hickox said.

He also said the three-week reviews of peaking plants have cut no corners in terms of fundamental environmental standards.

Two of those plants scheduled for Energy Commission votes today were praised by environmentalists as having relatively low emissions of smog-forming compounds, but they still were concerned by the 21-day review.

"If you're having a quick review, a plant shouldn't be allowed to continue for more than the summer," said Gail Ruderman Feuer of the Natural Resource Defense Counsel.

The first peaking plant approved by the commission, the United Golden Gate Project in San Mateo County, was given permission to run for three years.

But the next two, in San Diego and Palm Springs, are being recommended for indefinite approval, and their builder, InterGen North America, said it intends to keep them running for 30 to 40 years.

"There's no way affected communities can know what's going on with the processes that are so short," said Sandra Spelliscy, general counsel of the Planning and Conservation League. "I don't want to say negative things about that particular peaker (but) I think we're going to wake up in six to 12 months and realize we did a lot of stuff that we regret."

In Huntington Beach, city officials say they are largely pleased with the fast-track process that protected most of their major concerns over a proposal by AES to quickly revive two mothballed steam turbines at its seaside plant.

But a slower review process would have offered even more, Workman said. It would have delayed the plant for results of studies on sea life injured or killed by cooling water intakes and potential increases in ocean pollution.

He worries that his city's residents gave up those protections without any certainty that California will benefit from the extra 450 megawatts AES will be able to crank out.

Huntington Beach sought a California buyer clause in the AES permit, which is scheduled for an Energy Commission vote next week, but it was rejected in a cryptic report that only notes the commission staff has taken no stand on the issue.

AES would have opposed such a provision, because it believes the Energy Commission has no authority to tell it where to sell, said Aaron Thomas, a manager at AES Pacific.

"In our case, there is no need to have a shotgun to our head," he said. AES is negotiating to sell all 450 megawatts to the state.

Meanwhile, the governor acknowledged what an Energy Commission report outlined last week - that his goal of 5,000 more megawatts online by July will not be met.

"We have a real challenge in the early part of the summer," Davis said Tuesday. "We do have more than 4,000 megawatts coming online by late summer. Usually, the challenge is in August and September. This year, the challenge may well be in May and June."

The Bee's Carrie Peyton can be reached at (916) 321-1086, cpeyton@sacbee.com. Emily Bazar of The Bee Capitol Bureau contributed to this report.

Much Calif Power Price Gouging Beyond FERC's Reach -ISO By Jason Leopold Of DOW JONES NEWSWIRES

06/25/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

LOS ANGELES -(Dow Jones)- Federal energy regulators only have the authority to order refunds for about a third of the \$9 billion California Gov. Gray Davis claims energy companies have overcharged the state in the 12 months to May 2001, documents from the state's wholesale market operator show. Of the total, \$2.9 billion came from the May-September period the Federal Energy Regulatory Commission has said it can't act on, and \$2.8 billion from the October-May period is attributable to municipal utilities over which FERC lacks jurisdiction, according to documents from the California Independent System Operator. That leaves just \$3.3 billion in alleged overcharges that FERC could potentially order refunded - far less than the \$9 billion Davis seeks. Talks between generators and state officials to settle billions of dollars in unpaid bills and issues of overcharging began Monday. Curtis Wagner, the FERC administrative law judge presiding over the talks, has said California will likely see refunds from generators, but far less than the \$9 billion Davis expects. Davis said Sunday California is going to Washington, D.C., "with one goal, and that is to bring back \$9 billion." Nearly half that amount is attributable to municipal utilities, the ISO documents show. The ISO said the Los Angeles Department of Water and Power, for example, overcharged California \$75 million between May and October. David Freeman, the governor's chief energy adviser and the former general manager of the LADWP, said the agency didn't overcharge the state, but conceded it profited by selling spare power to the ISO. Davis adviser Nancy McFadden said the state needs FERC to lay the groundwork for the state to seek refunds from public utilities by ordering refunds from corporate energy suppliers. But during a conference call Sunday with reporters, McFadden and Davis press secretary Steve Maviglio couldn't explain how the governor would go about getting refunds from companies whose wholesale power prices aren't regulated by FERC. Davis testified before the U.S. Congress last week that generators overcharged the state \$9 billion and that FERC should order the refunds. State Sen. Jim Brulte, R-Rancho Cucamonga, has asked for an investigation into Davis's testimony, saying the figures were based on "shaky calculations." To come up with its conclusions, the ISO compared hourly market prices received by sellers to an estimate of market prices that could have been expected under competitive market conditions. The ISO established a benchmark for what it determined was competitive - at times about \$125 per megawatt-hour to \$200/MWh, a fraction of actual prices in the market - based on the cost of natural gas and compliance with air-quality rules. The ISO, however, typically used the price of gas at California's northern border, according to the documents. Generators paid a higher price for the fuel in Southern California, raising the cost of making electricity. The ISO also used reports of earnings by the state's "Big Five" power suppliers during 2000 - earnings that for some quadrupled - to draw the conclusion that generators overcharged the state, according to the documents. The ISO attributed high power prices in part to the state's three largest utilities' failure to buy the power they needed in advance, leaving the grid operator to pick up the shortfall at the last minute, according to the documents. The ISO alleges the following companies overcharged the state by the listed amounts between May 2000 and February: American Electric Power Service Corp. (AEP): \$22.9 million Arizona Public Service Co. (PNW): \$24.6 million Aquila Power Corp. (ILA): \$28 million Avista Energy Inc. (AVA): \$48 million Automated Power Exchange: \$16 million British Columbia Power Exchange Corp: \$439 million Calpine Corp. (CPN): \$236 million Constellation Power Source Inc. (CEG): \$7.8 million Cargill-Alliant LLC: \$1.4 million Citizens Power Sales: \$557,000 Coral Power, LLC, a unit of Shell Oil (RD): \$27 million Duke Energy Corp. (DUK): \$804 million Dynegy Inc. (DYN): \$530 million Enron Corp. (ENE): \$39 million El Paso Corp. (EPG): \$29 million El Paso Power Electric Co. (EE): \$24,475 Hafslund Energy Trading LLC: \$712,528 Idaho Power (IDA): \$28 million Koch Energy Trading: \$2.5 million Los Angeles Department of Water and Power: \$75 million MDSC: \$24 million Mico Inc.: \$1.6 million Morgan Stanley Capital Group (MWD): \$124,644 NewEnergy Inc.: \$1.5 million Nevada Power Co. (SRP): \$9.1 million PacifiCorp: \$65 million PECO Energy Co. (EXC): \$4.2 million Portland General Electric (ENE): \$44 million Public Service Co. of Colorado: \$14.1 million Public Service Co. of New Mexico (PNM): \$15.5 million Puget Sound Energy: \$24 million Reliant Energy Inc. (REI) \$750 million Mirant Corp. (MIR), formerly Southern Co., \$753 million \*Semptra Energy Trading Corp. (SRE): \$82 million (this number has been wiped out by the ISO) Sierra Pacific Power Co. (SRP): \$23 million TEK: \$11 million Tuscon Electric Power: \$1.1 million UPA: \$131,715 Winston and Strawn: \$11,917 Williams Cos. (WMB) \$860 million

Total FERC jurisdictional sellers: \$4.7 billion \*Total without SETC/SDG&E: \$4.6 billion

Total FERC and Non-FERC sellers: \$6.7 billion \*Total without SETC/SDG&E: \$6.6 billion

Total March-May overcharges: \$2.3 billion

Julie, could you post on the outage tracking Web page?

GAC POWER POINTS Special: Calif ISO Inflates Outage Figures By Mark Golden

04/04/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

A Dow Jones Newswires Column

NEW YORK -(Dow Jones)- The California Independent System Operator on Monday published on its Web site its list of off-line generators, as it has done every day since Jan. 25, as a way of showing why it is having such a hard time keeping the lights on.

Monday's bottom line - 15,501 megawatts of generating capacity out of service - was stunning since electricity usage within the ISO's area peaked that day at 28,632 MW.

But on Monday, as it has every day since Jan. 25, the ISO padded the list. It included power that isn't in any way considered resources of the ISO; qualifying facilities that the ISO counts twice; and generators that returned to service hours before the list was published.

When those are eliminated, Monday's listed outage total falls to 8,905 MW from 15,501.

The ISO list, for example, added 1,221 MW to the total of its "California Generation Curtailments" because the 1,221-MW Palo Verde nuclear unit 1 was taken off line over the weekend for scheduled refueling. But only one of the three investor-owned utilities that the ISO represents, Edison International's (EIX) Southern California Edison, owns any of the electricity from the Palo Verde plant, which is in Arizona. Edison's take from the generator is just 201 MW.

The same could be said for Four Corners unit 4, which contributes 355 MW to the ISO when its running, but 740 MW to Monday's ISO outage list.

The ISO list also includes dozens of generators owned by California municipal utilities that aren't part of the ISO's system. The ISO is responsible for managing the combined electricity load of Southern California Edison and California's other two investor-owned utilities: PG&E Corp.'s (PCG) Pacific Gas & Electric Co. and Sempra Energy's (SRE) San Diego Gas & Electric Co. Power plants owned by the three utilities are considered to be ISO resources, as are the big power plants that the utilities sold to merchant power companies like Dynegy (DYN) and Reliant (REI), and smaller, alternative power plants - or "qualifying facilities" - that provide juice to utilities under long-term contracts.

On Monday, the ISO included 2,726 MW of off-line generation that isn't considered by anybody to be ISO resources in the first place.

The ISO agrees it shouldn't be counting the entire output from generators that the utilities only partially own.

"It's a flaw in the calculation by the software. We're trying to get that fixed, and it should be within a week or two," said Tracy Bibb, the ISO's managing director of engineering and maintenance.

As for counting generators owned by municipal utilities in Pasadena and Sacramento that the ISO doesn't serve, Bibb said the ISO has no choice but to include them.

"The governor issued an emergency order that the ISO shall publish a list of all unit outages in California. We contacted all the utilities and said that, even though you're not part of the ISO, you are required to report outages to us, and we're required to post them," Bibb said.

The inflated daily outage list hurts the reputation of the state's merchant power companies. One of the primary uses of the list is to imply that "out-of-state generators," as they are often called, are keeping massive amounts of power off line to maintain false scarcity and pump up the wholesale power market.

"California once again was threatened with blackouts Friday, which put Reliant Energy on the spot when it announced it had taken one of its units out of service at its second-largest power plant in the state," the Houston Chronicle reported last week. "California critics have called power producers pirates, saying practices like taking plants out of service at key times push up prices."

The ISO includes every little difference between maximum output and actual output, however small or temporary. Of the 73 large in-state generating units owned by merchant power companies Reliant, Dynegy, AES Corp. (AES), Duke Energy (DUK) and Mirant (MIR), 51 units were on the ISO's list. Many are off line for scheduled spring maintenance, but most are on the list because at some point in the day they weren't generating at full capacity. Duke's 171-MW Morro bay unit 1, for example, appeared on Monday's list because at some point in the day it was generating just 155 MW.

"We hardly ever bring that 44-year-old unit to full load. It will stay on longer that way. The 171-MW maximum is running it flat out under perfect weather conditions," said Duke spokesman Tom Williams.

And many units are run at partial capacity due to annual limits on emissions of nitrogen oxide, which became far more strict this year, Williams and others said.

The ISO doesn't want to hear the excuses.

"A lot of them have been certified to a certain maximum capacity. Any derate at all off of that does get picked up. The unit is supposed to be good for that maximum," Bibb said.

As for NOx limits, Bibb agreed the limits are being reached because the units are running more than ever before. But he said there are ways around the limits, such as obtaining variances.

AES had to shut down several plants when it exhausted its emissions last year, and this spring and fall AES is installing NOx reduction equipment at eight of its big generators. But that raises another problem the merchant power companies have with the way the ISO breaks down its outages. Of the 15,501 MW shortfall listed Monday, 8,035 is listed as "unplanned." The merchant companies said most of these "unplanned" outages were coordinated with, and approved by, the ISO months ago.

"The ISO has coordinated the schedule for all 17 units in the L.A. basin that are going to be off line for SCR (selective catalytic reduction) installations this year. The schedule was finalized in early March," said AES spokesman Aaron Thomas.

Nevertheless, three AES units out for SCR installation contributed 672 MW to Monday's unplanned outage total.

It's the unplanned total that is often used to imply that merchant power companies are creating a false scarcity in order to drive up prices.

Weirdly, if a unit is generating less than its maximum by different amounts at different times of the day, the two curtailments are added together for the ISO list, though Bibb says this will also be fixed in the new software program.

Also on Monday, the ISO listed 1,580 MW off line at Southern California Edison's Mohave plant, even though the generators involved had returned to full operation hours before the ISO put its list out at 11:45 a.m. PDT. The return of any capacity before the list is published is ignored, but if a unit trips off line just before the list is published, that gets included, the ISO's Bibb said.

The grid operator double-dips when it cites the state's smaller qualifying facilities. The ISO's chief operator and spokesman have said repeatedly in press conferences, interviews and press releases that the qualifying facilities that have been turned off due to lack of payment from utilities are separate from the ISO outage list. And daily newspaper reports give both the outage total and the qualifying facility total separately.

But the outage list includes QFs every day. On Monday, for example, 1,726 MW of QF generation contributed to the outage total.

In the meantime, it's the list's inflated total that grabs attention.

"We don't get that many questions on it from the medi

| File       | dasovich-j/all_documents/27755.                                                                                    |

FERC has set a meeting for Monday 18 June 10 am PDT wherein it has noticed its California and WSCC-wide dockets. The meeting has been timed in advance of congressional hearings (by Senator Joseph Lieberman) that were set for later in the week.

Expect FERC to respond to intense political pressure to expand its current price mitigation measures, possibly to a WSCC-wide scope or to all hours, or both.

As far as I know Hebert is still President of the FERC, which would speak to less intervention rather than more.

We will forward information as we learn it.

US FERC To Meet June 18 On Western US Electricity Prices

06/11/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

WASHINGTON -(Dow Jones)- The U.S. Federal Energy Regulatory Commission has scheduled a special meeting June 18 to address pending matters involving electricity markets in California and neighboring Western states.

The commission's meeting notice provides no details, except to list for discussion four cases involving price mitigation in, and the structure of, volatile power markets in California and 10 other Western states.

The meeting comes as members of Congress are placing enormous political pressure on the commission to take more drastic action to contain runaway electricity prices in the region.

Last week, House Minority Leader Dick Gephardt, D-Mo., joined 21 Western-state congressional lawmakers to request an opportunity to appear before the commission to argue their case for cost-based price controls in the region's electricity markets.

"At least twice, FERC has determined that the Western electricity market is 'dysfunctional' and that prices are 'unjust and unreasonable' under the Federal Power Act. Despite these findings, and contrary to the law, the commission has failed to bring these rates to just and reasonable levels," the lawmakers said in a letter to FERC Chairman Curt Hebert.

Possible Rotating Blackouts Beginning at 2:30 P.m. Today; Outages Required Due to Supply Limitations

FOLSOM, Calif.--(BUSINESS WIRE)--May 31, 2001--The California Independent System Operator (California ISO) is notifying the public of the possibility of rotating customer outages beginning around 2:30 p.m. today, Thursday, May 31, 2001.

Conservation efforts will help lessen the severity and duration of possible outages. All Californians are urged to rededicate their efforts to save as much energy as possible during this emergency situation. Please monitor the ISO website at [www.caiso.com](http://www.caiso.com) under System Conditions for updates.

Specific information about the location and timing of the outages must be obtained from the local utilities. California ISO anticipates reaching a peak load of 37,882 megawatts at approximately 4:00 p.m. this evening. Stage One and Stage Two Emergencies remain in effect all day, until 12 midnight.

???????ISO TELECONFERENCE CALL

???????Time: ??????????????????3:00 p.m. ????????Phone: ??????????????????1-800-374-1387 ????????Passcode: ??????????????????ISO News

Stage Three of the state's Electrical Emergency Plan (EEP) is required when operating reserves fall below one-and-a-half percent. The California ISO's EEP is part of the state's enhanced reliability standards created by landmark legislation Assembly Bill 1890, which restructured California's electricity industry.

California ISO is charged with managing the flow of electricity along the long-distance, high-voltage power lines that make up the bulk of California's transmission system. The not-for-profit public-benefit corporation assumed the responsibility in March, 1998, when California opened its energy markets to competition and the state's investor-owned utilities turned their private transmission power lines over to the California ISO to manage. The mission of the California ISO is to safeguard the reliable delivery of electricity, facilitate markets and ensure equal access to a 12,500 circuit mile "electron highway."

USA: New Power adds 20 percent to customer base with two deals.

07/05/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW YORK, July 5 (Reuters) - New Power Co., a national energy provider partly owned by powerhouse Enron Corp., on Thursday increased its customer base by about 20 percent and its visibility in Pennsylvania and Ohio with two separate acquisitions. Financial terms were not disclosed. New Power, a unit of NewPower Holdings Inc. , which was formed to take advantage of electricity deregulation, added a total of 121,000 electric and natural gas customers to its customer base of about 615,000. New Power said it signed an agreement to buy the customer base and related assets of AES Direct, the retail marketing subsidiary of independent power company AES Corp. , which includes natural gas inventory, supply and transportation contracts as well as billing and customer service operations. It also bought Ohio-based customers from CoEnergy, a unit of Michigan-based DTE Energy , gaining entry into service areas of four additional utilities. Shares of New Energy closed at \$8.75 on Tuesday, well below its 52-week high of \$28.69 but above its low of \$4.63.

GERMANY: German utilities should expand abroad - consultant.

07/05/2001 Reuters English News Service (C) Reuters Limited 2001.

COLOGNE, Germany, July 5 (Reuters) - Germany's top utilities lag far behind major foreign rivals in the share of revenues derived internationally, which could limit future growth, a consultant told an industry conference on Thursday. "Germany's market leaders lag behind in their market presence in Europe and the rest of the world," said Volker Flegel, a European energy expert at consultancy A.T. Kearney's Munich office. "If they don't act fast, the gap will widen....They have to adopt more of a pan-European perspective," he said, singling out Spain as the most attractive investment target. Flegel said revenues generated outside Germany by the country's top four utilities ranged between 3.0 percent of turnover at HEW, to 11 percent at E.ON, 11.7 percent at RWE. By comparison, the shares of foreign sales at U.S. energy groups TXU and Enron were 36 percent and 18.6 percent. Foreign sales contributed 18.6 percent to turnover at French/Belgian group Electrabel and 18.3 percent at France's EdF. Flegel pointed out that expansive internationalisation, which began in the late 1980s, has already had helped some German utilities achieve annual sales growth of up to 30 percent. Both RWE and E.ON have made forays into the British market, and are currently bidding for stakes in Spanish firms, along with EnBW. Flegel said the return on electricity sales in the Spanish market was two to four times higher than in Germany. Spain's annual consumption growth in recent years has reached as much as six percent. In addition, Spain could be used as a bridgehead for acquisitions in Latin America, where the firms are already involved, he said. Apart from Spain, A.T. Kearney identified a list of countries it viewed as attractive both in size and market conditions for foreign entrants - including France, Italy, Finland, Britain, Poland, Sweden and, outside Europe, the United States and Brazil. In the dynamic

Italian market, newcomers by 2003 should have captured already one quarter of the market, Flegel said. In central Europe, Swiss companies will be the engines behind sale growth in the trading of power, through their hydropower capacities and its shareholdings in French power firms. The Scandinavian markets are lucrative, although comparably small, because their per-capita power usage is three to five times higher than in the rest of Europe, Flegel said. This is partly due to ample supply and low prices, which encourage consumers to use electric power for home heating. The growth potential in eastern Europe comes from projected consumption rises of 27.1 percent annually between 1996 and 2005. Prices have not risen so far, but Flegel said he expects increases in the medium term.

#### NewPower Hldgs To Buy AES Corp Unit

07/05/2001 Dow Jones News Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

PURCHASE, N.Y. -(Dow Jones)- NewPower Holdings Inc.'s (NPW) New Power Co. unit agreed to acquire the customers and related assets of AES Corp.'s (AES) AES Power Direct retail marketing unit. In a press release Thursday, NewPower Holdings also said it agreed to acquire the customers and natural gas inventory, related to the Columbia Gas of Ohio and Dominion East Ohio gas customer choice programs, of CoEnergy Trading Co., a unit of DTE Energy Co. (DTE). Financial terms of both deals weren't disclosed. Together, the deals significantly expand NewPower's presence in Ohio, where the company will add over 82,000 natural gas and electric customers, and in Pennsylvania, where NewPower will add about 38,000 natural gas customers.

INDIA: Belgium's Tractabel to divest India stake-paper.

07/05/2001 Reuters English News Service (C) Reuters Limited 2001.

BOMBAY, July 5 (Reuters) - Yet another foreign power firm is bailing out of India, several financial newspapers reported on Thursday. Belgian power firm Tractabel plans to sell its stake in a joint venture with India's Jindal Vijaynagar Steel Ltd , both The Economic Times and the Times of India said. Tractabel, a subsidiary of the giant French water and power utility company Suez Lyonnaise des Eaux SA , will receive 2.35 billion rupees (\$49.9 million) for its 50 p

USA: FERC judge says Calif power refunds are likely.

06/22/2001 Reuters English News Service (C) Reuters Limited 2001.

WASHINGTON, June 22 (Reuters) - The Federal Energy Regulatory Commission administrative law judge, who is overseeing refund settlement talks in California's power market, said Friday that generators that sold electricity in the state will probably have to pay back overcharges of "several billion dollars." In an interview with Reuters, Judge Curtis Wagner, the head FERC administrative law judge who will preside over the 15-day conference starting Monday, said California Gov. Gray Davis' claim the state is owed \$9 billion is too high. "I think that's high," Wagner said when asked to comment on Davis' request for that amount in refunds. "I'm hoping to come up with a settlement of the issue of a refund of overcharges - if there are overcharges. My sense is that there probably are," Wagner said. Enron Corp. , Mirant Corp. ,

Duke Energy Corp. , Williams Cos. , Reliant Energy Inc. , and Dynegy Inc. are among the producers that FERC could compel to make the refunds. The companies have said they did nothing wrong. Davis, the California Public Utilities Commission and the state's investor-owned utilities will join in the negotiations at FERC headquarters in Washington. If no agreement is reached, Wagner will have seven days to make a recommendation to the five FERC commissioners on the refund issue.

EOTT Butane Trader Indicted For Bilking Co.On Gas Trade By Roy R. Reynolds Of DOW JONES NEWSWIRES

06/22/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

HOUSTON -(Dow Jones)- A Houston-based federal grand jury indicted Steven Gary Todoroff, former trader for Enron Corp.'s (ENE) EOTT Energy Corp. (EOT), late Wednesday on charges he funneled 100,000 barrels of butane gas meant for EOTT into a company of his own for later sale to a third party at just under \$1 million. EOTT terminated Todoroff for the alleged malfeasance in 1999. "There was apparently concealment of other natural gas trading activity," said EOTT spokeswoman Gina Taylor. According to Assistant U.S. Attorney Cedric Joubert, Todoroff is accused of bartering a deal in which Petrogas Inc. would have supplied EOTT with butane for a repayment of butane a year later. Todoroff then allegedly steered the Petrogas butane to Monarch Media Resources Corp., which he owned, and sold the gas to the Oklahoma office of Gas Producers Liquids Inc. for \$996,187.50. EOTT took a \$3 million charge to earnings in the fourth quarter of 1999 to cover the cost of purchasing additional butane to deliver to Petrogas, Taylor said. Todoroff's attorney, Wendell A. Odom, Jr., doesn't deny his client made the trade, but said it was a side trade that had nothing to do with EOTT operations, and therefore shouldn't be a criminal offense. "From the onset of this, we've always contended that this is a civil debt," Odom said. "This was a personal investment." Odom said Todoroff was following a generally accepted practice of side trading on the deal, and EOTT got involved by the confusion of other players in the trade. "Everybody just assumed it was an EOTT deal, even though it wasn't," he said. "EOTT made the decision to belly up to the bar and pay off when it came time to deliver." Joubert said Todoroff will more than likely appear before a judge late next week for an arraignment on the charges. The judge will then schedule a trial date, to begin within 70 days of the arraignment. The nature of the deal, which took 13 months, kept EOTT from discovering the action until late in the process. "The way he allegedly set up the contracts, we didn't know about it until it was time to pay Petrogas," Taylor said. "When Petrogas calls us and said they needed payment, that's when we started looking at the transaction." Petrogas, which Joubert said is a Canadian company with an operating arm in Texas, couldn't be contacted Friday. Joubert said Natural Gas Liquids isn't suspected of any wrongdoing in the case, though he noted Todoroff used to live in Oklahoma. "I assume he still knew some people there," Joubert said. Natural Gas Liquids owner Greg Stiman, based in Houston, wasn't in the office Friday and unavailable for comment. News Article On EOTT Charge Aroused Suspensions

EOTT took total charges of \$9.8 million, or 35 cents a diluted unit in the fourth quarter of 1999, explaining in a press release that the amount covered "the cost to exit mid-continent natural gas liquids activities that are no longer needed as a supply function for crude oil blending activities on the West Coast; severance costs for work force reduction due to operating efficiencies from recent acquisitions; implementation of a new marketing and accounting system; and a theft of NGL product, concealment of NGL commercial activities and other unauthorized NGL actions by a former employee." The company reported losses that quarter of \$7.48 million, or 27 cents a unit after the charge. By contrast, EOTT reported earnings for 2000's fourth quarter of \$3.71 million, or 13 cents a unit. According to Joubert, EOTT had to buy butane from Amoco Inc. - now BP Amoco PLC (BP) - to replace the butane owed Petrogas. "The real loss has to do with the replacement costs with the gas - a year after (Todoroff) got his money," Joubert said. Odom maintains that Todoroff was making a legal trade through Monarch Media, but simply didn't have the funds to cover the cost of replacing the butane when it came due. "(Todoroff) did not have the financial resources, he just got caught short on the deal," Odom said. "He did not tell (EOTT) they had to honor that deal." Although Plains All American Pipeline LP (PAA) uncovered rogue trading by one of its executives in 1999, fraud among the energy trading world is rare, said both Joubert and Taylor. "It's not a common problem," Taylor said. "We have controls in place to take care of this kind of thing." Joubert began sniffing around the case after a news article regarding the company's fourth quarter charge aroused suspicions. Odom said the close-knit and fast-paced world of energy trading helped lead to a misunderstanding of his client's deal. -By Roy R. Reynolds, Dow Jones Newswires; 713-547-9208; roy.reynolds@dowjones.com

INDIA: CMS says India LNG project now stalled. By Suresh Seshadri

06/22/2001 Reuters English News Service (C) Reuters Limited 2001.

MADRAS, India, June 22 (Reuters) - U.S. firm CMS Energy Corp's LNG-based power project at Ennore in southern India is now completely stalled for want of a credit support mechanism from the Indian government, a top firm official said on Friday. Rodney E. Boulanger, CMS Generation Co's president, said in a statement e-mailed to Reuters that the firm though "not threatening to withdraw" from the project was "losing heart". The firm's statement comes against a backdrop of a bitter payment row between U.S. energy giant Enron Corp's \$2.9-billion, 2,184-MW Indian unit, the Dabhol Power Co, and the state-run utility in India's western Maharashtra state. CMS, along with India's Grasim Industries, leads a consortium to build a \$1.6-bil

#### RECENT EVENTS:

-- SB 28x (Sher/Battin), which makes various changes to the siting process including many IEP-sponsored proposals, passed off the Senate floor last week 37 to 1. Asm. Wright=01,s office is now working with the authors and = IEP to make additional changes to the bill, as opposed to moving more siting issues in AB 36x (Wright) (although that is still an option). Chris Elliso= n and I are continuing to work with the authors=01, staff to develop addition= al language. The bill is scheduled to be heard on Monday in the Assembly Energy Costs and Availability Committee. We are waiting to review new language from the author=01,s office. At this point we are recommending the bill do= es NOT move forward without this additional language. I will let members know the status of these amendments before the hearing.

-- IEP has a meeting with the newly-elected Assembly Republican Leader Dave Cox (Sacramento) on Tuesday at 8:30 am to discuss the Republican=01,s position on siting and direct access, and possibly linking those issues with the passage SB 5x (Sher), the billion dollar energy conservation bill on the Assembly side. Although they are not the only issues IEP and its members want resolved in this legislative session, they are currently the most visible and active issues with the best chance of passage.

-- AB 60x (Hertzberg), which ties to the siting process the requirement that a developer enter into a contract to sell power to specified California entities, is out of the Assembly on a 64 to 12 vote. The bill will be heard in the Senate Energy Committee next. IEP members have agreed on amendments to the bill which it will present to the Speaker, however, it and its members will be meeting with members of the Senate Energy Committee to stop the bill. IEP=01,s opposition message is twofold: 1) the bill creates another obstacle in the siting process when the state should be streamlining it; and, 2) as a net-importer, California would be sending the wrong signals to its neighboring states that send us power in our time of need.

-- AB 8x (Migden), which would have given the EOB additional and undefined powers related to the coordination of operation and maintenance schedules, was gutted in the Senate last week and used as a vehicle for the State to get the generation component of the utilities=01, rates, the San Diego rate= cap extended to all customers, and kicking the QF issue to the CPUC. AB 8x in its new form, authored by Assembly Member Keeley, passed out of the Senate, but failed to get enough Republicans to vote for the bill on the Assembly floor. The biggest opposition came primarily from the gas-fired QFs which wanted to be exempt from the measure=01,s QF provisions.

Migden=01,s office has communicated its intention to move forward with the language previously in AB 8x, although in a different vehicle not yet identified. There remains a commitment on the table to meet with IEP to discuss amendments. IEP member company lobbyists have agreed to continue lobbying her office to urge her to wait hearing the bill again until this meeting has happened.

-- There appears as if there is going to be another attempt at moving QF legislation next week. SB 66x (Bowen) was introduced on Wednesday in which a Senate Floor analysis was already prepared. The measure is still in spot-bill format, but rumor has it =01&they=018 are working on language as = we speak. Be prepared for anything.

-- Senator Burton=01,s office is sending IEP another set of amendments attempting to solve our problem with the eminent domain provision in SB 6x (Burton), which is the state power authority measure. I will report on the status of these amendments once we have had a chance to review them.

-- SB 39x (Speier), which would define generators as public utilities and put the CPUC in the role of coordinating outages and maintenance schedules, remains on the Senate floor awaiting a vote. There is no action item on this measure at this time.

-- Regular session is getting under way in conjunction with the on-going special session hearings. IEP has taken a support position on the followin= g bills which are scheduled for hearings next we

To: Ginger Dernehl/NA/Enron@Enron cc: Subject:

Ginger - please forward this to all of GA. Thanks.

This is a request for help from my colleagues in GA. I am preparing Enron's comments to the Federal Trade Commission concerning the results of different "regulatory approaches" by states implementing retail electric competition programs or legislation. The FTC has invited comments on a number of specific issues, but their goal is to "examine various state retail competition programs and describe those features that have resulted in consumer benefits and those that have not yielded consumer benefits."

There are some obvious areas where we'll comment - California - but I'd appreciate people sending me specific examples of good or bad regulatory policies in other states. Also, does anyone know of any good reports or analyses already prepared on these issues? Thanks. -Bob

Hi, all--- You may already know this, but I wanted to keep you updated. All new commodity (power) business in California has been put on hold. Yesterday, Eric Letke announced to the team of originators that we would be suspending new efforts until the regulatory/legislative environment is more solid in California.

With that news, all of our team meetings and conference calls have been cancelled.

However, I want to maintain a weekly call (30 min max) on our own....just to keep-in-touch. I will defer to your schedules. Please tell me what day and hour looks best for you. OR Is there an existing call that we could join? I just don't want to lose focus.

Participants: Regulatory Affairs (Harry, Jeff, Sue, Robert) Market Development (Marcus Dotson, Jennifer Rudolph, Ed Hamb)

Thank you! ---Jennifer 713-345-8206

## WPTF Friday Credo Veritas Burrito

|            |                                 |
|------------|---------------------------------|
| Sender     | foothi19@idt.net                |
| Recipients | [charlotte@wptf.org]            |
| File       | dasovich-j/all_documents/29374. |

THE FRIDAY BURRITO "...more fun than a fortune cookie, and at least as accurate."

There is a hint of Autumn in the air. I don't know if it's wishful thinking, or if the seasons are really beginning to turn from our pale summer into a Bay Area glorious Fall. It's premature, I know. A few fallen leaves, the start of schools, slightly longer afternoon shadows ... I'm jumping the gun. I can't wait for this summer to be over, especially this summer. The pounding never stops, and as I hear the din of the cash register ringing with each climb in Southwest temperature, I can barely keep track of all the hiccups which drive prices up: fires in Montana restricting transmission paths, blown up interstate gas pipeline in New Mexico, diminishing N-Ox credits for in-state power plants, depleted inventory of hours of voluntary load interruptions for commercial and industrial customers, credit limits restricting imports of Canadian power into the Northwest and California, and BPA buying about 1,000 MW to cover its short hydro position.

I also get the willies every time another politician lambastes the California restructured power industry. I just want to end to the summer, now, and start a two week Fall vacation ... anywhere, even in Cleveland.

There are seven, count them, seven investigations into some aspect of the wholesale power market out here. Two days ago there were only six, but FERC just added another yesterday in response to the Prez's request. That means FERC has two, the PUC has two, the State Attorneys General has two (one on the ISO Governing Board, and one on the in-state generators), and one by the Electric Oversight Board. If you don't have an ongoing study of the California Market, then you're not hip.

All of these investigations, save FERC's Section 206 Investigation, are going to amount to near nothing. A lot of wasted time and paper. The PUC and EOB studies have their conclusion sections all finished. Now they need some evidence to support their assertions.

And how are we holding up under all of this? How are you doing? I talk to many of you throughout the week, and I know how frustrated you are. I share your frustration. You want to tell the public, the press, and anyone in between the truth. You want to lay out the facts. You want to show anyone who will listen that each interference into the market is making things worse, not better. The price caps, for example, are damnable and screwing up the prices, much to the detriment of those people for who price caps were supposed to be a protection against price shocks. Now they are receiving higher average prices.

The public isn't going to listen to anything longer than a sound bite. And let's face it, when it comes to stellar public relations, our industry is not known for turning in A+ performances, except for SCE. Those guys seem to get their story in front of the public at every turn. I heard SCE is putting on their customers' bill, "Here is what you would have paid if the rate freeze ended ...." But many of us in the new power industry, borne from the loins of either the natural-gas industry or nuclear-power business, learned the hard way that the best response to a public inquiry is a two-block head start in front of an angry mob. Keep your head down, shut your mouth, and this too shall pass.

I don't buy that approach, at least not anymore. That is, I don't believe we have anything to hide, or of which to be ashamed. What electric restructuring is about is correct, beneficial to the public, and in everyone's best interests. Look at it this way, when they pat the last shovelful of dirt on your final resting place, for what do you most want to be remembered? That you caved in to the political will of others, or at a moment when you had the chance, you did what was right instead of what was expedient? I think the choice is easy, albeit laced with sheer terror. Those bland homilies I so diligently teach my kids (e.g., tell the truth, do what is right, think of the big picture and not just yourself) are a lot easier to speak than to live by. So join me and stand up for what you believe. They can't take away your pride, not yet.

Here is this week's line up.

@@@ Excerpts from FERC=01,s Order on SDG&E Complaint

President Clinton commented from the Rose Garden that good folks in San Diego, retired, fixed-income, likely to vote for a Democrat, are making choices between buying medicine or air conditioning their homes. I call this the Del Monica Beach lecture. The Prez instructed the FERC to investigate the situation in California, and FERC wasted no time.

In response to SDG&E=01,s August 2 complaint, whereby the utility asked FERC to impose a \$250 price cap on generators in the region, the FERC responded in a way that I was hoping to see several months ago. The FERC slammed SDG&E on their complaint for lack of merit, and the FERC also initiated an FPA Section 206 Investigation into the wholesale power market in California.

Here are some of the juicy excerpts from FERC=01,s Order:

=01&In this order, ... , we are denying SDG&E's requested immediate imposition of a price cap on all sellers in California. However, we are instituting consolidated hearing proceedings pursuant to section 206 of the Federal Power Act to investigate the justness and reasonableness of the rates and charges of public utilities that sell energy and ancillary services to or through the California ISO and PX, and to also investigate whether the tariffs and institutional structures and bylaws of the California ISO and PX are adversely affecting the efficient operation of competitive wholesale electric power markets in California and need to be modified

=01&SDG&E concludes that the markets cannot be workably competitive if sellers are able to exact prices that are considerably above levels that would prevail in open competition, i.e., sellers are able to bid and receive prices significantly above their marginal costs. SDG&E also argues that the hour-to-hour volatility in imbalance energy prices and the erratic clearing price for ancillary services is an indication that the market is breaking down when it is moderately stressed.

=01&While we find it appropriate to institute a section 206 hearing on these issues, we cannot implement an immediate price cap of \$250/MWh as requested by SDG&E because there is no record before us to support such an action. ... While the issues raised by this complaint are important, the Commission has no basis to conclude that SDG&E's proposal to place an immediate, arbitrary \$250/MWh cap on the price that every public utility seller of energy and ancillary services may bid into the PX and ISO markets would satisfy this standard. SDG&E has provided no evidence to demonstrate that all potential sellers are able to exercise market power, has not documented a single instance of a seller exercising market power during times of scarcity, and did not attempt to show that the conditions underlying the Commission's approval of market-based rates for public utility sellers of energy and ancillary services have changed. Nor did it address specific market or institutional factors that may be causing rates to be unjust or unreasonable.

=01&SDG&E asserts that the ISO's congestion management and market structures are flawed and in need of o

Dynegy Says First-Quarter Profit Higher Than Expected (Update4)

(Updates with closing share price. For more on the California electricity crisis, see {EXTRA <GO>}.)

Houston, April 2 (Bloomberg) -- Dynegy Inc., a U.S. electricity and natural-gas trader, said first-quarter per-share profit was higher than expected on trading gains, boosted by "strong" gas and power demand. The company also raised its 2001 earnings forecast. First-quarter profit rose to 40 cents a share from 26 cents a year earlier, the company said in a statement. It was expected to earn 31 cents, the average estimate of analysts polled by First Call/Thomson Financial. The company expects to make \$1.92 to \$1.97 in 2001, up from its previous forecast of \$1.80 to \$1.87, the statement said. The Houston-based company runs several power plants in California. The state has been hit by a 10-month electricity shortage, and the average power price there rose nine-fold last quarter from a year earlier. Colder-than-usual weather in other parts of the U.S. helped earnings, analysts said. "It's been the same thing throughout the industry -- they've had good margins in most of country," said William Hyler, an analyst at CIBC World Markets. He rates Dynegy a "strong buy." Dynegy owns Illinois Power, a utility with 650,000 gas and power customers in southern Illinois. Dynegy's fourth-quarter profit more than doubled, driven by power sales in the Midwest and Northeast. The company also owns, manages or is building or acquiring power plants in Texas, Arkansas, Kentucky, Georgia, North Carolina, Louisiana, Nevada, Washington and New York. Its plants currently generate about 13,500 megawatts of capacity, or enough to light 13.5 million homes. "I think their geographical reach has been a tremendous asset for them," said Merrill Lynch analyst Donato Eassey, who rates Dynegy "near-term accumulate."

Dynegydirect

The company also said it has had \$9 billion in transactions on its online trading site, Dynegydirect, since its start in November. The site had \$3 billion in transactions last year. Shares of Dynegy rose 89 cents to \$51.90. They have risen 65 percent in the past year. Dynegy will announce first-quarter earnings on April 17. The company is expected to earn \$1.84 a share in 2001, according to First Call. Other energy traders have said in the past three weeks they'll make more money than expected in the first quarter because of gains in business in the U.S. West. They include San Jose, California-based Calpine Corp., an electricity generator and power-plant developer; Spokane, Washington-based Avista Corp., owner of utilities in the U.S. Northwest; and Atlanta-based Mirant Corp., the energy-trading arm of Southern Co. In January, Houston-based Enron Corp., the biggest energy trader, raised its 2001 profit forecast, partly because of trading in North America. Dynegy was one of 26 energy suppliers to California accused in a March 22 report by that state's Independent System Operator, which controls 75 percent of California's power grid, of overcharging the state for power. The generators say their prices were fair based on market conditions. Earlier last month, Dynegy and Minneapolis-based NRG Energy Inc., co-owners of four California power plants, agreed to sell the state enough electricity to light as many as 2.3 million homes through 2004. Chevron Corp., the No. 2 U.S. oil company, owns 29 percent of Dynegy.

Enron Italia Chief Says It Won't Buy Extra Enel Capacity

04/02/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

VENICE, Italy -(Dow Jones)- Enron Corp. (ENE) will stay out of the auctions for Italian power company Enel SpA's generating capacity, despite recent developments that should bring the price of the assets down, Enron Italia chief Riccardo Bortolotti told a conference Friday. "We're very interested in doing risk management or power purchasing agreements, or capacity and tolling agreements," but not in actual ownership of the physical assets, Bortolotti told Dow

Jones Newswires on the sidelines of the conference. Enel was recently ordered to sell an additional 5,500 megawatts of plant in order to gain regulatory approval for its purchase of telecoms company Infostrada. This is in addition to long-standing plans for a three-tranche sale of 15,000 MW of installed capacity. The extra supply is expected to reduce the realized price of the assets considerably. Staying out of the auctions will restrict Enron's near-term options in operating in Italy, which has the highest electricity prices in Europe. Import capacity is scarce and planning permission for greenfield projects is still slow, despite promises by the government to simplify the procedure. Earlier, the head of the Italian arm of Germany's E.On AG (EON), Luca Alippi, refused to rule out participation in the auctions. Originally, E.On had decided not to bid. Separately, Bortolotti called on Italian regulatory authorities to change legislation that allows power consumers the freedom to cancel supply contracts at six months' notice. He noted that in such an environment, it will be difficult for independent power producers to secure financing for new projects. "You can't finance a project on trust," Bortolotti told Dow Jones Newswires. He explained that whereas this measure was necessary at the start of deregulation in order to allow customers to get out of disadvantageous contracts, now it is working against the interests of consumers. "If we can't sign (power purchasing agreement) contracts, then in the long term, they won't be able to find a counterparty" to compete with incumbent suppliers, he said. -By Geoffrey T. Smith, Dow Jones Newswires; +44 7771 513 797; geoffrey.smith@dowjones.com

USA: Enron and Saks ink energy management deal.

04/02/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW YORK, April 2 (Reuters) - Enron Corp. , North America's largest buyer and seller of electricity and natural gas, said Monday its energy services unit signed a long-term energy management agreement for all of upscale retailer Saks Inc.'s facilities. "By outsourcing the management of its electricity and natural gas supply to Enron, Saks is significantly protected from energy price uncertainty and volatility, particularly in California and New York," said David Delainey, chairman and chief executive of Enron Energy Services. Financial terms were not disclosed. Under the agreement, Enron Energy Services will supply all of Saks' store locations, which total over 300, its distribution facilities, and administrative offices with electricity and natural gas. The companies are also working to identify ways to save Saks money through energy efficiency. Although no time frame was g

International Saudis Set to Select Firms for Gas Projects By Bhushan Bahree Staff Reporter of The Wall Street Journal

05/14/2001 The Wall Street Journal A16 (Copyright (c) 2001, Dow Jones & Company, Inc.)

NEW YORK -- After more than two years of talks, Saudi Arabia is about to announce its choice of international oil companies for three huge natural-gas projects that will mark a reopening of the kingdom's energy sector to Western investment, a quarter century after it was nationalized. But the announcement, and the signing of memorandums of understanding early next month, will mark only the beginning of serious negotiations on terms for the three ventures, which together will need investment of some \$25 billion. It will be months before final agreements are signed. "We expect to have an agreement -- a final agreement -- signed somewhere at the end of the year, or, hopefully, the first quarter of next year," said Saudi Oil Minister Ali Naimi in an interview last week. Saudi Arabia's 11-member Supreme Petroleum Council is expected to meet today to endorse the companies recommended by a ministerial committee led by Foreign Minister Prince Saud al-Faisal. In the following week, Saudi Arabia is expected to communicate its decision to the oil companies from both sides of the Atlantic that have been vying for a role in the three projects. By the end of the month, the chosen consortium members and Saudi officials are expected to agree on which three companies will lead the projects. This will be a prestigious role in a country that is the world's largest oil exporter, has more than a quarter of the world's oil reserves and has the fifth-largest reserves of natural gas. As with any negotiations for such huge projects, industry rumors abound. All three so-called oil supermajors -- Exxon Mobil Corp., Royal Dutch/Shell Group and BP PLC -- have been mentioned as project leaders, particularly for the plum Ghawar project, named after the world's largest onshore oil field, whose environs are expected to yield large volumes of gas. The Ghawar project, known as Core Venture 1, is projected to require about \$15 billion in investment. Core Venture 2 is on the Red Sea coast. The third project is in Shaybah, a recently developed oil field in the kingdom's Empty Quarter, a southeastern region bordering the United Arab Emirates. The companies say they have no idea who will be named to the consortia, or who the Saudis will choose from a short list of 11 companies -- Exxon Mobil, Shell, BP, Chevron Corp., TotalFinaElf SA, ENI SpA, Enron Corp., Occidental Petroleum Corp., Marathon Oil Canada Inc., Conoco Inc. and Phillips Petroleum Corp. -- to lead each project. But they all have their hopes. "We would be very disappointed if we are not the lead operator" for the Shaybah project, said Archie Dunham, Conoco's chairman and chief executive. Since Saudi Crown Prince Abdullah invited major oil companies to return to the kingdom in October 1998, negotiations have focused on such broad issues as the scope of the projects and their integrated nature -- from exploration and production of gas to the making of petrochemicals and electricity -- as well as the notion that the companies will need adequate returns on their investment. Soon, the project leaders will have to start the bargaining on such issues as the roles to be played by national champions Aramco and petrochemicals company Saudi Basic Industries Corp. --- Alexei Barrionuevo in Houston contributed to this article. --- Population Pressure

Saudi Arabia is opening up its energy sector, in a bid to bolster the economy as population grows

-- Population 21.3 million (growing over 3.5% per year)

-- Unemployment rate\* 27%-35% of males

-- Real GDP Growth Rate 7.6%

-- Oil Production 9.3 million barrels per day

-- Natural-Gas Reserves 204.5 trillion cubic feet

-- Natural-Gas Production/Consumption 1.68 trillion cubic feet

\*Unofficial estimate for 1999

Note: Figures are estimates for 2000 except natural-gas production, which is for 1999

Cheney task force seeks input from interest groups By SHARON THEIMER Associated Press Writer

05/14/2001 Associated Press Newswires Copyright 2001. The Associated Press. All Rights Reserved.

WASHINGTON (AP) - The White House team developing a national energy plan has met with more than 130 interest groups, from environmentalists and unions often at odds with Republicans to major Bush supporters given private sessions with Vice President Dick Cheney. The vice president, Cabinet secretaries and others on a special task force have solicited ideas behind closed doors, hoping the privacy would encourage a free exchange of ideas. The White House has declined to provide names of participants - even to Congress. But interviews with participants detail a massive outreach where diverse interests have met with task force executive director Andrew Lundquist. Cheney's time has been reserved for meetings with more select participants such as power wholesaler Enron Corp. and the Edison Electric Institute, both GOP donors. Houston-based Enron is the world's top buyer and seller of natural gas and electricity. "The way the task force is set up, they don't have the staff or time to have a huge host of companies come through the door. They have told us to work through our associations to the extent we can," said Don Duncan, vice president of government relations for Phillips Petroleum Co. Participants said the meetings, typically 20 minutes to 45 minutes, included about a dozen to 100 interest group members and a few task force members and staff. No details were disclosed. Instead, administration representatives summarized the nation's energy problems or listened as groups briefly offered background and proposals. Many sent detailed materials to the task force outlining their priorities. At a half-hour meeting in late March with White House strategist Karl Rove and Bush economic adviser Larry Lindsey, nuclear energy executives tried to make sure the two knew about the production records the industry has set over the past few years. At one point, Rove asked if anyone was looking to build a nuclear power plant. An executive with Exelon replied that his company was thinking about it, meeting participants said. Energy Secretary Spencer Abraham has attended several meetings, including one with Teamsters President James Hoffa and an hourlong session in California with Democratic Gov. Gray Davis

Buenos Aires Invents `Patacon' Currency to Pay Bills (Update1) Bloomberg, 07/27/01

The Suits Tell the Tale Gov. Davis deceived Californians about the energy crisis. By Jerry Taylor & Peter VanDoren. Jerry Taylor is director of=20 natural-resources studies at the Cato Institute <<http://www.cato.org>>. Peter VanDoren is=20 editor of Cato's Regulation. July 27, 2001 8:25 a.m. or at least nine months now, California Gov. Gray Davis has been screaming=20 bloody murder about how corporate power pirates out of Houston have=20 economically raped and pillaged the state of California, creating an=20 artificial electricity crisis out of thin deregulated air. The story didn't=20 appear to add up. But because the governor's office refused to release=20 information about how much the state paid to whom for electricity over the=20 past several months, who was to say?=20 Lawsuits finally pried that information out of Davis last week and =01\* lo = and=20 behold! =01\* "the biggest snakes on the planet" (Davis's words) were chargi=

ng=20 less than the publicly owned utilities of California itself and even less= =20 than the price charged by his right-hand man, David Freeman, head of the L.= A.=20 Department of Water & Power. And Davis turns out to have known it all along= . Until Davis coughed-up the data, the Left was in hog heaven, scoring point= =20 after point about how socialism =01\* at least in the electricity business = =01\* was=20 far preferable to capitalism. Alan Richardson, president of the American=20 Public Power Association, recently told an audience that, "California is a= =20 great example of municipal utilities that have =01( taken care of their=20 customers while investor-owned utilities have taken care of their=20 shareholders =01( Every customer of a private utility is seen as a profit= =20 center. With public power, every customer is seen as our owner and neighbor= . "=20 Anti-utility activist Harvey Wasserman wrote in The Nation that, "dereg=20 apologists are having a hard time explaining why two California power=20 companies were immune to the crisis: the Los Angeles Department of Water &= =20 Power and the Sacramento Municipal Utility District. Both are owned by the= =20 public =01( during the crisis, rates charged by both companies have been st= able." It turns out, however, that publicly owned utilities charged the state an= =20 average of \$344 for a megawatt of electricity during the first three months= =20 of the year. Private companies were meanwhile charging less than an average= =20 of \$250 per megawatt. And those Houston-based "snakes" =01\* Reliant, Dynerg= y,=20 and Enron =01\* were charging less than the publicly owned utilities, less t= han=20 the sainted and celebrated L.A. Department of Water & Power (\$292 per=20 megawatt), less than the Sacramento Municipal Utility District (\$330 per=20 megawatt), less than other investor-owned California-based power marketers,= =20 and less than the overall market average. Other more ambitious sellers=20 include those municipal "good neighbors" at Seattle's City Light Department= =20 (\$634 per megawatt), BC Hydro (\$498), and virtually every other socialist= =20 power entity that bellied up to the California wholesale power market. But that's not to say that the municipals did anything wrong. They had an= =20 obligation to local taxpayers to maximize their revenues. Moreover, it turn= s=20 out that the markups weren't all that great. The cost of producing=20 electricity at the margin was so high because of the run-up of natural gas= =20 costs; most of the asking price reflected the cost of spinning electrons ba= ck=20 at the plant. "It's insulting to ask for any money back. We weren't part of= =20 the problem, and we helped the state in a crisis," Peter Fletcher of the=20 Sacramento Municipal Utility District told theSan Francisco Chronicle. "And= =20 it's not like we're doing well." Another interesting revelation is how inept California state agents were wh= en=20 they tried to run a power system previously managed satisfactorily by the= =20 utilities. The state "called us and said, 'we're looking for power at \$500 = a=20 megawatt hour for a seven-hour period,'" Kate Hora of the Modesto Irrigatio= n=20 District told the Chronicle. "There was no negotiation. We just helped them= =20 out at the price they named." These are the business wizards that Davis wan= ts=20 to take over the whole system? It should go without saying that this doesn't help the governor's=20 price-gouging argument. The story Hora tells of how the state behaved with= =20 her utility is consistent with the stories related by the private marketers= .=20 The state asks for power and names a price. The company agrees. And several= =20 weeks later, Davis & Co. scream about "the gougers." The story Fletcher tel= ls=20 =01\* of prices mostly reflecting costs =01\* likewise belies Davis's content= ion that=20 greed explains all. If Sacramento's municipal utility found it hard to make= =20 any money even with sales of emergency power at \$330 a megawatt, what makes= =20 anyone think it was easier for Enron et al.? The Left's entire California story, it turns out, was built upon a=20 breathtaking series of gubernatorial falsehoods and demagoguery. If Davis a= nd=20 his duplicitous henchman, David Freeman, have an ounce of credibility left,= =20 it's only because the nation is too riveted on the Chandra Levy matter to p= ay=20 any attention to the bomb that went off in Sacramento last week.

#### Wholesale-Energy Units Lifted Profit at Reliant, Peoples Energy

07/27/2001 Dow Jones Business News (Copyright (c) 2001, Dow Jones & Company, Inc.)

Power companies Reliant Energy Inc. and Peoples Energy Corp. on Friday=20 reported higher quarterly profits and strong revenue, easily topping Wall= =20 Street forecasts.=20 The two utilities in their reports attributed the strong performance to=20 increased profitability at their wholesale-energy units. But both Reliant= =20 Energy and Peoples Energy said uncharacteristically warm weather during the= =20 period and weaker-than-expected natural-gas operations cut into profit. Houston-based Reliant Energy (REI) said net income rose 22% to \$273.7=20 million, or 93 cents a diluted share, compared with \$223.9 million, or 78= =20 cents a share, a year earlier.=20 Excluding nonrecurring items, the company earned \$247 million, or 84 cents = a=20 share, up from \$236 million a year earlier. The results exceeded analysts'= =20 expectations of 77 cents a share, according to Thomson Financial/First Call= .=20 The adjusted results excluded several extraordinary items, including the=20 effects from an accounting change, gains from early retirement of debt,=20 losses from the disposal of discontinued operations in Latin America, and a= =20 noncash charge related to the spinoff of 20% of

Reliant Resources Inc.=20 Revenue at the utilities holding company more than doubled to \$11.97 billion= n,=20 compared with \$5.76 billion a year earlier.=20 Earnings at Relia

USA: UPDATE 1-PG&E opens bids to add 1.2 bcf of natgas in Calif.

05/30/2001 Reuters English News Service (C) Reuters Limited 2001.

SAN FRANCISCO, May 30 (Reuters) - Pacific Gas & Electric Co., in an effort to determine interest in expanding its California natural gas pipeline system, said it was accepting bids for up to 1.2 billion cubic feet a day (bcfd) of gas transport capacity. The move by the company, a subsidiary of San Francisco-based PG&E Corp., responds to California's growing demand for natural gas to run new power plants. Gas suppliers and big industrial customers participating in the bidding round, called an open season, have until July 31 to submit offers stating how much pipeline capacity they are willing to purchase and the price they are willing to pay. Based on the results of this round, PG&E will decide whether to proceed with the planned 1.2 bcf expansion - enough to run seven 1,000 megawatt gas-fired power plants - or modify it to accommodate an even bigger volume of gas. As it stands, PG&E's open season is offering firm capacity on its Redwood, Baja, and Silverado pipelines. These lines transport gas from Malin, Oregon; Topock, Arizona, and California gas production to the company's local transmission system and other pipelines. PG&E's current intrastate pipeline system can transport more than 3 bcf of gas a day throughout Northern and Central California. Over the past year, utilization rates on many California pipelines have jumped from 75 percent to near full capacity, limiting deliveries into the state needed to drive gas-fired power plants. Demand for gas, which already accounts for more than a third of California's power generation, is expected to jump. Since April 1999, California has approved 14 major gas-fired projects with a combined generation capacity of more than 9,500 megawatts. Ten gas-fired plants, with a total generation capacity of more than 6,000 megawatts, are already under construction. Over the past three months plans to build or expand interstate lines carrying gas to California have been announced by Sempra Energy unit Southern California Gas Co., Enron unit Transwestern, Williams Cos' unit Kern River Transmission, El Paso Corp. units El Paso Natural Gas Co. and Mohave Pipeline Co., Questar Corp., Calpine Corp. and Kinder Morgan.

US FERC Plans Technical Conference On RTO 'Seams' Issue

05/30/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

WASHINGTON -(Dow Jones)- The U.S. Federal Energy Regulatory Commission will hold a technical conference in June or July on the coordination of wholesale power transactions among regional transmission organizations, or RTOs, FERC Chairman Curt Hebert announced Wednesday. FERC is in the midst of implementing a sweeping order that directs the utilities it regulates to turn over their transmission assets to independent control by RTOs, which are slated to begin operating at the end of this year. The order aims to promote more liquid regional wholesale power markets by creating

independent power-grid operators, removing the remaining ability of vertically integrated utilities to use control of transmission to competitive benefit in power markets. In December, competitive power suppliers and industrial consumers petitioned the commission to convene a technical conference on what was termed the "seams" issue involving wholesale power transactions from one RTO-administered grid area to another. Unless the "seams" issue is addressed, "RTOs could soon resemble huge speed bumps which could not just slow down, but do permanent harm to the vehicle of competition," the petitioners warned. Addressing the "seams" issue is "absolutely crucial to the RTO process," Hebert said Wednesday, expressing the hope that the conference can be scheduled before July and allow FERC to "figure out the right way to do it." The groups that petitioned for the technical conference welcomed the decision to hold the technical conference. "It's overdue, but we appreciate the fact that it's coming about," said John Hughes, technical director at the Electricity Consumers Resource Council. ELCON represents large industrial electricity users. "Looking at the seams issues and addressing the seams issues successfully will address an awful lot of problems we see in terms of balkanized, dysfunctional markets," Hughes said. ELCON was joined in the petition by Enron Power Marketing Inc. (ENE), Reliant Energy Power Generation (REI) and Dynegy Inc. (DYN), and the Electric Power Supply Association. EPSA, which represents competitive power producers and marketers, is "thrilled" that FERC will address the issue, said spokesman Mark Stultz. Addressing the seams issue is "critical with regard to allowing RTOs to function and to enhance the movement of electricity across the country," Stultz said. "If you're moving toward a national grid, as the administration has proposed in its national energy policy, you want to make sure you don't have disconnects at the seams of these RTOs," he said. "The more standardized the business practices for the grid the better," said Stultz. In March, the commission sought comment on whether to hold the technical conference. At the time, Commissioner William Massey welcomed the move, noting that the lack of standardized procedures could pose "an impediment to trade." Massey called for FERC to shepherd an industrywide effort to develop consistent standards for information and terminology regarding scheduling and reservation of transmission capacity among RTOs - including the development of "generic interface procedures." FERC spurred a similar standardization process in the natural gas industry, which resulted in creation of a Gas Industry Standards Board, or GISB. GISB produced uniform communications protocols for reserving pipeline capacity and standardized business practices, Massey noted, expressing the desire for the electric industry to do the same. UK Wind Pwr Co Appeals Proj Rejection In Landmark Case Of DOW JONES NEWSWIREs

05/30/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

Germana Canzi LONDON -(Dow Jones)- U.K. wind-power developer Ecogen Developments Ltd. said Wednesday it will challenge the legality of a government decision to reject its Humble Hill project after the Ministry of Defense said the turbines would interfere with surveillance radar. The case could be an important precedent in determining the viability of a wave of offshore wind projects sponsored by companies such as Royal/Dutch Shell (RD), Enron Corp. (ENE), Powergen PLC (PWG) and TXU Corp (TXU). In April, the Crown Estates granted an option for the building of up to 13 offshore power projects, which together could produce up to 1,500 megawatts of electricity to around one million households. The decision to halt the Humble Hill project took the wind power industry by surprise, given the strong support of wind energy by the U.K.

OutFront Adam Smith, Save Us! How to solve California's power crisis: market pricing. BY Lynn Cook

07/09/2001 Forbes 058 Copyright 2001 Forbes Inc.

Power Surge | Here's a novel scheme to balance supply and demand for electricity in California. Hint: It's called market pricing. Californians have a chance to keep the lights on this summer: Let commercial customers take the power they would ordinarily use but decide not to, and sell it back to the grid at a profit. Such "negawatt" auctions are already being tested in Atlanta. Wal-Mart, say, could cool down its California stores by an extra three degrees during the nonpeak morning hours. In the afternoon, when temperatures and wholesale power prices soar, it could shut off air-conditioning and resell the power it would have consumed. Stores would be hot, but not unbearable. All Wal-Marts would get to remain open with cash registers operating instead of having to deal with scattershot closings and lost business because of blackouts. From steel fabrication plants to aluminum smelters that have already shuttered for the summer, heavy industry is itching to sell negawatts, says Marc Yacker, spokesman for the Electricity Consumers Resource Council representing industrial users. So why hasn't the Golden State seized a golden opportunity? Governor Gray Davis likes the idea, but not the proponents--Houston energy giants Enron and Reliant Energy--and any suggestion from Texas is, of course, anathema. Another little problem is that California's attorney general is on record favoring jail sentences for energy "profiteers." Let a big business like Wal-Mart make a spread on electricity? Horrors! Another hurdle: A multistate auction system of the sort that would rescue California would require overriding the federal Public Utility Holding Company Act, which prevents commercial and residential users from reselling juice to the grid. In Atlanta, where Georgia Power offers large industrial users a program called Daily Energy Credit, the utility was subject to approval only by a state commission, not the Feds, because it runs the negawatt program within its assigned borders and not across state lines. A bill pending in the U.S. House Energy & Air Quality subcommittee would have alleviated that. But in June the bill's sponsor, Representative Joe L. Barton, a Republican from Texas, yanked the relief package off the table, claiming House Minority leader Richard Gephardt, the Missouri Democrat, was planning to wreck the deal because it did not promote price caps. Gephardt denies the charge. A shame that it's so much harder to turn down the political heat than the central a/c.

INDIA: Enron India chief "optimistic" about Dabhol project.

07/09/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW DELHI, July 9 (Reuters) - The chief executive of Enron Corp's Indian arm said on Monday he was optimistic about working through the company's payment dispute with a local utility. "There are a variety of options facing us with the project. We are just trying to work through those," Wade Cline told reporters in the Indian capital after a meeting with the country's finance secretary. "We are having good meetings with the ministry, so we are optimistic," Cline said. He added he had briefed the finance secretary ahead of Enron Corp Chairman Kenneth Lay's meeting with Finance Minister Yashwant Sinha. Lay is due to meet Sinha, the Indian power minister and senior officials in connection with the payment dispute between Enron's Dabhol Power Co and the Maharashtra State Electricity Board which has defaulted on payments of \$48 million to Dabhol. Enron's project is the largest direct foreign investment in India. Its first phase of 740 MW was completed in 1998, while a second phase adding another 1,444 MW was almost complete when its contractor stopped work because of the dispute.

INDIA: Enron chief to discuss Dabhol with Indian officials.

07/09/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW DELHI, July 9 (Reuters) - Enron Corp Chairman Kenneth Lay is due to meet the Indian power minister and senior power ministry officials on Monday to discuss a dispute between the U.S. firm's Indian unit and a local utility, officials said. The firm's Dabhol Power Co and the Maharashtra State Electricity Board (MSEB) are locked in a payments dispute which provoked Enron to serve a preliminary termination notice to the utility, which in turn stopped buying power from Dabhol. "He is scheduled to meet Power Minister Suresh Prabhu at 5:25 p.m. (1155 GMT)," a federal power ministry official told Reuters. Lay was expected to discuss the future of the troubled Dabhol project, said the official who did not want to be identified. He said Lay would also meet senior officials in the federal power ministry before visiting Prabhu. MSEB, the sole buyer of Dabhol power, has defaulted on payments of \$48 million to Dabhol. Enron's project is the largest direct foreign investment in India. Its first phase of 740 MW was completed in 1998, while a second phase adding another 1,444 MW was almost complete when its contractor stopped work because of the dispute.

Week in Review Desk; Section 4 The Nation: Look Sharp Trying to Run a Country Like a Corporation By DAVID E. SANGER

07/08/2001 The New York Times Page 1, Column 5 c. 2001 New York Times Company

WASHINGTON -- WHEN President Bush was sworn in nearly six months ago, Washington was awash with loose talk of a "C.E.O. presidency." The first president with an M.B.A. to his name, from Harvard Business School no less, would be the chairman of the board of the world's biggest conglomerate, his aides boasted, a leader who delegated to his cabinet of experienced C.E.O.'s. They said his administration would apply business discipline to a bloated government. And cabinet sessions do look a lot like the Business Roundtable, the organization of chief executives that, a few weeks ago, held part of its annual meeting in the East Room. Next to the president sits Dick Cheney, late of Halliburton, and Treasury Secretary Paul H. O'Neill, fresh from Alcoa. Donald H. Rumsfeld is also at the table, in his second run as defense secretary, after running G. D. Searle & Company. Lower level officials, too, look and sound like business folk. "We effectively are the C.E.O.'s of wholly owned subsidiaries of the Department of Defense," said Thomas E. White, who left Enron -- the Texas energy company that wields great influence here -- to become secretary of the army last month. But c

#### UPDATE FROM EBS OFFICE OF THE CHAIRMAN

Since its inception just two years ago, Enron Broadband Services has made significant progress toward achieving our ambitious goals of being the leading provider of premium broadband content and the largest buyer and seller of bandwidth on a global basis. We are extremely proud of the company's accomplishments and equally optimistic about the future of EBS.

The market for bandwidth intermediation and risk management is developing more quickly than anticipated faster than the markets for natural gas or even electricity had developed. Global Trading and Risk Management has already executed more than 600 transactions this year, far exceeding the 321 total transactions executed in 2000. The Enron Intelligent Network (EIN), with its first-of-a-kind pooling point infrastructure, is in place to provide the physical backbone and switching platform to support EBS, emerging bandwidth and related trading operations.

Likewise, EBS has developed a superior technical and commercial platform to digitally deliver entertainment on-demand. While we have terminated our relationship with Blockbuster because of their inability to secure content, we remain confident that EBS will be successful in independently acquiring content commitments and developing distribution partnerships for this exciting new business.

EBS will continue to evolve as we build upon our presence in the bandwidth and network services market. While the market for broadband services in the U.S. and globally has undergone significant change in recent months, the demand for broadband services continues to grow dramatically and EBS has the skills and strategy required to be successful long term.

To better focus our efforts and respond to the market, we have made some organizational changes to enable us to effectively execute our strategy and efficiently grow EBS. These changes are outlined below and a current organizational chart is attached.

David Cox, formerly Managing Director of Content Origination, has been named Chief Commercial Officer, reporting to the EBS office of the chair. This new role will enable David to share his broad origination expertise with the various EBS commercial teams.

Digital Content Services, formerly Content Origination, is now led by Frank Bay with Rich DiMichele and Ed Smida. Rich will focus on the development of the content risk management business.

Stewart Seeligson is now leading an expanded Wholesale Origination unit combining media transport opportunities that Stewart has been developing in the broadcast industry and opportunities that Ted Seitz has been pursuing with traditional carriers, ISPs, and network service providers. This new origination team will focus on executing highly structured transactions with significant value in the wholesale market.

John Echols now leads the Enterprise Origination unit with Jim Crowder, Matt Harris and Brad Nebergall. Bryan Burnett also has joined the Enterprise team from Enron North America's Industrial Markets group. John's group will focus on intermediation opportunities with technology, financial, and corporate customers.

Dale Surbey has joined EBS from Enron North America to lead the Structuring group. Brad Richter will move to Jeff Donahue's Corporate Development team to pursue M&A and large, structured transaction opportunities.

Joe Edwards is leading the newly formed North American middle markets group, reporting to Paul Racicot.

Daryl Dunbar has joined EBS as a vice president in Engineering focusing on IP engineering. David Leatherwood and his team have moved to Enron Energy Services to develop outsourcing opportunities related to network engineering and construction.

We have established an impressive foundation from which to build our business and look forward to executing on the tremendous opportunities we see in this rapidly evolving market.

Click here to see the new organizational chart. =20

FLOOR MEETING WITH SKILLING Join Jeff Skilling at an EBS floor meeting next Tuesday as he answers=20 questions about our business and=20 discusses Enron's strategy. The floor meeting is designed to encourage op= en=20 communication and an=20 exchange of ideas. Date: Tuesday, April 24 Time: 1:30 p.m. Place: Near EB4423D If you wish to submit questions in advance, send them directly to Jeff by= =20 email or fax at 713-646-8381.

THANK YOU, EBS EMPLOYEES To show EBS employees their appreciation for all the hard work put forth th= is=20 quarter, Ken and Kevin=20 invite you to an afternoon of entertainment and recreation at Jillian's nex= t=20 Tuesday. Please join them at the=20 entertainment complex for fun, food and activities on April 24. Date: Tuesday, April 24 Time: 3:00 p.m.- 6:00 p.m. Place: Jillian's, 7620 Katy Freeway at Silber For those interested, a shuttle will be available. You can catch the shutt= le=20 to Jillian's outside the Enron=20 building on Andrews Street beginning at 2:30 p.m. If you have any question= s,=20 please contact Eddie Sera=20 at 3-0480.

EBS MARKET INTELLIGENCE ADDS NEW TOOLS Market Intelligence is pleased to announce the addition of Faulkner to the= =20 EBS family of research products=20 available to all EBS employees via wEBSource. Faulkner FACCTs is a fully= =20 searchable information service=20 that covers technology in the IT and communications industry segment. FACC= Ts=20 provides select vendor=20 company profiles, company timelines, market trends, product and service=20 profiles, standards information,=20 and company contact information. FORTUNE Advisor/On The Job Performance Reviews: Perilous Curves Ahead Grading employees via forced rankings is a valuable management tool, say many companies. A slew of employees beg to differ. Matthew Boyle

05/28/2001 Fortune Magazine Time Inc. 187+ (Copyright 2001)

Sanaa Taraman taught at the University of Michigan at Dearborn shortly after getting her Ph.D. in industrial engineering, so she knows all about grading on a curve. But she never thought she'd be the victim of one. A 25-year Ford veteran and the mother of three, Taraman was told last December that she had received the rank of C, the lowest grade under Ford's new performance-evaluation system. Employees who get a C are not eligible for bonuses that year. Two C's in a row are grounds for dismissal. Those in the double-C group will "not necessarily" be fired, says Francine Romine, a Ford spokesperson. Taraman, 54, a senior technical specialist, says she had never before received a poor performance evaluation. She claims that her manager signed off on a B ranking after she successfully completed a demanding assembly-plant project, but that the ranking mysteriously changed to a C a week later. Now on medical leave to treat depression, Taraman joined eight other Ford employees in filing a class-action lawsuit in February, alleging that the auto giant's evaluation system discriminates against older workers. "I felt I was a scapegoat," she says. Romine maintains that Ford's ranking system "is fair and nondiscriminatory." In companies across the country, from General Electric to Hewlett-Packard, such grading systems--in which all employees are ranked against one another and grades are distributed along some sort of bell curve--are creating a firestorm of controversy. In the past 15 months employees have filed class-action suits against Microsoft and Conoco as well as Ford, claiming that the companies discriminate in assigning grades. In each case, a different group of disaffected employees is bringing the charges: older workers at Ford, blacks and women at Microsoft, U.S. citizens at Conoco. Forced ranking systems, also known as forced distribution or "rank and yank," have been around for decades. Adherents include several of FORTUNE's Most Admired Companies, like Cisco Systems, Intel, and GE (see sidebar). But thanks to the slowing economy and an increased focus on pay for performance, more companies--a quarter of the FORTUNE 500, by one estimate--have instituted such forced rankings or gotten tougher with their existing systems. For example, Enron recently expanded its ranking system to cover most U.S. employees, and last fall Hewlett-Packard decreed that a full 5% of its work force would receive HP's lowest grade, rather than the fuzzy 0 to 5% of years past. Proponents of forced rankings argue that they facilitate budgeting and guard against spineless managers who are too afraid to jettison poor performers. "Managers want to live in a Lake Wobegon, where all the children are above average, but that's not the truth," says Dick Grote, an HR consultant who has designed ranking systems for GE and Texas Instruments. Forced rankings, the thinking goes, force managers to be honest with workers about how they're doing. But critics say they compel managers to penalize a good but not great employee who's part of a superstar team. Conversely, a mediocre employee on a struggling unit can come out looking great. "In many cases, the lowest performer might not be that much lower than the highest," says Paul Spector, a professor of industrial psychology at the University of South Florida. Most companies guard against this problem by refraining from rigidly applying the distribution to smaller teams--but that means the spread has to be made up somewhere else. The result: Different managers spend hours haggling with one another to meet the overall distribution requirements. This horse-trading process can be frustrating and time-consuming, one Microsoft middle manager says. While Bill Zolna, a Microsoft spokesperson, denies that the company requires managers to assign a certain percentage of employees to each level, the middle manager says that there is unspoken pressure to do so. Another area of contention is the ranking criteria. In a manufacturing-based economy, it was easy to figure out who was up to snuff: Just see whether Joe is pumping out (or selling) more widgets than Bob. But today organizations use a slew of fuzzy qualitative criteria to evaluate employees. And while there's no doubt that teamwork and communication skills are vital, they are tough to gauge. After all, one manager's team player is another's sycophant. Enron's ranking criteria are "very subjective," admits Mark Palmer, a company spokesman, adding, "There aren't easy labels for what type of person someone is." There's also the danger that forced rankings can become a crutch for poor management. "Good managers should have the capability to make these difficult decisions without a system forcing it upon them," argues Chris Michalak, who designs such systems at Towers Perrin. Of course, one reason employees are up in arms about forced rankings is that they suspect--often correctly--that the rankings are a way for companies to more easily rationalize firings. In his latest message to GE shareholders, CEO Jack Welch said, "Not removing that bottom 10%...is not only a management failure but false kindness as well." This year Sun Microsystems will

use a forced-ranking system to identify its worst-performing 10%, who will be given 90 days to shape up, find another job inside Sun, or ship out. So is Sanaa Taraman's situation an anomaly or a taste of things to come? The latter, according to New York City employment lawyer Lorraine Ahlers-Mack. "There's going to be a lot of litigation surrounding this issue," she warns. Managers had better get ready. FEEDBACK: onthefjob@fortunemail.com [BOX] PLUS: FAT CEO PENSIONS | NEW OUTSOURCING DANGERS | INTELLECTUAL CAPITAL REVISITED [BOX] Making the Grade ENRON Divides employees into six categories: superior (5% of employees), excellent (30%), strong (30%), satisfactory (20%), needs improvement, and issues (combined, 15%). FORD Last year gave 10% of employees A's, 80% B's, and 10% C's (the lowest grade); will give only 5% C's this year. GENERAL ELECTRIC Divides employees into top (20%), middle (80%), and bottom (10%) categories. HEWLETT-PACKARD Uses a 1-to-5 scale, with 15% of employees getting 5's (the top grade) and 5% getting 1's; the percentage of 2's, 3's, and 4's varies. MICROSOFT Ranks employees from 1 to 5;

News: Analysis & Commentary: FLASH PROFITS THE CARNAGE GETS WORSE Profits at bellwether companies slid in the second quarter By Pallavi Gogoi in Chicago, with bureau reports

07/30/2001 BusinessWeek 34 (Copyright 2001 McGraw-Hill, Inc.)

Welcome to the earnings recession. Economists may debate the health of the economy, but there's little doubt where Corporate America stands: Profits have shrunk for three consecutive quarters now. Higher energy costs, the gut-wrenching hangover from tech-spending excesses, and the strong dollar have all contributed to a slowing economy--and continue to take a heavy toll on earnings. That's despite seemingly strong revenue gains. Although overall sales rose 8% in the second quarter from the year before, BusinessWeek's flash profit survey of 90 bellwether companies shows that net income shriveled 34%. But on a closer look, sales weren't so hot either. Much of the jump stems from Enron Corp.'s 196% revenue gain. Barring that, overall sales were flat. DEPRESSED. Nor is the carnage over yet. First Call/Thomson Financial says earnings will drop 8% in the third quarter. Worse, recent earnings surprises have the Boston firm backing away from a projected 3.3% profit recovery in the fourth quarter. So far, 811 companies have warned of lower second-quarter earnings, up from 263 a year ago. "You don't switch from record earnings warnings to normal overnight," says Charles L. Hill, First Call's director of research. Few sectors escaped the bloodbath. Tech companies continued to lead the downturn: Intel Corp.'s net dropped 94% on depressed demand for chips, while Motorola Inc.'s \$759 million quarterly loss was one of the worst among the 90 companies. Carmakers and airlines didn't fare much better. General

Motors Corp.'s profits plunged 73% on weaker sales and losses from overseas units. ``The strong dollar is becoming an increased problem in the marketplace," says GM CFO John Devine. Among carriers, UAL Corp. was one of the worst performers, posting a \$292 million loss. Corporate travel cuts will force losses at most major carriers. The financial services sector was a mixed bag. Citigroup's net rose 9%, to \$3.7 billion, on higher global business growth. But venture capital investments in technology dealt Wells Fargo & Co. an \$87 million loss. There were few surprises among the quarter's star performers. Jack Welch will retire with his legacy as a master of strong and consistent earnings intact: General Electric Co. earnings rose 15%, to \$3.9 billion. Pharmaceuticals were also healthy. Pfizer Inc.'s net surged 56% to \$1.8 billion, and Johnson & Johnson's climbed 9%, to \$1.5 billion, on increased drug sales. Good thing. If the economy stays sick, we're all going to need plenty of painkillers.

Power-Market Bear Mauls Plans For New Generators In West By Mark Golden Of DOW JONES NEWSWIREs

07/26/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

NEW YORK -(Dow Jones)- The crumbling price of electricity in the western U.S., attributed by many to federal price controls, has forced power plant developers to cancel projects, calling into question whether there will be enough electricity to meet demand in the Northwest this winter. The cancellations of peaking plants and temporary, oil-fired generators - high-cost units that provide power needed only when demand is highest - have cut projected generating capacity in the Northwest by up to 1,000 megawatts, about 3% of the combined peak demand of Washington, Oregon, Idaho and western Montana. "The price caps have added uncertainty," said Scott Simms, spokesman for Enron Corp. (ENE) unit Portland General Electric Co. "If we look forward to this winter and you see a diminished supply scenario, you can see why we have concerns about regional reliability. That could put us in a position of having rotating outages in the region." About two weeks after the Federal Energy Regulatory Commission imposed limits on western power prices on June 19, Portland General halted installation of a new 45-megawatt gas-fired peaking turbine at its existing Boardman power plant. The utility was developing the extra generation both to meet its customers' needs and to sell some output to other Northwest utilities left short of hydroelectric supplies due to this year's drought. A turbine that size could power about 45,000 homes. "You can directly attribute that to FERC price controls," Simms said. After the FERC order, at least two utilities in Washington State ended negotiations with NRG Energy (NRG) for supplies from new plants that NRG was ready to build in time for winter. Both utilities - Tacoma Power and Snohomish County Public Utility District - experienced significant supply shortages in the past 12 months, paid very high prices in the spot market and had to raise customer electric rates by as much as 50%. But both utilities told NRG, and later Dow Jones Newswires, that they had no reason to sign long-term contracts to guarantee new supplies, because the FERC had practically eliminated the financial risk of relying on the spot market. NRG, as a result, scuttled plans to build peaking plants in Washington that could have added 300 megawatts. FERC's price controls, as well as supply-demand fundamentals, have dramatically changed the economics of selling power into the West's open market in the past few months. The current western U.S. electricity price cap of \$98 a megawatt-hour covers the costs of generating power from easy-to-install but inefficient peaking turbines, but not the capital costs of buying and installing new peakers. In addition, the current price cap may soon be recalculated to a much lower level. The cap is based largely on natural gas prices, which have been cut in half since the cap was first formulated in June.

#### Not Everyone Blames FERC

The average monthly price for on-peak hours in the Northwest from August through March is \$60 a megawatt-hour - a fraction of what it was three months ago. Many in the western electricity industry think that's because FERC's price controls have kept prices artificially low. A smaller group thinks the market is appropriately signaling that not all the planned gas-fired plants are needed, because some power plants are already under construction and consumers are conserving electricity. Jim Kemp, a senior executive for the Canadian utility TransAlta's (TA.TO) merchant power group, TransAlta (TA.TO), for example, doesn't attribute the cancellation of projects to price controls. "I see it as due to demand-side control and new units," Kemp said. "The market is sending out a signal tha

Can a humbler, more-informative Enron refuel investor enthusiasm? That's the hope of Kenneth Lay, founder and chairman as well as the once-again chief executive of this Houston energy and trading company. Enron has been regarded as one of the nation's most innovative -- though bedevilingly complicated -- companies. Mr. Lay acknowledges that Enron, which grew into a colossus over the past decade with a hard-charging, in-your-face management style, has "lost some credibility" with the investment community. "I want to make sure we restore that credibility," he said in an interview last week. He promises fuller disclosures, and Enron has a lot riding on whether investors find them sufficient -- and soothing. Last summer, the company's stock price hit \$90 a share, giving Enron a dazzling price-to-earnings ratio exceeding 60. As of 4 p.m. in composite trading yesterday on the New York Stock Exchange, Enron was at \$37.76, up \$1.41, sporting a more-conventional P/E ratio of about 21 times this year's expected earnings. The stock slide has multiple causes, including uncertainty about trading profits, due to the slower economy and a drop in energy prices as well as mounting concerns about the difficulty that investors face in figuring out how the company's extremely complex operations make money. Layer on management turnover. Earlier this month, Enron lost its chief executive when Jeffrey Skilling, Mr. Lay's longtime lieutenant and handpicked successor, unexpectedly resigned after only about six months in the top job. The 47-year-old Mr. Skilling was widely credited with helping to build Enron into the nation's leading energy trader and personified the company's brash manner. During an investor conference call in April, for example, when a caller criticized Enron's schedule for releasing financial information, Mr. Skilling responded by calling him an "ah." Mr. Skilling, who is on a river rafting trip, couldn't be reached for comment but others at the company, including Mr. Lay, say it was an unfortunate word choice that continues to haunt the company. At the time, Mr. Skilling said he regretted if anyone was offended by his remark. Though Mr. Skilling initially said his resignation was strictly for personal reasons, he added in a later interview that his own feelings of failure over the plummeting stock price had contributed greatly to his early departure. The 59-year-old Mr. Lay resumed the chief executive's job that he had previously held for 15 years. Jeff Dietert, an analyst from Simmons & Co. International in Houston, figures that Enron's P/E is likely to be permanently lower, though still somewhat higher than the average for its peer group. Mr. Dietert views Dynegy as the premium energy stock, which will fetch the highest trading multiple. While Mr. Lay insists that Enron's overall operating and financial condition is very strong, the unexpected exit of Mr. Skilling has some wondering if "there isn't another shoe about to drop," says Carol Coale, an analyst at Prudential Securities. To lessen such concerns, Mr. Lay promises to address the longtime analyst and investor complaint that Enron doesn't provide enough information about its extremely complex operations, which include not only construction of natural-gas pipelines and power plants but the trading of an ever-expanding array of commodities. Nowadays, Enron

trades everything from telecommunication capacity to weather-linked derivative contracts. "I truly do not understand all their financial arrangements, and I've sent information on their deals to accountant friends and they don't understand them either," says Rebecca Followill, an analyst at Howard Weil, who refers to Enron's accounting methods as a "black box." Yet analysts long put out buy recommendations on Enron stock, in large part because the company has issued consistently strong earnings. In 2000, for example, the company reported net income rose 10% to \$979 million on revenue that more than doubled to \$100 billion. Assets over the past five years more than quadrupled to about \$65 billion. "When the stock price and earnings were going up so quickly, less attention was paid to the quality of earnings," says Zach Wagner, an analyst at Edward Jones in St. Louis. With the stock price down, "Enron has to show that they do have quality earnings. The only way to do that is to open up the books," he says. Mr. Lay says Enron will start putting out more detailed information on individual business segments and "give a better idea of the profitability of various businesses" such as its wholesale-services category where a lot of business activities gets lumped. In another blow to criticism, Chief Financial Officer Andrew Fastow as of July 31 quietly ended his ownership and management ties with certain limited partnerships. Over the past two years, Enron has placed billions of dollars of assets and millions of shares of its stock into complex transactions with these partnerships. Enron executives say the transactions were perfectly proper and that the company asked Mr. Fastow to take part in the deals, which were done to reduce the risk of fluctuating market prices. An Enron spokesman says Mr. Fastow has no comment on the matter. Yet some analysts say they have been concerned about having Enron's top financial executive in a fiduciary position at entities that, at least potentially, stood to gain if the company lost in the transactions -- and vice versa. Mr. Lay says the transactions involving Mr. Fastow had become a "lightning rod" for criticism so "we're better off not doing it." Of course, it's still a challenge trying to make sense of these transactions. Consider the following snippet from Enron's second-quarter report concerning some Fastow-related deals: "Enron has entered into agreements with entities formed in 2000, which included the obligation to deliver 12 million shares of Enron common stock in March 2005 and entered into derivative instruments which eliminated the contingent nature of existing restricted forward contracts executed in 2000. . . . In exchange, Enron received notes receivable from the Entities totaling approximately \$827.6 million. In addition, Enron entered into share settled costless collar arrangements with the Entities on the 12 million shares of Enron common stock. Such transactions will be accounted for as equity transactions when s

SACRAMENTO, June 28 -- California legislators turned up the heat on power generating companies today, citing two of them for not handing over documents necessary in the state's continuing hearings on the spike in electricity prices. A special legislative panel, called the Senate Select Committee to Investigate Market Manipulation, unanimously passed a contempt motion this afternoon saying that the Mirant Corporation, based in Atlanta, and the Enron Corporation, based in Houston, had failed to respond to a June 11 subpoena asking for documents. The motion comes as the committee is trying to follow the paper trails to determine if power generating companies willfully manipulated the supply of electricity here last year in an effort to drive up prices. Several state agencies are investigating similar charges. Other companies, including Reliant Energy and Dynegy Inc., complied with the committee's requests for thousands of documents related to power sales and bidding procedures. Several other companies, which include the Williams Companies, the Duke Energy Corporation, the AES Corporation and NRG Energy Inc., are expected to hand over documents in two weeks. California's two largest utilities have racked up \$14 billion in debt, forcing one to file for bankruptcy protection. Last week, three former employees of Duke Energy told the committee that they observed behavior that they believed was consistent with market manipulation. Duke denied the charge, saying there was no merit to the accusations. The chairman of the select committee, Joseph Dunn, a Democrat, said that if Enron and Mirant complied with the request by July 10, the contempt order would be expunged. "We were not seeking to find contempt but to obtain compliance," he said today. "Unfortunately, we had to find contempt." The documents were subpoenaed earlier this month by the Senate Rules Committee to obtain details on bidding, pricing and other aspects of power sales. The power companies have said that they have not complied because they have not been able to negotiate an acceptable confidentiality agreement. By seeking the contempt citations, the committee needs the full Senate to follow through. There are no set penalties, said Laurence Drivon, the committee's special counsel, adding that by law, "the Senate can take such action as it deems necessary and appropriate." Patrick Dorinson, a spokesman for Mirant, said the company was seeking assurances that any information it handed over, which it considered proprietary, not be made public. He said the company had been negotiating with the committee up until today and hoped to resolve its concerns in the next few days. For Enron's part, a representative of that company sent a letter to Mr. Dunn outlining its objections to turning over documents. Michael Kirby, a San Diego lawyer, wrote that the documents the committee wanted were outside the state and thus out of the jurisdiction of the California subpoena. He also wrote that the committee was asking the company to reproduce documents that other state regulatory agencies already have. He called the subpoena's orders "vague, unduly burdensome, often argumentative and beyond the scope and extent of both the subpoenaing party's legal and regulatory authority and subpoena power." Today's legislative action took place in an atmosphere of increasing attacks on the power generators. A poll by The Los Angeles Times this week found that 86 percent of Californians interviewed believed that power companies had manipulated the electricity market in the state. Duke Energy, based in North Carolina, opened a campaign this week to do something about this widespread public view, taking out full-page newspaper advertisements in California to defend itself against accusations that it cut production to drive up profits.

SACRAMENTO -- Angered by the refusal of electricity wholesalers to surrender information about suspected price gouging, a Senate committee voted Thursday to hold two big energy companies in contempt of the Legislature. It was uncertain what punishment, if any, may be in store for Enron Corp. of Houston and Mirant Corp. of Atlanta. But committee

members said potential sanctions could include heavy fines and/or the jailing of corporate executives. "Jailing of an individual is an option and we intend to preserve all our options," warned state Sen. Joe Dunn (D-Santa Ana), chairman of the committee investigating whether the wholesalers had manipulated the market. "Could we impose, say, \$9 billion in fines?" Sen. Debra Bowen (D-Marina del Rey) asked rhetorically. Enron reacted angrily. "This is a shakedown," charged spokesman Mark Palmer. "And if this is a shakedown, we're going to protect our legal rights." Enron had further enraged the committee by sending a letter saying the legislative panel had no authority to conduct its investigation because wholesale prices were the "exclusive jurisdiction" of the Federal Energy Regulatory Commission. A spokesman for Mirant said the company intends to keep talking to the committee to reach an agreement. The bipartisan committee had been prepared to find eight generators--mostly out-of-state companies--in contempt for refusing to produce the subpoenaed records. But by the end of the four-hour hearing, companies that said they would cooperate--AES, Duke, Dynergy, NRG, Reliant and Williams--escaped a citation, at least temporarily. Though the committee found Enron and Mirant in contempt, its action is subject to ratification by the full Senate. Dunn said contempt citations are so rare there are few guidelines to follow in determining a punishment. He said it "could be anything that the Senate believes is necessary and reasonable." The finding of contempt for failure to obey a legislative subpoena is rarely used in California. Sources said it last was done in

This one is particularly amazing ...

Electricity traders' tech habits get scrutiny Posted at 10:23 p.m. PDT Sunday, June 10, 2001 BY JENNIFER BJORHUS

Mercury News

State officials investigating California's extraordinary energy prices are zeroing in on how energy traders use the technology tools of their profession -- from e-mail and specialized software to Internet energy data sites and online trading floors.

This technology may be key, they say, to helping traders acquire the intimate knowledge needed to manipulate California's troubled energy market. With minute-to-minute knowledge of market conditions, some traders went even further, two lawsuits charge, illegally coordinating bids and sending electricity prices to record-breaking levels.

The state Attorney General's Office has subpoenaed from power generators software used to formulate bidding strategies, names of employees providing computer support, communications with a prominent industry Web site and the name of firms that handle computer networks.

And a state Senate committee has hired an information technology consultant to help them look into how traders tracked patterns on the state's Internet-based spot market, among other things.

"Once you were knowledgeable about its operations, the opportunity to game it became pretty obvious," said Sen. Joe Dunn, D-Garden Grove, who chairs the committee.

Anti-trust laws

Working together, or colluding, to fix prices is illegal and violates state and federal anti-trust laws.

Sharing sensitive industry data, if it involved financial markets, would be considered insider trading and would be treated far differently, said Anjali Sheffrin, head of market analysis for the Independent System Operator, which manages the state's power grid.

The Securities and Exchange Commission polices the nation's stock markets, but wholesale energy trading goes largely unwatched by federal regulators.

San Diego attorney Mike Aguirre agreed with Sheffrin. Aguirre is part of a team of lawyers who have filed two lawsuits against leading power generators such as Dynegy, Duke Energy and Williams Energy Services.

``It's basically an embryonic kind of trading market that involves the sharing of inside information, and the only reason they're getting away with it is there's no SEC cop," he said.

Energy companies dismiss these charges as speculation.

``All of these 'What ifs?' " said Dynegy spokesman Steve Stengel. ``The fact of the matter is we've played by the rules, we've acted ethically, we haven't done anything wrong."

Energy companies say the way they use technology is all above board.

``That's something that we're proud of, that we have all of the tools to do the best possible job in the trading," said Paula Hall-Collins, spokeswoman for Tulsa-based Williams Co.

Not everyone is persuaded that energy companies actually conspired to hike prices.

Some public officials and energy industry players call the technology focus a red herring. California's energy problems are far more fundamental, they say, than click-happy energy traders with spreadsheets. The now-defunct California Power Exchange, for example, was something of a sitting duck, unable to freely shop around for the best electricity prices.

#### Wealth of data

Other experts believe the sheer wealth of data floating around -- from river flows to 30-day forecasts of power line outages -- gives traders an unfair advantage. ``That's exactly the issue," said Severin Borenstein, director of the University of California Energy Institute. ``The issue is whether all this information is actually doing more harm to competition than benefit to the efficiency of procuring and selling power."

The best illustration of this is a somewhat legendary Web site blunder.

In that incident, an energy industry association called the Western Systems Coordinating Council posted highly sensitive real-time data about transmission of extra-high voltage electricity in California.

Alarmed that such information could be used to game the market, the state's grid operator last October demanded that the trade group take the information off the site, which it did.

A former energy trader who spoke to the Mercury News on the condition that he not be identified, said: ``When you can calculate exactly what a market needs and where its surplus is going to come from, then you have the ability to essentially fix prices. It's like a linear equation. You know exactly what the end equation is going to be."

At issue are how traders employ the tools that, like the telephone and fax machine, are standard in trading electricity: software, data Web sites and Internet energy exchanges.

Dunn and other public officials acknowledge that it isn't clear how technology was used in suspected abuses. And no one has turned up slam-dunk evidence of collusion.

The ISO has done extensive studies that conclude traders drove up prices through gaming. The high prices have cost the state at least \$6.7 billion since May 2000.

``Energy traders trade information among themselves," the ISO's Sheffrin charged, comparing it to insider-trading. ``These traders are calling each other up all the time."

The former energy trader who talked to the Mercury News agreed energy traders as a very incestuous group.

They talk and e-mail every day. ``Sometimes many, many, many times a day," he said. ``Some of them have instant messaging." He said he believes it could amount to ``de facto collusion."

But proving collusion in court is extremely difficult.

The sticking point, said UC's Borenstein, is showing exactly what energy traders did with the information.

"These guys aren't actually sitting down in a room together," Borenstein said. "They sort of watched each other and said, 'Well, other firms are keeping capacity out and we will too.'"

The former energy trader said he doubted that investigators would prove collusion because traders will cover their tracks. "They're expunging hard-drive data as we speak," he said. "The documents are long gone."

#### Lawsuits

Two class-action lawsuits, filed on behalf of taxpayers by San Francisco and by Lt. Gov. Cruz Bustamante, accuse the energy companies of colluding to drive up prices. Neither lawsuit clearly documents how the energy companies engaged in secretive data-sharing.

The Bustamante suit, however, targets a new Internet site for wholesale energy trading launched last fall by heavy-hitter energy companies such as Duke and Reliant. The Atlanta-based Web site, IntercontinentalExchange, is one of at least a dozen such electronic trading floors that have popped up on the Internet in the last four years. None of these trading exchanges -- which analysts say are the wave of the future -- are regulated.

IntercontinentalExchange declined to comment since it is not a party to the suit.

The lawsuit charges the site "has several features that support collusive behavior amongst market participants."

One is that only approved traders have access to IntercontinentalExchange and those traders can pick who they want to trade with and shut other traders out. And more importantly, Aguirre said, the energy companies who own many of these Web exchanges get the tremendous benefit of having a record of all the trades.

"It gives them an enormous amount of market data that no one else has access to," he said. "It's a conduit for collusion."

#### FW: ACR Inviting Comment On DWR/CPUC Proposed Rate Agreement

|            |                                                                                  |
|------------|----------------------------------------------------------------------------------|
| Sender     | jbennett@gmssr.com                                                               |
| Recipients | ['harry.kingerski@enron.com', 'jdasovic@enron.com', 'james_d_steffes@enron.com'] |
| File       | dasovich-j/all_documents/28900.                                                  |

Attached is an ACR issued today requesting comment on the Rate Agreement reached by the CPUC and DWR (which I will send under separate cover). The ACR highlights certain aspects of the Agreement and asks for parties to evaluate the effects of the Agreement and indicate what they believe the consequences of its adoption would be. Comments are due by August 1st.

The Agreement itself basically calls for DWR to set its revenue requirement based on "Bond Related Costs" and "Operating Expenses" and for the Commission to implement such revenue requirement. It is up to DWR to determine whether the revenue requirement is just and reasonable prior to submitting it to the Commission.

Please let me know if Enron is interested in Commenting on the Agreement.

Jeanne Bennett

From: Wong, John S. [mailto:jsw@cpuc.ca.gov] Sent: Wednesday, July 18, 2001 10:11 AM Subject: ACR Inviting Comment On DWR/CPUC Proposed Rate Agreement

Attached is an assigned Commissioner ruling (ACR) inviting comment on the proposed rate agreement between the California Dept. of Water Resources and the California Public Utilities Commission. Interested parties may file comments with the Docket Office on or before August 1, 2001.

Please note that there are three attachments to the ACR. Attachment A, the proposed rate agreement, is being forwarded to you as a separate PDF document. Attachment B, the relevant Water Code sections, is contained in the body of the attached Word document. Attachment C is the two page letter from the DWR, the Dept. of Finance, and the Treasurer's Office to President Lynch dated July 2, 2001. Attachment C was previously distributed to the A.00-11-038 et al service list in the Chief ALJ's ruling dated July 5, 2001. Today's ACR and all three of the attachments can also be accessed at the CPUC's web site.

State Board of Equalization Decision Stands in the Way of New Power Supply Decision opposed by local governments, tax-payers

The State Board of Equalization voted 5-0 Wednesday to usurp local control over tax assessments of electrical corporations. undermining current local incentives to welcome and site desperately needed power supplies in California.

"This decision defies logic. creating yet one more barrier, and more uncertainty, for developers proposing to build desperately needed electricity generation in California," said Jan Smutny-Jones, Executive Director of the Independent Energy Producers Association.

The Board's action, if not found unconstitutional, removes many of the incentives local governments have in siting new power plants by shifting assessment authority from local governments to the state. potentially disrupting the traditional revenue flow to local communities.

This change was opposed by all the host local communities, the California Tax Assessors Association, the Kern County Tax Assessors, the Los Angeles Tax Assessors, and Cal-Tax.

## Message 1063 of 1299

## SIGNIFICANT DEVELOPMENTS; Davis Staff Admit that DWR Costs for

|            |                                                                         |
|------------|-------------------------------------------------------------------------|
| Sender     | jeff.dasovich@enron.com                                                 |
| Recipients | ['karen.denne@enron.com', 'skean@enron.com', 'james.steffes@enron.com'] |
| File       | dasovich-j/all_documents/10411.                                         |

Please see the following important stories. It appears to be quickly slipping through Davis' fingers. May be useful to re-group a bit in light of the following events. In sum:

Most importantly, in today's Chronicle, it's reported that Davis' staff met with key Democrats yesterday and lowered the boom. DWR purchases likely to be about \$25 billion and rates may have to go up by 100%. (See attached story.) Apparently, one of the big reasons that 8X got held up yesterday is because Davis' own staff went to D leadership and said, "don't move 8X (a bill that Davis was said to support) because the \$10 billion cap on bonds won't work; they need much more." It appears that rate increases will now become part of the mix, whether Davis likes it or not. The staff alleged that they were conveying the information before Davis had been informed of the "bombshell." Davis was criticized for being at yet another fund-raiser yesterday while the situation significantly deteriorated in Sacramento. (See attached story.) Meanwhile, PG&E has sued--or may be about to sue--the State, saying they won't pay the QFs according to Davis' plan (which the PUC is supposed to implement on Tuesday). (See attached PG&E press release.) Finally, Mike Kahn has issued an opinion piece in yesterday's Chronicle, in which he attempts to lump together into one pile Republicans, market proponents, price gougers and Texans, and defending Davis and Lynch.

\*\*\*\*\*

\*\*\*\*\* Davis' Measured Plan To Fight the Darkness Michael Kahn

Friday, March 23, 2001 ,2001 San Francisco Chronicle URL:

[http://www.sfgate.com/cgi-bin/article.cgi?file=/chronicle/archive/2001/03/23/E\\_D103778.DTL](http://www.sfgate.com/cgi-bin/article.cgi?file=/chronicle/archive/2001/03/23/E_D103778.DTL) COMMENTS on Gov. Gray Davis' energy programs by apologists for former Gov. Pete Wilson bring to mind Robert Kennedy's admonition that it is better to light a candle than curse the darkness. Let's examine the darkness created by Wilson's energy deregulation scheme. The 1996 law he signed could not have been more wrong headed. -- Why did it hand energy price control over to the Federal Energy Regulatory Commission? -- Why did it free wholesale prices, while capping the price utilities could charge customers? -- Why did the former state Public Utilities Commission force utilities to sell off their fossil fuel power plants, leaving them vulnerable to predatory pricing by out-of-state merchant generators? -- Why did the Wilson-era PUC bar utilities from entering into contracts to ensure a long-term supply of cheap electricity? -- Most pointedly, why did California enter into deregulation without enough available generation to ensure a fair market based on balanced supply and demand? These are tough questions. It is not hard to understand why former proponents of the 1996 deregulation scheme would rather not answer them, preferring to bemoan the darkness and curse Davis' actions. The Wilson apologists jeer at plans for the state to purchase the power grid, though they surely know the value of a well-maintained, fully functioning electric transmission network. Bottlenecks in the grid impede the sharing of power between Northern and Southern California. This was a main reason Northern California experienced rolling blackouts in January while Southern California had plenty of power. The state's purchase of the grid will infuse new cash into the utilities, pulling them back from the brink of bankruptcy, while giving the state a tangible and valuable asset in exchange. And ownership of the grid will allow the state to modernize it, removing bottlenecks and upgrading technology - something the utilities have long failed at doing. The apologists ignore the state's strong record on energy conservation and Davis' actions to enhance these efforts. California now has the nation's second-best energy conservation record. The governor has budgeted \$404 million in new conservation measures and added an executive order offering 20 percent rebates to those who reduce their consumption 20 percent over last year. These measures will reduce commercial lighting, encourage residential and industrial efficiency and make state and commercial buildings more energy efficient. The apologists disregard the fact that the governor has also reversed a trend that had seen power plant construction in California drop to insignificance in the '80s and '90s. Since April 1999, the California Energy Commission has licensed nine major new power plants. Six are under construction. This is part of a streamlined, fast-track plant licensing process that aims to put an additional 20,000 megawatts on line by the summer of 2004, a nearly 50 percent increase in generation. And the apologists refuse to recognize that California is building the right sort of power plants - efficient, clean and environmentally friendly, with a strong bent toward renewable power sources. In fact, while some would go Texas' route and build plants that meet only the bare minimum of environmental requirements, California is continuing the effort that has made it the nation's leader in the use of clean, renewable power sources. Instead, the apologists engage in name calling, such as the charge leveled by former Wilson communications director Dan Schnur on this page that Loretta Lynch, the Davis appointee as PUC chair, is inexperienced and has failed to deal effectively with the energy emergency. Forget for a moment that of the 22 people who have served as PUC commissioners since 1980, only six had any energy expertise before their appointments. Forget for a moment that one of the principal architects of deregulation was Daniel Fessler, the UC Davis contract law professor with no special expertise in energy issues whom Gov. Wilson appointed as PUC president. Just consider this: It was the PUC under Lynch that freed the utilities to buy electricity on cheaper, forward contracts outside the Power Exchange. This corrected a huge Wilson-era PUC blunder that put utilities in an energy price straitjacket. The Lynch-led PUC also prohibited utilities from selling additional power plants, and it began the successful effort to make California's ISO (the Independent System Operator that runs the state's power grid) independent of the industry-connected officials who controlled it. Meanwhile, what sort of grand solutions have the apologists presented? Drill for oil in the Arctic National Wildlife Refuge in Alaska, build nuclear plants on closed military bases and encourage the construction of dirty Texas-style power plants in California. Drilling in the Arctic will not produce a watt of new power for California. Californians have long said they do not want the risks presented by new nuclear plants. And lax Texas pollution rules prompted the Dallas Morning News to charge in a Dec. 17 editorial that Texans are choking on the exhaust from power plants. Most disingenuously, the apologists would "let the market work," claiming that unfettered market forces will soon bring fair and balanced prices. But the market doesn't work now, as the Federal Energy Regulatory Commission has repeatedly admitted, most recently with its finding that generators overcharged the state in January. Unfortunately, for the most part the same commission had refused to clamp down on sky-high prices charged by generating companies. Look at New York's deregulated market, where there are no caps on retail electric prices. Market forces have done consumers there

little good. New Yorkers pay the highest prices for electricity in the country.

US FERC To Compile Data On Calif DWR Power Contracts

04/13/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

WASHINGTON -(Dow Jones)- The U.S. Federal Energy Regulatory Commission issued an order late Thursday requiring 49 electricity providers to file information regarding contracts they have entered into with the California Department of Water Resources. The information, due by the close of business Monday, is being compiled on behalf of the House Government Reform Committee, which held hearings in California this week as part of its oversight investigation into the state's electricity-supply crisis. Rep. Dan Burton, R-Ind., the committee's chairman, requested the information from FERC to determine whether the commission's order Dec. 15 designed to move the state away from reliance on volatile spot markets for power supplies and into lower-cost long-term contracts has been effective. The state water department has been purchasing power for months on behalf of the state's two financially troubled utilities, spending more than \$4 billion at a rate of \$50 million daily. Edison International unit Southern California Edison (EIX) and PG&E Corp. unit Pacific Gas & Electric Co. have amassed more than \$13 billion in liabilities, because state-regulated retail rates don't allow them to pass through high-cost wholesale power purchases. PG&E filed for Chapter 11 bankruptcy protection on behalf of its utility unit a week ago. Monday, Edison entered into an agreement to sell the state its transmission lines in a bid to restore financial solvency. FERC's order Thursday requests information from 49 power suppliers on both short- and long-term contracts they may have entered into with the department since Dec. 15. FERC said it will treat the information as confidential, unless the supplier states otherwise. One Democratic official in Washington suggested the House panel is engaged in a partisan "bashing" effort targeting California Gov. Gray Davis, who has widely been touted as a presidential prospect for the 2004 election. Davis spokesman Steven Maviglio supported the official's assessment. "What a shock! Dan Burton is at it again," Maviglio said facetiously of Burton, who derived a reputation as a partisan foe of former U.S. President Bill Clinton with his many investigations into Clinton and his administration. "The bottom line is they're aiding and abetting the generators," Maviglio said of Burton's committee. The governor's spokesman also questioned whether the information FERC amasses under seal of confidentiality will remain private once turned over to the committee. The committee's offices were closed Friday, so no response was immediately available. -By Bryan Lee, Dow Jones Newswires, 202-862-6647, bryan.lee@dowjones.com

Congressional Committee Members Question California Utility Officials Michelle Guido

04/12/2001 KRTBN Knight-Ridder Tribune Business News: San Jose Mercury News - California Copyright (C) 2001 KRTBN Knight Ridder Tribune Business News; Source: World Reporter (TM)

Officials from California's two major utilities and two of its smaller power generators were in the hot seat in San Jose on Wednesday, fielding questions from federal lawmakers about their role in the state's power crisis. On Day 2 of a three-day swing through California, three Republican members of a U.S. House subcommittee on energy policy and three local Democratic representatives heard testimony from utility officials and from the chairman of the Federal Energy Regulatory Commission. The energy crisis is expected to bring rolling blackouts to California through the summer months and energy officials warned on Wednesday that the high prices consumers face here undoubtedly will spill over into neighboring states if FERC doesn't cap prices now. But FERC Chairman Curt L. Hebert Jr. reiterated what he said Tuesday at a western energy summit in Boise: He does not support price caps on electricity -- in California or any of the western states. "The

energy is going to go where the caps are not, and nine out of 11 western state governors have said they don't want price caps in their states," Hebert said. "A cap sends us in the wrong direction." Instead, he said, by May 1, FERC will unveil a plan to monitor energy prices and in some cases, might mitigate the price of energy sold on California's more expensive spot markets. He wouldn't elaborate, but made it clear those adjustments would not include price caps. Government Reform Committee Chairman Dan Burton of Indiana opened the hearing by saying the committee's mission was not to "point fingers." "We wanted to see if there were ways the federal government and the state government could work together to get past this crisis." At one point early in the hearing, demonstrators attempted to address the lawmakers. They were ushered out of the room by security personnel. Burton was joined by Republican representatives Doug Ose of Woodland and Steve Horn of Lakewood. Also participating in the hearings were Democratic representatives Zoe Lofgren and Michael Honda of San Jose and Barbara Lee of Oakland. The Democrats pushed strongly for FERC to consider price caps. "We need to gain control of this out-of-control market and gain control of the price gouging," Lofgren said. Honda concurred: "We believe that FERC has a responsibility and they've even said that rates are unjust and unreasonable. We need short-term caps." It was clear that Burton doesn't believe that price caps are the answer. In fact, on several occasions, he suggested that capping energy prices might result in even more blackouts as summer approaches. Lee suggested that some people believe the only way out of the crisis is some form of re-regulation. But Dede Hapner, vice president of regulatory relations for PG&E, said she wasn't sure that was the answer. "We still think a correctly structured market could work. It's certainly working in other states," Hapner said. "In retrospect, the way the deregulation market was structured was designed to fail." Today the hearings move to San Diego, where members will hear from representatives of generators that have been accused of overcharging California, including Reliant Energy, Sempra Energy and Williams Energy Services.

HEADLINE: ?Judge: Calif Power Cos. Owe Refunds

BYLINE: JENNIFER COLEMAN

DATELINE: SACRAMENTO

BODY:

???An administrative judge mediating talks between California and energy companies says the generators likely owe the state "hundreds of millions of dollars" in refunds, far less than the \$8.9 billion California wants.

??Judge Curtis Wagner Jr., in a recommendation released Thursday, said that while California is due "vast sums" for overcharges, the state's major utilities, which have amassed crippling debts due to high wholesale prices, owe generators even more.

??Gov. Gray Davis and California officials who attended the 15-day talks pressed for \$8.9 billion in refunds, but Wagner said that amount can't be substantiated. ??"That very large refunds are due is clear," Wagner wrote, likely amounting to "hundreds of million of dollars, probably more than a billion dollars in an aggregate sum."

??The judge recommended a method for calculating refunds back to October; California's estimate was based on figures from May 1, 2000.

??The differences between what the state wants and what the sellers believe they owe should be decided in a trial-type, evidentiary hearing, Wagner said.

??Jan Smutny-Jones, executive director of the Independent Energy Producers, said the state's refund estimate was based on a "faulty analysis" and the judge was correct in lowering the amount.

??Davis said he hoped the Federal Energy Regulatory Commission would reject the lowered recommendation.

HEADLINE: THE NATION; ; Smog Feared in Power Buildup; Electricity: Bush administration's plan for up to 1,900 plants over 20 years poses a threat to air quality, especially in the Midwest and South, experts say.

BYLINE: GARY POLAKOVIC, TIMES ENVIRONMENTAL WRITER

BODY:

??The Bush administration's plans for a massive buildup of power plants nationwide could result in dirtier air in places where smog is already bad and getting worse--particularly in the Midwest and the South, air quality experts fear.

??Smog levels have been cut nationwide in the last 20 years, but the 1990s saw deteriorating air quality in places such as Columbus, Ohio, where the number of smoggy days jumped 78% during the decade, and Memphis, Tenn., where they doubled, according to figures from the federal Environmental Protection Agency.

??A large part of the deterioration is attributable to power plant emissions--a major contributor to ozone, which is colorless, and haze. Despite cleanup efforts, power plant emissions are up across much of the fast-growing South and in the Plains states.

??Meanwhile, generating plants running at peak capacity to produce electricity for California are sullyng Western skies too. Smokestack emissions are up from Washington state to Utah and Arizona to Montana, the EPA says.

??"The interior West has fantastic visibility, and power plants are one of the primary causes of visibility degradation," said Bruce Driver, executive director of the Land and Water Fund of the Rockies. "The emissions stand out like pouring red wine on white carpet. We have concerns about building new power plants in the West."

??The administration's energy plan calls for building up to 1,900 plants over the next two decades, increasing the nation's electrical generating capacity by at least half. That is equivalent to two new 300-megawatt plants a week--the fastest rate of expansion over such a long period since the end of World War II, according to the Department o

PG&E announces deals with smaller suppliers

(Published July 20, 2001)=20 SAN FRANCISCO -- Two weeks after reaching a long-term agreement with a majo= r=20 electricity supplier, Pacific Gas and Electric Co. on Thursday announced=20 similar pacts with 130 smaller alternative energy companies.=20 The deals, which must be submitted to a federal bankruptcy judge for=20 approval, are expected to provide about 1,600 megawatts at 5.37 cents per= =20 kilowatt hour -- a price set by the Public Utilities Commission for long-te= rm=20 agreements sealed by July 15. The total is about two-thirds of the=20 electricity that the utility usually receives under contracts with=20 alternative energy suppliers.=20 The utility has promised to repay the 131 companies the \$740 million it owe= s=20 them when its plan goes into effect.=20 It owes an additional \$260 million to other small producers who have not=20 settled. Some of those companies are trying to get out of PG&E contracts.= =20 --Claire Cooper=20 County sues over bond sale Monterey County officials sued the county's investment adviser for selling= =20 them \$4.9 million in Pacific Gas and Electric Co. bonds as the utility was= =20 collapsing financially.=20 PG&E defaulted on the bonds, which came due March 26, although it has paid= =20 the county \$5,334 in interest, the county said in its lawsuit.=20 The lawsuit, filed in San Francisco Superior Court, says Banc of America=20 Securities sold the bonds to Monterey County on Dec. 11 even though the=20 county "was seeking a conservative, low risk investment."=20 At the time, the securities firm was aware that PG&E "was financially=20 unstable and its securities subject to potential default," the lawsuit says= .=20 BofA Securities said the PG&E bonds were "similar in risk to investment in = a=20 certificate of

deposit and less risky than an investment in treasury bonds, " the suit says. BofA Securities couldn't be reached for comment. --Dale Kasler

Dan Walters: Six months later, utility debts are still the toughest nut to crack

(Published July 20, 2001) When Gov. Gray Davis and other state politicians finally became engaged in the energy crisis last January -- a half-year late -- the state's major investor-owned utilities had already amassed more than \$13 billion in debt from runaway power costs and were out of credit. Davis and the Legislature launched a massive state power purchase program, a speed-up of new power plants, conservation subsidies and other actions, not all of which have been successful. But everyone involved knew that the utilities' debts, which had driven them to the brink of bankruptcy, would be the most complex and politically difficult aspect of the crisis. Six months later, that's still true. An administration team negotiated for weeks with Pacific Gas and Electric and Southern California Edison on schemes to retire their debts and bring them back to a creditworthy status. The talks with PG&E went nowhere, and three months ago, the huge San Francisco-based utility filed for bankruptcy protection. Davis, clearly concerned that Edison would follow, hammered out a deal with the smaller utility within hours. It was, by any standard, a sweet deal for Edison and its parent company, Edison International -- too sweet for just about everyone in the Legislature -- and immediately, efforts began to change it. Edison lobbyists worked the Legislature, and the utility cranked up a massive advertising and public relations campaign, to no apparent avail. And Davis, oddly, pulled back from the fray. The Democratic governor concentrated on another aspect of the crisis with greater political sex appeal: demanding that power generators, many of whom are PG&E and Edison creditors, be forced to repay many billions of dollars because, as he put it, they had gouged the state. Ultimately, Davis' campaign failed, although his strident advocacy did, apparently, arrest his decline in public opinion polls. Meanwhile, the Edison deal languished. With the Legislature now poised to leave Sacramento on a monthlong summer recess and a self-imposed deadline for enacting the Edison plan approaching, the Capitol is newly aflutter with efforts. "Complex" doesn't even begin to describe the situation. There are at least three alternative plans kicking around, none of which can be passed as written. Davis may be willing to accept almost anything that would save him from the embarrassment of another utility going to bankruptcy court on his watch, but currently backs a scheme ginned up by Assembly Democratic leader S. Edison, however, has split with Davis and now favors an alternative offered by Republicans and some moderate Democrats -- one that consumer advocates denounced as a corporate bailout. Meanwhile, liberal senators are pushing another version that Edison likes even less, but its critics among consumer activists like more. With both lawmakers and outside interest groups so widely scattered over what, if anything, should be done to rescue Edison, a consensus developed late Thursday to keep the vehicles alive with preliminary floor votes but to continue private negotiations through the monthlong legislative recess. The many-sided stalemate stems from both the rival plans' provisions -- farmers, for example, fear environmentalists' gaining authority through the state over Edison-owned watershed in the Sierra -- and the convoluted dynamics of the Capitol. Legislative leadership is very weak in the era of term limit

Santa Clara County agreed Thursday to join a lawsuit against power suppliers, alleging they conspired to raise prices and boost profits while subjecting consumers to higher bills and rolling blackouts. The county is the first to join the suit originally filed by San Francisco in January. The suit seeks refunds for consumers of more than \$1 billion in alleged excess electricity profits. "The San Francisco suit contains significant allegations of manipulation and collusion by the wholesalers, resulting in the disastrous consequences we're all familiar with," said lead deputy county counsel Alan Tieger. "We looked at the evidence on which those allegations were grounded and found they were indeed supported by the evidence, expert and otherwise." The suit names a dozen electricity generating and marketing companies, including Duke Energy and Enron Energy Marketing. Similar claims have been filed by three water districts in the San Diego area, and two class-action lawsuits by private attorneys on behalf of consumers are pending against power suppliers. The companies have vigorously denied the charges. "I don't think there will be any evidence of illegal activity by anyone," said Jan Smutny-Jones, executive director of the Independent Energy Producers Association, when asked about various government probes.

BUSINESS Huge increase in Calpine earnings / San Jose power supplier rakes in \$94.8 million Christian Berthelsen Chronicle Staff Writer

04/27/2001 The San Francisco Chronicle FINAL B.1 (Copyright 2001) Power producer Calpine Corp. announced a 424 percent increase in earnings yesterday, capping a series of huge first-quarter earnings announcements by companies that are profiting mightily during California's energy crisis. Calpine said it earned \$94.8 million in the first three months of the year, compared with \$18.1 million in the same period last year. That profit level, on \$1.2 billion in revenue, puts Calpine in league with industries such as computer sales and securities brokering in terms of median return on revenue, and far above the median annual return in the energy industry, which averages about 1 percent. Calpine's 30-cents-per-share earnings blew past the average analyst estimate of 24 cents per share compiled by Thomson Financial/ First Call. The San Jose power generator said last month that it expected to report earnings of 20 cents to 25 cents. Williams, a Tulsa, Okla., energy concern that markets electricity in California produced by AES, the Arlington, Va., generation company, reported first-quarter profit of \$378 million, more than double its results one year ago. (AES reported gains yesterday of 19 percent). Other energy companies with business in California -- including Reliant and Enron -- have reported huge gains in recent days. Calpine executives yesterday sought to distinguish themselves from other merchant energy companies in California, saying most of the electricity it sells here is under relatively low-cost contracts with the utilities, the state and other entities, and very little of it is sold in the spot market, where prices are often three times as high. "It is not our business strategy to play in the volatility of the market but to have long-term contracts," said Bill Highlander, the company's director of public relations. Calpine was not among the companies named in a report last month by the California Independent System Operator identifying power concerns that gouged California consumers. Calpine's stock was hit hard

earlier this month when it revealed that it had not set aside reserves to offset more than \$270 million in potentially bad debt owed by Pacific Gas & Electric Co., which filed for bankruptcy protection. But Calpine's stock was trading near the top of its 52-week high yesterday, ending up \$2.01, or 3.75 percent, to close at \$55.71. Ann Curtis, Calpine's chief financial officer, said in an interview yesterday that the company still expects to be paid by PG&E, since the power it provides under contract to the utilities and the state is much less expensive than if they voided the contract and sold the power on the spot market. "It makes sense and would be in the best interest of the utility and state to honor the contract," Curtis said. As it had last quarter, Calpine's announcement made no mention of runaway wholesale energy costs in California, which have severely damaged the state's leading utilities and are beginning to hurt the state government's finances. Rather, Calpine Chief Executive Officer Peter Cartwright, in a prepared statement, attributed the earnings growth to "the continued execution of Calpine's strategy to acquire and build low-cost generation facilities in key power markets throughout the U.S." More than half of the company's plants are in California. Overall, the supplier operates 44 plants nationwide that generate nearly 6,000 megawatts. Calpine is one of the darlings of the energy industry, viewed as a model for a "new" energy company because of its aggressive expansion plans and reliance on relatively clean, efficient generation. The company is relatively small in the industry, with a market capitalization of about \$16 billion, compared with about \$34 billion for an industry giant like Duke Energy of Charlotte, N.C. Calpine is in the midst of a program that is expected by 2005 to boost its electricity generation portfolio to 70,000 megawatts -- an amount equivalent to more than twice the energy California uses at this time of year -- from its current capacity of about 6,000. Lehman Bros. calls Calpine one of its "top picks" and maintains a strong buy rating on the company's stock.

CREEK SEEKS HEARING ON POWER PLANT PLAN DAVID FLESLER and JEREMY MILARSKY Staff Writers

04/27/2001 South Florida Sun-Sentinel Broward Metro 3B (Copyright 2001 by the Sun-Sentinel) Coconut Creek filed a legal petition with the state Thursday that could stall Enron Corp.'s plans for a power plant in Pompano Beach. Attorneys for the city requested an administrative hearing on the state's plans to issue an air permit for the plant. This could delay the company's plans by six months, if it doesn't thwart them altogether. Coconut Creek, which is downwind from the site, is a center of opposition to Enron. When Pompano Beach held public hearings on th

Enron Willing To Continue India Power Project - Report Dow Jones International News, 05/31/01

Business/Financial Desk; Section W World Business Briefing Asia: India: Power Dispute By Saritha Rai (NYT)

05/31/2001 The New York Times Page 1, Column 1 c. 2001 New York Times Company

The Dabhol Power Company, the Enron Corporation's unit in India, stopped generating electricity at its \$3 billion power plant after its sole customer, the utility of the Indian state of Maharashtra, stopped buying power on Tuesday. The halt in power generation was the latest move in a months-long dispute that has cast doubt on the future of Dabhol's \$2.9 billion power project in India, the largest foreign investment ever in India. Jimmy Mogul, a spokesman for Enron, which owns 65 percent of Dabhol, said the company remained open to discussions in the dispute, which involves overdue payments for power. Dabhol had issued a preliminary termination notice on May 19 saying it was pulling out of the Indian project. Final termination requires a contractual six-month cooling-off period.

Column One Spin Control: Spain Hits Turning Point At Windmill Parks --- Some Are Well Planned, Others Scar the Landscape --- EU Pride and Promises at Stake By Keith Johnson Staff Reporter

05/31/2001 The Wall Street Journal Europe 1 (Copyright (c) 2001, Dow Jones & Company, Inc.)

BARBATE, Spain -- The economy of this fishing community is as battered as its town hall, where dim lights flicker in the hallways and chips of paint flake off the walls. Up in his second-floor office, the mayor, Juan Manuel de Jesus, has an in-tray overflowing with troubles: a third of the town out of work; a desperately needed fishing treaty with Morocco; rising crime and drug abuse; and a big municipal budget deficit. But this morning, his thoughts revolve around a different irritant: windmills. "Look at this," he says, unfolding on his desk a map of the countryside surrounding Barbate. Large yellow and green splotches -- a military training zone and a swarm of natural parks -- hem in the seaside town, leaving just a pair of white slivers. "Those are the only areas open for development," he says. His finger stabs one of the white areas near the Atlantic coast. "And that's where they're putting the windmills -- the one place we could have built a hotel, a resort, something that would bring us some jobs." The mayor sees the windmills as a blight on the land, driving away tourists and crimping more lucrative projects. Local environmentalists fret that the installation, with its rows of steel towers and sharp metal blades, will play havoc with migrating birds and mar the coastline as they did in nearby Tarifa, a windsurfing mecca on the Strait of Gibraltar. Tilting at windmills is nothing new in the land of Don Quixote. But wind power doesn't have to be like this. At the opposite end of the country, more than 1,000 kilometers to the north in the green hills of Navarra, 28 steel windmills perch on a ridge over a landscape that resembles a nature reserve. Cows nap in the shade of the towers, and the narrow gravel access roads follow original grazing trails. Electricity is transformed in a nearby substation built to resemble the neighboring stone houses. The approach -- the result of close cooperation between business and government -- has won accolades from environmentalists and business leaders alike. Spain, the world's No. 3 producer of wind power, has become a battleground for two competing models of developing the business: the hodgepodge of unsightly wind parks seen in the south and the carefully planned and unobtrusive installations found up north. The conflict

is intensely local, with the country building enough new windmills to more than triple its wind-power capacity by 2005. But the model that prevails will have consequences far beyond the Iberian Peninsula. Anxious to clean up its environment and limit its dependence on imports of natural gas, the European Union has committed itself to generating 22% of its electricity from renewable energy sources by 2010. Yet less than 5% of the EU's electricity output now comes from windmills, thanks largely to poor execution and a brewing backlash. If Spain -- with its open spaces and relatively low population density -- can't sell the public on windmills, the EU will likely find it difficult to convince Europeans to accept more ambitious forms of alternative energy, such as biomass plants, which turn agricultural, animal and human waste into energy. The failure could also call into question the EU's commitment to the 1997 Kyoto global-warming treaty, which U.S. President George W. Bush has been roundly criticized in Europe for rejecting. Few expected this turn in events back in 1996, when the EU first set a more modest 2010 target. At the time, wind power looked like the fresh breeze of the future. Soon, the union's most green-minded states, led by Germany and Denmark, were busily building wind parks to the applause of environmental groups, which saw wind power as a clean alternative to nuclear power and coal-burning power plants. But early enthusiasm led to shortsighted projects, leaving the European landscape littered with inefficient wind parks. Germany, for example, quickly became the world's largest producer of wind power, with 6,113 megawatts of capacity installed at the end of last year. But the brea

Edison Won't Accept Changes To Calif Rescue Deal -Exec ???? Updated: Thursday, April 19, 2001 05:40 PM?ET ?? ? By Jason Leopold

Of DOW JONES NEWSWIRES

NEW YORK (Dow Jones)--Edison International (EIX, news, msgs) unit Southern California Edison isn't willing to modify the rescue agreement it reached last week with the state in order to convince lawmakers to support the plan, a senior Edison International executive told Dow Jones Newswires Thursday.

On Wednesday, Gov. Gray Davis, in a meeting with Senate Democrats, said he was willing to consider amendments to the proposal, which has been criticized by Republicans and Democrats as a utility bailout at consumers' expense. The Edison executive, however, warned against tinkering.

"This has been negotiated to the hilt," the executive said. "The MOU, as negotiated is a balanced deal. The negotiated agreement we entered into with the governor is no different than the agreement in principle" reached in late February.

The terms of the deal, signed last week by Davis and Edison International Chief Executive John Bryson, call for the state to buy Southern California Edison's 12,000 miles of transmission lines for \$2.76 billion and allow the utility to issue bonds backed by ratepayers so it can recoup \$5.5 billion in unrecovered power costs.

The Edison executive said the memorandum of understanding is non-negotiable and should be accepted by legislators "as-is."

Senate President Pro Tem John Burton, however, told reporters Wednesday that many aspects of the Edison deal would have to be amended, particularly the securitization package. State Sen. Debra Bowen, D-Redondo Beach, chair of the Senate energy committee, agreed.

"It probably would take less time to list the things that don't have to be changed in the MOU," Bowen said Thursday. "If it's a take it or leave it proposal, it's a pretty simple choice for me."

If lawmakers don't pass legislation to implement the buyout by Aug. 15, the deadline set in the agreement, the utility could find itself dragged into involuntary bankruptcy proceedings by creditors, the executive said.

"I think we'll have big (problems)" if legislation isn't passed by Aug. 15, the executive said. "We got all these creditors out there, and no one knows how long they'll forbear."

#### Bankruptcy Would Worsen Crisis -Executive

Some lawmakers think ratepayers and taxpayers would be better off with Southern California Edison in bankruptcy.

"I still don't see how ratepayers could be any worse off with (SoCal Ed) in bankruptcy than they would with the governor's plan," Bowen said.

Sen. Joe Dunn, D-Santa Ana, said a filing would take the burden of the company's cash-flow crisis off of legislators.

"A Bankruptcy Court judge would make the decisions without political interference," said Dunn, who still wasn't convinced the state will benefit from the deal.

Moreover, lawmakers have said Davis' transmission-line buyout doesn't make as much sense now that PG&E Corp. (PCG, news, msgs) unit Pacific Gas & Electric has sought bankruptcy-law protection as an alternative to continuing negotiations with the state.

The Edison executive, however, warned that another utility bankruptcy would be a "black eye" for California.

"I think the practical questions are... what are the alternatives here?" the executive said. "Is the state going to allow another utility to go bankrupt and choose the path of years and years of litigation?"

If the utility winds up in bankruptcy, the executive said, "the crisis gets a lot worse, because there is not only a shortage of supply, but the power grid begins to decline."

At the same time, if the state were to become the owner of the utility's transmission lines and the power lines owned by Sempra Energy (SRE, news, msgs) unit San Diego Gas & Electric, a purchase it is now negotiating, it is almost guaranteed that a Bankruptcy Court judge would approve the sale of PG&E's power lines to the state as well, the executive said.

"If the state were to buy Edison's and SDG&E's lines, it would be the inevitable purchaser of PG&E's transmission lines," the executive said. "One of the first things a bankruptcy judge will look at is the sale of assets. And if the state purchased

Edison and SDG&E's lines, it would be in the strongest position to buy PG&E's system as well."

In addition, the Edison executive said, even without PG&E's transmission lines, the state would still have substantial control of the grid in Southern California, which has much better access to new generation sites being developed.

"Sixty-eight percent of all new generation capacity approved or in the process of being approved can link directly to Southern California Edison's transmission system," the executive said.

Lawmakers, however, remain skeptical.

"It's a deal that every Edison shareholder and creditor loves, because it's financed 100% by ratepayers," Bowen said. "But it's not in the best interest of the state or in the best interest of Edison's ratepayers."

SoCal Ed Can't Pay QFs Money Owed Due To Cash Crunch ???? Updated: Thursday, April 19, 2001 05:35 PM?ET ????

By Jason Leopold

Of DOW JONES NEWSWIRES

NEW YORK (Dow Jones)--Edison International (EIX, news, msgs) unit Southern California Edison is unlikely to pay more than \$900 million in past due power bills any time soon to the state's small independent power producers the utility buys electricity from because it "simply (doesn't) have the dollars to do that," a senior executive with Edison International told Dow Jones Newswires Thursday.

"We wish to pay them going back," the executive said. "But we simply don't have the dollars to do that."

The executive said utility officials are meeting with some of the owners of the so-called qualifying facilities on the issue of back payments and new contract prices.

Many of the state's QFs, gas-fired and renewable energy producers, have been off-line for several months due to SoCal Ed failing to pay its past due power bills to the companies.

The power producers said they owe millions to natural-gas suppliers who have refused to sell them the commodity until they pay their bills.

Last week, SoCal Ed paid the QFs \$206 million for power produced on a forward basis. PG&E Corp. (PCG, news, msgs), which recently filed for Chapter 11 bankruptcy protection because of \$8.9 billion in unrecovered power costs, paid the QFs \$34.6 million for forward power sales.

However, the QFs said the issue of past-due payments needs to be addressed before they return their plants to service. About 2,000 megawatts in QF generation remained off-line Thursday because of the back-payment issue. Last month, the loss of 3,000 MW in QF generation contributed to two days of statewide rolling blackouts.

The Edison executive said the company can only pay the QFs for power going forward, as ordered by state regulators last month, and the utility will pay all of its creditors once it's restored to financial stability.

California Regulators May Provide Some Relief

But the state's 688 QFs, which provides the state with one-third, or about 9,500 MW, of its total supply, may get some relief on the issue of back payments from the California Public Utilities Commission.

The commission voted unanimously Thursday to start an investigation into the reasons some QFs have remained off-line and whether they have violated their contractual obligations with the utilities, despite the fact that they have been paid on a forward basis.

Commission President Loretta Lynch said, "I do think...we need to take a hard look at whether utilities pay certain QFs that are on the brink

BusinessWeek e.biz: Cover Story: The e.biz 25 25 Leaders for a Dangerous Time

05/14/2001 Business Week EB24 (Copyright 2001 McGraw-Hill, Inc.)

The Internet forced a revolution in the way companies are managed. For the CEOs of upstarts and Old Economy players alike, the focus has been on making decisions in a heartbeat, innovating fast, and looking for ways to tap the Net to reach new customers and streamline operations. Now we're in the midst of what experts say could be the biggest tech slowdown in 15 years. With the pressure on to cut costs and meet quarterly earnings expectations, what's a CEO to do? Ask our e.biz 25. These are the most influential people in e-business--everybody from empire builders like AOL Time Warner Chairman Steve Case to Monica Luechtefeld, executive vice-president of e-commerce at retailer Office Depot. Those two have wisely built bridges between the worlds of bricks and clicks. Their advice is bold: Don't just hunker down and try to wait it out. Invest, build, develop new products, and prepare for the upswing. Technology and the Internet may not be growing lickety-split, but they aren't going away. Says Jeffrey K. Skilling, CEO of Enron Corp., one of our 25: "A lot of people will pull back. They will be missing tremendous opportunities. Those with capital and talent should push forward and widen the lead." Doing this in the face of a trigger-happy Wall Street will require dynamic leadership and cast-iron stomachs. We've got that on our e.biz 25. These are the pioneers, the people with the new ideas, the out-of-box thinkers, and the survivors--especially the survivors--who will shape e-business for years to come. Some of our 25 have been on the list before. Michael Dell, CEO of Dell Computer Corp., for one. He's a pioneer who has used the Net to reach customers and revamp his supply chain. Now, in the midst of the downturn, Dell is turning up the heat on competitors by slashing prices ruthlessly. Thanks to his foundation of Net technologies, Dell can do this and still make a profit. The result could be a massive restructuring of the PC industry, with some of Dell's competitors losing market share at a gallop. Others land on the list because of their potential for shaking up the status quo. Example: Rick Belluzzo, Microsoft Corp.'s president. Microsoft has been ho-hum on the Net--until now. Belluzzo has turned Microsoft's MSN into the No. 2 portal on the Web, and now the company is committed to spending \$2 billion this year on research & development for its .Net strategy for supercharging the Web. It may well make the Net more useful--and easier to use. And Microsoft could leapfrog from laggard to leader. Then there are the folks whose future is very much in doubt--and that makes them even more important to watch. Squarely on the e.biz hot seat sits Jeff Bezos of e-tailer Amazon.com Inc. With the online superstore's revenue growth slowing and its \$15 stock off its peak by 85%, the man who scared the bejesus out of the nation's traditional retailers isn't so terrifying now. But he's still the trailblazer of e-tailing. Whether he fails miserably or triumphs in the end, how he fares will tell us much about the next episode in the Internet saga. "This is a good time to learn, to explore, to get ready," says Rosabeth M. Kanter, professor at Harvard Business School. Indeed, economic slumps have been launchpads for companies who know how to take advantage of them. The outfits that are likely to pick up momentum in this downturn are the companies that create or adopt new technology, experiment with new business models, and expand aggressively. That's certainly been true in the past. During the 1990-91 recession, EMC Corp. focused on high-end storage technologies and innovated its way through hard times. Chrysler retooled its design process and began farming out component manufacturing to partners--and was the only one of the Big Three to post a profit in 1992. Arrow Electronics bought smaller competitors and expanded in Europe, emerging as the No. 1 electronics distributor in the world.

“Slowdowns can be a great opportunity for companies that are prepared. It's time for the strong to get stronger, and for the relatively weak to get stronger, too,” says Orit Gadiesh, Chairman of consulting firm Bain & Co. The Internet's early winners focused on boosting sales. But during a downturn, that's not nearly enough. The Net can be used to supercharge every aspect of a company's operations, from market research and customer service to engineering collaboration and linking up suppliers. Consider e.biz 25 member Pradeep Sindhu, co-founder of Juniper Networks Inc. He used this wall-to-wall approach to make his four-year-old upstart the leader in high-end network routers. It was built from the ground up to capitalize on the Net. The company takes orders over the Web and automatically passes them to contract manufacturers who make and ship the products. This frees Juniper to concentrate on designing products that trounce the competition. The payoff: Juniper's operating margin hovers around 30%, nearly double the average in the hardware business. The most successful e-businesses don't just chase the latest hot idea. They figure out which technologies are really right for them. Gary M. Reiner, chief information officer at General Electric Co., one of our e.biz 25, turned up his nose when many industrial companies joined consortiums that set up public e-marketplaces. GE has instant economies of scale with its 11 different businesses, so it can reap huge savings by combining all their buying into the company's own private e-marketplace. GE expects to save \$600 million on procurement over the Web in 2001. Many established companies rapidly spun off independent Internet divisions, and for some--NBC, for example--that turned out to be a mistake. The latest thinking is that companies like retailer Office Depot got it right. It set up an independent organization, run by Luechtefeld, but its bricks and clicks are cemented together. For instance, customers who need something immediately can check online to see if the item is in stock at their local Office Depot. The company logged \$850 million in online sales last year, making it the No. 2 online retailer after Amazon.com In a downturn, charismatic leadership is more important than ever. With revenues sinking and stock options underwater, workers need reasons to believe. “You have to persuade people to stay with you for the ride,” says Haim Mendelson, a professor at the Stanford Graduate School of Business. While most companies are laying off, some, like Sun Microsystems Inc., pledge to do so only as a last resort. CEO Scott McNealy, one of our e.biz 25, believes layoffs break a social contract with employees. By holding back, “we're protecting the long-term shareholder value,” he says. For CEOs who have been the company's visionaries during the Net's go-go years, now is the time to buckle down and pay attention to operations. It's advice that Amazon's Bezos takes to heart. The company's goal is to post an operating profit--excluding special charges--in the fourth quarter. He's concentrating on operating efficiencies. And he's using Net technology to get there. Right now, Amazon is

Senate asked to hold Reliant in contempt over document release By DON THOMPSON Associated Press Writer

07/18/2001 Associated Press Newswires Copyright 2001. The Associated Press. All Rights Reserved.

SACRAMENTO (AP) - A Senate committee investigating possible price gouging in California's energy market voted unanimously Wednesday to ask the full Senate to find Houston-based Reliant Energy in contempt for failing to comply with a subpoena for documents. The decision came despite Reliant's last-ditch offer to turn over 10,000 documents under a contingent confidentiality agreement that the Senate Select Committee to Investigate Market Manipulation rejected. "I'm

not just trying to buy time," said Reliant attorney Charles J. Stevens. "We believe we have acted cooperatively. We believe we have a good-faith legal dispute." "It's clear you're trying to work with us. It's not contempt with contempt," agreed committee Chair Joseph Dunn, D-Santa Ana. By contrast, Sen. Steve Peace, D-Chula Vista, blasted Reliant's "shoddy behavior" before backing what he termed "a legally unprecedented step." If the full Senate imposes sanctions against Reliant, it will be the first time since 1929, when the Senate voted to jail reluctant witnesses during a committee investigation of price fixing and price gouging allegations involving cement sales to the state. There are no set penalties, said committee special counsel Laurence Drivon. By law, "the Senate can take such action as it deems necessary and appropriate." The contempt citation will be presented to the Senate Thursday, but will immediately be sent to the Rules Committee for another hearing before the full Senate acts, Dunn said. He said the committee had no choice but to seek the sanctions and likely force a court battle after it was unable to reach agreement with Reliant over the confidentiality of its documents. The committee voted 6-0 in favor of the contempt finding. "If we reach agreement on these issues, the process would be terminated immediately," Dunn said. In that light, the committee stepped back from its contempt vote last week against Enron Corp. after the company and committee moved closer to agreement over its release of thousands of documents stored in Texas. Enron sued the committee last week to stop the subpoena of its financial and electricity trading records. Among its objections are that only the Federal Energy Regulatory Commission has the authority to investigate wholesale markets. Reliant, like Enron, had argued the company's financial papers are outside the committee's jurisdiction because most of its operations and paperwork are outside California. Atlanta-based Mirant Inc. also at least temporarily avoided a contempt citation by agreeing to turn over subpoenaed documents. The committee will review both companies' compliance in 30 days.

Calif. Senate Panel Votes To Cite Reliant With Contempt

07/18/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

LOS ANGELES -(Dow Jones)- A California Senate committee Wednesday voted to cite Reliant Energy (REI) with contempt because the company has refused to provide documents for an investigation into wholesale electricity prices in the state, said committee Chairman Joe Dunn, D-Santa Ana. The committee also voted to forward a contempt charge for Enron Corp (ENE) to the full Senate, where it will be voted on. If the charge is approved, the Senate will vote on punishment, which could include hefty fines or incarceration of executives. Talks between Enron and committee attorneys Monday seemed to indicate the company would agree to committee demands, but since then it has become clear the company doesn't plan to comply, Dunn said. "If you had asked two days ago I'd have said we are cautiously optimistic about Enron. Now I'm pessimistic about it. We felt they were indicating to us a willingness to do what the other generators were willing to do, but the bottom line is that they are not, despite their cooperative-sounding words. We are no closer to them coming into compliance than we were a week ago," Dunn said.

The Senate Select Committee to Investigate Market Manipulation is requesting that Reliant and Enron provide 16 kinds of documents related to market behavior, rent a depository for the documents, and sign the committee's version of a confidentiality agreement. Both generators have refused to meet those demands, Dunn said. The committee will drop its contempt charges at any time before a full Senate vote if either generator agrees to its requests. A report detailing Enron's contempt charge will be sent to the full Senate on Thursday for introduction, but is expected to be referred to the Senate Rules Committee for review before a floor vote. Dunn said he didn't know how long the report would be considered in the Rules Committee, but he will "certainly push them to do it as soon as possible." Enron spokesman Mark Palmer said the company "will continue to negotiate" with the committee. Legislators are scheduled to begin a monthlong break Friday, but aren't certain that will happen because they still need to pass a budget bill and are trying to approve a bill to rescue Edison International (EIX) unit Southern California Edison before leaving. Dunn said it would take a few days to prepare a report on Reliant's contempt charge. "We may not be able to forward that report to the Senate floor until the day we get back from recess," Dunn said. No one at Reliant could be immediately reached for comment. The committee originally was poised to cite seven other electricity generators for contempt, but all eventually agreed to provide the requested information. -By Jessica Berthold, Dow Jones Newswires; 310-962-2843; jessica.berthold@dowjones.com

USA: UPDATE 1-Sempra looks to natgas lines to carry optic fiber.

07/18/2001 Reuters English News Service (C) Reuters Limited 2001.

SAN DIEGO, July 18 (Reuters) - A Sempra Energy unit said on Wednesday it has developed technology to connect thousands of miles of underused high-speed fiber-optic cable to buildings across the U.S. by inserting the cable directly into existing natural gas pipelines. Sempra said using its utility's gas lines - which hook up to buildings in cities throughout central and southern California - could tackle the telecommunications industry's "last mile" problem connecting end users to outlying fiber-optic cable networks without tearing up city streets. The surge in demand for high-speed Internet access has led telecommunications companies to pour billions of dollars into vast nationwide fiber-optic systems that carry data to computers, phones and screens faster than traditional copper wires. "Demand for broadband service in metropolitan areas is greater than ever," said Donald Felsing, group president of Sempra Energy. "The most significant obstacle to meeting that demand is the laying of fiber-optic cable under city stree

New Book Uncovers The Secret to Turning Wild and Creative Ideas Into Multi-Million Dollar Innovation

04/24/2001 PR Newswire (Copyright (c) 2001, PR Newswire)

CHICAGO, April 24 /PRNewswire/ -- You're at your local grocery store or shopping mall when you spot it -- that one product that makes you say out loud, "Who came up with that idea and why didn't I think of it first?" As it happens, though, you may have thought of it. So why aren't you now reaping the benefits from its sales? Companies such as Bacardi, Coldwell Banker, Enron and Starbucks can tell you why. You were hit with a humorous bazooka. For many years companies have been touting their innovation, techniques and experiences, but as they can tell you, it takes dedication and perseverance to arrive at the point where innovation is a strategic part of any business. Innovation begins with a creative idea; however, without an environment that allows that idea to grow, nothing comes of it except frustrated comments like, "Why didn't I think of it first?" In his new book, Ban the Humorous Bazooka: (And Avoid Roadblocks and Speed Bumps along the Innovation Highway), innovation guru Mark Henry Sebell shares his experiences and case studies to show how and why ideas are quickly silenced. As the founder and president of Creative Realities, Inc., a Boston-based consulting firm specializing in innovation processes that dramatically increase the odds for successful outcomes, Sebell spells out what it takes to achieve real breakthroughs in innovation, in spite of the speed bumps (individual behaviors) and roadblocks (group behaviors and cultural norms) that impede progress. Sebell's impressive Who's Who client list has taken part in the book, allowing him to share stories from the front lines of innovation, humanizing the concepts and providing tangible and practical tools to make innovation work beyond any and all expectations. "... I now keep a toy bazooka prominently displayed in my office as a constant 'innovation reminder' that every idea, no matter how unconventional or implausible, has potential value and should always be encouraged," says Alex Perriello, president and CEO, Coldwell Banker Real Estate Corporation. Sebell defines a humorous bazooka as a funny, witty comment that, intentionally or unintentionally, shoots down another person's idea. In other words -- an innovation killer. In "Ban the Humorous Bazooka," readers examine the nine myths of innovation, bringing a greater awareness to the exciting and messy work that must be done in order to discover, nurture, launch and implement a great idea. Sebell also utilizes past and current client examples to provide the reader with the five phases of innovation essential to any creative and innovative pursuit. Starting with objective setting and then following the phases through discovery, invention, the greenhouse and implementation and launch, Sebell paints a thorough and motivating sequence of events. Sebell counts among his clients such firms as Compaq Computer, Walt Disney World Soup, Enron, PepsiCo, Citigroup, Starbucks and Dewar's Scotch. Enron India Eyes 1st Step To End Pwr Proj - Board Member By Andrew Dowell Of DOW JONES NEWSWIRE

04/24/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

NEW YORK -(Dow Jones)- Enron Corp.'s (ENE) troubled Indian unit Dabhol Power Co. is mulling a preliminary move toward terminating its project in the state of Maharashtra in light of its inability to collect payment for power already delivered, a member of the company's board said Monday. Enron, however, plans to complete Phase II of the 2,184-megawatt power plant, said Don Sturmer, a vice president at Bechtel Enterprises (X.BTL) and member of the board at Dabhol Power, in which Bechtel owns a 10% stake. The company at its board meeting Wednesday in London will consider what's called a preliminary termination notice, the first of three steps that end in abandonment of the project, Sturmer said. Step two would be an official termination notice, and step three would be a notice that the company was

surrendering control of the project, said Sturmer, who called the first step "procedural." "We're nowhere near steps two and three yet," he said. "Whether we go forward with (a preliminary termination notice) will probably be decided at the board meeting on Wednesday." Issuing the preliminary termination notice could put Dabhol Power in a position to suspend deliveries as it negotiates its payment disputes with the Maharashtra state electricity board, or MSEB, Sturmer said. As reported, the electricity board intends to challenge those bills at the meeting Wednesday. A spokesman for Enron Corp., which with a 65% stake in Dabhol Power is the project's largest shareholder, wouldn't comment on topics for discussion at the upcoming meeting. Other shareholders include General Electric Co. (GE), which owns 10%, and the MSEB, which owns 15%. Dabhol Power is moving ahead to finish the second phase of the project, which is 95% complete, Sturmer said. Phase two will add two nominally rated 750-megawatt units to the existing 750-megawatt unit and add a liquefied natural gas terminal and regasification unit to allow the plant to shift from running on naphtha to running on gas. "The current plan is to continue construction...and having the entire facility commercially available by the end of this year," he said. Disputes Over Payments For Power Delivered To MESB

The controversial \$3-billion project, India's largest foreign investment, has been mired in financial disputes since the electricity board began missing payments last year. According to Sturmer, the board owes Dabhol Power \$48 million for power delivered in December and January. The board made a \$24 million payment for February, but has a \$31 million bill for March coming due Wednesday. Dabhol Power officials met Monday with lenders to update them on the dispute and to discuss steps the company might take in light of the missed payments. Dabhol Power officials weren't available Tuesday to comment on the outstanding payments. According to some news reports, Dabhol Power was seeking to secure its lenders' approval for a plan to terminate the project. A Dabhol Power executive and a banker, both involved in the talks, wouldn't confirm or deny the reports. John Ambler, spokesman for Enron's Global Assets Group, called the meeting a regular status update. The

BODY:

??Gov. Gray Davis is relying on stringent conservation measures, increased electricity supply and quick Legislative authority to proceed with a \$12.5 billion revenue bond issue to head off blackouts this summer.

??Davis administration officials briefed lawmakers Monday on the governor's plan to rescue Southern California Edison by buying the utility's transmission lines.

??The extra financial details Davis' representatives gave Assembly Republicans include forecasts of the Department of Water Resources' summer power purchases - the same figures the state will use to find buyers for \$12.5 billion in bonds to pay for future power.

??Those forecasts, some Republicans said, count on too many things falling into place, including the assumption that all of the state's financially troubled alternative energy producers will be online.

??Though energy analysts have predicted skyrocketing energy costs for summer - up to \$1,500 per megawatt hour - the governor's plan calculates an average cost of \$195 per megawatt hour over June, July and August.

??That's because DWR cut long-term contracts covering a major part of the electricity needed during peak times, said Ron Nichols, senior managing director for Navigant Consulting Inc.

??Long-term contracts and conservation will minimize the effect of the expected high spot prices, Nichols said.

??In essence, Davis aides, much of the conservation will be spurred by sticker shock felt by consumers when they get their higher rates on their June bills. PG&E customers will see a 34 percent increase, Southern California Edison's will jump 32 and San Diego Gas and Electric rates will jump 44 percent.

??Davis' consultants predict the state can conserve up to 7,234 megawatts during peak demand - about 16 percent of a 45,000 megawatt load that summer weather can bring on. One megawatt is roughly enough power for 750 homes.

??Much of that conservation, 2,484 megawatts, will come from three different conservation programs through the California Independent System Operator, keeper of the state's power grid.

??Davis' "20/20" conservation plan is expected to cut another 2,200 megawatts of demand. The rest of the cuts come from the sticker shock of higher consumer rates and by estimating how much less power Californians are using this year compared to last year.

??"If we're wrong, there are certain reserves built in," said Susan Kennedy, deputy chief of staff and secretary of cabinet. Either the state borrows more or there will be blackouts, she added, and if the price of power goes higher than expectations, the state won't be able to afford it.

??By the end of 2002, Davis estimates, DWR will spend \$26.9 billion to buy power for customers of the three financially ailing utilities. Of that, \$12.5 billion will be paid for by revenue bonds that will add up to one cent per kilowatt hour to customer bills for 15 years.

??The Legislature approved the revenue bonds based on a formula that would set the amount of the issue. Now Davis' representatives say it's urgent that the Legislature approve a bill with a firm cap so they could begin the bond sale.

??"We need the unambiguous authority to sell bonds. We need it right now. We cannot afford any delays," Kennedy said.

??A bill putting a \$10 billion limit on the bonds stalled in the Assembly last week after Republicans refused to vote for it until they received more details about Davis' power buys and long-term contracts.

??Republicans wondered about the ability of the alternative generators to be online, a sentiment shared by the industry. Currently, about one-third are off-line now because PG&E and Edison owe them more than \$1 billion.

??The Public Utilities Commission ordered the utilities to pay those generators every other week starting April 1, but the large debts have the generators fighting to stay open, said Jan Smutny-Jones, executive director of the Independent Energy Producers.

??Davis' predictions aren't rosy, but realistic, said Joseph Fichera, a financial adviser for the governor. "It minimizes the risk of blackouts, but you can never eliminate it."

??Also Monday, an Assembly subcommittee unveiled four bills Monday designed to increase supplies of natural gas, including streamlining approvals for gas storage and new pipelines.

??After conducting hearings on the market, the subcommittee is recommending the state streamline the PUC's process to approve underground

SJM to mobilise retired army officers Our Political Bureau New Delhi

06/08/2001 Business Standard 2 Copyright (c) Business Standard

The Swadeshi Jagran Manch (SJM) would marshal a battery of retired army officials to raise the banner of revolt against the government's decision for privatisation of the defence sector. The SJM is expecting to mobilise support of retired senior army officials in order to drive home the point that the decision to privatise and allow FDI in defence production was "anti-national". These officials would lead the dharna from July 25 outside Parliament, sources in the SJM say. After its council meeting at Shimla, the SJM is preparing to launch a full-blown attack against the government for pursuing its policies of economic liberalisation and globalisation. "The decision to hold a three-day agitation during the monsoon session of Parliament is intended to convey the message that the SJM would continue its struggle," said a senior office-bearer. The Swadeshi faction within the Sangh Parivar appears buoyed by the fact that the council had adopted four resolutions which approved the SJM's struggle against the Enron project, WTO and the government's decision to privatise the defence productions. Sources in the SJM maintain that given the resolutions passed by the council, it was unlikely that the RSS leadership would intervene and ask the SJM to mend its ways. "In the Bangalore meeting with the RSS leadership, a broad consensus was evolved that all RSS-affiliated organisations were free to chalk out their own course of actions and the RSS would not intervene," they said. Obviously, the SJM has been bracing up for a confrontation with the government in major economic issues by putting up BMS founder and senior RSS leader Dattopant Thengadi in front to criticise the government.

States cannot afford DPC power Santosh Tiwary & P Vaidyanathan Iyer NEW DELHI

06/08/2001 Business Standard 2 Copyright (c) Business Standard

The Centre's initiative towards facilitating sale of power from the Enron -promoted Dabhol project in Maharashtra to other states is likely to come a cropper. Sources told Business Standard that the states would in no way be able to purchase power from Dabhol Power Company (DPC) as it would be difficult to lower the tariff to Rs 3 per unit. "No state will be able to buy power from DPC at a rate above Rs 3 per unit considering the rate at which they are supplying power to the consumers at present," said a source in the Central Electricity Authority (CEA). Power minister Suresh Prabhu had only last week asked CEA to consult the power-deficient neighbouring states of Maharashtra seeking their views on the requirement and tariff at which they would be able to buy electricity from DPC. Sources said that states such as Gujarat, Madhya Pradesh and Goa, to which DPC could supply power, were not in a position to buy it at a cost which was more than what they spend at present. They pointed out that even after a considerable reduction in tariff, it was highly unlikely that DPC would sell power to these states at the rates affordable by them. As for the other states, transmission cost would only add up to the already high cost of Dabhol power. Hence, the proposition is almost ruled out, said sources. They said that the unit cost of power for all SEBs was around Rs 3 at present. Interestingly, the average tariff of all the SEBs was estimated to be 208 paise per unit in 1999-2000, at a 74 per cent tariff to cost ratio. In 1999-2000, the unit cost of power supply in Gujarat was 287.30 paise, and in Madhya Pradesh, it was 252.72 paise. Maharashtra had 254.36 paise per unit cost of power supply in 1999-2000. Sources said that the existing tariff structure and supply cost was a clear indication why third party sale had not been allowed by the states even though Section 43 of the Indian Electricity (Supply) Act, 1948 allowed such sale. They added that the chances of states allowing third-party sale by the independent power producers in the light of the DPC-MSEB controversy was remote. The Centre has asked the states to allow third-party sale from the IPPs.

Dabhol lenders to study pullout cost Freny Patel MUMBAI

06/08/2001 Business Standard 1 Copyright (c) Business Standard

Lenders to the Dabhol Power project have mandated their engineer, Stone and Webster, to do a costing study on the implications of mothballing the second phase of the project. The issue is whether to close it now or wait till the civil work on the project is over. Enron has made it clear that it wants to pull out of the second phase unless issues relating to the power purchase agreement are resolved and the government of India makes a firm commitment on the offtake of power. IDBI executive director RS Agarwal, who was present at the two-day lenders' meeting in Singapore, told Business Standard that the institutional lenders will discuss the report of the engineers before deciding on a further course of action. The second phase is 92 per cent complete. Total completion would entail the finalisation of the power blocks and the LNG facility. Incidentally, the trial run of the first block of the second phase\_740 mw was to have taken place today, but failed to happen on account of the legal battle between DPC and MSEB. To date, more than \$1,570 million has been invested in the second phase. Stone & Webster's report will identify how much additional funds the lenders would have to plough in depending upon whether the project is shelved immediately or after completion of construction activity. It will also figure out the funds required to restart the project. "The legal position of the two parties - DPC and MSEB - has complicated the issue," said Agarwal. Foreign lenders are reportedly unconvinced about the Indian government's seriousness in resolving the issue. Lenders have expressed anxiety over the suspension of power offtake by the MSEB, as this has affected the \$50 million cash flow. The priority is for the two sides to resolve the issue through negotiations at the earliest. DPC ought to take the initiative as it is at the receiving end, said industry sources.

Enron Introduces Price Hedging for Memory Chips By Bob Sechler

06/07/2001 Dow Jones Business News (Copyright (c) 2001, Dow Jones & Company, Inc.)

Dow Jones Newswires HOUSTON, Texas -- Dynamic random access memory chips, known as DRAM, have long been viewed as the pork bellies of the computer industry, commodities whose prices swing widely based on supply and demand. Enron Corp. (ENE) is taking the analogy a step further by enabling DRAM manufacturers and consumers, such as computer companies, to engage in the same price hedging strategies deployed in industries that depend on traditional commodities. Th

05/13/2001 The New York Times Page 16, Column 4 c. 2001 New York Times Company

For final exams, prepared students pack extra pens, calculators, bottled water, granola bars. And, at the University of California's Berkeley campus this year, a flashlight. As state officials and utilities struggle to maintain the power supply during California's continuing energy shortage, administrators and professors at the 31,000-student campus are planning for the possibility that rolling blackouts may disrupt exams, which began on Friday and run through next Saturday. "People here are used to interruptions," Sara Abbas, 21, a senior communications major, said with a shrug as she studied in a cafe near campus. "People walking in, people running around buck naked and whatnot. People have cut the power lines. They just reschedule." In an e-mail message sent Wednesday, the executive vice chancellor, Paul R. Gray, advised instructors to use "individual discretion to decide the disposition of their examinations once the exam has started." Among the options: delay the test until the lights return; postpone it until a Saturday; grade the incomplete test; or cancel the exam altogether. Professors are also encouraged to check a Web site to see if their exam rooms have windows. "In some classrooms," Mr. Gray noted, "students may have sufficient natural light." The rolling blackouts could hit most of the campuses of the University of California and California State University. The two systems are embroiled in a legal dispute with Enron Energy Services, a Houston-based company that, in February, cut short a four-year contract to provide electricity directly to the universities. For now, the two systems -- among the largest energy consumers in the state -- are being supplied by Pacific Gas and Electric and Southern California Edison. Though several medical centers and the Davis, Los Angeles and Riverside campuses of the University of California system are exempt from the blackouts, the rest of the campuses have been put on alert. At Berkeley, the warning from Mr. Gray only heightened pre-exam stress levels. "Stopping in the middle of a final would be detrimental to my grade because I save the hardest questions until the end," said Heidi West, 20, a sophomore majoring in political science. Aaron Chung, a senior studying cognitive science, said it would be unfair to grade half-finished exams because he often circled answers instinctively, planning to return later with more care. "The only thing I don't have a problem with is if the professors give everyone A's," Mr. Chung, 23, said. "You have to be under a lot of duress for that to happen." Gary L. Firestone, a biology professor, said he would move his 500-member class out into the sunshine and tell students to spread their blue books on the grass. But Jeff Good, a graduate student who teaches Introduction to Syntax and Semantics, said he would probably cancel the exam because the final counts for only 20 percent of the grade. That is what Michelle Chen, a junior linguistics major in Mr. Good's class, is hoping for. "I would love a blackout," Ms. Chen said. "I'm going to turn on my air-conditioner. My toaster, too."

Business British Telecom Patience Wheatcroft

05/12/2001 The Times of London News International Final 4 55 (Copyright Times Newspapers Ltd, 2001)

BRITISH TELECOM has inflicted enough damage on itself in the past year. But others are still lining up to put the boot in. Hours after the company announced a Pounds 5.9 billion rights issue and the separation of cash-hungry BT Wireless, Moody's Investors Service lowered BT's credit rating. This thumbs-down will cost BT an extra Pounds 35 million a year on existing loans as well as making future working capital more expensive. The timing is odd. One of the two other main agencies presented with the same BT proposals maintained its rating and the other edged it down so little that change-of-rating clauses were not triggered. In the meantime, the market prices of BT debt have been rising. The Enron Cost of Credit, which measures the overall risk premium on BT borrowing, has halved since mid February. Such costly inconsistencies must focus more critical attention on the agencies, whose power has grown out of proportion to their accountability. Moody's verdict is, however, peanuts compared with the cost to BT of the whims of Stephen Byers and the

UK competition authorities. Moody's will no doubt be aghast to learn that Yell could be worth Pounds 1 billion less as a result. In 1996 the Monopolies and Mergers Commission found that BT's Yellow Pages had an 85 per cent monopoly of its market and made it sign undertakings to cut prices by 2 per cent a year in real terms. The Office of Fair Trading has reviewed this report; predictably, it has found that the enforced price cuts have kept competition down and kept Yell's market share up. The reasoning behind OFT advice that annual real price cuts should be doubled is closed to scrutiny until Mr Byers has a new BT undertaking. But it appears to argue that the market is still a monopoly, so Yell must be charging too much, so prices should fall further. The result, according to those formerly eager to buy Yell, is that a growth business has been turned into a stagnant one, losing all momentum. This sounds typical of the dead hand of UK regulation. It must strengthen the resolve of BT's new leaders to remodel what the authorities so hate to the greater advantage of shareholders.

OUTLOOK Outlook Houston needs to think small about future technology WILLIAM DYLAN POWELL

05/13/2001 Houston Chronicle 2 STAR 4 (Copyright 2001)

OK, it's test time - sort of like a breakfast-time Rorschach test for Outlook readers. Here we go: What's the first thing that comes to mind when someone mentions Houston? Time's up. Your answers may have been energy, medicine or seemingly random acts of highway closure. But how about something very, very small? While Houston may not exactly be synonymous with all things tiny, we may want to start giving more mind share to the world of the miniature. As technology advances, Houston may owe a great deal to the study of small substances. Nanotechnology is the study of creating functional structures on a molecular scale (the prefix "nano" means one billionth, or 10 to the ninth power numerical

Enron Would Accept Less Money in a Calif. Settlement (Update1) 2001-06-06 01:57 (New York)

Enron Would Accept Less Money in a Calif. Settlement (Update1)

(Adds spokesman's comment in fourth to sixth paragraphs.)

Houston, June 6 (Bloomberg) -- Enron Corp. Chairman Kenneth Lay said the world's largest energy trader would accept less than 100 percent of the money it's owed for power sold to California if it could reach a settlement with the state. Lay, who spoke on PBS's "Frontline" television program, which aired nationwide this evening, refused to say how much of a "haircut" the company would accept. "I'm not going to negotiate with the governor through you," Lay said on the program. Enron is currently owed \$400 million to \$500 million by California power purchasers, he said. Most of that money is owed by PG&E Corp.'s Pacific Gas & Electric utility, which declared bankruptcy April 6, so it wouldn't be covered in a settlement with the state, spokesman Mark Palmer said after the broadcast, adding that there are currently no settlement talks going on between Enron and the state. Palmer said a settlement to the California power crisis would have to include issues beyond prices, such as long-term power contracts and retail electricity choice. "There would have to be a settlement of all the issues in the market before anyone would agree to take a haircut," he said. "For anyone to even talk settlement, we have to talk about structural issues." The "Frontline" broadcast also said Duke Energy Corp. has been in secret settlement negotiations with the state for six or seven weeks, which would require that all pending litigation against the company be dropped. The program, a joint production of PBS and the New York Times, said that Duke pledged political and public support for California Governor Gray Davis as part of the settlement. "I will not do anything that is unseemly or anything that will bleed California dry," Davis said, adding that he won't give up legal avenues. He said he gave Duke "high marks," though, for proposing a settlement in the first place. Davis has accused California's major generators and Enron - a state power marketer, but not a generator - of price gouging California consumers. Duke, which produces about 5 percent of the power used in California, recently admitted it charged \$3,800 a megawatt-hour for power sold to the state in January and February. That's 15 times above average levels in January. Shares of Houston-based Enron fell 79 cents to \$53.75. Shares of Charlotte-based Duke, the top U.S. utility owner, fell \$1.70 to \$42.50.

Business World: California's Ship of Fools By Holman W. Jenkins Jr.

06/06/2001 The Wall Street Journal A27 (Copyright (c) 2001, Dow Jones & Company, Inc.)

Lamenting the politician's lot in "Profiles in Courage," John F. Kennedy wrote that "In no other occupation is it expected that a man will sacrifice honors, prestige and his chosen career on a single issue." Of course, no politician would last long if he didn't blow with the wind nine times out of 10. But on the tenth occasion even California has the right to expect some courage. We don't know what happens when an advanced economy like California's suffers day after day of blackouts. We may be about to find out. Modern office architecture becomes uninhabitable without air-conditioning and elevators. Old people and asthmatics may die in the heat. So may drivers at unlit traffic crossings. Steps could still be taken to lessen the blackouts, but voters wouldn't know the difference, and it's so much easier to cast blame. Gov. Gray Davis prates about a "war with Texas." And who knows what secret failures as a human being led Bill Lockyer, the attorney general, to threaten Enron's Ken Lay with homosexual rape in the California prison system. California has found itself singularly lacking in heroes in its hour of crisis. Mr. Lockyer and Mr. Davis harp on price, but the true problem is the unavailability of power at any price to meet the demand that exists under the current structure of retail rates. Both must know the solution they noisily advocate, federal price controls slapped across Western electricity markets, wouldn't bring power into existence to close the gap. Their proposal would simply saddle the feds with the dirty job of apportioning blackouts from California's mistakes across half a dozen other states. In California itself, municipal utilities in Santa Clara, Palo Alto and other towns have already announced they won't participate in rolling blackouts. The Los Angeles Department of Water and Power certainly isn't volunteering. Why should voters in other states? Why not just cut the lines and let California monopolize the darkness? A state review board in Washington has already vetoed a proposed plant rather than suffer local pollution for power destined for California. Mr. Davis knows this; he knows price controls would create a new problem without solving the shortages. Meanwhile, the specter nobody wants to talk about is the state of California itself headed for bankruptcy if it continues to be willing to pay any price to satisfy the demand of consumers shielded from the true cost of power. Mr. Davis's version of the Big Lie is that Texas is to blame. Texas companies account for just 12% of California's supply, having bought 7,000 of the 20,000 megawatts that local utilities were forced to sell under "deregulation." Being in the right place at the right time has always been profitable, but any windfall has been spread widely among suppliers of gas, pipeline capacity, storage and ancillary services. Take Enron: Its revenues quadrupled in the past year, but so did its costs, and profits are up only 31%. A leaked California memo names as two of the biggest "gougers" BC Hydro, owned by Canadian taxpayers, and the U.S. Bonneville Power Administration. Their sin was letting their reservoirs fill up overnight while meeting local needs with spot-market power, so they could sell their own production for higher prices to California during the day. These are precisely efforts that might stop if price controls were imposed across the West, making the

shortages worse, probably much worse. Northwestern smelters might be better off reclaiming the cheap hydro they've been passing on to California -- 3,000 megawatts, enough for two million homes. Farmers could resume irrigating. Seattle, Tacoma, Boise and other neighbors have all done what California has failed yet to do, hiking rates to curb demand. Rather than emulate them, Gov. Davis's peacock of an energy czar, David Freeman, babbles about "public power," the answer to a question nobody asked, the solution to a nonexistent problem. Prices of electricity and natural gas for future delivery are already falling as investors race to

COMMODITIES & AGRICULTURE - Soft commodity traders find the going hard. By ADRIENNE ROBERTS.

07/03/2001 Financial Times (c) 2001 Financial Times Limited . All Rights Reserved

Soft commodity traders find the going hard - Barriers to entry are daunting and the big incumbents are facing months of adaptation and belt tightening, says Adrienne Roberts. Profit margins in soft commodities trading are wafer-thin. "The margins are to be found between the wallpaper and the wall," said the head of a European trading business. "We are barely making a profit in cocoa, and we are one of the biggest participants in the market," said an executive at a leading London futures brokerage. Enron, the largest natural gas and electricity trading house in the US, announced recently that

it is closing its London-based cocoa, sugar and coffee brokerage business following an internal company review. Members of the industry think the brokerage, Rudolf Wolff, was failing to generate enough cash. "US companies tend to be much more aggressive on the kind of returns they want from each desk. I'm not surprised Enron decided to pack it in," said a US trader. Enron says it is continuing to look into other opportunities in the softs industry. Part of the problem is depressed markets, with low prices and thin volumes. "Coffee is at a 30-year low, cocoa is flat at this time of year - I would say it's extremely challenging unless you have critical mass," said the head of a London softs desk. "Merchants are the source of our income. If they're squeezed, they squeeze everyone." Business conditions have been particularly difficult, for merchants sourcing from Cote d'Ivoire, a major coffee producer and the world's largest cocoa grower. Political upheaval and industry restructuring have reduced the volumes of stock coming on to the physical market. "The only answer is greater efficiency; lower costs," said a manager at a leading soft commodities merchant. Customers found a way of cutting their brokerage costs late last year when the London International Financial Futures and Options Exchange took its commodity products electronic. Customers can now ask their brokers to provide them with trading screens, with uncomfortable effects on brokers' execution fees. A year ago, a client who wanted to buy 10 lots of coffee might telephone his broker, get some advice, hear the latest on the weather in Brazil or politics in Cote d'Ivoire, and have his trade executed by the broker. Now the client might connect directly to Liffe, put through his own trade electronically and receive the documentation via the web. He may not speak to his broker at all. Brokers earn a fee for providing the screens, but not as much as they would from execution. "Margins are under tremendous pressure in the futures business because of the move to electronic trading," said an executive at a London bank. "You're seeing the tip of the iceberg now. If electronic trading is having such a major effect on brokers in the softs market, what does it mean when metals and energy go electronic?" The execution and advice functions, once part of the same package, have been separated. The question of where these clients will go for advice and what they are prepared to pay for it has not yet been answered. "The key to this business is volume," said Brian de Clare at ABN Amro. "Your incremental cost is negligible - putting through 100,000 lots costs pretty much the same as 500,000 lots. High volumes, in conjunction with good service, will determine who's going to get the lion's share of the business and who won't." ABN Amro is one of the few participants in the industry that is expanding its softs business and recruiting. Brokers think more people will begin dropping out of the market and there will be consolidation among those in the industry. There are rumours that Truxo, which belongs to the Neumann group, is thinking of withdrawing from clearing customer business. Head counts have come down since the demise of the open outcry trading pit, but some businesses are looking to streamline further. Commodities brokers that trade on the floor might have from four to seven support staff to each trader. In the softs business "we're now starting to see that people who were in the office are not needed to the same degree because people have got their own screens", said one. There is not much relief in sight. For smaller brokers, the barriers to entry are increasingly daunting. For the big incumbents there may be many months of adaptation and belt tightening ahead. GLOBAL INVESTING - Enron looks to make power play in continental Europe. By JULIE EARLE.

07/03/2001 Financial Times (c) 2001 Financial Times Limited . All Rights Reserved

Ten years ago Enron, the US energy giant, derived its profit purely from its home market and from a few projects in the UK. It operated pipelines and produced power. Today, the Houston-based company has recreated itself as a global energy merchant, selling and delivering gas and electricity, and its profits are increasingly produced offshore. Having consolidated its position in the UK, Enron is making a big push into continental Europe to capture the growth potential in deregulating energy markets. The company moved into the energy selling business with the deregulation in the US of gas in 1994 and electricity in 1996. It now has projects in more than 40 countries. The change in strategy, away from owning infrastructure and towards energy selling, has seen its earnings drift away from pipelines in the US towards a rapidly growing wholesale gas and power business. Enron does not release its revenue breakdown but it is clear from its volumes that the wholesale unit - which involves energy trading and marketing and risk management services - generates about 85 per cent of the company's profits. A third of the company's wholesale business come

From the Dow Jones Newswire:

*SoCal Ed May Be Near Financial Solvency With 'Plan B' LOS ANGELES (Dow Jones)--Legislators in California are beginning to embrace an alternative energy plan, expected to be introduced as a bill this week, that would get the state out of the power buying business in as little as six months and restore Edison International's (EIX) Southern California Edison unit to financial solvency without requiring the utility to sell any of its assets to the state. If the plan wins the support of both houses of the Legislature, lawmakers hope it will also convince a bankruptcy court judge in San Francisco that it can be used to lift PG&E Corp.'s (PCG) Pacific Gas & Electric unit out of Chapter 11 bankruptcy protection. "Clearly this would be a positive development," said Paul Patterson, a utility analyst with Credit Suisse First Boston in New York. "It would offer a way to restore the utilities to financial viability. We've noticed over the weekend that the situation in the Assembly is improving." The proposal by Assemblyman Joe Nation, D-San Rafael and Assemblyman John Dutra, D-Fremont, has gained the interest of some members of the Assembly Republican Caucus, all of whom have resisted previous attempts at rescuing SoCal Ed from near bankruptcy. Consumer groups have been resistant to any form of what they call a utility "bailout." But a spokesman at The Utility Reform Network in San Francisco said the group is studying the 'Plan B' proposal. On Friday, a spokesman to Gov. Gray Davis said state Sen. Richard Polanco, the Senate Majority Leader, would introduce legislation this week enacting the agreement the governor reached with SoCal Ed exactly one month ago that would allow the utility to issue about \$3 billion in bonds to recoup its unrecovered power costs and sell its power lines to the state for \$2.76 billion to pay off its debt. But Nation and Dutra, members of the so-called 'Plan B' group, are looking to alter that agreement. "There are a lot of people who question the validity of buying the grid" from SoCal Ed," Nation, an economist by trade, said. "I think there is an understanding*

that the existing (memorandum of understanding) won't pass." One of the problems with having the state purchase the grid at this point is that there won't be enough funds available to maintain and upgrade the lines to improve the flow of electricity, according to several members of the Senate Budget Committee. "We're preparing for massive budget cuts this week because of this electricity crisis," the member of the Senate Budget Committee said. - - Plan Eliminates Purchase Of SoCal Ed's Power Lines Nation's proposal calls for the state to hold a five-year option to buy SoCal Ed's transmission lines for its book value price of \$1.2 billion, and eliminate a provision that would ease the regulation of the utility by the California Public Utilities Commission In exchange, SoCal Ed can securitize a larger portion of its \$5.5 billion in unrecovered power costs backed by a larger dedicated rate component. Moreover, the utility would sell the state additional power at a cost beyond the 10 years already agreed upon in the memorandum-of-understanding and additional power from other company sources. Nation also wants to set up a ratepayer revenue account to refund consumers if generators agree to accept less than 100 cents on the dollar. He said, however, he does not plan to include a provision in any legislation that states generators must take a "haircut" on money the companies claim they are owed by SoCal Ed. Republicans, including Assemblyman George Runner, R-Lancaster, and Assemblyman Keith Richman, R-Granada Hills, have been working closely with Nation and the 'Plan B' group. Jamie Fisfis, a spokesman for the Assembly Republican Caucus said the caucus is not yet ready to support the plan, but Republicans are "happy" they are being included in the discussions. "We have two criteria when we evaluate the plan," Fisfis said. "The plan has to keep power rates as low as possible and puts more supply into the grid." Steve Maviglio, Davis' press secretary, said the governor "has always said he's open to improvements" in the memorandum-of-understanding. "But it has to remain a balanced transaction," Maviglio said. Nation, a member of the Assembly since 2000, said the state would only have to spend a couple of weeks renegotiating the memorandum-of-understanding with Edison and that it could likely win a two-thirds majority vote in the Assembly shortly after that. Nation said he has had a number of conversations with Edison International executives on his proposal and "they have been generally receptive because they believe the agreement with the governor won't pass." A SoCal Ed spokesman was unavailable for comment. Lawmakers Seeking Quick Exit From Power Buying Business California has committed \$7.2 billion of its roughly \$8 billion general fund buying power since January on behalf of PG&E, SoCal Ed and Sempra Energy's (SRE) San Diego Gas & Electric unit. But several lawmakers and one of Davis' financial advisers said Sunday that the state wants to desperately get out of the power buying business soon because of the economic impact the energy spending will likely have on education, transportation and other state programs. "We are beginning to realize that if we don't get out of the business of buying electricity, we will be in the same boat as the utilities," said one state Senator who is also a member of the Senate Budget Committee. Nation agreed, saying "the best thing we can do for California is get out of this mess we're in. We need to get the DWR out of the business of buying power." Lawmakers Working To Keep SoCal Ed Out Of Bankruptcy A number of Democrats in the Assembly, who have said SoCal Ed may be better off in bankruptcy, now want to see the utility remain solvent, Nation said. "I think several months ago bankruptcy wouldn't have seemed like such a challenge," Nation said. Nation said he fears that if SoCal Ed were in a bankruptcy setting, the state's so-called qualifying facilities, renewable and gas fired power plants that contract directly with the utilities, may win the right to sell their cheap power on the open market. "If that happens, it will dramatically raise the risk to the state because we will be forced to buy that power," Nation said. "I think people understand what the risks are and that's a real danger." -By Jason Leopold; Dow Jones Newswires; 323-658-3874;

INDIA PRESS: Dabhol Challenges Commission's Jurisdiction

07/19/2001 Dow Jones Asian Equities Report (Copyright (c) 2001, Dow Jones & Company, Inc.)

NEW DELHI -(Dow Jones)- Dabhol Power Co. Wednesday appealed to the Supreme Court to challenge the jurisdiction of Maharashtra State Electricity Regulatory Commission, reports the Business Standard. Dabhol, the Indian unit of U.S. energy major Enron Corp. (ENE), is challenging the Commission's decisions on Dabhol's disputes with its sole buyer the Maharashtra State Electricity Board. The newspaper report quoted a Dabhol spokesman as saying the issue will come up for a hearing in several days. Dabhol's global lenders have also decided to appeal to the Supreme Court within a week over the same issue, the report added. Dabhol is the single largest foreign investment in India, worth \$2.9 billion. Its power plant in the western Indian state of Maharashtra has a capacity to generate 740 megawatts. The plant has stopped operations since May 29 after MSEB stopped drawing power from Dabhol saying its tariffs were "unaffordable." Financial Post Investing Buy & Sell Looking for an S&P revival: Elliott & Page manager focuses on earnings growth Sonita Horvitch Financial Post

07/19/2001 National Post National D03 (c) National Post 2001. All Rights Reserved.

Toronto-based Mark Schmeer, managing director of equities at money manager Elliott & Page, says the Standard & Poor's 500 index could generate a double-digit total return over the next 12 months as the U.S. economy grows about 2% to 3%. If this forecast is correct -- "by various measures the U.S. economy has bottomed" -- then this augurs well for growth stocks such as those in the technology sector, he says. "Growth stocks do well in a climate of accelerating economic growth and a rising stock market." This suggests, he says, that investors should consider revisiting the battered tech sector, "but not indiscriminately." While he is bullish on the outlook for the equity market over the next 12 months, Schmeer warns that there will continue to be volatility. Schmeer and his team have assembled a comprehensive corporate data base that is updated regularly. In stock selection, the Elliott & Page team uses both traditional fundamental analysis and proprietary models. These rank companies on their earnings growth momentum and their ability to generate positive earnings surprises and upwards earnings revisions by financial analysts. For the column, Schmeer is selecting stocks from a number of sectors. His tech pick: - BEA Systems Inc. (BEAS/NASDAQ), which closed recently at US\$24.52 and trades in a 52-week range of US\$89.50 to US\$20.19. The stock is substantially off its 52-week high and has declined more than the average tech stock, he notes, yet the company continues to deliver on earnings. BEA provides application and Web application servers for electronic commerce. Major products include BEA WebLogic, a software platform for e-commerce applications. Unlike many other tech companies, BEA has been keeping up its earnings growth rate and reporting

earnings in line with expectations and should continue to do so, Schmeer says. Earnings per share estimates are US42 cents for the fiscal year to January, 2002, and US64 cents for the fiscal year to January, 2003. This makes for an earnings growth rate of around 50%. The stock trades at a multiple of close to 60 times forward earnings. A specialist stock in the energy sector he likes is: - Enron Corp. (ENE/NYSE) US\$49.85 (US\$90.56- US\$42.35). Based in Houston, this company is a leader in the field of energy wholesaling. It procures energy and sells to major U.S. corporations such as Eli Lilly and Quaker Oats under long-term agreements. Enron has expanded into the electricity market as deregulation created price uncertainty for users, says Schmeer. The company has produced six consecutive quarters of positive earnings surprises and analysts have been revising their earnings estimates upward, he notes. Earnings per share estimates are US\$1.86 for 2001 and US\$2.25 for 2002. The stock trades at a P/E multiple close to this earnings growth outlook, which is desirable as many stocks in the S&P 500 index are trading well above their prospective growth rates, says Schmeer. He is generally cautious about energy producers and traditional energy services companies such as drillers. "Historically, these stocks mainly outperform when the market is going down and they are less likely to beat the market in a climate of economic acceleration." He has sold major U.S. energy services company, Schlumberger Ltd. (SLB/NYSE) US\$49.85 (US\$88.87-US\$48.05). Its earnings growth rate has been rapidly declining and the company may not meet consensus estimates for the third and fourth quarter this year, he says. Schmeer's picks in the consumer products sector include: - Johnson & Johnson (JNJ/NYSE) US\$54.91 (US\$54.98- US\$40.25). This health care products company has been reporting positive earnings surprises, he notes. "This is not a cheap stock, but you a

LOS ANGELES -- California may be struggling to keep its lights on, but one thing there is no shortage of is accusations over who is to blame for an electricity crisis that has sent power prices skyrocketing. In recent days, top California officials have stepped up their rhetoric against a handful of merchant power companies, many of them Texas-based, that supply the state with much of its juice. Gov. Gray Davis says companies such as Reliant Energy Inc., of Houston, have engaged in "unconscionable price gouging." Loretta Lynch, president of the California Public Utilities Commission and a Davis appointee, proclaims that a "cartel" of electricity producers has created artificial shortages. Lt. Gov. Cruz Bustamante is backing a bill that would make energy price fixing a felony, and as a private citizen he is suing several major power producers in Los Angeles state court. About half a dozen investigations are being conducted by entities ranging from state legislative committees to the California attorney general's office. So far, these probes -- some of which have been under way for months -- haven't yet yielded either civil or criminal charges. While the energy suppliers are generating "unconscionable profits," the question remains "whether they are illegal profits," says California Attorney General Bill Lockyer, who has offered rewards of as much as hundreds of millions of dollars for information about lawbreaking in the energy business. Mr. Lockyer says he believes his office will eventually file civil charges against suppliers. He would very much like to add criminal counts. "I would love to personally escort [Enron Corp. Chairman Kenneth] Lay to an 8 x 10 cell that he could share with a tattooed dude who says 'Hi my name is Spike, honey,'" adds Mr. Lockyer. Houston-based Enron is a major energy-trading company. Like other such firms, Enron has denied wrongdoing in the California market. Mark Palmer, Enron's vice president for corporate communications, said Mr. Lockyer's comment about Mr. Lay "is so counterproductive that it doesn't merit a response." Investigators and academics say there is abundant evidence that individual firms have been exercising "market power." This term is used to denote efforts to influence wholesale-electricity prices, such as by withholding supplies. The California Independent System Operator, or ISO, which manages the state's electric transmission grid, estimates that by exercising market power, suppliers may have added about \$6.8 billion to the cost of electricity in the state since early last year. A single firm exercising such power isn't necessarily illegal, says Severin Borenstein, director of the University of California Energy Institute. If a company is a large supplier in the state and "you're not exercising market power, you are not doing your job" on behalf of shareholders, he says. Mr. Borenstein and others say that there are steps that should be taken against suppliers. They note that under federal power law, the Federal Energy Regulatory Commission can order refunds for wholesale prices that are above "just and reasonable" levels. So far, FERC has tentatively ordered California suppliers to make tens of millions of dollars of such refunds, as part of that

agency's ongoing inquiry into the California market. Critics of the suppliers and FERC say the refunds should be in the billions of dollars. The power industry, not surprisingly, says there is nothing to accusations of price manipulation or collusion. Executives point to a botched state-utility-deregulation plan that relies heavily on volatile spot-market purchases. Suppliers note that over the past decade, California didn't build enough new power plants to keep up with demand growth. The allegations of manipulation are "a lot of sound and fury and they won't produce anything," says Gary Ackerman, executive director of the Western Power Trading Forum, an industry trade group. Power generators also point to sharp increases in some of their costs, particularly natural gas, which is a major power-plant fuel. This rise in natural-gas prices also has set off a flurry of investigations over possible manipulation. One such case, involving El Paso Corp., Houston, is the subject of probes by federal and state officials. El Paso denies any wrongdoing. While power-industry officials say they have been cooperating with the investigations, law-enforcement officials say they have hit some roadblocks. For instance, Mr. Lockyer's office has gone to San Francisco state court to enforce subpoenas against Reliant, Houston-based Dynegy Inc., and Southern Co. and Mirant Corp., both of Atlanta, after the companies resisted turning over certain business documents they deemed confidential. Investigators have zeroed in on the increased frequency with which plants are going out of service for unscheduled outages. At times, several thousand fewer megawatts of capacity are available than a year ago. A thousand megawatts can power about one million homes. Generators say that this increased "forced outage" rate shows that tight supplies over the past year have required them to run plants, some of them more than 40 years old, for long periods without routine maintenance. This combination has produced more breakdowns. "Plants have been running flat out," says Tom Williams, a spokesman for Duke Energy Co., Charlotte, N.C., which says that its California power plants produced 50% more electricity in 2000 than in 1999. At the same time, during periods of lower demand, the number of unplanned outages often seems to rise enough to keep supplies tight, says Frank Wolak, a Stanford University professor and chairman of the ISO's market surveillance committee. "Clearly, something is going on here." However, he and others say that it is almost impossible to tell why a particular pipe failed or whether such a failure was a legitimate reason to reduce output. Some of the most intriguing evidence to date about forced outages surfaced in a federal case. FERC officials said an investigation had raised questions about whether two major power companies had taken plant

International Indian State to Make Overdue Payments to Enron in Power Spat

04/26/2001 The Wall Street Journal A17 (Copyright (c) 2001, Dow Jones & Company, Inc.)

BOMBAY, India (AP) -- The Maharashtra state power utility said it will pay outstanding electricity bills for March as part of a dispute over tariffs with U.S. power company Enron Corp. "We will make the payment of 1.34 billion rupees [\$28.6 million] today for the March bill. The February bill of 1.1 billion rupees was already paid up last month," Krishna Rao, a member of the Maharashtra State Electricity Board, said yesterday. "As far as we are concerned, there are no more payments outstanding." A spokesman for Houston's Enron said it is now due \$48 million for nonpayment of electricity bills for December and January and is seeking to have the issue of outstanding payments resolved through arbitration. The state electricity board has said the December and January bills should be offset against a fine of four billion rupees that it had levied against Enron for nonsupply of power in that period. Meanwhile, the state's chief minister, Vilasrao Deshmukh, said a panel will be formed in two days to renegotiate a power-purchase agreement, or the rate at which the state buys power from Enron. Enron has been under fire from Bombay politicians, who say costs have increased sharply from the four cents per unit agreed on in 1995 for the two-year-old, 740-megawatt naphtha plant. Prices shot up to 15 cents a unit after the world-wide fluctuation of oil prices and depreciation of the rupee. Enron says a 1,444-megawatt liquefied natural-gas plant to be commissioned later this year will lower tariffs. Also yesterday, Indian newspapers reported that a proposal by the Enron board to issue a termination notice to the state electricity board had been temporarily shelved. The Enron spokesman said that to his knowledge no one had ever threatened to shut down the plant. India's largest foreign investment, the \$3 billion project has been in trouble since December, when the state government said it would review the price agreement with Dabhol Power Corp., Enron's Indian subsidiary.

Reuters

04/26/2001 The New York Times Page 4, Column 1 c. 2001 New York Times Company

The Enron Corporation's troubled Dabhol Power Company authorized the termination of a deal to sell power to the western Indian state of Maharashtra, the chairman of the state electricity board there said yesterday. The chairman, Vinay Bansal, said Dabhol authorized the managing director to issue a notice of termination on the contract to sell 740 megawatts of power in India. Dabhol, which is 65 percent owned by Enron, is involved in a payment dispute with the board and is facing a cash squeeze because the board has defaulted on payments worth 2.26 billion rupees (\$48.31 million). The decision gives the managing director of Dabhol permission to seek the end of the contract at any time, Mr. Bansal said.

April 26, 2001 Houston Chronicle Indian utility, Enron battle over bills BOMBAY, India -- The Maharashtra state power utility said Wednesday it would pay outstanding electricity bills for March as part of an ongoing dispute over tariffs with Houston-based energy giant Enron Corp. Krishna Rao, member of the Maharashtra State Electricity Board, said the agency would pay 1.34 billion rupees, or \$28.5 million, for the March bill. The February bill of 1.1 billion rupees, or \$23.4 million, was paid last month, Rao said. "As far as we are concerned, there are no more payments outstanding," Rao said. An Enron spokesman confirmed receipt of the February dues, but said the company is also due \$48 million for nonpayment of electricity bills for December and January. The state electricity board has said the December and January bills should be offset against a fine of 4 billion rupees, or \$85.31 million, it had levied against Enron for nonsupply of power during that period. Meanwhile, the state's chief minister, Vilasrao Deshmukh, told reporters a committee would be formed in two days to renegotiate a power purchase agreement, or the rate at which the state buys power from Enron. Enron has been under fire from Bombay politicians who say its power charges are unaffordable. Politicians say costs have increased fourfold from 4 cents per unit agreed in 1995 for the 2-year-old naphtha plant. Houston-based Enron maintains that a larger liquefied natural gas plant to be commissioned later this year will lower tariffs.

Limited price controls ordered to ease West's power crisis%) By H. JOSEF HEBERT Associated Press Writer

WASHINGTON (AP) - The Federal Energy Regulatory Commission has agreed to limit price controls on California's wholesale electricity markets. But Enron spokeswoman Karen Denne said price caps won't help the state's problems this summer and calls the FERC decision "unfortunate." Federal energy regulators directed limited price controls on California's wholesale electricity markets Wednesday, but the order fell short of the sweeping price caps California officials have wanted. FERC voted 2-1 to order that wholesale prices be capped in California when electricity reserves fall below 7.5 percent, triggering an emergency alert by the state's power grid managers. "Price caps will not help california's problem going into summer," Denne said. "They neither increase supply or decrease demand. What they will do is exacerbate the situation and create additional shortages." Denne pointed out that power emergencies, such as Wednesday's Stage 2 alert, are becoming routine in California, and will only become more common with summer's heat. That would mean price caps could be in effect most of the summer. California Gov. Gray Davis said earlier Wednesday that he had urged FERC to extend the price controls so they would take effect when a Stage 1 alert was declared by the California Independent System Operator. A Stage 1 alert means electricity reserves have fallen below 7 percent. After the order, however, Davis' spokesman Roger Salazar, said the governor would not comment until he had a chance to review it in detail. "All along we have been

Jones demands probe of state's energy buyers=20 By Amy Chance Bee Political Editor (Published July 17, 2001)=20 Secretary of State Bill Jones on Monday asked the state attorney general an= d=20 the Fair Political Practices Commission to investigate whether energy=20 consultants hired by the Davis administration violated state=20 conflict-of-interest law by holding stock in energy generators and utilitie= s=20 while buying electricity for the state.=20 Jones said recent reports that show several energy buyers held such stock,= 20 coupled with the fact that they failed to file reports of their financial= 20 holdings until last week, suggest that Gov. Gray Davis "hired them without= 20 any forethought and due diligence as to how they could personally and=20 financially benefit from being on the state

payroll." "This is either a miserable failure in executive management and leadership, or he and his administration have colluded in a blatant and possibly criminal conflict of interest," said Jones, a Republican seeking to challenge Davis in next year's governor's race. In particular, Jones pointed to a report filed by Vikram Budhraj, a consultant in the Department of Water Resources' energy resources scheduling division, who signed a \$6.2 million, 23-month contract with the state. Budhraj reported that he began working for the department on Jan. 25. On Jan. 17 and 22, Budhraj acquired stock in Edison International valued at between \$10,001 and \$100,000. He also bought stock in Dynegy, an energy generator, in the same value range. He disposed of all the stock on Jan. 29, noting on the form that he "divested holdings upon first opportunity after start of services." He also reported that he had received income of more than \$100,000 from Edison International as "a retainer to provide consulting services upon request." He noted that there was "none requested since the third quarter of 2000." Jones said the contract Budhraj signed with the state, however, was dated Jan. 17, showing that he "entered into a \$6.2 million contract with the state and the same day that Davis ordered a state of emergency and put the state into the power-buying business. Mr. Budhraj sold this stock within days and pocketed a significant profit." Davis spokesman Steven Maviglio said the contract was simply dated Jan. 17 "for administrative payroll purposes." He said Budhraj met with Davis on Jan. 25 and began work for the state on Jan. 29. "Any activity he had with Edison International was over and done with the minute he started his job," Maviglio said. "He said he called his broker and said, 'Sell everything.'" Budhraj also has a letter on file with the department that says he will do no business with Edison while employed by the state, Maviglio said. While he did participate in negotiating contracts with Dynegy, Maviglio said he did so "weeks and months after he had sold his stock." Administration lawyers are still looking at reports filed last week by other energy schedulers and traders that show they still hold stock with energy generators, particularly Calpine Corp. The lawyers are examining whether those consultants buy electricity as part of their jobs and whether they have done any trading with Calpine. "They may be in violation, for all we know," Maviglio said. Representatives of the FPPC and attorney general said they are reviewing Jones' request.

The Bee's Amy Chance can be reached at (916) 326-5535 or [achance@sacbee.com](mailto:achance@sacbee.com) or <mailto:achance@sacbee.com>.

Energy Digest: PG&E's managers will get bonuses

(Published July 17, 2001) SAN FRANCISCO -- A bankruptcy judge has approved executive bonuses at Pacific Gas and Electric Co., saying the 223 managers who will divide the \$17.5 million pool are not responsible for California's energy woes. For 23 of the senior executives, the plan provides bonuses equal to their base pay or, in the case of PG&E President and CEO Gordon Smith, \$630,000. The bonuses for other managers will average \$60,000. PG&E, in proposing the payments, said it was worried that senior employees would flee to more secure and lucrative jobs, which could hamper the utility's bankruptcy reorganization. Some consumer advocates opposed it, saying the utility's customers ultimately would pay for it. But U.S. Bankruptcy Judge Dennis Montali said he had been assured that no effort would be made to cover the cost with future rate increases. In his opinion, Montali said the bonus program was needed to prevent resignations that could damage PG&E, making it harder for creditors to collect. --Claire Cooper

Blackout image battled Aiming to dispel the notion that California is paralyzed by blackouts, a coalition of economic development agencies today will begin a national public relations campaign to improve the state's image. The \$150,000 campaign is called "The Power of California." Its goal is to convince the national media to create stories that show the state's economy hasn't been crippled by the energy crisis. "It's an effort on our part to fight back," said Wayne Schell, chief executive of the California Association for Local Economic Development. The campaign is funded by local and regional economic development groups, he said. Barbara Hayes, executive director of the Sacramento Area Commerce and Trade Organization, said she was recruiting companies in New York this spring and was besieged with questions about power blackouts. "The message that people outside California have is we are in the dark," she said. SACTO isn't aware of any companies that have refused to move here because of the energy crisis, but it's possible that some companies have stopped making inquiries about the region because of

(VENTUREWIRE) -- CyberSafe, a provider of electronic security technology and services, said it eliminated 84 positions, or over 50% of its staff, as a result of declining sales and unfavorable economic conditions. CyberSafe said the cuts were spread throughout various departments in all of its international offices, including London, Ottawa, and Singapore. The laid-off employees did receive severance. CyberSafe also said it would be concentrating on its intrusion detection software and electronic security consultancy businesses and not expanding its authentication software divisions. The company had no comment on profitability or about raising a new round. Eighty people remain with CyberSafe, which has raised \$100 million, including a \$20.7 million Series E round in January, from Accel Partners, Deutsche Bank, Financial Technology Ventures, First Data, Oak Investment Partners, and Polaris Venture Partners, among others. http://www.cybersafe.com BlueLight CEO Mark H. Goldstein Steps Down mail? top SAN FRANCISCO (VENTUREWIRE) -- BlueLight.com, an independent e-commerce site majority owned by Kmart, said Mark H. Goldstein has stepped down as chief executive officer. The company said he will now become the long-term Internet adviser for Kmart, in order to pursue other interests outside of BlueLight. Mr. Goldstein was one of the original

founders of BlueLight.com, which formed in December of 1999. On Wednesday the company announced it would lay off an undisclosed number of employees and begin to use more of Kmart's marketing and merchandising staff in order to become more efficient and reduce operating costs. When asked yesterday whether the cost cutting moves combined with Mr. Goldstein's departure meant BlueLight would be rolled into Kmart completely, BlueLight spokesperson Dave Karraker said, "Right now we're a private company. Is it possible there will be a buyback by Kmart? It is possible."

Stand up, Texas, against California's bullying By JONATHAN WILCOX

LADIES and gentlemen: May I present to you the Hon. Bill Lockyer, attorney general of the state of California, from the May 22 Wall Street Journal:

"I would love to personally escort (Enron Corp. Chairman Kenneth) Lay to an 8 x 10 cell that he could share with a tattooed dude who says, 'Hi, my name is Spike, honey.' "

When you stop gagging, join me in celebrating Lockyer's crude, lewd and unsubdued behavior. It has stripped away whatever veneer of respectability California officials had by virtue of the offices they hold and exposed them as braggarts and bullies of the first order. But they also wield enormous and destructive power -- and they intend to use it.

The sooner Texans realize this the better.

As citizens of the state that is home to much of the nation's energy production, the people of Texas are intimately familiar with the booms and busts of the oil and natural gas industries. Sometimes, prices are high, new supply is high and willing buyers can only sigh.

Other times, gluts occur, demand fluctuates, competition grows ruthless and revenues seep out like the last remnants of black crude from a stripper well.

These are the principles of American capitalism, free market forces and the give-and-take and push-pull that separate this nation's economic capacity from all others. It is a fundamentally fair system, it has served us remarkably well and every time we have tampered with it, it has been to our ultimate detriment.

Witness California's partial "deregulation" of its electricity market.

The Golden State, for all its vanity, pride and preening machismo, actually knows very little of tough times. Sure, we can handle the occasional spectacular episode, like an earthquake or wildfire. That's part of the thrill of living in California.

But when it comes to our economic expectations and their interrelationship with our desired lifestyle, we only know the California way: more, more often and with no end in sight.

And if we don't get what we want, when we want it, it's someone else's fault.

In that light, it is no surprise that we are saddled with our current governor, Gray Davis, and our current law enforcement chief, the aforementioned Lockyer.

Despite his frequent jittery appearances on national television, Davis is a politically shrewd man. He may not know which public policy choices are best for the state's future, but that's not his highest priority.

Item No. 1 on Davis' "To Do" list is to get re-elected next year. But this has been complicated by the state's year of energy woes, Davis' ineffectual response and the fact that California is a largely one-party state.

Of California's eight statewide elected offices, seven are held by Democrats, including Davis and Lockyer. You don't have to be a Delphic oracle to discern that if Davis gets tossed out, he will take more than a few of his political brethren with him.

So, as California tiptoes toward its long, hot summer of rolling blackouts and unprecedented electricity shortages, Davis is busy digging his personal bomb shelter. He's preparing for the big one, calculating that while the damage will be great, and the fallout potentially lethal, he and the other cockroaches, like Lockyer, will survive.

How will they do this? By finding some fall guys to take the rap.

Call it the Texas two-step: First, Davis declares "war" on Texas energy producers. Next, Lockyer says he expects to file civil charges against suppliers, with, he hopes, criminal counts to follow.

For a demonstration of how not to deal with Lockyer and other California aggressors, examine the rejoinder of Mark Palmer, Enron's vice president for corporate communications. Lockyer's comment about Lay, he said, "is so counterproductive that it doesn't merit a response."

Wilcox is a former speechwriter for California Gov. Pete Wi

ASIA/PACIFIC Kookmin Bank Formal Merger Expected The formal merger of South Korea's two largest retail banks, Kookmin Bank and Housing & Commercial Bank, will create the country's largest financial institution. But uncertainty over who will become president of the new entity, which also plans to list on the New York Stock Exchange in October, could still disrupt the merger process, officials involved in the deal say. The presidents of the two lenders are expected to sign a binding merger agreement today, creating a bank with combined assets of 161 trillion won (\$124 billion). Foreign investors will have a combined 60% stake. Goldman Sachs Group will hold a 9.95% interest, making it the largest shareholder of the merged bank, which will be called Kookmin Bank. The government will hold a 9.36% stake. Japan to Probe Polyester-Fiber Dumping Japan's government said it will begin an investigation into allegations that South Korean and Taiwanese makers were dumping certain types of polyester fiber on the Japanese market, marking the latest effort to protect some embattled Japanese industries. The finance and economy ministries said they received requests this year from five Japanese makers to impose antidumping duties on the Korean and Taiwanese imports, and have found enough evidence to embark on a formal inquiry. Dabhol Holders May Review India Project Shareholders of Dabhol Power, a unit of Enron of the U.S., will meet Wednesday in London to possibly discuss the future of Dabhol's 2,184-megawatt power project in India's Maharashtra state, an Enron India spokesman said Saturday. Enron has a 65% stake in the \$3 billion project; the Maharashtra State Electricity Board owns 15%, and General Electric and Bechtel of the U.S. each hold a 10% stake in Dabhol. BRIEFLY: -- Citing market weakness, Taiwan's Chunghwa Telecom again postponed a planned U.S. share offering, the latest setback in efforts to privatize the company. The decision likely means Chunghwa will have to reapply to Taiwan's security regulator for the U.S. share offering. -- Pakistan plans to sell a further 26% stake in Pakistan Telecommunications to a private investor; bids will be due by June 30. The government will keep a 62% stake. -- Taiwan's central bank cut the discount and secured-loans rates by 0.125 percentage point to 4.0% and 4.375%, respectively, its fifth rate reduction in as many months. -- Kawasaki Steel said Friday it will likely join in talks on a business link between NKK and the steel unit of Germany's ThyssenKrupp. NKK and Kawasaki, Japan's No. 2 and No. 3 steelmakers, last week said they plan to merge operations beginning in October 2002. -- Time Magazine apologized to its Muslim readers after demonstrators in India's Kashmir region last week protested an image of the prophet Muhammad in its April 16 issue and Malaysia pulled the issue from newsstands. The editor of Time's Asia edition said the image was an "unintentional affront

to the Islamic faith," which considers such images blasphemy.

PG&E's Glynn Commits Chain of Errors Before Unit's Cash Crisis 2001-04-23 03:07 (New York)

PG&E's Glynn Commits Chain of Errors Before Unit's Cash Crisis

(Published in May issue of Bloomberg Markets.)

San Francisco, April 23 (Bloomberg) -- When Robert Glynn addressed PG&E Corp.'s shareholders for the first time as chief executive, he told them he saw only one way for the price of electricity to go in California: lower. "There is no product bought on a daily basis that has such a predictable downward price trajectory," he said at the 1998 annual meeting, held at San Francisco's Masonic Auditorium. Retail prices would drop 20 percent by 2001, he predicted. How wrong Glynn turned out to be. Since June 2000, wholesale prices in California have jumped sixfold. Utilities such as PG&E were barred from passing the increased costs on to customers when the state's electricity industry was deregulated in 1996. Glynn's misreading of the market was just one step in a chain of events that led him, in April, to steer the company's Pacific Gas & Electric Co. unit into Chapter 11 -- the biggest bankruptcy filing by a utility in U.S. history. Saying that electricity prices would fall, Glynn, 58, embraced deregulation -- the very same law that business leaders, politicians, and editorialists have recently condemned. With the help of proceeds from the asset sales required under deregulation, Glynn, who became CEO of PG&E in June 1997, pushed the San Francisco-based company into new markets. PG&E developed a nationwide energy sales and trading business and, through \$3.5 billion in acquisitions, became a power producer in New England and a natural gas provider in Texas.

#### PG&E Goes Up Against Enron

As PG&E expanded outside California, it butted heads with the likes of Enron Corp. -- and often came out on the losing end. Last year, PG&E sold its Texas natural gas business for \$840 million, less than half the price it had paid. The company also sold a unit that managed energy use for corporate customers after racking up more than \$120 million in losses. Some analysts and investors are fed up with Glynn's management. "He's put the company in some difficult situations," said Jeffrey Gildersleeve, an analyst at Argus Research who has a "hold" rating on the company's stock. "There has been a lot to swallow." PG&E's stock, which has traded as high as \$35.06 during Glynn's tenure, dropped to \$6.50 shortly after the bankruptcy filing. It closed last Friday at \$8.90, down 56 percent since the start of the year. Bond prices have also declined. Pacific Gas & Electric's 7.375 percent bonds due in 2005 have fallen to 65 cents on the dollar from about 90 cents last November. For 2000, the company had a net loss of \$3.36 billion after taking a \$4.11-billion charge for power-purchase costs. Revenue rose 26 percent to \$26.2 billion.

#### Early Proponent of Deregulation

Glynn was an early proponent of deregulation. He told legislators before the bill passed in 1996 that it would allow PG&E to raise cash to pay off debt as well as to expand outside the state. "Glynn, more than anyone else on earth, invented the idea that it was a good risk for utility shareholders to take," said California Senator Steve Peace, a Democrat who co-wrote the law. A native of Orange, New Jersey, Glynn joined Pacific Gas & Electric in 1984 after being with Long Island Lighting Co. and Woodward Clyde Consultants, an engineering company now owned by URS Corp. He became the utility's president in June 1995 and was named PG&E's president when the holding company was formed in Jan

USA: UPDATE 1-Enron CEO says stock hit because of high multiple. By C. Bryson Hull

03/28/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW ORLEANS, March 28 (Reuters) - Wall Street's stampede away from stocks with high price to earnings (PE) ratios is finally catching up with Enron Corp. and hurting its share price, the energy giant's top executive said on Wednesday. "I think the stock price dropped because of multiple compression," Enron President and Chief Executive Jeff Skilling told an audience of institutional investors at the Howard Weil Energy Conference in New Orleans. Enron currently trades at about 41 times earnings, a value Skilling said he considers "low and clearly sustainable moving forward." His comments came as Enron shares dropped as much as 5 percent Wednesday, before closing down \$2.36, or 3.9 percent, at \$58.10 in trading on the New York Stock Exchange. Enron's fall outpaced the less than one percent drop in the Standard & Poor's Utility Index. Skilling pointed to the wave of companies whose prices have dropped sharply in the last year because investors thought they were overvalued, with PE multiples above 30 times earnings range. "We kept our multiple and felt a little like the last duck in the pond and there was still a lot of ammo with the hunters," Skilling said. Enron's stock remained immune to the trend against high PE ratios until last week, when it dropped under \$60 for the first time since January 2000. It lost 8 percent over a two-day period, March 21-22, prompting Skilling to hold a conference call last Friday to assuage investors and analysts. One analyst said several Enron-specific issues have more to do with the recent decline in the company's share price than the broader market disregard for high PE ratio stock. "He is exactly right that high multiple stocks have sold off, and you see that particularly in the NASDAQ. Telecoms and the tech sector have been hit hard and Enron had a large part of its valuation in the telecom sector with broadband," Commerzbank securities analyst Andre Mead said. The market took that value out as telecoms weakened across the board and as some doubts arose about Enron's timing on its broadband initiative and other issues, he said. "The bottom line is there are some market dynamics at work for at least a portion of the sell-off, but a good deal of it is Enron-specific, because the market is valuing the broadband (part) less," Meade said. The fall in its shares last week followed a rapid string of negative news about Enron, including continuing word that India's Maharashtra State Electricity Board could not pay Enron for power from its Dabhol power plant; the termination of the broadband unit's marquee 20-year video deal with Blockbuster Inc. ; and false rumors of layoffs at the broadband unit. Enron has peaked at \$90.56 and touched a low of \$51.55 over the past 12 months.

USA: ICE to offer Internet products trade off Colonial Pipeline.

03/28/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW YORK, March 28 (Reuters) - Internet-based IntercontinentalExchange (ICE) plans to offer trading in U.S. refined products off the Colonial Pipeline in the second quarter of this year, a company official said Wednesday. The Houston-to-New York Colonial Pipeline is the largest refined products pipeline in the United States, pumping a total of 2.35 million barrels per day of gasoline, heating oil, diesel and jet fuel. Refined oil prices for the nation's refining hub on the Gulf Coast are set by trade into the pipeline. ICE however would not elaborate on which products exactly it will trade. "That's

the plan, but we don't really have any further details," said a company official. With backing from major banks and energy groups, ICE (<https://www.intcx.com>) has become one of the most widely distributed online energy marketplaces, despite only launching trading last fall. It hosts a range of energy and precious metal 'over the counter' (OTC) contracts - those traded outside regular futures exchanges. Oil derivatives traded on ICE include crude oil, fuel oil, heating oil, jet fuel, gasoline and naphtha. But with an average of \$3.5 billion in daily trade volume, rival Enron Corp (ENE.N) subsidiary EnronOnline ([www.enrononline.com](http://www.enrononline.com)) has been the most successful online energy trading platform. While it does not currently offer trading of Colonial Pipeline products, an EnronOnline official did not rule out such a move in the future. "We have been making additions pretty much every month," the official said. "If we get demand for Colonial, I'm sure we'll add it. We're making large efforts to expand that product area." This week, EnronOnline launched trading in WTI crude options and spread trading in Light Louisiana Sweet/St. James, West Texas Sour/Midland and West Texas Intermediate/Midland crudes.

US FERC To Seek Input On Regional Pwr Grid Coordination By Bryan Lee

03/28/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

OF DOW JONES NEWSWIRES

WASHINGTON -(Dow Jones)- The U.S. Federal Energy Regulatory Commission agreed Wednesday to seek comment on whether it should hold a technical conference on the coordination of wholesale power transactions among the regional transmission organizations, or RTOs, that it seeks to develop. FERC is in the midst of implementing a sweeping order that will direct the utilities it regulates to turn over control of their transmission assets to RTOs. The order aims to promote more liquid regional wholesale power markets by creating independent power-grid operators, removing the remaining ability of vertically integrated utilities to use control of transmission to competitive benefit in power markets. In December, competitive power suppliers and industrial consumers petitioned the commission to convene a technical conference on what was termed the "seams" issue involving wholesale power transactions from one RTO-administered grid area to another. "The transmission grid for electricity is interstate and inter-regional," said John Anderson, executive director of the Electricity Consumers Resource Council, or ELCON, which represents large industrial power users. "We must be sure that, first, RTOs coordinate transmission facilities of different utilities, but, second - and probably more important - we must ensure that transmission facilities coordinat

USA: INTERVIEW-El Paso had no reason to inflate price-chairman. By C. Bryson Hull

05/21/2001 Reuters English News Service (C) Reuters Limited 2001.

DALLAS, May 21 (Reuters) - El Paso Corp. had no incentive to inflate natural gas prices on its pipelines to California because it had hedged most of its gas to third parties before prices took off last year, the gas company's top executive said on Monday. The Houston-based company is currently fighting price-gouging claims brought to federal regulators by the California Public Utility Commission and that state's two largest investor-owned utilities, PG&E Corp.'s . Pacific Gas & Electric and Edison International's Southern California Edison. El Paso Chairman, President and Chief Executive Officer William Wise told Reuters he expects his company to be cleared once it makes its case to the U.S. Federal Energy Regulatory Commission in hearings this week. "The last piece we think is very elemental and so easy to understand is that we hedged our capacity into California. If we thought the gas prices were going to go up, we wouldn't have hedged it. We were hedging it because we thought prices would be flat or down," Wise said in his first interview on the topic since El Paso began fighting the accusations several months ago. Even SoCal Edison's main witness admitted during testimony last week that it would be irrational for a market manipulator to hedge like El Paso did, Wise said. Ninety percent of El Paso's gas was hedged to others in the period during which the company was alleged to have raised prices. On Monday, lawyers for El Paso continued fighting those accusations in proceedings before FERC Administrative Law Judge Curtis Wagner. The California trio alleges El Paso, California's largest natural gas supplier, withheld capacity on its four pipelines into the state from March through November 2000 in order to inflate prices. The CPUC alleges that cost Californians an additional \$3.7 billion. Even in the worst case, if Wagner substantiates the claims and orders El Paso to refund some of the money it made, Wise said the exposure will not be great. "I think in total last year, we didn't make more than \$100 million in California," Wise said during an interview following El Paso's annual shareholder's meeting in Dallas. The FERC already rejected a related accusation from the CPUC, which charged El Paso rigged bidding in a capacity auction for its main pipeline into California to favor a sister company. Wise said he was confident that El Paso would prove that it did not withhold pipeline capacity, as the company's accusers have alleged. The genesis of the complaints to FERC is a desire by the utilities and the CPUC to shift blame, Wise said. "They're attempting to deflect away from decades of bad policy and bad business decisions, both by the public utility commission and by the utilities in which they did not build power plants and they did not build natural gas infrastructure within the state," Wise said. The most glaring infrastructure problem is the limited capacity to move gas inside of California, especially from south to north. The utilities traditionally countered that by storing natural gas, but Wise said they made a critical mistake last year by selling stored gas at an arbitrated profit. "They depleted storage, and by the time they figured this out, they needed every bit of capacity just to serve the market and they had no capacity to refill storage," Wise said. "Economics 101 would tell you you're going to get prices spikes, and that's exactly what happened." ACQUISITIONS STILL ON RADAR Outside of California, Wise said that EL Paso will remain an active acquirer, given its track record of executing mergers and acquisitions like its recent \$24 billion purchase of Coastal Corp. "Do we buy an electric utility? Do we buy more (exploration and production)? The market should expect us to do merger and acquisition activity within the playing field that we have a demonstrated expertise in," Wise said. Asked whether he had any interest in hometown rival Enron Corp.'s Portland General utility, which is on the block again after

Enron's \$3 billion sale with Sierra Pacific Resources Corp. fell through last month, Wise answered: "The utility side of the business is not my favorite side of the business. The generation side of a utility could be interesting," Wise said.

Former TVA director signs as Enron lobbyist

05/21/2001 Associated Press Newswires Copyright 2001. The Associated Press. All Rights Reserved.

KNOXVILLE, Tenn. (AP) - Johnny Hayes, a former Tennessee Valley Authority director, has been hired to lobby Congress for electric wholesaler Enron Corp., a potential TVA competitor. Hayes, who resigned from the three-member TVA board in January 1999 to become the top fund-raiser for Al Gore's presidential campaign, registered this month to lobby for Houston, Texas-based Enron, The Knoxville News-Sentinel's Washington bureau reported Sunday. Enron is one of the nation's largest energy companies, reporting \$101 billion in revenues last year compared to government-owned TVA's \$6.7 billion. Enron spokesman Eric Thode confirmed Hayes has been hired to work for the company, but refused to say his salary. Enron paid another lobbyist \$415,000 last year, records show. Hayes' salary at TVA was \$118,400 annually. Hayes, a former Tennessee economic and community development commissioner who lived in Gallatin, did not immediately return calls to The Associated Press for comment. Stephen Smith, executive director of the TVA watchdog and environmentalist group Southern Alliance for Clean Energy, said he is concerned about a TVA insider joining ranks with a potential TVA competitor. "As a board member for TVA, one knows where a lot of the skeletons are throughout the agency," Smith said. "What is always a concern is when you step out away from the organization, do you potentially now profit from that and turn it against consumers in the Valley?" Hayes was hired to lobby "on energy issues, TVA-related, kind of a host of issues that would affect that area and be related to energy," Thode said. The lobbying "may include TVA, but it would be a variety of things," he said. "We're looking at things, projects all over the nation at all times." TVA and Enron have done business before. TVA contracted with Enron to provide power during peak periods in the summers of 1998 and 1999. When Enron fai

BANDWIDTH BEAT: Master Trading Agreement 3.0

04/16/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

. By Michael Rieke . A Dow Jones Newswires Column .

HOUSTON -(Dow Jones)- Carriers and trading companies worked for more than nine months last year, missed four deadlines and couldn't produce a master bandwidth trading agreement. Now they seem to be coming out with something new every other month or so. Since mid-December, two master trading agreements have been posted on the Competitive Telecommunications Association Web site, and there's a third one circulating. Who's behind it, however, is a mystery. The

first thing to understand in a discussion of master trading agreements for the bandwidth market is that few, if any, sources want to be quoted on the subject. Enron Corp. (ENE) and Williams Communications Group (WCG) are about the only companies willing to have their names attached to a trading contract. But it's safe to assume that at least El Paso Corp. (EPG), Utilicorp United Inc. (UCU) unit Aquila, Koch Industries and Reliant Energy Inc. (REI) worked with Enron on first contract. Universal Access Inc. (UAXS) and unnamed carriers are said to have worked with Williams on the second. The new contract is being referred to in the market as the "Universal Access" contract. "This is not a Universal Access contract," Pam Whitehead, vice president of global bandwidth markets for Universal Access, told Bandwidth Beat. Her company was one of about 10 carriers that worked on the third contract, she said. When asked for a copy of the third contract, Whitehead referred Bandwidth Beat to CompTel, saying she was sure the group had a copy. Another source, when asked for a copy of the third contract, said, "Why don't you talk to Pam? It's her document." Less Firm Or More Flexible?

The third contract is "less firm" than the other two contracts, people in the trading market said. But a person who worked on it described it in a way that makes it sound more flexible than the other two. "It does have a check box on the front that allows you to totally opt out of the firmness that's described (in the contract), said the source. "But if you don't check that box, it's completely firm." Firm contracts leave parties liable for damages if the terms aren't met, and trading companies say bandwidth has to be traded on a firm basis for the market to work. Carriers, on the other hand, say the best-efforts basis on which they've always done business should be fine for bandwidth trading as well. This split has frustrated attempts to create a common contract. But the whole debate over firm versus best-efforts is at least a little bogus. Despite traders' hard-line position, there's always room for flexibility in markets. When Enron buys natural gas, it doesn't always use a firm contract. If it's going to resell the gas under an interruptible - or best-efforts - contract, it doesn't need to buy with a firm contract. In the winter, when delivery of gas is crucial, 95% of the business is done with firm contracts, a veteran gas trader told Bandwidth Beat. In the summer, when delivery isn't so crucial, 75% of the business is done with firm contracts. Special Deals No One Talks About

When carriers say they've always done business on a best-efforts basis, they're not telling the whole truth either. Case in point are individual case basis, or ICB, contracts. ICB contracts aren't standardized. A buyer can get just about anything in an ICB deal, including firm delivery, but the buyer can't tell anyone about it. The arrangements are private and confidential. So who can get ICB contracts? It's determined by how much a buyer is spending, how much he knows about the market and how good he is at negotiating, Ron Harden, director and chief operating officer of PointOne Telecommunications in Austin, Texas, told Bandwidth Beat. "You can always get an ICB deal if you push them hard and ... if you know where the market is priced," he said. So energy traders don't always do business on a firm basis, and carriers don't always do business on a best-efforts basis. But there's no arguing that fact that trading with a firm contract makes any market, including the telecom market, more efficient. Buyers need to know when their crucial orders will be filled. Now let's go back to the fact that, at least on the carriers side of the argument, companies don't want their names associated with the effort to produce a standard trading agreement. The reluctance stems from internal and external concerns. Carriers' traditional sales staff fear bandwidth trading could cause them to lose customers and bonuses to their company's bandwidth trading desk. And carriers hoping to do business with both other carriers and trading companies don't want to endanger their relations with either group. But Jon Merriman, president and chief executive of RateXchange Corp. (RTX), has predicted that carriers won't always shy from being mentioned in connection with bandwidth trading. Sometime soon a telecom analyst will put a buy rating on a carrier that uses the bandwidth market to sell unused network capacity and increase its revenues, giving companies an incentive to open up, Merriman said. We'll see how long that takes. On the Web: <http://www.CompTel.org> -By Michael Rieke, Dow Jones Newswires; 713-547-9207; michael.rieke@wsj.com

Sierra Pacific Shares Slump After Utility Suspends Dividend By Elena Molinari

04/16/2001 Dow Jones Business News (Copyright (c) 2001, Dow Jones & Company, Inc.)

Dow Jones Newswires NEW YORK --- Interpreting Sierra Pacific Resources' suspension of its dividend payment as a sign of poor financial health, investors sold off shares of the utility on Monday. At 4 p.m., shares of Sierra Pacific (SRP) were off \$1.21, or 8.3%, to \$13.29 after earlier falling by as much as 12% in New York Stock Exchange trading. Sierra Pacific, which owns two Nevada utilities, said last week it cancelled the dividend payment scheduled for May 1. The company cited high power costs and other fallout from the energy crisis afflicting the western part of the U.S. The move will save the

Reno, Nev.-based utility less than \$20 million, it said. The dividend policy will be reviewed at the next board meeting May 21, the company added. Sierra Pacific has paid a quarterly dividend of 25 cents a share in recent quarters. Caught between regulated retail electric prices and rising wholesale energy costs, Sierra Pacific's situation is similar to that of California utility PG&E Corp., which filed for bankruptcy protection on April 6. "The company's earnings in the past few quarters have been hurt severely by the high cost of wholesale electric power," said Barry Abramson, an analyst with UBS Warburg. "Even though the company has been allowed to gradually increase its retail electric rates each month, these rate hikes have not kept up with the cost of power." Sierra Pacific received relief in February when the Nevada Public Utilities Commission approved a 17 percent rate increase, equal to about \$300 million of add

Dabhol notice: Govt has till Monday to respond Santosh Tiwary NEW DELHI

04/06/2001 Business Standard 2 Copyright (c) Business Standard

With little time left to respond to the arbitration notice served on it by the Dabhol Power Company, the Union finance ministry has asked the law ministry and the Maharashtra government to advise the Centre on the counter-moves to be made. The Enron-promoted company had issued a notice of conciliation and arbitration for the non-payment of the December bill of MSEB of Rs 102 crore, which had the state government as well as the Centre's counter-guarantee. DPC has informed the Centre that it has to respond by 3.00 pm on Monday. Maharashtra government sources said, "Thursday and Friday are holidays on account of Moharrum and Mahavir Jayanti respectively. We will be able to work on the notice only on Saturday. The Centre too will be able to take action only on Monday as Saturday and Sunday are holidays." Finance ministry sources said that the law ministry had earlier informed the government that there was a case for Maharashtra seeking adjustment of "availability penalty" from DPC against the outstanding bills and the Centre was expected to fight it out in the international court of arbitration. They further said that the Centre will respond to the notice well in time. Sources also said that the Centre was contemplating the options through which a long-term solution to the payment wrangle could be achieved. The finance ministry was also firming up on its suggestion of the possibilities of a re-negotiation of the counter-guarantee for a discussion in the Cabinet, they pointed out. The Centre had made it clear earlier that it was interested in finding a long-term solution to the problem by not paying the December bill for which the GoI counter-guarantee was invoked by the DPC, till the penalty issue taken up by the MSEB was settled.

Oregon Regulators: Elec Utils Will Be Able To Buy BPA Pwr

04/05/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

LOS ANGELES -(Dow Jones)- Oregon regulators Wednesday said that the state's electricity restructuring legislation will not prohibit Enron Corp (ENE) utility Portland General Electric and Scottish Power (SPI) unit PacifiCorp from buying cost-based power from Bonneville Power Association for their residential and small farm customers. BPA, the federal agency that markets electricity from dams on the Columbia and Snake Rivers, is scheduled to provide 259 megawatts of cost-based power to Portland General and 135 MW to PacifiCorp, starting Oct. 1, the effective date of the state's restructuring bill. The bill required the Oregon Public Utilities Commission to determine by May 1 whether certain bill provisions would require the utilities to restructure in such a way that they could not meet BPA eligibility requirements for cost-based power. "We've taken great care to make sure we didn't violate (BPA) standards. Even though BPA's rates are going up, this power will still provide benefits for residential customers," OPUC Chairman Ron Eachus said. -By Jessica Berthold, Dow Jones Newswires; 323-658-3872; jessica.berthold@dowjones.com

USA: US POWER-Success spells trouble for Calif. energy traders. By C. Bryson Hull

04/05/2001 Reuters English News Service (C) Reuters Limited 2001.

HOUSTON, April 5 (Reuters) - In downtown Houston's booming energy district sit a few companies whose record earnings have made them fat targets for regulators and politicians under pressure to make someone pay for California's power crisis. High energy prices and shrewd trading have earned Houston companies Dynegy Inc. , Reliant Energy Inc. , El Paso Corp. and Enron Corp. huge profits, higher rankings on the Fortune 500 list and happy stockholders. But success has bred contempt and invited political and regulatory fire as California reels from blackouts and rising power rates in a crisis that is engulfing the U.S. West. The power companies' troubles, on both the state and federal level, could get worse if forecasts of a summer electricity shortfall become reality. "I don't think Dynegy, Reliant and Duke and those people are out of the woods yet. The regulatory policy is just not as mature yet," said Jerry Langdon, who served on the Federal Energy Regulatory Commission (FERC) from 1988 to 1993. "While those are unregulated entities, they are being treated like regulated entities." Langdon, a FERC appointee by President Ronald Reagan who is now in the natural gas industry,

points to FERC's recent order to 13 power providers to either justify high power prices in California or refund millions of dollars to state utilities. Dynegy and The Williams Cos. were hardest-hit, and are fighting refund orders of \$45.8 million and \$29.6 million, respectively. STATE TROUBLES FOR GENERATORS And that is just at the federal level. Democratic Gov. Gray Davis of California has already branded the power providers as "out-of-state profiteers," and other politicians and regulators are investigating anti-competitive practices and are proposing various sanctions. The latest volley came Wednesday, when a group of California state legislators proposed a windfall profits tax against power generators. Under the bill, California would set a limit on the amount of profit generators could make and would take any money earned above that level. The bill's sponsors took particular aim right at Houston's generators. "They have been gouging us, and it is time we gouged them. We're sick of paying these outrageous bills to those Texans," California Assemblyman Dion Aroner said. The generators are adamant they sold their power properly, at market prices they can justify. "We'll continue to justify our operations and we'll take the uproar for what it is. Will it get worse? It's hard to speculate," Reliant spokesman Richard Wheatley said. FEDERAL REGULATORY ENVIRONS FAVORABLE The saving grace for the generators may be the Bush Administration's clear hands-off approach to the California crisis, which it has declared a state issue. Bush and FERC Chairman Curtis Hebert both opposes price caps. And power producers could soon have two familiar and friendly faces on the FERC. Bush last week appointed former Texas Public Utility Commission chair Pat Wood III and Pennsylvania Public Utility Commissioner Nora Mead Brownell, both of whom oversaw their states' power deregulation efforts. "With the new appointments to FERC, I think it's pretty clear they are not going to interfere with California," said John Herrington, a former energy secretary in the Reagan administration who lives in California. But if fears of a summer power shortfall come true in California and west as expected, the Bush administration's stance could change, said former FERC chairman and Clinton administration deputy Energy Secretary Charles Curtis. "Those concerns will find a public expression, and they will likely be calls for regulatory intervention," Curtis

Best, Jeff \*\*\*\*\* Power purchase bills exceed \$7.5 billion  
Published Tuesday, July 10, 2001, in the San Jose Mercury News BY MARK GLADSTONE, NOAM LEVEY AND DION NISSENBAUM

Mercury News Sacramento Bureau

SACRAMENTO -- Six months after jumping into the electricity business, the Davis administration on Monday provided the first detailed glimpse of California's daily power purchases, showing more than \$5 billion in payments, much of it to government-owned utilities and private companies that state officials have branded as price gougers. The state spent an additional \$2.5 billion on a variety of contracts and other electricity services designed to stabilize the volatile energy markets, according to documents that the state agreed to release last week amid a legal dispute over public access to the data. In roughly the first five months of the year, the state shelled out \$1.2 billion to Atlanta-based Mirant, the most any company was paid for electricity, followed by \$1 billion to Powerex, the marketing arm of BC Hydro in British Columbia. It also paid \$331 million to the Los Angeles Department of Water and Power. The documents raise questions about some of the common assumptions that have arisen around the electricity crisis. For instance, almost 40 percent of the state's purchases have come from government-run power generators in California and elsewhere, but not Texas; some of the biggest suppliers are from the Northwest. Gov. Gray Davis, who has ambitions to run for the White House, has put much of the blame for the soaring costs of power on energy companies based in President Bush's home state. The figures are tucked inside 1,770 of pages of invoices that Davis has resisted divulging, saying disclosure would encourage suppliers to charge more. The state, which last month released information on its long-term electricity contracts worth \$43 billion, agreed Thursday to release the first quarter details. Short on explanation The figures were disclosed late Monday by the

California Department of Water Resources, which buys power for the state's financially strapped major utilities, and seem to buttress the administration's contention that the price of power is gradually dropping but offer little or no explanation for what prompted the decrease. In January, for instance, the average price for power on the spot market was \$321 a megawatt hour. It peaked in April at \$332 and dropped to \$271 in May. One megawatt powers about 750 homes. Davis spokesman Steve Maviglio said the price data supports the governor's assertions that California has been gouged. "The bad guys are clearly the out-of-state generators," Maviglio said. "There has been a significant shift of money out of California." But the documents fail to shed much light on whether, as the administration contends, the price drop was due to long-term power contracts negotiated by the state earlier this year. Critics contend that the Davis administration panicked and rushed into deals that commit the state to pay high prices for many years. Used for support Republican officials used the price information to bolster their attacks against Davis, a Democrat, for signing long-term contracts with power generators even as the price of power on the spot market was coming down, partly because of the declining price of natural gas used to fuel many plants. "It's more clear than ever that the long-term contracts are a bad deal," said Assemblyman Tony Strickland, R-Camarillo. "The governor's really hurt the ratepayers for the next five or 10 years." The newly released bills highlight the volatility of California's energy market, where the price per megawatt hour ranged from \$70 to \$1,000. On any given day, the records show, the prices from seller to seller varied widely, with some of the highest prices being charged by public utilities and companies outside Texas. On one day in February, for example, San Diego-based Sempra Energy was charging \$165 per megawatt hour, the Eugene Water and Electric Board was charging nearly \$500 and Duke Energy, a North Carolina company, was charging up to \$575. The state's daily spending peaked May 10 at \$102.4 million for all power, including the spot market and contracted power. The state began buying power in mid-January on behalf of the state's major utilities, which were unable to borrow money to buy power after amassing enormous debts for electricity. San Jose-based Calpine Corp., which is building several new power plants around California including one in South San Jose, did only \$29 million worth of business with the state in the first five months of the year, according to the figures. The state began buying power in mid-January when Pacific Gas & Electric Co. and Southern California Edison Co. were on the ropes financially. PG&E later went into bankruptcy. On Monday, state lawmakers took another shot at trying to cobble together a plan to rescue financially ailing Edison. While most concede that a rescue plan Davis worked out with Edison will not win the necessary support in the Legislature, lawmakers have created several working groups to come up with alternatives. Compromise plan On Monday, state Sen. Byron Sher, D-Redwood City, unveiled the latest compromise proposal that seeks to protect average ratepayers and small businesses from further rate increases and forces everyone else to help finance the Edison bailout. The "shared pain" proposal would force power producers, owed about \$1 billion, to take a 30 percent "haircut" and agree to forgive about \$300 million in Edison debts. Edison would be asked to swallow \$1.2 billion -- about a third of its debt. And big users would be asked to pay off the remaining \$2 billion in debts, possibly by paying higher prices for power. In exchange, large companies would be given the opportunity to buy power on the open market, a system that would allow many of them to sign cheap energy deals. Sher presented the proposal to Senate Democrats Monday afternoon, but it remains unclear how much support the framework will receive in the Legislature.

Insight Capital Closes Fourth Fund With \$740 Million

mail? top NEW YORK (VENTUREWIRE) -- Insight Capital Partners, a venture capital firm focused on software companies, said it closed its fourth venture capital fund, Insight Capital Partners IV, with more than \$740 million. Managing director Scott Maxwell said the fund, originally targeted between \$700 million and \$750 million when Insight began fundraising last June, will make typical investments of \$20 million in expansion-stage enterprise software companies over the next three years, with about 15% of the investments made internationally. According to Mr. Maxwell between 30% and 40% of the fund's

capital came from new limited partners with the rest coming from returning LPs. The firm has no plans to deviate from its original model. "Software is the space we're founded on and the space that's thriving," said Mr. Maxwell. "We pick the absolute best ten or so software companies each year that will bring in the best revenues and spend an enormous amount of time on them." Insight IV has already invested in Enigma, ConnectCapital Holdings, Dorado Software, and Xchange. The firm's other managing directors include Jeff Horing, Jerry Murdock, Bill Doyle, Peter Sobiloff, and Deven Parekh. Insight Capital Partners closed its first \$15 million fund in June 1996, an \$81 million fund in July 1997, and its third fund at \$307 million in March 1999. Insight has approximately \$1.5 billion under management. <http://www.insightpartners.com> Whitney & Co. to Spin Off International Offices mail? top STAMFORD, Conn. (VENTUREWIRE) -- Whitney & Co., a Stamford, Conn.-based venture capital firm, will spin off its offices in Tokyo, Hong Kong, and London, VentureWire has learned. "They're closing all international offices," said a source close to the firm. The source said Whitney will contract with individuals in each office to oversee the existing portfolio companies. Earlier this month, Whitney announced closing its fifth fund at \$1.1 billion, short of its \$2 billion target. At the time, the firm said it would significantly reduce overseas personnel as well as lay off an undisclosed number of employees at its headquarter

A Section Coal Scores With Wager on Bush; Belief That Mineral Is Part of 'Balanced' Energy Policy Lifts Industry Outlook Dan Morgan Washington Post Staff Writer

03/25/2001 The Washington Post FINAL A05 Copyright 2001, The Washington Post Co. All Rights Reserved

Few businesses placed as big a bet on Republicans in the last election as the coal industry, which gave 88 cents out of every dollar in campaign contributions to GOP candidates or organizations. Two months into the Bush administration, that wager has begun to pay off. President Bush has jettisoned a campaign promise to require coal-burning power plants to reduce emissions of carbon dioxide, after heeding industry warnings that such action could "kill coal." Now, industry officials who worked for this week's Environmental Protection Agency decision to revoke a Clinton administration crackdown on arsenic in drinking water are taking aim at more than two dozen pending rules regulating substances from coal mine dust and ozone to diesel particulates. In the GOP-controlled Congress, lobbyists for coal companies, railroads and electric utilities are mobilizing behind tax credits, subsidies and regulatory exemptions for coal-burning utilities. The emergence of coal from the political shadows is due in part to Bush's conviction that the mineral, which is used to generate half the nation's electricity, is crucial to preventing the spread of the California energy crisis. Coal "didn't have a very friendly forum in this town" during the Clinton administration, an environmental official said. The Clinton administration favored rigorous enforcement of clean air controls on emissions by coal-burning utilities and encouraged expansion of power plants using cleaner natural gas. The Bush administration, in a tilt back the other way, contends that an expansion of coal-generated power must be part of the "balanced" energy policy needed to provide ample electricity at reasonable prices. But coal's new strength also rests on the enhanced influence, in the aftermath of last year's election, of a network of interests, such as electric utilities and railroads, that strongly oppose lessening the country's dependence on coal. In late February, senior executives of coal, utility and railroad companies descended on Washington under the auspices of an informal group, the Coal-Based Generators, to lobby for legislation providing tax credits and other subsidies for utilities using experimental "clean coal" technologies. Among them were Irl Engelhardt, chairman of the Peabody Group, the nation's largest coal enterprise, whose holding company contributed \$250,000 to the Republican National Committee in July. Engelhardt himself served as an energy adviser to the Bush-Cheney transition team. Meanwhile, coal, rail and power companies such as Peabody Holdings Inc., Burlington Northern/Santa Fe, and Southern Co., provided funding last year to start Americans for Balanced Energy Choices, to develop grass-roots support for coal. "The market realities have changed, and the political dynamics have changed in Washington," said the group's president, Steve Miller, a Democrat who was Bill Clinton's campaign organizational chairman in Kentucky in 1992. "People have no idea of the environmental improvement the coal industry has made." To get that message across, Americans for Balanced Energy Choices has set up a Web site and prepared a media advertising budget of several million dollars to finance what Miller says will be "a longtime conversation with opinion leaders across the country." The purpose will be to counter the influence of environmental organizations. Separately, the Coalition for Affordable and Reliable Energy, made up largely of trade associations, has been set up to lobby in Washington and has begun running advertisements in Capitol Hill publications. Electric utilities and their executives and employees last year gave \$18.4 million to candidates and parties, of which \$12.4 million went to Republicans, according to the Center for Responsive Politics, a campaign research group. Southern Co., one of the nation's largest coal-burning power producers, opposes the Kyoto protocol, under which signatory nations, including the United States, agreed to reduce greenhouse gas emissions to 1990 levels. The Senate has never ratified the

agreement. Southern Co. is represented in Washington by the lobbying firm headed by former Republican National Committee chairman Haley Barbour, a close associate of Senate Majority Leader Trent Lott (R-Miss.). In the House, Rep. Joe Barton (R-Tex.), chairman of the subcommittee with jurisdiction over clean air and energy, has vowed that legislation containing such restrictions will "never" pass through his panel. Until Barton's northeast Texas district was reconfigured in 1994, it contained strip mines and coal-burning power plants belonging to Texas Utilities Co., the third largest electricity producer in the United States. Barton has continued to receive funds from its political action committee. The coal industry itself has made use of its own extensive network of connections. The Interior Department's newly appointed deputy secretary is J. Steven Griles, who has lobbied for coal and gas companies ranging from Pittston Coal Co. to Dominion Resources. The Bush-Cheney transition team was sprinkled with industry officials, including Engelhardt and Steven Chancellor, president and chief executive of Indiana-based Black Beauty Coal Co. Chancellor and his company were major Republican contributors, and he hosted a fundraiser in August at his home attended by former president George Bush and vice president Dan Quayle, according to the Indianapolis Star. West Virginia coal executive James "Buck" Harless raised more than \$100,000 for President Bush and chipped in \$100,000 to the Bush-Cheney Inaugural Fund, as did Peabody Holding Co. and Southern Co. The coal industry may enjoy even better connections in Congress. Along with Sen. Robert C. Byrd (D-W.Va.), Sen. Mitch McConnell (R-Ky.) has advanced legislation providing billions of dollars in tax credits for utilities, and indirectly benefiting contributors to GOP campaign committees he has headed.

Enron Unit Must Honor Pact With California Schools (Update1) 2001-04-11 16:30 (New York)

Enron Unit Must Honor Pact With California Schools (Update1)

(Adds comment from judge, details of hearing starting in third paragraph.)

San Francisco, April 11 (Bloomberg) -- An Enron Corp. unit must provide electricity to California universities under an existing contract, U.S. District Judge Phyllis J. Hamilton ordered. Enron Energy Services Inc. had agreed to provide energy and related services to the University of California and California State University, said Douglas R. Young, a lawyer for the universities. The company cut off the schools on Feb. 1, and transferred the accounts to PG&E Corp. and Edison International utilities, Young said at a hearing today in San Francisco. The schools say they want to keep the contract with Enron, because it is more reliable than the utilities. Both utilities are burdened with billions in power-buying debt, and Pacific Gas & Electric Co. has filed for bankruptcy. The utilities' customers have been subjected to rolling blackouts amid power shortages in the state. "Enron did not have the right to return the university systems to the utilities," Hamilton said. She granted the universities' preliminary injunction, forcing Enron to honor the contract for now. Enron and the universities announced the four-year contract in 1998, valuing the agreement at \$300 million to \$500 million in electricity sales. Cal

State would save \$1.5 million a year through the contract, they said, and U.C. would save \$2.4 million.

#### The Switch

Enron lawyer A. William Urquhart said the company didn't cancel the contract; it just switched the source of supply to the utilities. Enron said it will file an immediate appeal with the 9th U.S. Circuit Court of Appeal in San Francisco. During the hearing, Urquhart said Enron had a "responsibility to its shareholders" to make financially prudent decisions. At most, the universities have suffered some economic damage, which would not entitle them to enforce the contract, Urquhart said. California Attorney General Bill Lockyer, who filed a "friend of the court" brief in the case, said that Enron's duty to its shareholders "seems to be to rip off California consumers." Enron is saying "we don't want to sell power at the prices we promised," Lockyer said. "We continue to believe that we're acting in the best interests of our clients," Enron Energy Services spokeswoman Peggy Mahoney said after the hearing.

#### Lawsuit

The universities sued Enron in March, seeking to enforce the four-year contract. The schools also said in court documents that buying from utilities would render obsolete new electricity meters that help them conserve. The universities have installed meters to collect data on consumption, helping them reduce power bills. Those \$1,500 meters can't be used on the "bundled" systems like the utilities' and would have to be removed, said Charles McFadden, spokesman for the University of California. Enron says that it has offered to continue to provide all campuses with the metering, billing and related services under the agreement. Judge Hamilton ordered the universities to post a \$1 million bond. The routine order assures Enron's losses will be paid, if the energy company prevails in the case.

Judge orders Enron to deliver electricity to universities By DAVID KRAVETS Associated Press Writer

04/11/2001 Associated Press Newswires Copyright 2001. The Associated Press. All Rights Reserved.

SAN FRANCISCO (AP) - Saying that Enron Energy Systems Inc. may be in breach of contract, a federal judge Wednesday ordered the Houston company to abide by its agreement to sell cheap power to the state's public universities. Enron was attempting to get out of delivering power for the final year of a four-year deal with the California State University and University of California systems. Enron, which buys power from producers and sells it on the market, said the contract would cost the energy concern \$12 million a month because of skyrocketing wholesale power prices. Enron said the state should free Enron from its obligation and taxpayers should pick up the tab. "It's our economic interest to provide a service with the least amount of dollars we can provide it for," Enron attorney A. William Urquhart said. He later described the case as being "all about money. It's all about money." Enron said it would file an emergency appeal to the 9th U.S. Circuit Court of Appeals in San Francisco to overturn U.S. District Judge Phyllis Hamilton's ruling in the suit brought by the state's two university systems. Appearing in federal court, state Attorney General Bill Lockyer argued that Enron wants out of the contract so it can engage in a "marketing game" with the universities' promised power and sell it on the open market for 10 times more than what the electricity cost Enron. He said lawmakers may have "left the keys in the car" when they approved California's failed energy deregulation scheme that has prompted the energy crisis, "But it is still theft to steal the car." The judge issued a temporary injunction against Enron, forcing it to continue providing service as the suit brought by the universities proceeds. When the judge issued the order, she also said there is a likelihood Enron will lose the suit. "I am persuaded, in the end, there is a very strong likelihood of success on the breach of contract claim," the judge said. UC's annual electric bill is about \$87 million and its natural gas bill is about \$26 million. CSU annually pays about \$40 million for electricity and \$20 million for natural gas. The case is UC Regents vs. Enron Energy Systems Inc., 01-1006.

WSJ.COM: Rumors? Firms Ponder How To Announce Layoffs By Stephanie Miles

04/11/2001 Dow Jones News Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

WSJ.com

NEW YORK -(Dow Jones)- When British technology publisher Future Network PLC announced a broad restructuring that would result in 350 layoffs, few employees were surprised. For a week, workers had been glued to an industry-gossip site. "Everybody was waiting, expecting to be fired," says Scott Laine, who was laid off from a job in sales for Revolution magazine, published by Future's U.S. subsidiary Imagine Media. Managers were watching the message boards, too. So,

when Future announced the restructuring in February, it sent a short companywide e-mail with the press release attached. The company also sent out two more detailed letters, from Future's chairman and chief executive respectively, explaining in more detail the circumstances surrounding the layoffs. But instead of beaming them electronically, the U.S. unit printed out color paper copies and placed them on employees' desks, in an effort to keep the note from being quickly posted online or cleanly photocopied. "Why make it easy?" says Nancy O'Neill, then president

SACRAMENTO -- In a dramatic escalation of energy crisis rhetoric, California Atty. Gen. Bill Lockyer this week suggested the chairman of a Houston-based power company should be locked in a prison cell with an amorous, tattooed inmate named Spike. Lockyer, who is investigating whether energy firms have manipulated prices on the wholesale electricity market, made the comment in an interview with the Wall Street Journal that appeared Tuesday. "I would love to personally escort [Enron Corp. Chairman Kenneth] Lay to an 8-by-10 cell that he could share with a tattooed dude who says, 'Hi my name is Spike, honey,' " Lockyer said. Enron spokesman Mark Palmer called the comment "counterproductive rhetoric" that "does not merit a response." But other industry representatives denounced the remark as "outrageous," especially because neither Lockyer's office nor any investigative panel has filed charges against Enron or other companies. "You'd expect that the state's chief legal counsel would file charges first and make public statements second," said Gary Ackerman of the Western Power Trading Forum, an association of energy producers and traders. "We're very disappointed with his choice of words, which don't exactly fit the profile of his office." In an interview Tuesday, Lockyer said he decided to "ratchet up" the commentary to "put [energy companies] on notice" that "we are not afraid of them and have the will to prosecute." "What I'm trying to do is let these economic buccaneers understand that if we catch them, they're going to be prosecuted," Lockyer said. "Just because they're multimillionaires and run big corporations, it doesn't provide them with immunity." The attorney general is investigating whether power company officials tried to maximize profits through illegal manipulation of prices on the wholesale energy market. Several panels, including a state Senate committee and the California Public Utilities Commission, are conducting similar probes. On Tuesday, Lockyer announced that three power companies have agreed to turn over documents subpoenaed months ago by his investigators. The attorney general went to court to obtain the documents after the companies failed to meet a March 19 deadline to hand them over. Lockyer said the forthcoming documents would help his office as it sifts through mountains of evidence in search of possible violations of antitrust or unfair business practice laws. "Evidence is accumulating that certainly infers illegal activity," Lockyer said. "But we need to make sure it's compelling and clear enough that you can convince a jury." Lockyer said he singled out Enron's chairman because the Houston company is the world's largest energy trader. At least one observer found Lockyer's comments refreshingly candid. Harry Snyder, a senior advocate of Consumers Union, said, "Let Lockyer be Lockyer." \* Times staff writer Dan Morain contributed to this story.

Enron Unit Threatened With India Fine An Indian state utility is planning to impose a second penalty of four billion rupees (\$85 million) on U.S. energy company Enron's local unit, barely a week after Enron took its first step to pull out of the embattled power project. A Maharashtra State Electricity Board official said the fine on Dabhol Power would be for not meeting capacity targets within a stipulated period. Dabhol Power officials declined to comment. The MSEB earlier this year imposed a similar penalty on Dabhol, which it hasn't paid, saying its plant couldn't be ramped up to full capacity within three hours from a cold start.

May 23, 2001, 4:38AM Consumer rights cited in petition with Texas PUC By LAURA GOLDBERG Copyright 2001 Houston Chronicle Residential consumers switching power companies under a pilot deregulation program aren't being properly informed of their rights, four consumer groups said Tuesday.

At issue is a document called "Your Rights as a Customer" that electric providers are required by the state Public Utility Commission to give consumers signing up to switch companies. The document must include information on a variety of topics, including filing complaints against providers, protection against unauthorized service switches, meter testing and privacy rights. Consumers Union, Texas Legal Services Center, Texas Ratepayers' Organization to Save Energy and the AARP Capital City Task Force for Deregulation of Electricity filed a petition Tuesday with the PUC. In it, they asked the PUC to require electric providers to fix their documents, to take any other action needed to clear up consumer confusion that may be occurring, and to develop a standard document format for providers to use. They also ask that the PUC's education campaign better inform consumers of their rights. Starting Jan. 1, when the Texas electricity market deregulates, all Texas consumers will be able to choose power providers. Before that, a limited number of consumers will be able to get power from new providers under the state's pilot program starting in July. Nearly 50,000 residential customers have signed up for the pilot, and thousands of slots are still open. That Texas consumers haven't had to shop

for electricity presents a challenge to start with, said Janee Briesemeister, senior policy analyst with Consumers Union Southwest Regional Office. "And when the information that is given to consumers is confusing, they're at a further disadvantage," she said, adding that the PUC said

CHICAGO -- Enron Corp. and Exelon Corp.'s Commonwealth Edison Co. signed an agreement to supply power to the city of Chicago and 47 suburban communities, in the largest such deal since Illinois deregulated its electricity industry in 1997. Under the agreement, Enron will provide 60% of the 400 megawatts of power contracted annually while ComEd will provide the rest. Terms of the contract, expected to go into effect this year, weren't disclosed. The coalition of governments sent out requests for bids to the state's 13 registered electricity providers last summer in a bid to bring down power costs.

ASIA/PACIFIC Lenders to Enron Unit Continue Talks Foreign and Indian lenders are scheduled to meet again today in Singapore, after two days of talks with Dabhol Power, U.S. energy company Enron's Indian unit, ended in deadlock, according to R.M. Ganatara, general manager of the Industrial Development Bank of India. The talks are over the future direction of its \$2.9 billion power project near Bombay. "Something is being hammered out; there isn't a common meeting point yet. We will be looking toward a solution to end this crisis" at today's meeting, he said. But he said he wasn't "sure how and where the talks will end" concerning the project, which has been torn by a bitter dispute between Dabhol and the Maharashtra State Electricity Board over nonpayment of bills and power charges.

June 7, 2001, 12:09AM Briefs: Houston & state

Enron Broadband invests in AP Engines Enron Broadband Services, a division of Houston-based Enron Corp., took part in a \$30 million venture investment into Massachusetts-based tech firm AP Engines. Private equity fund Thomas Weisel Capital Partners led the round, while Atlas Venture, Bessemer Venture Partners and Commonwealth Capital Ventures, Lighthouse Capital Partners and Mentmore Venture Partners also participated in the round. AP Engines develops software that allows broadband Internet service providers, such as cable and telephone companies, to move a variety of data types, including, e-mail, voice, video-on-demand and video conferencing over their networks.

June 7, 2001, 9:58PM Houston Chronicle Attempt to save Enron power project in India extended to third day Bloomberg Business News SINGAPORE -- Indian banks that funded Dabhol Power Co., a unit of Enron Corp., and international lenders extended a meeting into a third day to try to save the \$3 billion power project from closure, bankers said Wednesday. Executives from Industrial Development Bank of India, or IDBI, other Indian banks and international lenders such as ABN Amro Holding NV decided to meet again today after initially planning a two-day meeting, the bankers said. The meeting was called to resolve a dispute related to power prices that has resulted in Dabhol and the Maharashtra State Electricity Board, its only customer, starting to terminate the project. The fate of Houston-based Enron's first investment in India is seen as a litmus test for future foreign involvement in infrastructure projects in the country. Indian banks have the most at stake. Unlike them, international lenders received government guarantees for about \$600 million they lent to the project. The Indian banks, which have given as much as \$1.4 billion in unsecured loans, are that concerned foreign creditors may call for a termination of the project and invoke their guarantees and are seeking ways to keep it alive. Lenders such as ABN Amro, Citibank N.A., a unit of Citigroup, Bank of America and Credit Suisse First Boston in April approved Dabhol's decision to begin termination of its power supply contract with the board. Foreign banks wouldn't comment on what solution they are seeking from the Indian lenders at the Singapore meeting.

Derwent Valley. : Grosvenor Place Pre-letting

06/07/2001 Dow Jones International News (Copyright (c) 2001, Dow Jones & Company, Inc.)

LONDON -(Dow Jones)- The company has, through one of its subsidiaries, pre-let further office space at 21 Grosvenor Place, SW1 to Enron Power Operations. Enron took 1,980 sq. m (21,300 sq. ft) earlier this year and is now taking an additional 1,170 sq. m (12,600 sq. ft), at GBP0.7m per annum. The rent payable equates to GBP55 per sq. ft, for a lease expiring in 2014, with reviews in 2004 and 2009. Refurbishment of this newly-let space will be incorporated into the current scheme, at an additional cost of GBP1m, with the work scheduled for completion at the end of 2001. India Dabhol Pwr Lenders Mtg Ends "Positively" - Source

06/07/2001 Dow Jones Asian Equities Report (Copyright (c) 2001, Dow Jones & Company, Inc.)

SINGAPORE (Dow Jones) A three-day meeting involving institutional domestic and foreign lenders to U.S. Enron Corp.'s (ENE) troubled Dabhol Power Co. project in India ended Thursday "positively," one of the lenders told Dow Jones Newswires. He added no further meetings were planned in Singapore. Dabhol, India's largest private power plant, was scheduled for commissioning in two phases. The project's first phase, a 740-megawatt power plant, has already been commissioned and 1,444-megawatt phase two is due to be completed later this year. The \$3 billion Dabhol project has been mired in financial disputes when its main customer, the Maharashtra State Electricity Board, has failed to pay several of its bills. Dabhol has come under fire because of the relatively high cost of its power. Critics object to Dabhol charging INR7.1 a kilowatt-hour for its power, compared with INR1.5/KWh charged by other suppliers. Enron Corp. (ENE) has a

65% controlling stake in the controversial 2,184-megawatt, \$3 billion Dabhol project, which supplies power to the State Electricity Board. MSEB has 15%, General Electric Co. (GE) has 10% and Bechtel (X.BTL) with 10% are the other shareholders in the project. A senior official with an Indian lender involved in the DPC project confirmed that the meeting's outcome was positive. "

Calif Senate Committee Pushes Enron Contempt Cite Forward

07/11/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

LOS ANGELES -(Dow Jones)- A California Senate committee Wednesday voted to forward to the full Senate a contempt charge against Enron Corp (ENE) because the company refuses to provide certain financial documents for an investigation into wholesale power prices in the state. If Enron is deemed to be in contempt by the full Senate, the legislators will vote on punishments that could include fines against the company or incarceration for company executives. "When Enron decides it is so important to keep its information private, I can only assume there is much more there to find than I can imagine," said Sen. Steve Peace, D-El Cajon, a member of the Senate Select Committee to Investigate Market Manipulation. Enron filed a lawsuit Tuesday to stop the Senate's subpoena of financial records, saying the documents were outside of California's jurisdiction. The company is also likely to legally contest the contempt charge, an Enron attorney said during Wednesday's hearings.

The market manipulation committee will forward its contempt report to the full Senate by early next week, at the earliest, said Sen. Joe Dunn, D-Santa Ana, chair of the committee. If at any point between now and then Enron decides to comply with the committee's requests, the contempt charge will be dropped, Dunn said. The committee also voted not to recommend a contempt charge for Mirant Corp (MIR), which agreed to provide financial documents Wednesday morning shortly before the hearing. The documents sought by Dunn's committee include information on bidding and pricing behavior in the state's electricity markets. The committee originally was poised to cite eight electricity generators for contempt, but all except Enron have since agreed to provide the requested information. -By Jessica Berthold, Dow Jones Newswires; 323-658-3872; jessica.berthold@dowjones.com

Enron Sues To Block Calif From Forcing Document Release

07/11/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

SACRAMENTO (AP)--Enron Corp. (ENE) is suing California officials to stop a Senate subpoena of its financial records in a dispute over alleged overcharges for its electricity sales to California. "They've sent two things to Texas - our money and these documents, and they saying we can't get either one back," said Laurence Drivon, special legal counsel to the California Senate Select Committee to Investigate Market Manipulation. The suit came hours before the committee will consider asking the full Senate to cite the Houston-based company for contempt Wednesday. The other subject of possible sanctions, Atlanta-based Mirant Inc., appears to be cooperating, Drivon said. Committee chairman Joe Dunn, a Santa Ana Democrat, said the committee's investigation will continue despite Enron's "pure act of intimidation. We're not going to back down." Enron's suit said the company's financial papers are outside the committee's jurisdiction because most of its operations and paperwork are outside California. That shouldn't matter, Drivon said, citing last year's successful out-of-state documents during the investigation into the activities of former Insurance Commissioner Chuck Quackenbush. Previous investigations have included documents subpoenaed from other nations, he said. Companies doing business in California cannot claim immunity from its laws or oversight, Drivon and Dunn said. Houston-based Reliant Energy made the same argument but then agreed to turn over 1,800 documents.

Enron Corp. sues to block Senate from forcing document release By DON THOMPSON Associated Press Writer

07/11/2001 Associated Press Newswires Copyright 2001. The Associated Press. All Rights Reserved.

SACRAMENTO (AP) - Enron Corp. is suing state officials to stop a Senate subpoena of its financial records in a dispute over alleged overcharges for its electricity sales to California. "They've sent two things to Texas - our money and these documents, and they're saying we can't get either one back," said Laurence Drivon, special legal counsel to the Senate Select Committee to Investigate Market Manipulation. The suit came hours before the committee will consider asking the full Senate to cite the Houston-based company for contempt Wednesday. The other subject of possible sanctions, Atlanta-based Mirant Inc., is cooperating, Drivon said. Mirant spokesman Pat Dorinson said the company has turned over 159,000 pages of documents that were being transferred to a repository in Sacramento to comply with the subpoena. The company and the committee reached an agreement last night on the confidentiality concerns, Dorinson said. Committee chairman Joe Dunn, a Santa Ana Democrat, said the committee's investigation will continue despite Enron's "pure act of intimidation. We're not going to back down." Enron's suit, filed in Sacramento Superior Court, said the company's financial papers are outside the committee's jurisdiction because most of its operations and paperwork are outside California. That shouldn't matter, Drivon said, citing last year's successful subpoena of out-of-state documents during the investigation into the activities of former Insurance Commissioner Chuck Quackenbush. Previous investigations have included documents subpoenaed from other nations, he said. Companies doing business in California cannot claim immunity from its laws or oversight, Drivon and Dunn said. Houston-based Reliant Energy made the same argument but then agreed to turn over 1,800 documents. Enron's suit also says Dunn's committee has not given the company a fair hearing, and the committee has not followed due-process protections before seeking sanctions. Not so, said Dunn and Drivon, adding that they negotiated with generators to give them time to comply with the subpoenas. Proof of that, they said, comes in the decision to give Williams, AES, Reliant, Dynegy, Duke and NRG an extra week past Tuesday's deadline to turn over documents subpoenaed last month. In a letter to Dunn, Steven J. Kean, an Enron executive vice president, said several municipal districts were profiting from the power crisis. "Yet, remarkably, the committee has inexplicably chosen not to include these market participants in its investigations." Enron officials are concerned the purpose of the investigation, Kean said, is to "create a convenient political scapegoat to shoulder the blame for California's policy mistakes and changes in market fundamentals." However, Enron has agreed to turn over some "non-confidential" documents at the Wednesday hearing, Kean said. The committee is on the verge of asking the full Senate to impose sanctions for the first

Hopes dim for a quick Edison deal By Kevin Yamamura Bee Capitol Bureau (Published July 27, 2001) The Assembly will not return this week to consider a plan to save California's second-largest utility from bankruptcy, all but ending hopes that legislation would reach Gov. Gray Davis by a mid-August deadline. A group of legislators and Davis staffers has worked this week on an agreement that would restore Southern California Edison's credit and relieve the state of having to purchase energy for the utility. Assembly leaders, who convened the group, set an ambitious schedule that would have led to a vote today had they reached consensus and been able to recall enough of the 80 Assembly members from summer recess destinations. But the newly formed plan, which would issue \$2.9 billion in consumer-backed bonds in exchange for several Edison concessions, remains too rough for a vote, said Paul Hefner, a spokesman for Assembly Speaker Robert Hertzberg, D-Sherman Oaks. Hefner was quick to note that Hertzberg has the Assembly "on call" for the scheduled monthlong break and is prepared to ask members to return if a deal comes in the next three weeks. But staff and lawmakers said earlier that organizing a mass return after today would prove nearly impossible because Assembly members are expected to travel throughout the state and beyond. Davis set an Aug. 15 deadline in his original Edison deal and recently said he could call a special session forcing legislators to return if they do not authorize a plan by then. His spokesman, Steven Maviglio, said Thursday the governor is not ruling out that idea but is waiting to see what comes of further legislative discussions. "It's pretty clear that everyone's working pretty hard to form a consensus, but they're just not there," Maviglio said. "The governor is optimistic about the Aug. 15 date." Even so, Edison does not expect a solution by then. Company officials stated earlier this week that they would wait for a political deal at least until lawmakers return Aug. 20.

Sempra's trading unit generates a windfall

\ objattph By Craig D. Rose UNION-TRIBUNE STAFF WRITER July 27, 2001 Sempra Energy, the parent company of SDG&E, reported a 25 percent surge in profit to \$137 million last quarter but said yesterday it lost money on the sale of electricity under a long-term contract to California. On the other hand, Sempra said its largest source of profits was its energy trading unit, a middleman that earned \$69 million during the quarter buying and selling energy produced by others. The results underscore the transformation of relatively simple utility companies into diversified energy holding companies that have learned to profit in new ways from the deregulation of electricity and the turmoil in energy markets. The surprising announcement -- that a company lost money selling power during California's run-up in electricity prices -- was explained by Sempra as an intentional consequence of the long-term contract it signed with the state to provide power. Stephen Baum, chairman and chief executive officer of Sempra, said the company agreed to provide a steep discount to California during the summer months but would recoup the losses later in the 10-year deal. California sought long-term electricity purchase contracts so it could reduce its purchases in daily and near-term power markets, where prices reached record levels. Critics say Gov. Gray Davis rushed into long-term deals because of concerns about getting through next year's election. They also say the contracts will saddle customers with higher costs for years. The governor has acknowledged that long-term contracts might cause consumers to pay relatively high prices for electricity in later years, but he maintains it is a fair price to pay for lowering prices that were devastating the state economy. Michael Shames, executive director of the Utility Consumers' Action Network in San Diego, said the steep discount Sempra provided to the state on power this summer raised questions about the governor's proposal to help San Diego Gas & Electric Co. clear a

debt of \$750 million. SDG&E says it is owed that money for power purchases on behalf of its customers. In a media conference last month, Davis said the agreement would eliminate the threat of a possible balloon payment for consumers, who he said might have faced the so-called balancing account debt as early as next year. Shames says the proposal, which took the form of a memorandum of understanding, or MOU, is costly for consumers and a bonanza for Sempra. He said the relatively cheap power provided by Sempra this summer "makes the MOU sound like more of a hidden payback to Sempra than a real relief plan for local ratepayers." Shames said he will release an analysis of the state's Sempra plan next week. The state Public Utilities Commission is expected to rule on the plan in August. A Sempra spokesman said there is no connection between discount power and the tentative agreement to clear the \$750 million debt. Doug Kline, the Sempra spokesman, said the power contract with the state was signed in early May and the agreement on the balancing account was reached in mid-June. Sempra Energy Trading, meanwhile, said only 10 percent of its \$69 million profit was earned from sales of energy in the western region, which includes California. The trading operation earned \$40 million in profit during the comparable period last year. California's Independent System Operator, which manages most of the state power grid, and other investigators have said trading and bidding strategies were tools used by energy companies to raise prices during the California power crisis. Though Sempra earned money on trading, its wholesale power generating business lost \$9 million during the quarter. Baum said the discounts on electricity provided the state were the prime cause of the loss for Sempra Energy Resources but added that a plant outage also contributed. Sempra Energy Resources, which co-owns a generating plant near Las Vegas with Reliant Energy, earned \$2 million during the second quarter last year. Baum added that Sempra's long-term contract with the state -- under which it will provide up to 1,900 megawatts -- has allowed its wholesale business to p

Features/Toxic Bonds Headed For A Fall ; Companies issued special zero-coupon bonds, assuming th= ey'd never have to pay them off. Now shareholders could be on the hook for = a \$65 billion tab. Janice Revell

11/26/2001 Fortune Magazine Time Inc. 131 (Copyright 2001)

It was an irresistible proposition: Borrow billions of dollars, pay no inte= rest, reap millions in tax breaks, and then wait for the debt to simply dis= appear. That was the promise of zero-coupon convertible bonds, and companie= s from Enron to Merrill Lynch binged on what seemed like free money.=20 But, of course, there was a catch: For this scenario to play out, a company= 's stock price had to rise sharply--and quickly. That's because investors b= ought the bonds in the hope of converting them into equity--if the stock ta= nked, the bonds would no longer be worth converting. So to make them more a= ttractive to buyers, companies had to build in an escape hatch: If the stoc= k price failed to rise sufficiently, investors could "put" (that is, sell) = the bonds back to the company--in many cases, after just one year. And that's exactly what's about to happen--to the tune of some \$65 billion = over the next three years. Stock prices have fallen so far that for at leas= t half of these special hybrids, the prospect of conversion is now absurd. = It simply won't happen. So bondholders are looking to get their money back = the first chance they can. And because of the put feature, that is possible= . Suddenly companies like Tyco, Comcast, and dozens more are on the hook fo= r billions of dollars in debt and interest they thought they'd never have t= o pay.=20 That could be very bad news for shareholders of these companies. After all,= they're the ones who are going to be picking up the tab when all that debt= comes due. Huge chunks of cash will disappear from balance sheets to repay= bondholders. Companies without enough cash-- and the majority fall into th= is camp--are likely to face skyrocketing interest charges when they borrow = money anew. That means sharply reduced earnings. Especially at risk are inv= estors in companies with poor credit ratings--prime candidates for killer r= efinancing costs. Some companies may even be forced to issue stock to pay o= ff the debt, creating significant shareholder dilution, especially at curre= nt depressed prices. To make matters worse, this is happening at a time whe= n the economy is barreling downhill and corporate profits are already shrin= king. "This is a ticking time bomb," warns Margaret Patel, manager of the P= ioneer High Yield Bond fund, a top-performing junk fund.=20 The seeds of this mess were sown in

mid-2000, when the stock market started to falter. Companies in search of capital balked at the thought of selling stock while their share prices were struggling. Zero-coupon convertible bonds presented an attractive alternative because companies didn't have to make cash interest payments on the bonds (hence the name "zero"). Instead issuers offered an up-front discount--for instance, investors would buy a bond for \$700 and collect \$1,000 when it matured. Companies also gave investors the right to convert the bonds into a fixed number of common shares. But the bonds were structured so that conversion would make sense only if the stock price rose significantly--in many cases, by more than 50%. With that protective feature (called the conversion premium), zeros took off. Corporate issuers would pay no interest, and once their stock prices had climbed back to acceptable levels, the debt would be swept away into equity. "If the bonds are converted, it's a home run for everybody," says Jonathan Cohen, vice president of convertible-bond analysis at Deutsche Bank. That four-bagger, of course, depends entirely on the stock price rising. If it doesn't, the bondholders, armed with that handy put feature, can simply sell the bonds back to the company. Great for bondholders, but not so hot for the company or its shareholders. But, hey, what are the odds of that happening? "CFOs and CEOs believe that their stock will just continue to go up," says Cohen. "They don't worry about the bond getting put." If all this seems a little complicated, that's because it is. A real-life example should help. California-based electric utility Calpine issued \$1 billion in zeros in April to refinance existing debt. At the time, the company's stock was trading at about \$55 a share--severely undervalued in the opinion of company management. "We really didn't want to sell equity at that point," says Bob Kelly, Calpine's senior vice president of finance. So the company instead opted to sell zeros, setting the conversion premium at a hefty 37%. Still, with no cash interest payments and a stock price that had to rise significantly to make conversion worthwhile, the bonds weren't exactly a screaming buy for investors. So Calpine added the put feature: Investors could sell the bonds back to the company after one year at the full purchase price, eliminating any downside risk. Things haven't exactly worked out as management had hoped. The stock has since plummeted to \$25, and it now has to triple before conversion makes sense. So it's looking as though Calpine will be liable for the \$1 billion in borrowed money when investors get the chance to put the bonds this April. There's also the refinancing cost. According to Kelly, Calpine's borrowing rate could run in the neighborhood of 8.5%--an extra \$85 million per year in cash. "Obviously, nobody plans for their stock to go down," Kelly says. "I don't think there was one person around who thought the bond would be put." Calpine's potential costs are particularly high because its credit rating is straddling junk. "If you are a borderline investment-grade company, a financing of this nature is not necessarily the most appropriate thing in the world," notes Anand Iyer, head of global convertible research at Morgan Stanley. The problem is, there are a slew of companies with far worse credit ratings out there: Jeff Seidel, Credit Suisse First Boston's head of convertible-bond research, estimates that about half of all zeros outstanding fall into the junk category. And others are at risk of having their ratings downgraded before the put date. Today, with junk yielding as much as 5 1/2 percentage points above bonds rated investment grade, refinancing can be a pretty proposition. Contract manufacturer Solectron is one that could well get hit by the high price of junk. It has \$845 million in zeros that it will probably have to

Curtailment management programs, designed by utilities and ESPs, can help manage load and increase customer satisfaction. Silicon Energy's EEM Suite can enable utilities & ESPs to design, issue, monitor & report load curtailment events using powerful Internet-based tools. From specific groups to thousands of customers, create targeted programs utilizing the software's flexibility. Enterprise customers are alerted to participate by accessing real-time energy usage info through a customized Internet page. Subscribe to our monthly E-Newsletter at <http://www.siliconenergy.com> or call 1-877-749-9400.

LineSoft announces LD-StructureCalc, an advanced and easy-to-use single pole structural analysis tool for joint use for utilities, communications companies, and municipalities. Technicians use LD-StructureCalc's advanced calculation capabilities to accurately determine pole, guy, and anchor loads. Once identified, load percentages can be attributed to the various owners of wires and equipment on the pole. Users in the office or field enter structure, conductor, and equipment information on a laptop and analyze poles on the spot. Sag and tension calculations are performed in real time and for multiple load cases. LD-StructureCalc can model a variety of remedies to correct any overload condition. LD-StructureCalc is an affordable standalone analysis tool complete with pre-defined databases that ensure NESC and GO95 code compliance. Contact Greg Berry at 1-800-928-3274, extension 240 to schedule an on-line demo, or ask about limited-time introductory offers.

### PennFuture's Green Power Update

|            |                               |

Giant Wind Blade Gives Pennsylvanians a Sneak Peak at New Clean Energy Choice Coming this Fall

As a more than 100-foot-long wind power blade arrived by truck in front of Philadelphia's City Hall Thursday morning, the Mid-Atlantic Renewable Energy Coalition (MAREC) held a press conference to announce the near completion of Mill Run, the largest wind farm in the East, which will help power Pennsylvania homes and businesses by this fall.

Sitting atop Laurel Mountain in Fayette County, Mill Run will generate enough Green-e certified clean electricity to power over 5,000 homes. The wind farm's output is already available to large business and commercial customers. One of the first local institutions to put their money on home-grown wind is Carnegie Mellon University, who recently announced the largest retail wind purchase in the United States and plans to buy 5 percent of its electricity from Green-e certified wind power generated at Mill Run beginning this year.

While generating electricity with no emissions and requiring no fuel, the wind farm is also bringing jobs and tax revenue to a rural area, as well as providing lease payments to the farm owner who profits from an additional "crop." The wind turbines actually use very little land, and farming and other agricultural activities can continue right up to the base of the turbines.

Mill Run is one of a growing number of new wind projects that are under development in Pennsylvania. Two other wind farms are scheduled for construction in Somerset and Wayne Counties, and are expected to begin commercial operation in late 2001 or early 2002. And at least four additional wind farms are in development and may provide as much as 108 MW in 2002 or 2003. All told, as much as 266 MW of new wind energy alone is likely to be ready to serve Pennsylvania by 2003. This is enough clean energy to power at least 66,500 average Pennsylvania households with 100 percent wind.

The energy produced at Mill Run is being sold for the next twenty years to wholesaler Exelon Power Team, who in turn sells it to Community Energy, Inc. - a local retailer specializing in new wind energy. More information about the Mill Run site is available on the Atlantic Renewable Energy website at <http://www.atlantic-renewable.com>. If interested in purchasing wind energy, contact John Halley of CEI at (610) 254-9800, or sign up at [www.newwindenergy.com](http://www.newwindenergy.com).

See the attached document for a photo of the giant wind blade!

Pittsburghers Anticipate Tremendous Opportunity to Buy Green Power and Still Save \$

A golden opportunity lies just around the bend for Pittsburgh area residents and businesses to buy renewable energy and still save money. Currently, customers who switch to renewable energy products pay not just the price of the product, but also an added "regulatory stranded cost charge" of up to 3.39 cents per kWh. This charge was imposed after the electricity industry opened to competition, and is supposed to enable utilities (in this case Duquesne) to recover uneconomic investments in nuclear power made when it was a regulated monopoly. Without the collection of stranded cost charges, Duquesne may have gone bankrupt.

The good news is that charge will be eliminated early in 2002, slashing consumers' electricity rates across by as much as 27 percent. Even if buying renewable energy is not the lowest cost option, consumers will be able to invest some of their savings in switching to renewable energy, and still pay less than what they're paying now. For example, once the stranded cost charge is removed, a residential customer could buy one of the five renewable products presently available in the Duquesne territory and still save from 1 cent to 2 cents per kWh. That's equal to savings of over \$100 a year! Buying renewable energy is one the best things that any home or business can do to clean our environment and ensure a more

sustainable future, and avoids an amount of pollution equal to planting 950 trees, not driving 20,000 miles, or taking 1.7 cars off the road! Pittsburgh area residents will be some of the first in the country to enjoy the elimination of the stranded cost charge.

See the attached document to view a complete listing of Green-e certified renewable energy products currently available in Pennsylvania!

#### The European Commission Evaluates the External Costs of Energy Production

The European Commission (EC) recently reported that the cost of generating electricity from coal is up to 120 times more expensive than wind, and 10 times more expensive than generating from solar photovoltaics. In a study quantifying what would happen to the cost of generating electricity from various fuel sources if environmental damage, health damage and other external costs were taken into account, the EC concluded that the cost to generate electricity from coal or oil would double, while the cost of production from natural gas would increase by 30 percent.

This is the first research project of its kind to calculate financial costs of socio-economic damages resulting from different fuel sources for the entire continent. The report concludes that the cost of environmental and health damage could be addressed by either taxing damaging fuels and technologies, or by encouraging or subsidizing cleaner technologies that avoid socio-environmental costs.

Since taxation on a continental level is difficult to achieve, the Commission has agreed to encourage renewables. In February, it published guidelines on state aid for environmental protection, which explicitly said, "Member States may grant operating aid to new plants producing renewable energy that will be calculated on the basis of the external costs avoided."

To conduct the study, the EC contributed 10 million Eurodollars to analyze 20 research projects from the past decade, and all member states of the European Union participated, as well as the United States. The EC will build on the results of this analysis with its recent launch of the NEWEXT (new elements for the assessment of external costs from energy technologies) research project, which will study additional elements for the evaluation of external costs, including the monetary valuation of mortality risk, evaluation of acidification and eutrophication on the ecosystem and biodiversity, and effects of major accidents in non-nuclear fuel chains, such as oil spills. For more information about the project, visit their website at <http://externe.jrc.es/>.

#### Mid-Atlantic Renewable Energy Coalition Preps for Major Campaign

The Mid-Atlantic Renewable Energy Coalition (MAREC) is gearing up to hit the airwaves to tout the terrific benefits of renewable energy. A coalition of clean energy advocates, renewable energy businesses and government officials, MAREC is developing a mass media campaign designed to increase consumer demand for renewable energy. Because Pennsylvania has the most vibrant renewable energy market in the Mid-Atlantic, the first year of the campaign will focus on reaching audiences in the greater metropolitan Pittsburgh and Philadelphia regions. MAREC is currently working with a consultant to develop the messages and images that will inform people about the benefits of green power and motivate people to take action, as well as raising funds and developing outreach efforts that will kick off in Pennsylvania this fall. Be on the lookout for the debut of this exciting new campaign! For more information about MAREC, contact Peter Adels at (215) 569-9695, or [adels@pennfuture.org](mailto:adels@pennfuture.org).

#### Renewable Energy Bills Await Hearings

In March, members of the renewable energy caucus introduced four bills in the Pennsylvania House of Representatives, which provide incentives, tax credits, and funding for renewable energy and energy efficiency. If passed, this package of b

Power Politics: Energy Crisis Offers Clues to the Workings Of Bush=20 Administration --- Cheney Does Heavy Lifting And Bush Rides Agenda; Taste f= or=20 Horse-Trading --- `A Lot of Pain in the West' By Jeanne Cummings Staff Reporter of The Wall Street Journal

02/16/2001 The Wall Street Journal=20 A1 (Copyright (c) 2001, Dow Jones & Company, Inc.)=20

WASHINGTON -- George W. Bush had barely celebrated his belated presidential= =20 victory when he was hit by the energy crisis in the West.=20

In a series of telephone calls to Mr. Bush's Texas ranch before Christmas,= =20 Utah Gov. Michael Leavitt spent hours raising the alarm with the=20 president-elect's top aides. A supply squeeze had sent utility bills soarin= g=20 not just in California but in neighboring states as well, with the prospect= =20 of bigger spikes in the months ahead.

How Mr. Bush went on to handle the crisis, the first big challenge of his= =20 presidency, offers some early clues to how his White House will function. H= e=20 has leaned heavily on Vice President Dick Cheney to handle the details. Tha= t=20 allowed Mr. Bush to stick doggedly to his chosen public message -- and=20 shielded the president from some difficult policy choices. Even Mr. Leavitt= =20 never insisted on speaking directly to the new president, who was busy nami= ng=20 his cabinet.=20

Mr. Bush bent his free-market, limited-government principles to accommodate= a=20 crisis, but so far by only a little: He offered a single two-week extension= =20 of Mr. Clinton's executive order directing suppliers to sell power to nearl= y=20 bankrupt California utilities. While turning to national issues, Mr. Bush= =20 remained open to a state-level problem, offering his former gubernatorial= =20 colleagues a sensitive ear.=20

And he worked hard to use unexpected events to help buttress his arguments= =20 for his policy agenda. Just as he has used the economic slowdown to garner= =20 support for his tax-cut agenda, he hopes to use the Western energy crisis t= o=20 win political support in Congress for his controversial agenda of expanding= =20 exploration into environmentally sensitive areas in Alaska and the Rocky=20 Mountains.=20

Such exploration might not yield energy for years, or yield much power at= =20 all, especially of the sort California needs. But it's a pet project of a= =20 White House where the president and vice president are both veterans of the= =20 oil industry. Winning the necessary support for exploration is part of the= =20 challenge of drafting a comprehensive energy bill, which a team of top aide= s,=20 led by Mr. Cheney, is working to produce within 45 to 60 days.=20

The energy problem has shadowed Mr. Bush throughout the first month of his= =20 presidency. It commanded his private attention every day of his first week = in=20 office, even as he was publicly unveiling education-reform proposals. More= =20 recently, he has received regular briefings from Mr. Cheney, who is=20 consulting key members of Congress and energy experts. The matter will move= =20 front and center today when the president makes his first foreign visit, to= =20 Mexico, where he is expected to discuss expanded natural-gas exploration an= d=20 trade with Mexican President Vicente Fox Quesada. At the same time, Mr.=20 Cheney will be back in Washington convening the first working meeting of th= e=20 various cabinet secretaries whose departments will be affected by a nationa= l=20 energy bill.=20

Some top Republicans believe the energy crisis could cast an even larger=20 cloud over Mr. Bush's first year than the softening economy -- especially i= f=20 the continuing supply squeeze leaves Western consumers facing new price=20 increases this summer, as widely predicted. "We recognize that this is a=20 challenge we will be faced with at least through the summer. We're obviousl= y=20 monitoring it very closely," says Energy Secretary Spencer Abraham.=20

The problem has its roots in California's 1996 energy-deregulation bill,=20 signed by former GOP Gov. Pete Wilson. As part of the negotiations over the= =20 bill, the state's utilities agreed to buy power on short-term contracts,=20 making them vulnerable to wholesale-price swings. The law also capped=20 consumer bills, which meant rising fuel costs couldn't be passed along to t= he=20 users.=20

The situation became critical last year when natural-gas prices spiked upwa= rd=20 at the same time that hot summer weather and a booming economy increased=20 usage and low rainfall depleted the region's hydroelectric power. Californi= a=20 soon began gobbling up any available power in the Western region's electric= =20 grid, which drove wholesale rates sky-high and wound up increasing the=20 utility bills of consumers in neighboring states. Idaho residents, for=20 instance, saw their bills rise by 25%, while California users still benefit= ed=20 from retail-price caps.=20

So Gov. Leavitt wasn't the only Western governor trying to get the new=20 president to focus on the issue. Wyoming Gov. Jim Geringer raised it on Jan= .=20 9, when he and Mr. Bush were standing together in the pasture parking lot o= f=20 the Bush ranch, awaiting the arrival of other Republican governors invited = to=20 a Bush-sponsored barbecue. The issue was also discussed later among all the= =20 governors, but only in broad terms, participants say.=20

Three days later, Clinton administration officials convened the first meeti= ng=20 of all the parties involved in the California crisis. To provide a voice fo= r=20 Mr. Bush's team, Clinton aides invited the president-elect's friend and=20 fellow Texan Kenneth Lay, head of Houston-based Enron Corp. As the largest=

Search Committee for New Dean Announced; Dean Tyson to Step Down in December 2001 Haas School Evacuation: Preparing for Next Time Haas Students Tutor at Skyline High School Ganesh Iyer Named 2002-2003 Schwabacher Fellow Dan Sullivan and Pat Riegg Recognized with Chancellor's Outstanding Staff Award Faculty News New Staff Haas in the News Happening at Haas Haas Celebrations

**SEARCH COMMITTEE FOR NEW DEAN ANNOUNCED; DEAN TYSON TO STEP DOWN IN DECEMBER 2001**

Vice Provost Jan de Vries has announced the members of the search committee for the new dean at the Haas School. A memorandum was distributed to the Haas community via e-mail on Friday afternoon.

The memorandum included an incorrect date for Dean Tyson's departure from Haas. She will resign her position as dean at the end of December 2001 as she had planned. Ben Hermalin, associate dean for academic affairs, will be interim dean from January 1, 2002 until a new dean is in place.

The committee responsible for conducting a search and making recommendations for the next dean of the Haas School has been named. The members are:

Barbara Horst Broque, assistant dean for planning, Haas School of Business Barry Eichengreen, professor , Department of Economics Hans Grande, MBA 02, MBA student and president of the Haas School MBA Association Robert D. Haas, BA 64, chairman, Levi Strauss & Co. Herma Hill Kay, professor, Boalt Hall School of Law David J. Vogel, the George Quist Professor of Business Ethics, Haas School James A. Wilcox, the Kruttschnitt Family Professor of Financial Institutions, Haas School Janet L. Yellen, the Eugene E. and Catherine M. Trefethen Professor of Business Administration, Haas School

Professor Mark Lemley of the Boalt Hall School of Law will serve as chair of the committee. Another alumni member of the search committee is likely to be announced soon, according to officials.

The committee will consult with the school community for both suggestions and views on candidates. De Vries, who is vice provost for academic affairs and faculty welfare, formed the committee after consultation with various campus constituencies.

**HAAS SCHOOL EVACUATION: PREPARING FOR NEXT TIME**

The Haas School was evacuated and the school was closed for classes and business last Wednesday afternoon after receiving a report of an unknown substance on several items of mail in an office in the faculty building. Both UC Police and a hazardous materials team were called in to conduct field tests and secure the scene. Officials reported that the substance was not hazardous. The event gave school officials a chance to witness the Haas emergency plan in action.

"Overall the emergency plan was very effective, but there are some issues to be addressed," said Jay Stowsky, associate dean for school affairs and initiatives. "We need to make sure that all of the faculty, staff, and students know what to do in case of an emergency."

The Haas School administration has an official emergency plan. All faculty and staff are responsible for familiarizing themselves with the procedures outlined in building emergency plan. The full emergency plan can be downloaded at <<http://www.haas.berkeley.edu/haas/emrginf2.html>>. Haas Facilities Manager Edward Madera is working on a one-page emergency preparedness fact sheet for faculty, staff, and students to have on hand for reference.

In the meantime, it is important to remember a few simple rules for evacuating the building:

+ Stay calm, do not rush, and do not panic. + Safely stop your work. + Gather your personal belongings if it is safe to do so. (Take prescription medications, your home and car keys, and your wallet with you if at all possible; it may be hours before you are allowed back in the building.) + If safe, close your office door and window, but do not lock them. + Use the nearest safe stairs and proceed to the nearest exit. Do not use the elevator. + Proceed to the designated Emergency Assembly Area (EAA): +From the faculty building, evacuate to Gayley Plaza located directly in front of the Haas School. +From the student services building, evacuate to the Boalt Hall parking lot. +From Cheit Hall, evacuate west of Cheit Hall between Minor Hall (the optometry building) and the Women's Faculty Club. + Wait for any instructions from emergency responders. + Do not re-enter the building or work area until you have been instructed to do so by the emergency responders. + If you are told to leave the area and later on want information on the status of the Haas School, visit the Haas web page at <<http://haas.berkeley.edu/>>.

For the latest instructions campus-wide emergency preparedness visit the UC Berkeley Office of Emergency Preparedness site at <<http://public-safety.berkeley.edu/oepweb/>>. This site also has information on mail handling procedures.

---

#### HAAS STUDENT TUTOR AT SKYLINE HIGH SCHOOL

Lending a hand to high school students, even in a small way, can make a world of difference. The Haas School's outreach program Young Entrepreneurs at Haas (YEP) has done just this for years, and now the MBA students are adding to this outreach by tutoring at Skyline High School in Oakland.

Every Monday (the class-free day of the week), Haas MBA students travel to Skyline High School to tutor students in math, English, and career planning as part of the MBA Education Club. The tutoring takes place during the Skyline lunch hours.

The tutoring program started last year after J.P. Tennant, MBA 01 and former emergency relief teacher at Skyline, organized a small group of students to give some of their time to help Oakland students with academics. This year the MBA Education Club has continued the tutoring program at Skyline and needs more volunteers.

"If we get more support from Haas students we will expand the program to Berkeley High this year," said Doug Buzbee, MBA 02, the tutoring program coordinator. "Without greater involvement from students though, we may have difficulty sustaining the current program at Skyline, let alone expanding into Berkeley."

Skyline High School students, teachers, and administrators alike appreciate the tutoring provided by Haas MBA students. Jim Delbridge, a 10th grade math teacher, provides his classroom during lunch hours so that students can get help from Haas volunteers. The level of help needed is basic - reading, algebra, analytical geometry, and some calculus - but Skyline students benefit and genuinely appreciate the help.

"Tutoring at Skyline is obviously rewarding unto itself," says MBA student Jon Metzler. "But as a Haas student, it's also a way to keep connected with the local community, which I think lends perspective to what we do at Haas."

If students are interested in becoming a Haas tutor, please contact Doug Buzbee at [buzbee@haas.berkeley.edu](mailto:buzbee@haas.berkeley.edu).

In addition to the Education Club's tutoring initiative at Skyline, eight Young Entrepreneur Program mentors meet twice a month here at Haas with fifteen Skyline students. These Skyline students are part of the 84 students involved in the Haas-based Young Entrepreneurs Program this year. The 2001 YEP class members hail from over 20 schools across the Oakland, Berkeley, and West Contra Costa school districts. YEP, which was founded in 1989, teaches basic business skills to 9th and 10th graders and is supported by more than forty Haas MBA volunteer mentors/business coaches.

FYI -----Original Message----- From: Jon Cartwright [mailto:JCartwright@FI.RJF.com] Sent: Friday, August 24, 2001 1:23 PM To: 'RJF Energy-Gram (E-mail)' Subject: POWER: California Department of Water Resources -- Fitch Teleconference: 24 Aug 2001 8:29 AM

Fitch-NY-August 24, 2001:

On Wednesday, August 29 at 3 p.m. (EDT), Fitch will host a teleconference to address frequently asked questions about the legal structure and creditworthiness of the California Department of Water Resource's (DWR) Power Fund.

In addition, the teleconference will address any issues related to pending matters at the California Public Utilities Commission that could affect the ability of the DWR Power Fund to issue bonds. Fitch analysts Donna DiDonato and Steven Fetter will host the call.

Participants in the U.S. and Canada should call 1-888-542-8839 five minutes prior to the 3 p.m. (EDT) start time. International participants should call 1-706-634-1731. The identification number for the call is 1673543 (California Department of Water Resources).

A replay of the teleconference will be available two hours after the conclusion of the call until 5 p.m. on Sept. 5, 2001. To access the replay, participants in the U.S. or Canada should call 1-800-642-1687 while international participants should call 1-706-645-9291.

Contact: Donna DiDonato 1-212-908-0637 or Steven Fetter 1-212- 908-0555, New York.

Media Relations: James Jockle-212-908-0547, New York.

---

UC BERKELEY AND THE HAAS SCHOOL RESPOND TO THE NATIONAL TRAGEDY Nearly a week after the terrorist attacks on America, the Haas School community has expressed its sadness, shock, and concern in a series of events on campus with more to follow.

As of Monday, the Haas School was waiting for definitive word on whether or not any Haas alumni or students were missing or confirmed dead in these attacks. The Haas NewsWire will report on any losses when official confirmation is available. In addition, alumni and students have been using the Haas e-mail mailing lists to account for alumni in New York City and Washington DC.

Dean Tyson has opened two previously scheduled MBA student lunches to the entire Haas community so that everyone can join her to discuss how last week's tragedy has touched their lives and the Haas School community. The first lunch will be on Tuesday, September 18, and the second on Wednesday, September 19. Both lunches will be held at 12:45 in the Haas courtyard.

Tyson was stranded for most of last week in New York City, where she had traveled on school business. In her absence, Ben Hermalin, associate dean of academic affairs, called for an informal gathering for faculty, students, and staff to provide a forum for discussion and support on the day of the attacks. In addition, some classes and events were canceled that day, and students, faculty, and staff gathered in the Bank of America Forum to watch the news unfold on television and to discuss the implications of these sad events.

On the central campus, Chancellor Robert Berdahl called for a moment of silence on Friday, September 14, at noon as the campanile bells tolled, marking the national day of mourning. On September 17, a well-attended campus-wide memorial service for the victims of the attacks was held on Memorial Glade.

In the coming days, the information below regarding blood drives, contributions, and activities may be of help.

+ According to central campus, there are no more appointments available at the on-campus blood drives scheduled for this week. The local chapter of the American Red Cross also reports their supplies are at capacity but they emphasize that the need for blood will be ongoing. At this time they are asking that you wait until next Friday, September 21, to register to give blood. Normally they take walk-ins at the donation center at 6230 Claremont Ave., but under the current circumstances they ask that you register in advance by phoning: 1-800-GIVE LIFE.

+ The Berkeley campus has created this site, <http://www.berkeley.edu/news/specupdates/index.html>, for updates on events and building closures on campus.

+ Last Friday evening, the MBA students put together an impromptu fundraising barbecue for the Red Cross, which raised just over \$2,300. If you missed the opportunity to give on Friday, visit the Red Cross site at <http://www.redcross.org/>.

+ The site at <http://www.finebrand.com/statuses>, which the Haas School recommended as a resource to find missing friends in the Haas community, has been shut down. The federal government site, <http://www.firstgov.gov/featured/usgresponse.html>, has links to many survivor registries. A group of Berkeley students also created a site with links to many of the sites for survivor registries, donations, and of companies affected by the attack: <http://safe.millennium.berkeley.edu/>.

Please do not reply to this message!!! Your response will be distributed to ALL EES Employees, including EES Executives. For your convenience, we have provided a detailed listing of contact information of the EES SAP Team.

A Message from your EES SAP Team,

As you already know, the legacy MSA system for EES is scheduled to go away on July 1, 2000 with the implementation of SAP. In order to smooth the transition, the EES SAP Team will start distributing key information to every employee at EES through Lotus Notes. With this in mind, attached below are several files that will help ease the transition to SAP. Please keep this e-mail for future reference.

For these and other helpful documents, please visit the Apollo website ( <http://sap.enron.com/> ) or our EES SAP website ( <http://inet.ees.enron.com/vision/comm/sap/> ) both of which will be updated with any changes going forward.

For questions, please contact the EES SAP Finance Support Staff:

Kem Miller 713-853-6965 Chip Brenner 713-345-8793 Murthy Rao 713-853-4246 COE - Help Desk 713-345-4SAP (713-345-4727)

For other SAP related questions, please contact the EES SAP Site Managers: Bobby Mahendra (Finance) - 713-345-8467 Daler Wade (HR) - 713-853-5585

We look forward to a smooth transition to SAP. Please review the attachments below.

ATTACHMENTS (this information is valid as of 6/25/00. Any updates to this information will be posted to the respective websites):

- 1) The following attachment contain a list of all MSA RC's and their corresponding SAP Cost Centers. In SAP the Company Code is 4 digits with a "0" preface, e.g. "985" is now "0985" . Please note that after "Go Live" July 1, 2000, MSA RC's will be replaced with SAP Cost Centers.
- 2) The following attachment relates to common expense coding.
- 3) For some SAP accounts, a functional area and/or a material number is required for specific tracking purposes.
- 4) A SAP Employee Expense Report
- 5) Accounts Payable requires you to fill out a SAP Invoice Coding Sheet when sending an invoice for payment in place of the current Invoice Stamp.
- 6) Useful only for people who code expenses or time to "E" Work Orders, the following is the conversion list of all MSA "E" Work Orders to SAP Stat Orders.
- 7) A detailed SAP Chart of Accounts.
- 8) Useful only for people who code expenses or time to "S" Work Orders. the following is the conversion list of all MSA "S" and "J" Work Orders to SAP WBS Elements (Projects).

Greetings from the Pac Rim Club!

We've been able to get a discount of \$100 on the tour price from Executive Tours, lowering the price of the Pac Rim tour to \$2,085 for double occupanc= y and \$2,455 for single occupancy. (This discount is dependent on having a minimum of 10 participants on the trip.) The new lower prices apply to new sign-ups as well as to those currently registered for the trip. In the event the tour does not get a minimum of ten participants, anyone who registers may request and will receive a full refund of their deposit. Along with these new price cuts, the deadline for registration has been extended to Friday,

November 2nd. If you are interested in participating in the Pac Rim trip, please contact Richard Price a.s.ap. by phone at (800) 521-0070 or (714) 897-0074, or by email at [rextours@earthlink.net](mailto:rextours@earthlink.net). For more information about the Pac Rim trip, please visit our website: <http://groups.haas.berkeley.edu/pacrim/Pacrim.htm> Please feel free to contact me as well if you have questions. -- Home Home: (510) 525-2880, Cell Phone: (510) 504-9999 ~ William Ktsanes

Discover Southeast Asia! -- Thailand, Cambodia, Vietnam & Singapore

Haas Pacific Rim Trip 2002

More information about the trip on the Haas Pac Rim Club web site:

<http://groups.haas.berkeley.edu/pacrim/Pacrim.htm>

Information about the Haas Pac Rim Club:

<http://groups.haas.berkeley.edu/pacrim/index.htm>

This year's trip is going to be fantastic!!

Itinerary

Bangkok, Thailand offers incredible temples, outstanding cuisine, fantastic shopping and the friendliest people you've ever met. Thailand is called the Land of a Thousand Smiles for good reason.

Siem Reap (Angkor), Cambodia: The magnificent temples of Angkor have only recently opened to tourism after years of civil war and unrest. Now is a perfect time to visit these timeless wonders before they are marred by the rapid growth in tourism.

Ho Chi Minh City (Saigon), Vietnam: This is the most vibrant and dynamic country in Southeast Asia. Saigon is sophisticated, exciting and endlessly fascinating, from its glorious French colonial architecture to its modern club scene and nightlife.

Nha Trang, Vietnam: Endless white sand beaches, warm sunshine, tropical breezes. Need we say more?

Singapore: We will only have one overnight in Singapore as a result of the airline schedule. But what a great city to spend a night! Discover Little India, Arab Street, pubs along Boat Quay or sample Malay cuisine at a hawkers stand.

Details

NEW Low Prices: \* \$2,085 Per-Person, Double Occupancy \$2,455 Per-Person, Single Occupancy

Including round-trip airfare from San Francisco on Singapore Airlines. \* The Early-Registration Discount applies to participants who register for the tour and submit their deposit on or before November 2, 2001. After October 19, 2001, the tour prices increase by \$50 per-person.

More Information Registration has begun! If you'd like to join us or for more information, call 1-800-521-0070 or (714) 897-0074. Presented by the Pacific Rim Club and Executive Tours International.

Conference Call A Cambridge Energy Research Associates Conference Call

TOPIC FERC'S ORDER FOR THE CALIFORNIA MARKET: BOLD DECISION OR INSUFFICIENT ACTION?

\* A FERC Vote for Market Solutions \* Where is the Relief for Retail Customers? \* What's Next for California and Western  
Wholesale Markets? \* Implications for the Broader North American Power Market

FORMAT At the time listed below, our speakers will address this topic for approximately 30 minutes, followed by an open  
question and answer period.

SPEAKERS Larry Makovich, CERA Senior Director, North American Electric Power Mike Zenker, CERA Director, Western  
Energy

TIME 1:00 P.M. Eastern, Monday, November 13, 2000

ELIGIBILITY Clients eligible to participate in this conference call are those who subscribe to the North American Electric  
Power Retainer Advisory Service or the Western Energy Retainer Advisory Service.

TO ENROLL To enroll, please contact Ms. Kari Paakaula via fax at (617) 497-0423, or enroll via e-mail at  
[kpaakaula@cera.com](mailto:kpaakaula@cera.com) before 4:00 P.M., Friday, November 10, 2000.

AUDIO For the audio portion of the call, please call in on one of the following numbers approximately five (5) minutes  
before the call:

Within the United States: 1-800-946-0741 Outside the United States: (719) 457-2649 Confirmation Code: 640107 Title of  
the call: CERA Call

TECHNICAL ASSISTANCE U.S. callers: If you are experiencing difficulties during the call, you may signal for technical  
assistance by pressing \*0 (star, zero) on your telephone keypad

International callers: Please re-dial and ask the operator for assistance before giving the confirmation code.

A recording of this call (audio only) will be available until December 13, 2000. To access this recording, please call  
1-888-203-1112 (within the U.S.) or (719) 457-0820 (outside the U.S.). Please use confirmation number 640107 to access  
the call.

\*\*\*\*\* \*\* For more information, please contact Kari Paakaula via e-mail at  
[kpaakaula@cera.com](mailto:kpaakaula@cera.com) or via telephone at (617) 441-1362.

HEADLINE: Dynegy and NRG Energy Announce Long-term Agreement With California Department of Water Resources

DATELINE: HOUSTON & MINNEAPOLIS, March 6, 2001

BODY:

Dynegy Inc. (NYSE:DYN) and NRG Energy, Inc. (NYSE:NRG) today announced that their affiliates, El Segundo Power LLC, Long Beach Generation LLC and Cabrillo I LLC, have entered into an agreement with the California Department of Water Resources (DWR) to provide the state with up to 2,300 megawatts (MW) of energy through 2004.

Under the terms of the agreement which begins today, Dynegy and NRG's affiliates will provide 1,000 MW to DWR for the balance of 2001, and beginning January 1, 2002 will provide up to 2,300 MW. Financial and other terms of the transaction were not disclosed.

"Since last summer, Dynegy and NRG have continued to produce all the power the state has requested. We have worked diligently with the DWR to capture the value of our in-state generation, balanced with California's long-term energy needs," said Steve Bergstrom, president and chief operating officer of Dynegy Inc.

Craig A. Mataczynski, president and chief executive officer of NRG North America, said, "Today's announcement solidifies our commitment to eliminating uncertainty for our respective shareholders and restoring price stability and future reliability to the California electricity market."

Dynegy Inc. is a leading provider of energy and communications solutions to customers in North America, the United Kingdom and Continental Europe. The company's leadership position extends across the entire convergence value chain, from power generation and wholesale and direct commercial and industrial marketing and trading of power, natural gas, coal emission allowances, weather derivatives, and broadband to transportation, gathering and processing of natural gas liquids. For more information on Dynegy visit our web site at [www.dynegy.com](http://www.dynegy.com).

NRG Energy is a leading global energy company primarily engaged in the acquisition, development, construction, ownership and operation of power generation facilities. NRG owns all or a portion of 66 power generation projects and its net ownership interest in these projects is 16,704 MW. The company's operations utilize such diverse fuel sources as natural gas, oil, coal and coal seam methane, biomass, landfill gas, and hydro, as well as refuse-derived fuel. More information on NRG Energy is available at [www.nrgenergy.com](http://www.nrgenergy.com).

Certain statements included in this news release are intended as "forward-looking statements" under the Private Securities Litigation Reform Act of 1995. These statements include assumptions, expectations, predictions, intentions or beliefs about future events. Dynegy and NRG caution that actual future results may vary materially from those expressed or implied in any forward-looking statements. Some of the key factors that could cause actual results to vary from those Dynegy and NRG expect include changes in commodity prices for energy or communications products or services; the timing and extent of deregulation of energy markets in the U.S.; general capital market conditions; the effectiveness of Dynegy's and NRG's risk management policies and procedures; the liquidity and competitiveness of wholesale trading markets for energy commodities, including the impact of electronic or online trading in these markets; operational factors affecting Dynegy's and NRG's power generation or Dynegy's midstream natural gas facilities; and uncertainties regarding environmental regulations or litigation and other legal or regulatory developments affecting Dynegy's and NRG's businesses. More information about the risks and uncertainties relating to these forward-looking statements are found in Dynegy's and NRG's SEC filings, which are available free of charge on the SEC's web site at <http://www.sec.gov>.

Masters of Financial Engineering Degree Offered by the Haas School = Second Annual Nation-Wide Social Venture Business Plan Competition Launches = The Second E-Business Seminar Series: "Stuck in The Bozo Filter" = Patricia Of Gives Second Business Faculty Research Dialogue = The Future of Communications Networking from the President Of Bell Labs = New Staff = Haas in the News = Happening at Haas = Haas Celebrations

MASTERS OF FINANCIAL ENGINEERING DEGREE OFFERED BY THE HAAS SCHOOL = As many in the Haas community have heard, the Haas School has established a new one-year Masters of Financial Engineering (MFE) degree program aimed at preparing candidates with superior analytical skills for a growing niche of quantitative finance careers. Berkeley's MFE is the first such degree program in the US offered entirely under the auspices of a business school.

Taught by finance faculty from UC Berkeley's Haas School and UCLA's Anderson School of Management, the MFE Program will prepare students for jobs as risk managers, investment bankers, asset managers, derivatives traders, and developers of specialized securities at the world's leading commercial and investment banks, insurance companies, and corporate and public treasury departments.

"Haas is training a new generation of financial engineers who will be in strong demand in the modern finance marketplace," said Haas School Dean Laurie Tyson. "The program will also offer students the distinct advantage of being part of a world-class business school with its first-rate career services, practical internships, and alumni network."

The inaugural MFE class, the Class of '02, will begin taking courses at the Haas School on the Berkeley campus in April 2001 and will graduate in March 2002. Forty-five MFE students have been admitted into the first class. It is the first US program to offer its students a three-month internship at a top financial firm as part of the learning experience. Its leading-edge curriculum will balance teaching the latest financial theory with practical applications of financial modeling concepts.

The MFE program is taught by Haas School faculty Jonathan Berk, Greg Duffee, Nils Hakansson, Dwight Jaffee, Hayne Leland, Richard Lyons, Terry Marsh, John O'Brien, Mark Rubinstein, Miguel Simon-Cantillo, Domingo Tavella, and Nancy Wallace, as well as Francis Longstaff and Rossen Valkanov from UCLA's Anderson School of Management.

"We're seeing tremendous interest among talented individuals coming from technical backgrounds, such as nuclear physicists, mathematicians, and engineers who are in narrow jobs and are keen to transition to a brand new

career where opportunities are abundant and continue to grow," says MFE=20 Executive Director John O'Brien. O'Brien came to Haas after having served as=20 managing director at Credit Suisse Asset Management (CSAM), a multi-billion=20 dollar asset management company.=20

Students will have the option of earning both an MBA and MFE degree=20 concurrently from the Haas School over two years. The MFE program will be as=20 self-sufficient program funded by student fees and industry sponsorships. The=20 tuition for the MFE degree is \$32,000. Students in the concurrent degree will=20 pay the MFE fee in addition to regular MBA fees.

Founding sponsors include some of the world's top financial firms, namely A=20 IG=20 Inc., Barclays Global Investors, BARRA Inc., Gifford Fong Associates, Goldman=20 Sachs and Co., KMV LLC, MBIA Inc., Morgan Stanley Dean Witter, Quantal=20 International Inc., and The Dean Witter Foundation. Sponsoring firms will be=20 accepting interns from the programs.

For further information on the MFE visit the MFE web site at=20 <http://www.haas.berkeley.edu/MFE>.=20

SECOND ANNUAL NATION-WIDE SOCIAL VENTURE BUSINESS PLAN COMPETITION LAUNCHES=20 On November 20, the second Haas Social Venture Business Plan Competition will=20 launch with an event in the Wells Fargo room at 6:00 p.m. The event will=20 include information about social ventures and rules for the competition. It=20 will be followed by a reception to allow potential teams to network.=20

Prior to the launch, a special Rules Forum will take place featuring seven=20 entrepreneurs, venture capitalists, and philanthropists who are highly=20 experienced at implementing and growing businesses with dual bottom lines,=20 who will assess the competition's judging criteria. They will make=20 recommendations to ensure that the social impact claimed in the business=20 plans is genuinely attributable to the business' operations and that the=20 method of quantification of that nonmarket impact is valid.=20

Last year's inaugural competition exceeded all expectations, drawing=20 sixty-six teams representing MBA students from 23 of the nation's top=20 business schools to submit plans. Fourteen thousand dollars was distributed=20 among the top three plans, including a ten thousand dollar first prize. In=20 addition, these three teams won the opportunity to have their plans reviewed=20 by a group of 150 "socially responsible" angel investors, called the=20 Investors' Circle. One of the teams, Visible Hand, a web-based facilitator=20 of "best practice" development initiatives in the third world, has received=20 \$500,000 in seed funding.=20

The winner from last year was easyDiabetes, which provides a centralized,=20 Internet-based diabetes data management system that minimizes the costs of=20 medical complications associated with the current diabetes information=20 management systems. In Year 5 its revenues are projected at \$26M, and its=20 cumulative cost savings to society are projected at \$96M. The runner-up was=20 Ripple Effects, an interactive software program that helps troubled teenagers=20 develop social skills. Ripple Effect projects revenues by Year 3 at \$10M,=20 and direct quantifiable social impact in Year 3 at \$17M, based on reduction=20 in school absentee rates and social skills curriculum expenditures, and on=20 tax revenues from statistically increased wage potential among customers of=20 the product.=20

The entry criteria for the competition are: each team must have at least one=20 current MBA student from any accredited graduate school of business in the=20 US=20 (not just Haas); the plans must be for businesses that incorporate a social=20 or environmental bottom line into their regular operations and their mission=20 and plans must be for an original, innovative idea for a startup business=20 that is profitable and has a quantifiable social or environmental bottom line.

The schedule for the competition is=20

Monday, January 22, 2001, Registration, executive summaries due=20 Monday, January 29, Notification of admission to first round of judging=20 Tuesday, February 20, First round plans due=20 Tuesday, March 6, Notification of eight finalists=20 Friday, March 30, Final plans due=20 Friday-Saturday, April 13-14, Final Round Event and Awards Ceremony=20

For more information on the competition, please visit=20 <http://groups.haas.berkeley.edu/socialventure/>.

THE SECOND E-BUSINESS SEMINAR SERIES: "STUCK IN THE BOZO FILTER" The next Fisher Center for the Strategic Use of Information Technology=20 E-Business Executive Seminar features Tom Gable, chairman and CEO of the=20 Gable Group, who will address

Heard on the Street With Enron Stock Trading at Book Value, Some See Company as a Takeover Target By John R. Emshwiller and Rebecca Smith Staff Reporters of The Wall Street Journal

10/31/2001 The Wall Street Journal C1 (Copyright (c) 2001, Dow Jones & Company, Inc.)

With growing revenue, a dominant position in major energy-trading markets and a depressed stock price, Enron Corp. would logically be prime takeover bait. But in the topsy-turvy world of Enron, what constitutes logic anymore? Takeover speculation has swirled around Wall Street and the energy markets in recent days as Enron shares have plummeted by about two-thirds to their lowest level in a decade, a selloff sparked by a loss of investor confidence in the Houston energy-trading company following big third-quarter write-downs and the disclosure of a Securities and Exchange Commission inquiry into transactions involving its former chief financial officer. Among the names bandied about as potential buyers of all or at least a substantial chunk of Enron are General Electric's GE Capital unit, Warren Buffett's Berkshire Hathaway and Royal Dutch Shell. GE and Berkshire had no comment. A spokesman for Shell couldn't be reached. Meanwhile, Enron has approached at least one major institutional investor, seeking a capital infusion, according to a person familiar with the matter. But Enron was turned down because of uncertainties over its financial condition, this person says. While Enron shares, which are trading at about book value, look cheap by historical standards and even compared with two weeks ago, it isn't clear whether history is much guide when evaluating Enron these days, say analysts and others. Even fans of the stock have long complained about difficulty understanding how Enron operates because of its enormously complex financial structure and relatively sparse disclosure. For years while Enron's stock price was soaring,

much of Wall Street didn't seem to care about such issues. Now with Enron's stock dropping, that lack of understanding is haunting the company. "How bad could Enron get? That's really the question," says Prudential Securities analyst Carole Coale. Yesterday, Ms. Coale reduced her price target for Enron shares to \$9 and maintained the "sell" recommendation she recently put on the stock. At 4 p.m. yesterday in New York Stock Exchange composite trading, Enron shares were down \$2.65, or 19%, to \$11.16, down from nearly \$85 a year ago. "When a business like this starts a down cycle, they've got to stop it and stabilize before anyone will be willing to have a really intelligent conversation with them," says Peter J. Solomon, head of Peter J. Solomon Co., an investment-banking boutique. An Enron spokesman says the company won't comment on takeover speculation; nor will it comment on whether it had approached potential investors about a possible capital infusion. However, the continued plunge in Enron shares and turmoil surrounding the company are a significant "overreaction in the marketplace. Our core businesses are strong," he says. The company has said that it is taking steps to restore investor confidence. For example, Enron is trying to negotiate a new credit line with its major banks. Late yesterday, Enron's bankers were putting the final touches on a new credit line of more than \$1 billion, according to people familiar with the discussions. Analysts and other observers say that one uncertainty surrounding Enron is the condition of its vast energy-trading operation. As the nation's biggest energy trader, Enron is a principal in one-quarter of all electricity and natural-gas trades. Enron's EnronOnline Internet-based trading platform has transacted more than \$884 billion of trades since it was created in November 1999 and does about \$4 billion a day in transactions. One worry is that Enron's trading partners, edgy about the turmoil swirling around the company, will start demanding much tougher credit terms from the Houston company or simply cut back doing business. Such a trend, if it picked up enough momentum, could have troubling consequences for Enron. "We are all in suspense . . . It all depends on how the market reacts," says Susan Abbott, a managing director at Moody's Investors Service. On Monday, Moody's downgraded Enron's long-term debt. There were some warning signs of unease among trading partners even before the company's third-quarter earnings release set the stage for the huge drop in the stock price. About six to seven weeks ago, Entergy Corp. became worried about its level of exposure in Enron-related deals, says Wayne Leonard, chairman and chief executive officer of the big New Orleans energy company. Since then, Entergy has cut its Enron exposure to about \$10 million to \$20 million from \$90 million to \$100 million, he says. Mr. Leonard didn't specify what prompted the worries, which appear to have arisen after the surprise August announcement by Jeffrey Skilling that he was resigning as Enron president and chief executive. Mr. Skilling cited personal reasons as well as his concerns over the falling stock price. While the Enron spokesman says the company doesn't comment on specific trading arrangements, he adds that Entergy is one of his company's smaller trading partners. He says major trading partners are doing business with Enron on "essentially the same terms and conditions" and that overall "our trading operations are as strong as ever." The company spokesman adds that a few smaller trading partners in Europe are seeking revised credit terms from Enron. "We are working to put together credit terms, which they are more comfortable with," says the spokesman, who declines to be more specific. In an effort to bolster its liquidity and position in the marketplace, Enron last week drew down some \$3 billion, accounting for the bulk of its existing credit lines. While it used most of that money to buy its outstanding commercial paper, a short-term corporate IOU, the company retained about \$1 billion of the borrowings as cash. A friendly takeover of all or part of Enron would be likelier than a hostile one. Among the most obv

===== Top Stories =====

o H&Q Asia Pacific Closes New \$750 Million Fund

PALO ALTO, Calif. -- H&Q Asia Pacific, a private equity investment company, said it closed its third fund, Asia Pacific Growth Fund III. At \$750 million, the fund is the company's largest. It will focus on Internet infrastructure investment opportunities in the Asia Pacific region. Telephone 650-838-8037.

o CacheFlow Acquires Springbank Networks For \$180 Million

SUNNYVALE, Calif. -- CacheFlow, a publicly traded company which provides technology to accelerate and manage the flow of online information, said it acquired Springbank Networks of Palo Alto, Calif. The stock transaction is valued at \$180 million. Springbank will be integrated into CacheFlow and all employees of Springbank will relocate to CacheFlow headquarters. No management changes were announced. Springbank Networks has received financing from Sequoia Capital. <http://www.cacheflow.com/>

o FatBrain Spinoff MightyWords Raises \$36 Million First Round

SANTA CLARA, Calif. -- MightyWords, formerly an online publishing subsidiary of publicly traded FatBrain.com, said it received \$36 million in funding in its first round of institutional funding. The round was led by Barnes & Noble.com, which contributed \$20 million in exchange for a 30% stake in the firm. Vulcan Ventures contributed an additional \$10 million and \$6 million was raised from other investors including APV Technology Partners, Highland Capital Partners, and Millennium Technology Ventures. Vulcan Ventures will hold a 15% stake, Millennium Technology Ventures 4%, and both Highland Capital Partners and APV Technology Partners will hold 1.5% of the company. FatBrain.com will retain 23% of the company. Chris MacAskill, chief executive officer of MightyWords and founder and CEO of FatBrain, will serve as chairman of the MightyWords board of directors. Two representatives of Barnes & Noble.com, one representative from Vulcan Ventures, and one representative from Millennium Technology Ventures will take seats on the company's board of directors. 10/07/2001 Los Angeles Times Home Edition A-40 Copyright 2001 / The Times Mirror Company

More than two dozen U.S. states and cities, no longer waiting for the Bush = administration to seize the initiative against global warming, have begun t= aking steps to reduce emissions that scientists say are heating the planet.= =20 From Vermont to Oregon, state and local governments are calling for broader= use of energy-saving devices, more energy-efficient building standards, cl= eaner-burning power plants and more investment in such renewable energy sou= rces as wind and solar power--all to help reduce greenhouse gases that trap= the sun's energy near the Earth's surface. Many of the strategies being promoted mimic those endorsed in July by 180 n= ations as part of an international campaign against global warming that the= Bush administration declined to join.=20 In August, six New England states and five eastern Canadian provinces signe= d a pact to reduce greenhouse gas emissions. Under the agreement, the signa= tories pledged to cut emissions to 1990 levels by 2010 and by 10% below tha= t level by 2020. Those cuts are to be followed by even deeper reductions. I= t is the most ambitious goal set by state governments and it was supported = by three Republican governors, two Democrats and one Independent from Massa= chusetts, Connecticut, Rhode Island, New Hampshire, Vermont and Maine.=20 No single state or region can make a substantial reduction in the gases tha= t contribute to global warming. Moreover, much of the success of state and = local efforts relies on voluntary compliance from industry.=20 Still, advocates of state and local initiatives are confident that there is= enough public support to ensure broad cooperation in the private sector.= =20 "Public demand for action on climate change increased when the United State= s was not a part of the [international] agreement. It had a powerful impact= on the thinking of all kinds of people, including governors and heads of l= arge companies," said Tom Peterson, director of domestic policy for the Cen= ter for Clean Air Policy in Washington.=20 The center was created in 1985 by a bipartisan group of governors to promot= e economical solutions to air pollution.=20 "This is a way [for states] to distinguish themselves from the Bush adminis= tration," California Resources Secretary Mary Nichols said. "A lot of pract= ical, moderate people are recognizing climate change is a reality, not a th= eory, and they need to take it into account and help move the direction of = the world by doing something about it."=20 California was an early leader in reducing dependence on fossil fuels that = release greenhouse gases. Today, 12% of its electrical power comes from ren= ewable sources, more than any other state.=20 President Bush has sent mixed signals concerning global warming. Shortly af= ter he took office, he reneged on a campaign promise to cut emissions of ca= rbon dioxide, the most abundant greenhouse gas. He said he rejected the int= ernational accord, outlined in Kyoto, Japan, in 1997 and ratified last summ= er, because it would cost U.S. jobs and did not immediately impose limits o= n emissions from developing countries, including India and China.=20 Last spring, Bush announced the formation of a task force of Cabinet member= s to formulate U.S. policy. The work of the task force was slowed by disagr= eements among its members and by the Sept. 11 terrorist attacks.=20 In the meantime, several

members of Congress, including Sens. James M. Jeffords (I-Vt.), John McCain (R-Ariz.) and Joseph I. Lieberman (D-Conn.), have begun formulating policy. McCain and Lieberman announced in August that they would develop legislation to cap greenhouse emissions and reduce them using a market-based trading mechanism. But that bill, too, has been delayed as Congress grapples with the enormous fallout from the attacks on the World Trade Center and the Pentagon. Meanwhile, officials of several states say they are making measurable progress. In New Jersey, officials say they are on track to cut greenhouse gases by 3.5% below 1990 levels by 2005. The plan relies on capturing emissions from methane--which traps 20 times more heat than carbon dioxide--from landfills, securing voluntary reductions from various industries and preserving open space and trees, which can absorb carbon dioxide from the atmosphere, said Amy Collings, spokeswoman for the state Department of Environmental Protection. New York Gov. George Pataki in June announced a series of measures to improve energy efficiency and trim greenhouse gases. Specifically, the Republican governor ordered state buildings to get 20% of their electricity from renewable sources, such as solar or wind power, by 2010. In the Northwest, Seattle City Light, the local electric utility, will offset any carbon dioxide emissions from power generation with wider use of clean-fueled vehicles and other measures. In Oregon, more than 20,000 people have signed up for the "Blue Sky Program" by paying an extra \$3 per month on their utility bills to ensure that Pacific Power and Light purchases electricity from sources that don't contribute to global warming, said Tim Honadel, sustainability coordinator for Gov. John Kitzhaber. The California Legislature has established a registry to track greenhouse gas production. It gives businesses interested in reducing their emissions a place to record their progress. Such progress will be rewarded when the state, as anticipated, begins to regulate greenhouse gas emissions. There are growing indications that businesses, large and small, do want to cooperate, if only to ensure that they have a hand in crafting policies and regulations many see as inevitable. A group of Fortune 500 companies joined with the Philadelphia-based Pew Charitable Trusts to study and develop ma

On Monday, November 27, the Arizona Superior Court issued a judgment to CV 97-03748 (consolidated) TEP vs. ACC. The judgment is against the Arizona Corporation Commission on all consolidated rules and CC&N complaints filed by the coops and pertaining to all CC&N decisions insofar as the Commission's Electric Competition Rules and Decisions enacted and issued pursuant to those rules are invalid for failure to provide for the Commission ascertaining the fair value of the property of public service corporations under Article 15& 14 of the Arizona Constitution and certain rules are invalid for lack of Attorney General certification.

It was further ordered that the coops demonstrated as a matter of law that the Commission's rules and CC&N decisions are unlawful and unconstitutional under the Arizona Constitution. Commission Decisions 59942, 61071(Emergency Rules), 61272 (Emergency Rules made permanent) and 61969 and all Electric Competition Rules enacted under those decisions are vacated and set aside as unlawful and unconstitutional. All competitive CC&N's and tariffs approved under those decisions are also vacated and set aside as unlawful and unconstitutional.

-----Original Message-----

From: jsmollon@newwestenergy.com [mailto:jsmollon@newwestenergy.com] Sent: Tuesday, November 27, 2001 11:21 AM To: arem@electric.com Cc: douglass@energyattorney.com; Jeff.Dasovich@enron.com Subject: Proposal AREM response to UDC Joint Filing - Implementation of Su spension DA

I have had an opportunity to talk to most of you regarding the attached proposal. I apologize I ran out of time yesterday and didn't catch everyone.

NWE would like to propose a slightly different take on our AREM filing having had a chance to think more about it. I wanted to run it by everyone to get your thoughts before submitting a redline. If you feel this warrants a conference call I will gladly set one up for today. Time is of the essence and would appreciate your feedback as soon as possible. If we all agree, I would like to get the re-write with everyone's blessing to Dan by tomorrow at 8:00 am. or sooner.  
<<arm-puc-plan.doc>> Proposal Benefits

1. We look more reasonable and agree to much of what UDCs are proposing. 2. Accommodates most, if not all, of ESP and customer concerns. 3. Strong argument for avoiding any contract review. Our verification proposal could backfire; PUC could accept our approach, but add details which goes toward ESPs submitting contracts to the PUC for review and validation Thank you, Janie Mollon Manager, Legislative and Regulatory Affairs Office: 602-629-7758 FAX: 602-629-7772 Mobile: 602-625-3892

Maureen -- Please forward to the Enron public affairs group. Thanks!

---

To: Enron Public Affairs

From: Michael F. Terraso, Vice President, Environment, Health and Safety & Chief Environmental Officer Jeff Keeler, Director, Environmental Strategies

Environmental regulations and policies have and will continue to play a significant role in the current California "energy crisis" situation. It is a high priority of the Enron Environment, Health and Safety (EHS) organization to ensure that environmental issues are given serious consideration as part of Enron's efforts to capitalize on opportunities and manage risks related to the California crisis.

To that end, we have asked Mary Schoen, Manager, Environmental Strategies, to serve as the EHS organization's key contact for commercial, government affairs, EHS and public affairs personnel on environmental issues related to the California crisis situation. As the primary interface with these groups, Mary will coordinate the numerous resources of the entire EHS department in support of Enron's activities, including:

Providing timely intelligence and analysis about environmental policy developments that affect Enron markets; Reviewing legislation/regulation, coordinating environmental policy advocacy strategies and providing input into overall Enron advocacy efforts; Providing assistance on environmental permitting, due diligence, and other technical services.

Mary's contact information:

San Francisco Office: 415-782-7803 phone 415-782-7845 fax

Houston Office: 713-345-7402 phone 713-646-8160 fax

Thanks very much for following up on this, Margo. I'm now scheduled to meet with Kristina Mordaunt on Tuesday to talk about compliance.

Margo Reyna 12/29/2000 08:55 AM

To: Jeff Dasovich/NA/Enron@Enron, Sue Nord/NA/Enron@Enron, Mona L Petrochko/NA/Enron@Enron cc: Subject: CA Quarterly Fee Statement

All,

With Dick Anderson's assistance, we've tracked down the appropriate person to handle the filing of the CA Quarterly Fee Statement that Jeff sent to me last week. I have forwarded a copy of the form to Steve Batchelder (see e-mail from Dick below) via interoffice mail and left him a voicemail message indicating that the form is on its way and that Dick indicated Steve is the appropriate person to handle it. I have asked Steve to call me when he receives the form.

Thanks!

To: Margo Reyna/NA/Enron@Enron cc: David DeGabriele/Enron Communications@Enron Communications, Steven Batchelder/Enron Communications@Enron Communications, Scott Bolton/Enron Communications@Enron Communications Subject: Re: A new fax has arrived from 7138537297

Margo,

The attached form is in regards to an assessment by the California PUC on all entities regulated by the PUC to recover the costs of running the PUC. The concept is that the regulated utilities, rather than the taxpayers, should pay for the operation of the PUC. This fee is only assessed on intrastate revenues, thus, we should only report the California intrastate receipts of Enron Telecommunications, Inc. Since this fee is not a tax, Accounting is responsible for completing this report, according to the July 2000 agreement between Jim Ginty (Tax), Scott Bolton (Regulatory Affairs), Steve McCarrel (Legal) and Carolyn Barrett (Accounting). It is my understanding that Steven Batchelder is the person in Accounting tasked with completing these reports.

Thank you for asking, Richard D. Anderson Director of Taxes Enron Broadband Services, Inc. 713-345-7729 (Houston office 1/8 through 1/10, no voice mail) 503-886-0335 (Portland office and voice mail) 503-880-5249 (cellular) 503-425-6005 (fax) richard\_anderson@enron.net

OFFSITE MEETING OCTOBER 16TH THROUGH OCTOBER 17TH - MONDAY/TUESDAY -- AGENDA ATTACHED

Hi everyone!

Attached is the final agenda for Vancouver -- also is the final rooming list with confirmation numbers. The Hotel Waterfront is located at 900 Canada Place Way, Vancouver, B.C. (604) 691-1991 (phone) and fax is (604) 691-1999. The hotel is approximately half an hour (cab ride) from the airport. Cabs are the recommended mode of transportation because the hotel shuttle bus does not run very frequently and it often takes an hour to get to the hotel.

The meetings will take place in Ballroom A on both days (see ppt presentation for meeting times) there will be signs in the lobby which indicate where the Ballroom is located.

We will be serving breakfast and lunch Monday and only breakfast on Tuesday.

Attached are a few web sites if you are interested in any extracurricular activities. The Canucks are Vancouver's hockey team and they are playing the Toronto Maple Leafs Monday, October 16th. The writer's fest is taking place on Granville Island (approx. half an hour walk or a 10 minute cab ride) from the hotel -- see attached website for details.

Any questions, please call or email! I look forward to seeing you in Vancouver!

<http://www.writersfest.bc.ca>

<http://www.thehotelwaterfront.com>

<http://www.canucks.com>

<http://www.granvilleisland.com>

Folks,

Late Friday afternoon Ziad called me. The ISO Governing Board earlier the same day turned down the ISO management's request to force SCs to place 95% of their scheduled load in the DA market. That leaves the ISO little choice but to venture into the energy markets to procure power to cover their peak hours on hot days.

Terry gave Ziad the OK to proceed with placing both the APX and California PX screens for this new product/matching-service. I am working with the two vendors and the ISO to make this happen quickly. We anticipate that the market will open on Tuesday, September 5, or earlier.

Key people who you may need to contact: ISO - Ziad Alaywan 916-351-2140 (Nancy Traweek and Jim McIntosh are also in the loop) PX - Ken Czarnecki 626-537-3123 PX - John Yurkanin 626-537-3124 APX - Denice Cazalet 408-517-2123 APX - Michael Heinrich 408-517-2159

Please feel free to contact me with your questions. Several of you have not had the opportunity to attend the pre-design meetings we had at the California PX and APX a few weeks ago, nor were you aware of the joint WPTF/ISO meeting held last week. But in essence, what this product/matching-service will allow you to do is post bids to sell, or buy a 6-hour block of capacity at a firm energy price across the hours of HE13 to HE18. You can bid at COB, Mead, PV, SP15 or NP15. You can utilize either the CalPX or APX to post your bids, because the ISO will be watching both screens. The block sizes are (supposed to be) 25MW. The seller is responsible for arranging transmission to the delivery point, and the buyer (e.g., ISO) is responsible for arranging transmission service from the delivery point. The ISO will make its purchase decisions for the day-of at or before 8:00 a.m. The ISO will send out a general notice when it needs offers to sell on the super-peak market. I expect that bids for either buy or sell will be able to be posted at any time, 24 hours. The screens should allow parties to post buy or sell bids at least 60 days forward of the trade day.

You are not limited to a price cap in these markets, but the ISO as a buyer has the right to not purchase at prices above it's price cap.

I think WPTF members should be very proud that we were able to quickly work together, and with the ISO to create this market. I have no doubt the ISO will be offering bids to purchase starting Sept 5, and going forward 60 days. However, who among you will be willing and able to post bids to sell?

gba

PowerSpring will be unable to attend the OFO Forum scheduled for August 29, and would like to submit the following item for inclusion in the next meeting. Additionally, PowerSpring suggests the OFO Forum meet on a quarterly basis.

Issue: During pro-forma tariff discussions on I.99.07.003 Gas Settlement Agreement, PowerSpring lobbied for customer choice of daily nominating and balancing for Core Aggregated customers if the customer had installed Automatic Meter Reading equipment provided by executing the Meter Add-On Tariff. Additionally, this AMR data would be used for OFO/EFO purposes. PG&E contended that the Settlement did not contemplate the use of this data for these purposes and that the issue should be addressed in the OFO Forum.

PowerSpring requests that this issue be included on the agenda for the next OFO Forum.

Tod Bradley PowerSpring, Inc. Office: (760) 944-1999 Cellular: (714) 305-9237 mailto: tod\_bradley@powerspring.com

## Recession Risk is Rising, According to Research by Professor

|            |                                    |
|------------|------------------------------------|
| Sender     | owner-eveningmba@haas.berkeley.edu |

Haas NewsWire October 16, 2000

CONTENTS Recession Risk is Rising, According to Research by Professor Kenneth Rosen FCC Commissioner to Speak at Workshop on "Regulating on the Technological Edge" Thomas Siebel Inaugurates Second Year of Fisher Center Seminar Series Former Oracle President and COO Ray Lane Predicts the Future for Dot-Coms Dean Emeritus Earl "Budd" Cheit Honored by Cal Performances New Faces at Haas Haas in the News Happening at Haas Haas Celebrations

RECESSION RISK IS RISING, ACCORDING TO RESEARCH BY PROFESSOR KENNETH ROSEN The risk that the US economy is headed for a recession is rising, according to new research by Prof. Kenneth Rosen, co-chair of the Fisher Center for Real Estate and Urban Economies at the Haas School, and his co-author Amanda Howard, senior analyst at the consulting firm RCG. Rosen and Howard based their conclusion on a study of eight leading economic indicators.

"While advancements in technology have enabled notable productivity improvements, those gains are over-stated," say the authors about the argument that increased productivity levels will continue to ward off a recession. "The US sits on the high end of an economic seesaw, held up by a series of related -- and increasingly less sturdy -- imbalances."

High oil prices, a tight labor market, and a potentially weaker dollar will encourage price and wage inflation, and potentially even higher interest rates, say the authors. At the same time, likely declines in foreign investment and venture capital funding would encourage the stock market bubble to burst and thus reduce consumer spending.

As the technology sector continues to contract and without venture capital funding to support the large percentage of unprofitable Internet businesses, a substantial number of jobs will be lost, argue Howard and Rosen. Under these circumstances, the record level of private sector debt and the negative personal savings rate would become increasingly problematic.

"It is the interaction of all of these imbalances that make the risk of a recession so great," conclude the authors.

FCC COMMISSIONER TO SPEAK AT WORKSHOP ON "REGULATING ON THE TECHNOLOGICAL EDGE" Federal Communications Commissioner Michael K. Powell will give the keynote address to the "Regulating on the Technological Edge" workshop on Friday, October 20, at 4:00 p.m. in the Arthur Andersen Auditorium. All faculty, students, staff, and alumni are invited to attend this speech.

Powell has served as a commissioner since 1997. Prior to joining the FCC, Powell was chief of staff to the Antitrust Division of the Department of Justice. He earned his JD from Georgetown University and clerked for a judge on United States Court of Appeals before he joined the Washington DC law firm of O'Melveny & Meyers LLP. In his practice he focused on regulatory matters involving telecommunications, antitrust, and employment law.

This speech is the only event in the workshop series that is open to the public. The regulation workshop is an invitation-only event for academics, regulators, and industry leaders geared towards addressing the issue of regulation of emerging technologies. For more information, contact Anita Patterson at 510-642-4233.

THOMAS SIEBEL INAUGURATES SECOND YEAR OF FISHER CENTER SEMINAR SERIES The founder of one of the fastest growing companies in America, Thomas Siebel, chairman and CEO of Siebel Systems, is coming to Haas to share the secrets of his success with the Haas community on Tuesday, October 31, as the first speaker in this year's Fisher Center E-Commerce Executives Seminar series.

All students, faculty, staff, and alumni are invited to attend the seminar, which takes place Tuesday, October 31, from 12:30 p.m. to 2:00 p.m. in the Wells Fargo Room. Seats will be given on a first-come, first-served basis.

Siebel Systems provides an integrated set of e-business application software that enables multi-channel sales, marketing, and customer service systems to be deployed over the Web, call centers, the field, resellers, retail, and dealer networks. Siebel Systems has grown from \$50,000 in revenues in 1994 to \$791 million in 1999.

Siebel was recognized as one of the top 25 managers in the world by BusinessWeek in January 2000 and Siebel Systems was named the fastest growing company in 1999 by Fortune magazine. Siebel has authored two books on selling. His current book Cyber Rules, which details his business principles, was published in April 1999.

Siebel began his career as employee number 50 at Oracle, after earning his bachelor's in History, a master's in Computer Science, and an MBA from the University of Illinois. In 1990, he left Oracle and became CEO of Cayenne Systems, which he renamed Gain Technology and merged with Sybase. In 1993 he founded Siebel Systems.

FORMER ORACLE PRESIDENT AND COO RAY LANE PREDICTS THE FUTURE FOR DOT-COMS Raymond J. Lane, former president of Oracle Corporation and new general partner at the Silicon Valley venture capital firm Kleiner Perkins Caufield & Byers (KPCB), will give his vision of the future of the New Economy to the Haas community on Friday, November 3, at 4:00 p.m. This event is the first of the 2000-2001 Business Faculty Research Dialogue: Shakeout in Cyberspace: What's Next for the Dot Coms. The event is open to the entire Haas School community.

Since his change in positions, Lane has been quoted extensively that he believes the venture business is going to shift from just funding companies to playing an even larger role in building those companies. He told the Associated Press that KPCB will help to create the survivors in the impending dot-com shakeout.

Lane has stated that the changes at Oracle announced by founder Larry Ellison sped up his departure, which he announced just before the July 4th weekend. Lane left Oracle with no severance package and had to give up \$300 million in unvested stock options. Lane originally joined Oracle as president of Oracle USA after working as a senior partner in the consulting firm of Booz Allen & Hamilton.

Lane has also stressed that his leaving Oracle was part of trying to create balance in his life, noting that the KPCB offices are just 5 minutes from his house. In addition, Lane and his wife have an 18-month-old son at home and a second child due in November. More information on Lane can be found at <http://www.kpcb.com/>.

The Business Faculty Research Dialogues will be sponsored again this year by the Clausen Center for International Business and Policy and California Management Review.

Lane will speak in the Haas School's Arthur Andersen Auditorium at 4:00 p.m. on Friday November 3. There will be a reception at 5:00 p.m. following the lecture in the School's Bank of America Forum. Please contact Meredith LaCorte in the dean's office to reserve a space at either the lecture or the reception.? She can be reached at 510-643-2027 or in email at [lacorte@haas.berkeley.edu](mailto:lacorte@haas.berkeley.edu).

DEAN EMERITUS EARL "BUDD" CHEIT HONORED BY CAL PERFORMANCES Earl F. Cheit, dean emeritus of the Haas School, was honored with a gala celebration at the Cal Performances Season opening in September. Cheit is the founding chair of Cal Performances. Cheit's involvement with Cal Performances began in the early 70s when he served on the Committee for Arts and Lectures, the organization that became Cal Performances.? Now that his term has ended he is stepping down as chair, but will continue to serve on the Board of Trustees.

Cheit served as the Haas School dean from 1976 to 1982.? Among his many achievements was establishing awards for outstanding teaching to faculty selected and presented by students. The first awa

Enron Troubles Only the Tip of the Iceberg? By Peter Eavis <<mailto:peavis@thestreet.com>> Senior Columnist TheStreet.com 10/26/2001 05:23 PM EDT URL: <<http://www.thestreet.com/markets/detox/10003083.html>>

Dealings with a related party have tarnished Enron's (ENE:NYSE - news - commentary) reputation and crushed its stock, but it looks like that case is far from unique. The battered energy trader has done business with at least 15 other related entities, according to documents supplied by lawyers for people suing Enron. Moreover, Enron's new CFO, who has been portrayed by bulls as opposing the related-party dealings of his predecessor, serves on 12 of these entities. And Enron board members are listed as having directorships and other roles at a Houston-based related entity called ES Power 3. The extent of Enron's dealings with these companies, or the value of its holdings in them, couldn't be immediately determined. But the existence of these partnerships could feed investors' fears that Enron has billions of dollars of liabilities that don't show up on its balance sheet. If that's so, the company's financial strength and growth prospects could be much less than has generally been assumed on Wall Street, where the company was long treated with kid gloves. Enron didn't immediately respond to questions seeking details about ES Power or about the role of the chief financial officer, Jeff McMahon, in the various entities. Enron's board members couldn't immediately be reached for comment. Ten Long Days Enron's previous CFO, Andrew Fastow, was replaced by McMahon Wednesday after investors criticized Fastow's role in a partnership called LJM, which had done complex hedging transactions with Enron. As details of this deal and two others emerged, Enron stock cratered. The turmoil that resulted in Fastow's departure began two weeks ago, when Enron reported third-quarter earnings that met estimates. However, the company failed to disclose in its earnings press release a \$1.2 billion charge to equity related to unwinding the LJM transactions. Since then, investors and analysts have been calling with increasing vehemence for the company to divulge full details of its business dealings with other related entities. Enron stock sank 6% Friday, meaning it has lost 56% of its value in just two weeks. Enron's End Run? New financial chief's involvement in Enron business partners Enron-Related Entity Creation Date McMahon Involved?

ECT Strategic Value Corp. 4/18/1985 Yes JILP-LP Inc. 9/27/1995 Yes ECT Investments Inc. 3/1/1996 Yes Kenobe Inc. 11/8/1996 Yes Enserco LLC 1/7/1997 Yes Obi-1 Holdings LLC 1/7/1997 Yes Oilfield Business Investments 1/7/1997 Yes HGK Enterprises LP Inc. 7/29/1997 Yes ECT Eocene Enterprises III Inc. 2/20/1998 Yes Jedi Capital II LLC 9/4/1998 Yes E.C.T. Coal Company No. 12/31/1998 Yes ES Power 3 LLC 1/7/1999 Yes Enserco Inc. 3/25/1999 No LJM Management LLC 7/2/1999 No Blue Heron I LLC 9/17/1999 No Whitewing Management LLC 2/28/2000 No Jedi Capital II LLC 4/16/2001 No Source: Detox However, Enron has yet to break out a full list of related entities. The company has said nothing publicly about McMahon's participation in related entities, nor has it mentioned that its board members were directors or senior officers in ES Power 3. (Nor has it explained the extensive use of Star Wars-related names by the related-party companies.) It's not immediately clear what ES Power 3 is or does. So far, subpoenas issued by lawyers suing Enron have determined the names of senior officers of ES Power 3 and its formation date, January 1999. Among ES Power 3's senior executives are Enron CEO Ken Lay, listed as a director, and McMahon and Fastow, listed as executive vice presidents. A raft of external directors are named as ES Power 3 directors, including Comdisco CEO Norman Blake and Ronnie Chan, chairman of the Hong Kong-based Hang Lung Group. A Comdisco spokeswoman says Blake isn't commenting on matters concerning Enron and a call to the Hang Lung group wasn't immediately returned. Demands, Demands Rating agencies Moody's, Fitch and S&P recently put Enron's credit rating on review for a possible downgrade after an LJM deal that led to the \$1.2 billion hit to equity. Enron still has a rating three notches above investment grade. But its bonds trade with a yield generally seen on subinvestment grade, or junk, bonds, suggesting the market believes downgrades are likely. If Enron's rating drops below investment grade, it must find cash or issue stock to pay off at least \$3.4 billion in off-balance sheet obligations. In addition, many of its swap agreements contain provisions that demand immediate cash settlement if its rating goes below investment grade. Friday, the company drew down \$3 billion from credit lines to pay off commercial paper obligations. Raising cash in the CP market could be tough when investors are jittery about Enron's condition. This week, a number of energy market players reduced exposure to Enron. However, in a Friday press release, CEO Lay said that Enron was the "market-maker of choice in wholesale gas and power markets." He added: "It is evident that our customers view Enron as the major liquidity source of the global energy markets." McMahon reportedly objected to Fastow's role in LJM, allegedly believing it posed Fastow with a conflict of interests. But he will need to convince investors that the 12 entities he's connected to don't do the same. Enron has said that its board fully approved of the LJM deals that Fastow was involved in. Now, board members will have to comment on their own roles in a related entity.

Under The Radar: Enron's Flickering Bulb By Christopher Edmonds <mailto:cedmonds@thetstreet.com> Special to TheStreet.com 10/26/2001 05:08 PM EDT URL: <<http://www.thetstreet.com/comment/chrisedmonds/10003075.html>>

While the bulb at Enron (ENE:NYSE - news - commentary) may not have burnt out, it's clearly flickering. To date, investors aren't sure whether Chairman and CEO Ken Lay is up to the task of re-energizing the company he once built to greatness.

What's happened at the Houston energy giant-turned-dwarf could've been imagined with any number of ne'er-do-well companies during the well-chronicled bubble. But this is Enron. As one longtime Enron bull and shareholder said, "I never had to worry about Enron's ability to survive until this week. I still find it hard to believe." Peter Eavis has done an exceptional job of chronicling Enron's adventures for some time. If you'd listened to him earlier this year, you'd have profited from his knowledge. His reporting on Enron's partnership shenanigans to the departure of Chief Financial Officer Andrew Fastow has been outstanding. The rumors -- from a pending bankruptcy to a Justice Department investigation -- are, for now, just that. And, Enron did not single-handedly cause the California power crisis, nor is Royal Dutch/Shell (RD:NYSE - news - commentary) about to make a bid to buy the company. Sources do tell me that head-count reductions are likely through employee buyout offers and the company is set to refocus on

Enron, El Paso Shut Down Energy Trading After Attacks (Update1) Bloomberg, 09/11/01

A Day of Terror: Energy Firms Act to Protect Their Systems By Wall Street Journal staff reporters Rebecca Smith, John Emshwiller and Alexei Barrionuevo

09/12/2001 The Wall Street Journal A2 (Copyright (c) 2001, Dow Jones & Company, Inc.)

Energy companies that control the nation's electricity and natural-gas supplies as well as big oil companies went on heightened alert to safeguard the system from possible attack. Across the country, utility emergency control centers came to life and extra security patrols were initiated. But with thousands of miles of pipelines and transmission lines, it was largely a symbolic effort. With energy markets suspended and trading floors closed in New York and Houston, the biggest impact was financial. In California, grid officials were preparing to order plants to operate today according to work schedules submitted for yesterday's market day. Enron Corp., Dynegy Inc. and Reliant Energy Inc. largely shut down their headquarters offices in Houston, except for essential personnel. However, they said they were maintaining normal deliveries of electricity and gas to customers. "We have a skeleton crew on the trading floor but I don't think anyone is focused on trading today," a Reliant spokesman said. The Nuclear Regulatory Commission ordered the nation's 104 nuclear reactors to implement heightened security plans although many utilities that own generating plants already had done so. Exelon Corp. put its 17 reactors at 10 plant sites on alert voluntarily -- and largely vacated its 60- plus story headquarters office tower in downtown Chicago. "We sent everybody home we could," said Don Kirchoffner, head of communications for the firm that owns the old Commonwealth Edison and Philadelphia Electric utilities. "At our plants,

we've doubled the security." Nuclear power plant containment buildings, where radioactive materials are housed, are "hardened" against war-time or terrorist attack. They are designed to withstand accidental air crashes and hurricanes, as well, and have concrete walls up to four feet thick that lie outside heavy steel liners, often an inch thick. Nevertheless, critics always have feared that terrorists might be able to get inside the plants and cause mayhem. Edison International said it has asked the California Highway Patrol to monitor traffic along Interstate 5, which lies a short distance from its San Onofre nuclear plant south of Los Angeles that's operated by its Southern California Edison unit. Like companies everywhere, Tulsa-based Williams Cos. started the day by locating its top three levels of management. Then the energy company traced employee travel to determine whether any employees might have been in lower Manhattan or at the Pentagon at the time of the terrorist attacks. "We still don't know for sure," Williams spokesman Jim Gipson said. In the wake of the attacks, oil companies said they heightened security measures at refineries but no company reported a curtailment in the production of gasoline or other refined products. BP PLC, Shell Oil Co., Chevron Corp., Valero Energy Corp. and Phillips Petroleum Co. all said that their facilities were operating normally. A spokesman for Valero, San Antonio, said the company instructed refinery managers in a morning conference call to restrict the flow of "outsiders" into its plants. Phillips Petroleum, Bartlesville, Okla., instituted a travel ban for overseas U.S. workers. "We have just said, 'stay where you are for now,'" a Phillips spokeswoman said. Kinder Morgan Inc., Houston, shut down a petroleum-products storage facility in New York Harbor that feeds Northeast refineries and gas stations. The 6.6 million-barrel facility stores and transfers gasoline, jet fuel and diesel.

A Day of Terror: Attacks in U.S. Spur Rise in Energy Prices --- Some Suspect the Terrorism Has Origins in Mideast, Fear Supply Disruption By Alexei Barrionuevo Staff Reporter of The Wall Street Journal

09/12/2001 The Wall Street Journal A2 (Copyright (c) 2001, Dow Jones & Company, Inc.)

Energy prices soared on fears the terrorist attacks might have originated in the Middle East and that potential U.S. retaliatory action could disrupt oil supplies. The price of the U.S. benchmark West Texas Intermediate yesterday rose to as high as \$31 a barrel for both October and November delivery following the attacks, up from \$27.63 for the October price Monday. The attacks shuttered commodity trading at least through today at the New York Mercantile Exchange, which operates in a World Financial Center building next door to the World Trade Center. Gasoline pump prices also began shooting up in locations nationwide in the wake of the attacks. By lunchtime, workers reported seeing stations posting prices of \$2.09 a gallon in Lansing, Mich. Consumers in Tulsa, Okla., also reported prices that had spiked by more than 20 cents a gallon at several stations. Across the country, people lined up at gasoline stations to top off their tanks, apparently concerned about gasoline supplies. Exxon Mobil Corp., one of the country's largest gasoline retailers, advised against it. The company said it had "ample supplies" of gasoline and urged consumers to "maintain normal buying habits to avoid artificial run-outs." In a statement, BP PLC said "for today, we are holding the line on prices." Trucks lined up several deep at Valero Energy Corp.'s Benicia, Calif., gasoline pick-up terminal. Valero was the only refining company in the San Francisco Bay Area that kept open its terminal, said Greg Kaneb, a Valero vice president. Other companies apparently closed theirs for security reasons, later reopening them after lunch. As a result, wholesale prices for several refiners shot up as much as 20 cents a gallon, Mr. Kaneb said. "There's going to be a public reaction that's going to create some uncertainty," said Jeff Pillon, energy analyst at the Michigan Public Service Commission. "We've seen a lot of volatility. For things to jump around would not be surprising." Should oil prices continue to climb, members of the Organization of Petroleum Exporting Countries appeared ready to step in and boost production. Ali Rodriguez, OPEC's secretary general, said the organizat

o Pseudo.com Shuts Down, Lays Off All 175 Employees

NEW YORK -- Pseudo Programs, operator of an Internet television network, said it ceased operations after efforts to raise additional funding or sell the company fell through. The company engaged in talks with possible buyers up to the last minute, even putting off informing its employees for an hour and a half, but when those failed, CEO David Bohrman made the announcement to Pseudo's 175 employees at a meeting yesterday afternoon, according to the company's former senior vice president of corporate communications, Jeanne Meyer. VentureWire reported last week that Mr. Bohrman was seeking additional funding and considering selling the company. Ms. Meyer said Pseudo is still seeking a buyer. In June, Pseudo eliminated 16% of its workforce, about 58 jobs, and reassigned 30 others to new production positions in an attempt to recreate itself as a continuous live broadcast network. In May, the company raised a \$14 million round of funding led by Defosses International, a media unit backed by LVMH Luis Vuitton Moet Hennesy. Intel Capital participated along with FD5 S.A., Prospect Street Ventures, and Tribune Ventures. Pseudo has received additional backing from investors including Sycamore Ventures, Big Wave Ventures, and Winfield Capital. <http://www.pseudo.com/>

o Optical System Developer Maple Has Over \$50 Million Series B

SAN JOSE, Calif. -- Maple Optical Systems, which develops optical systems, said it raised over \$50 million in its Series B round of funding. The latest round brings the company's funding to over \$60 million. New investor Texas Pacific Group led the round, which included new investors Amerindo Investment Advisors, Aurora Networks, McQuillian Ventures, Siemens AG, and Technology Crossover Ventures. Previous investor Raza Foundries, which invested \$9 million in the company's initial funding, also invested in this round. The company will use the funding for sales and marketing, developing a research and development facility, and for manufacturing. Maple Optical Systems, formerly Maple Networks, develops multi-service optical systems that enable carriers to provision, scale, and manage bandwidth.

<http://www.mapleoptical.com/>

o Beauty ASP Makeover Networks Names Former Revlon Exec CEO

SAN MATEO, Calif. -- Makeover Networks, an application service provider for the beauty, fashion, and accessory industries, said it named George R. Cannon as its president and CEO. Mr. Cannon most recently served as president and general manager of Revlon's South American, Central American, and Caribbean markets. Makeover Networks is backed by Draper Richards and Venture Management Associates. <http://www.makeoverstudio.com/>

o Silicon Valley Bank Launches First Direct Investment Fund

SANTA CLARA, Calif. -- Publicly-traded Silicon Valley Bancshares, parent company of Silicon Valley Bank, said its first direct equity fund Silicon Valley BancVentures had a first close at \$42 million. The fund expects to have a final close in excess of \$50 million in mid-November. The fund will invest \$250,000 to \$1 million in technology and life sciences companies and will co-invest with other venture capitalists. The investment managers are Greg Becker, Aaron Gershenberg, and Doug Hamilton in Menlo Park, Calif. and Jim Maynard in Boston. <http://www.svb.com/>

o Latin Portal SportsYA! Cuts 25% of Staff, Raises \$10 Million

MIAMI -- SportsYA!, a sports portal aimed at Latin America, Spain, and the U.S. Hispanic market, said it that it cut its staff by 25%, laying off 50 of its 200 employees. Part of the cuts will come from duplications resulting from SportsYA!'s recent acquisition of Element 7. SportsYA! also said it raised \$10 million in fourth round financing from previous investors IMG/Chase Sports Capital, Chase Capital Partners, Flatiron Partners, and Ventech. The company will invest the money in its Latin American operations. The funds will also be used for sales and marketing. The company intends to open new offices in New York and Los Angeles. <http://www.sportsya.com/>

Enron Shares Fall on Concern Over CFO's Partnerships (Update4)

(Updates with Chief Financial Officer Fastow didn't immediately return a call for comment in fifth paragraph.)

Houston, Oct. 19 (Bloomberg) -- Enron Corp.'s shares have fallen 26 percent in the past three days on concern the biggest energy trader's dealings with partnerships run by its chief financial officer contributed to investment losses.

Enron's stock dropped 10 percent today. Enron's board cost the company at least \$35 million by allowing Chief Financial Officer Andrew Fastow to manage LJM Cayman and LJM2 Co-Investment, partnerships that bought Enron assets, a shareholder alleged Wednesday in a lawsuit.

The lawsuit came the day after Enron reported \$1.01 billion in third-quarter losses from failed investments. The Wall Street Journal reported \$35 million of the losses were connected with the two limited partnerships. Enron also reduced shareholders' equity by \$1.2 billion when it bought back 55 million shares from the partnerships, the paper reported yesterday.

"It looks sleazy," said Roger Hamilton, a manager at John Hancock's Value funds, which own 600,000 shares. "If you are someone who invests in a company's management, it's almost time to punt with Enron."

Enron spokeswoman Karen Denne didn't return calls or written requests seeking comment. Fastow didn't immediately return a telephone call for comment.

Fastow and a handful of associates made more than \$7 million last year in management fees and about \$4 million in capital increases on an investment of about \$3 million in one of the partnerships, the Journal reported today.

Buying Enron Assets

Fastow is involved in 17 other similar companies and partnerships that appear to have ties to Houston-based Enron, based on filings with the Texas secretary of state.

The foreign business corporations and limited liability companies have directors, officers or managers whose address is listed as 1400 Smith Street in Houston, Enron's corporate address, according to Texas records.

Fastow is listed as a director, officer or managing member in each one. At least one of the companies bought and sold Enron assets, including foreign power plants.

Whitewing Management, which lists Fastow as its managing member, received \$807 million from the sale of Enron debt last year.

Under the terms of the debt sale, Whitewing is allowed to use the proceeds to buy power plants from Enron or make other "permitted investments." Whitewing has bought 14 Enron plants or companies since 1999 and sold four.

Enron's Denne has not responded to written requests about Fastow's role at Whitewing or whether he used his knowledge of the value of Enron assets to benefit outside investors or company executives at Enron's expense.

Shares of Enron fell \$2.95 to \$26.05. They have fallen 69 percent this year.

--Russell Hubbard in the Princeton newsroom, 609-750-4651 or rhubbard2@bloomberg.net, and Jim Kennett in Houston, (713) 353-4871 or jkennett@bloomberg.net/pjm/alp/pjm

USA: UPDATE 1-Enron stock sustains further heavy losses.

10/19/2001 Reuters English News Service (C) Reuters Limited 2001.

(New first paragraph, adds additional analyst comment) By Andrew Kelly HOUSTON, Oct 19 (Reuters) - Enron Corp. stock sustained further heavy losses on Friday as investor confidence in the former Wall Street favorite was rocked by reports about the company's relationship with a limited partnership that was run until recently by Enron's chief financial officer. The energy giant's stock closed down \$2.95 or 10.2 percent at \$26.05 per share, making a cumulative loss of 27 percent for a week in which Enron reported a third-quarter loss of \$638 million, its first quarterly loss in over four years. Analysts said confidence was shaken by several articles in the Wall Street Journal this week alleging possible conflicts of interest on the part of Chief Financial Officer Andrew Fastow, who until recently ran a limited partnership that bought assets worth hundreds of millions of dollars from Enron. "I don't think this thing passes the smell test," said one analyst who spoke on condition of anonymity. "I think the CFO should be out of there right now. In the interest of the stockholders, that CFO should be gone," he said. Enron has rejected the suggestion that there was anything improper about the arrangements, but Fastow severed his ties with the LJM2 partnership earlier this year to allay concerns raised by investors and analysts about his dual responsibilities. POOR JUDGMENT? Analysts said that at the very least, the arrangement showed poor judgment by senior managers at Enron, which recently pledged to be more open with investors and analysts following a series of high-profile stumbles that culminated with the shock resignation of new chief executive officer Jeff Skilling in August. "For a company that had a lot of question marks around it already, these questions about financial dealings are really worrisome for investors," said Commerzbank Securities analyst Andre Meade. "It points to poor decision-making on behalf of the board and top management at Enron," he said. Enron, North America's biggest buyer and seller of natural gas and electricity, was one of Wall Street's high flyers last year, when its stock posted a gain of 87 percent. The stock's ascent was driven by enthusiasm for the company's plans to build a broadband telecommunications business and the success of its EnronOnline Internet energy trading platform. This year Enron's shares have fallen 69 percent as sentiment toward broadband and the Internet soured, Skilling resigned after only six months as CEO, and the company's Dabhol power plant project in India became mired in a payments dispute. Moody's Investors Service said earlier this week that it had placed all of Enron's long-term debt obligations on review for a possible downgrade after Enron took \$1.01 billion in write-downs and charges that substantially reduced valuations for several non-core businesses, including broadband and water services. Some of Enron's financing arrangements require the company to maintain investment grade credit ratings. Analysts said Enron's credibility has been severely damaged and the recent reports about the LJM2 partnership had raised concerns that more unpleasant surprises may lie ahead. "What don't we know that went on at that company? Where's the credibility?" asked one frustrated analyst. "We don't know if it's limited to this," he said.

Hey Everybody-

I will be leaving Tues., May 22 at noon to fly to Arizona for my sister's high school graduation. (sniff, sniff I am so proud.) I will be out the rest of the week and returning to work Tues., May 29, after the Monday Holiday. Jennifer Lind will be holding down my side of the fort while I am out. Please feel free to contact her if you need anything. She is at 415-782-7818.

Even though I will be swimming and lounging around the pool soaking up the beautiful Arizona sun please do not hesitate to page me if you have any emergencies that require my immediate assistance.

Cheers, April Hrach Administrative Coordinator Pager: 888-463-2072 Phone: 415-782-7825 Fax: 415-782-7851

Hello,

You are invited to take part in our annual Media Training Workshop, featuring Tripp Frohlichstein of Media Masters. He is a "master" at teaching this program and has done a great job at informing - as well as entertaining - previous workshop attendees. This year's workshop, helpful to both beginner and experienced professionals who currently work, or desire to work with the media, is being held at Cadence Design Systems on April 26th and 27th, 2001, and is co-sponsored by the San Jose Silicon Valley Chamber of Commerce

The registration fee for this event varies from \$100.00 to \$250.00.

Please see the attached registration form or click on our "press hat" icon on the SVMG home page at [www.svmg.org](http://www.svmg.org), for more information and a further description on this exciting program.

Please contact Michelle or myself for more information.

Best regards,

Michael Wero Associate, Communications Silicon Valley Manufacturing Group 408-501-7862 - p 408-501-7861 - f

Michelle Montague-Bruno Director, Communications Silicon Valley Manufacturing Group 408-501-7853 - p 408-501-7861

### Enron Image 2000 Video is Here

|            |                                |
|------------|--------------------------------|
| Sender     | public.relations@enron.com     |
| Recipients | [executive.list@enron.com]     |
| File       | dasovich-j/all_documents/2108. |

Enron's Image 2000 Video is Now Available

We think you will like Enron's new corporate image video, which can be used for employees, customers, suppliers, government officials, and other audiences who want to know about Enron. The video features Ken Lay, Jeff Skilling and Joe Sutton who discuss four key business initiatives: broadband; wholesale energy; energy outsourcing services and EnronOnline. The look and feel represents our people, culture and new branding.

MooreSource has a large supply of standard VHS (also known as NTSC) copies, which is the format used in the U.S. and some international locations, and copies in PAL, which is the format used in the U.K. and in most European locations. There also are special PAL formats (PAL-M and PAL-N) available for locations in South America.

You may use the order form below or, for those of you who prefer to order electronically, you may do so from MooreSource using the following item numbers. If you aren't familiar with MooreSource, please go to <http://home.enron.com:84/imgctr/> and click on the MooreSource button. Instructions for ordering will be provided there. If you have questions about using MooreSource, contact Michael Shea at 713/853-5418.

Order a copy today.

Greetings. In case Martin's interested...

Best, Jeff -----Original Message----- From: Jairam Gopal [mailto:Jgopal@energy.state.ca.us] Sent: Tuesday, October 23, 2001 12:15 PM To: undisclosed-recipients Subject: CADER'S DG 2001 CONFERENCE

!! CADER'S DG 2001 CONFERENCE !!

CADER's 3rd Annual International Symposium "Distributed Generation: Opportunities and Obstacles" will be held as scheduled on November 1-2, 2001 at the Catamaran Resort Hotel in San Diego.

Registration at the regular rates is still available. If you haven't registered yet, do so now. You should be there to network and mingle with some 250 fellow dg enthusiasts.

Twenty-three sponsors will be showing you the latest in distributed energy resource technologies. Over fifty speakers will provide you the latest and greatest in recent developments in financing, DG initiatives, deployment and commercialization issues, control & communication, standards and codes and more..... with a focus on case studies.

For the latest information on the Agenda, and registration details, please see [www.cader.org](http://www.cader.org) <<http://www.cader.org/>>

To facilitate your planning, San Diego's gorgeous Catamaran Resort Hotel has graciously extended the special rate deadline. Contact the hotel at 800-422-8386 or <<http://www.catamaranresort.com/cad1030.html>>

Call Jairam Gopal (916) 654-4880 or Michael Theroux (530) 823-7300 ext. 203 or Betsie Brown (858) 794-7355 if you have any questions.

CONFIDENTIAL SETTLEMENT DOCUMENT PER CPUC RULE 51

ALL INTERESTED PARTIES:

This is a reminder that PG&E will hold the first Gas Accord II Workshop of the new year on Wednesday and Thursday, January 10 and 11. The workshop will be held at PG&E headquarters in San Francisco, 77 Beale Street, in Conference Room 300.

Our objective for this workshop is to review and explain PG&E's comprehensive settlement proposal, which was distributed by e-mail on December 21, 2000, to those parties who have explicitly agreed to abide by CPUC Rule 51.

If you did not receive a copy of the December 21 transmittal and would like one, please complete the attached Rule 51 form and return it by e-mail to Frank Lindh (frl3@pge.com) and Geoff Bellenger (gjb2@pge.com), or by FAX to Geoff at 415-973-0881.

Because we will be discussing the substance of PG&E's settlement proposal at next week's workshop, any party who wishes to attend will be required to have completed the Rule 51 form. (Please note, if you received our December 21 transmittal, then that means PG&E has your Rule 51 form on file, so there is no need to fill it out again.)

Also attached below is a proposed Agenda for next week's workshop. We will start the sessions at 9:30 a.m. on Wednesday and at 9:00 a.m. on Thursday. We will provide coffee and juice in the morning, and lunch each day.

If you do plan to attend next week's workshop, we request that you please confirm your attendance, so that we can get a headcount for the food and drink orders. Please e-mail a response to Darcy Morrison (D2Mr@pge.com), or telephone Darcy at (415) 973-6644.

We look forward to seeing you next week and having a productive discussion.

Frank Lindh Ray Williams 415-973-2776 415-973-3634 frl3@pge.com rdw0@pge.com

Can you help me with this? I can never get Sanders to respond. Could you try to get an answer for me?

Sue Mara Enron Corp. Tel: (415) 782-7802 Fax:(415) 782-7854 ----- Forwarded by Susan J Mara/NA/Enron on 07/26/2001 01:39 PM -----

Susan J Mara 07/25/2001 01:38 PM To: Richard B Sanders/Enron@EnronXGate cc: James D Steffes/Enron@EnronXGate, Richard Shapiro/Enron@EnronXGate, Joseph Alamo/NA/Enron@Enron Subject: Electronic Mail Retention

Richard,

Several months ago, I was notified by you that my e-mails were being collected. Therefore, I kept doing what I've been doing all along since I joined Enron -- saving those emails I need for my job and deleting others. Given this new notice from you, I am confused about what to do. I do not have enough guidance. I get hundreds of emails every day. I respond to many of them. Do I save all email receipts and responses? Do I save a subset? What is the basis for saving some and deleting others? Can't my trash file and my e-mail system just be stored by IT centrally in Houston? Please respond.

Sue Mara Enron Corp. Tel: (415) 782-7802 Fax:(415) 782-7854 ----- Forwarded by Susan J Mara/NA/Enron on 07/25/2001 01:31 PM -----

Mark Haedicke and Richard Sanders Sent by: Enron Announcements 07/25/2001 01:19 PM To: Individuals Exempted from Retention Policy cc: Subject: Electronic Mail Retention

This is a reminder that due to the various proceedings ongoing in California, please do not delete any email or electronic data that relates to the Company's past, current or future business in California. Deletion of such data could subject both you and the Company to allegations of deliberate destruction of evidence, contempt of court, and civil and criminal penalties. To preserve such data, please have your assistant create a folder entitled "California Data" and move all emails and other data to that folder. Thank you for your cooperation. If you have any questions, please contact Richard Sanders at x35587 or Mark Haedicke at x36544.

Utilagent Now Provides 20% Electricity Savings for California Residences.

? 09/06/2000 PR Newswire

(Copyright (c) 2000, PR Newswire) ?

? PISMO BEACH, Calif., Sept. 6 /PRNewswire/ -- Utilagent, a California based utility services company, announced that it now provides a 20% electricity savings for all PG&E, Edison, and SDG&E residential accounts throughout California. The savings come directly from the actual cost of the electricity and is deducted from the "electric energy" charges as shown on one's utility bill. "California residents have seen their electricity bills skyrocket instead of decline and view this deregulation process as a confusing, dismal failure", says Robert Kramb, manager of Utilagent. "In addition, except for microscopic print found on electricity bills, regarding alternative suppliers, little has been done by the Public Utilities Commission and utility companies to educate Californian's about their purchase options. Utilagent has simply decided to take the guesswork out of the process." ?

Utilagent provides Californian's with an on-line approach for the 20% savings. Their web site <http://www.electricityderegulation.com> uses a one-page, one-minute, sign-up form where a resident enters their utility information and payment option. The entire process is done on-line, and there are no fees (either switching or cancellation), no deposits, and no long-term contracts. "Utilagent scours the utility market place for the best programs that provide the best utility savings for the most people, and we are pleased to promote Utility.com as the ESP (electric service provider) in California. Those signing up through Utilagent receive their same electricity and utility services as they have in the past, but pay 20% less for their electric energy, the way electricity deregulation is meant to be", claims Kramb. For further information visit <http://www.electricityderegulation.com> , or contact: Robert Kramb, Manager of Utilagent, 805-773-8777, fax, 801-409-5954, or e-mail, [robert@utilagent.com](mailto:robert@utilagent.com) This release was issued through DigitalWork.com - Your Business Workshop. For more information, visit <http://www.digitalwork.com> .

All,

Unfortunately, Aaron and I will not be able to make this call. However, we wanted to let the group know that we are strongly opposed to New West's proposal and urge the group to adopt the position we agreed to during last week's call, i.e., oppose the UDCs' proposal for a DASR cut-off date, for the reasons outlined in Dan's most recent draft.

Thanks.

Bill 925.287.4703

From: jsmollon@newwestenergy.com [mailto:jsmollon@newwestenergy.com] Sent: Tuesday, November 27, 2001 11:21 AM To: arem@electric.com Cc: douglass@energyattorney.com; Jeff.Dasovich@enron.com Subject: Proposal AREM response to UDC Joint Filing - Implementation of Su spension DA

I have had an opportunity to talk to most of you regarding the attached proposal. I apologize I ran out of time yesterday and didn't catch everyone.

NWE would like to propose a slightly different take on our AREM filing having had a chance to think more about it. I wanted to run it by everyone to get your thoughts before submitting a redline. If you feel this warrants a conference call I will gladly set one up for today. Time is of the essence and would appreciate your feedback as soon as possible. If we all agree, I would like to get the re-write with everyone's blessing to Dan by tomorrow at 8:00 am. or sooner.

<<arm-puc-plan.doc>> Proposal Benefits

1. We look more reasonable and agree to much of what UDCs are proposing. 2. Accommodates most, if not all, of ESP and customer concerns. 3. Strong argument for avoiding any contract review. Our verification proposal could backfire; PUC could accept our approach, but add details which goes toward ESPs submitting contracts to the PUC for review and validation Thank you, Janie Mollon Manager, Legislative and Regulatory Affairs Office: 602-629-7758 FAX: 602-629-7772 Mobile: 602-625-3892

Confidential Settlement Document Under CPUC Rule 51

PARTIES:

This is a reminder that we have a Gas Accord II Settlement Workshop next week on Wednesday and Thursday, October 25 and 26. The workshop on Wednesday will start at 9:30 a.m. and end around 3:30 p.m. We will provide lunch this day. On Thursday, we would like to start at 9:00 a.m. and end around noon. The Workshop is at PG&E's headquarters, Conference Room 300, 77 Beale Street, San Francisco.

Please respond, to let us know whether you will attend next week's workshop, so that we can get a head-count for lunch on Wednesday. Please RSVP to Darcy Morrison at D2mr@pge.com, or by telephone at (415) 973-6644.

Attached below is our proposed agenda. The topics include: balancing, transaction information, open-season rules, PG&E core procurement, and core aggregation.

Also on the Wednesday agenda, we have set aside some time for a feedback discussion with you. We are looking for your thoughts on the material we have presented in the Workshops to-date, topics for our final Workshop on November 7 and 8, issues you may wish to have addressed at that workshop, and any process suggestions.

Looking ahead, our initial thinking for the November 7 and 8 Workshop includes the following topics: \* A more comprehensive supply/demand/pipeline capacity forecast and the implications on facility needs, including under cold weather conditions. \* Further explanation of the Supply Reliability options discussed at the September 27 Workshop. \* More detail on the Capital Expenditure forecasts. \* Additional analysis of the Direct Connect to Backbone and Local Transmission rate design options. \* Continue the feedback discussion.

Please be reminded that we would like everyone involved in the Gas Accord II Settlement to fill out our information form, including initials indicating agreement to abide by CPUC Rule 51. If you have not previously provided us with a form, please fill out the attached blank form and return it by e-mail to Geoff Bellenger at gjb2@pge.com, or send it by FAX to 415-973-0881.

We look forward to seeing you at next week's Workshop. Please call or E-mail us if you have any questions or suggestions.

Frank Lindh Ray Williams Attorney Director 415-973-2776 415-973-3634 frl3@pge.com rdw0@pge.com

I just sent you a fax of the information which I currently have in my possession regarding the ICSC Law Conference. I have a call into Shirleen Glasin (the individual here in Houston who is putting together the PowerPoint Presentation for Laurie) to see if there has been any discussions regarding Jeff's portion of the presentation; i.e., whether there would only be one PowerPoint Presentation prepared wherein Laurie would present her portion of the discussion and then Jeff would pick up and finish with the deregulation portion of the discussion,, or if there would be two separate presentations prepared all together. I have scheduled a meeting between Laurie and Shirleen for next Wednesday, October 10, 2001 at 2:00 p.m. (CST) to discuss the presentation(s). It would probably be beneficial for Jeff to attend this meeting via telephone if he is available to do so.

To: cc: Subject: GOVERNOR DAVIS APPOINTS DIRECTOR TO THE OFFICE OF RATEPAYER ADVOC ATEs

A01:079 FOR IMMEDIATE RELEASE 03/21/2001 GOVERNOR DAVIS APPOINTS DIRECTOR TO THE OFFICE OF RATEPAYER ADVOCATES SACRAMENTO Governor Gray Davis today announced the appointment of Regina Ann Birdsell as Director of the Office of Ratepayer Advocates, Public Utilities Commission. The Office of Ratepayer Advocates (ORA) was established in September 1996 after the Legislature passed and the Governor signed SB 960. The legislation directs that an independent advocacy division be established to represent public utility customers in commission proceedings. Ms. Birdsell, 45, of Glendale, is a consultant to the Center on Philanthropy and Public Policy (School of Policy, Planning and Development) at the University of Southern California, a position she has held since January 2001. Prior to that, she served as Vice President for Winner and Associates, a management consulting and public affairs firm with emphasis on organizational and communication problems for high profile corporate clients. Ms. Birdsell was the executive director for the New Los Angeles Marketing Partnership from 1995 to 1999. From 1991 to 1995, she was Director of Public Affairs for the Children's Hospital Los Angeles. Ms. Birdsell served the California Attorney General's Office as Press Secretary from 1990 to 1991. She was the producer for The Parenting Network for Warner Brothers in 1989 and a coordinating producer for KABC-TV Eyewitness News from 1982 to 1988. Ms. Birdsell earned a bachelor of arts degree and a master of social works degree from the University of Southern California. The role of ORA is to obtain the lowest possible rate for service consistent with reliable and safe service levels. This charge covers all the industries regulated by the PUC except for transportation, telecommunications, electricity, gas and water. Ms. Birdsell will receive a salary of \$101,220. This position requires Senate confirmation. Megan Beiser Assistant Account Executive Edelman Public Relations Worldwide, Sacramento Phone: (916) 442-2331 Fax: (916) 447-8509

Howdy Golfers,

Tee times have been arranged on the East Course (18 holes of golf) at the Broadmoor for Thursday, November 8 (tee times: 1:40pm & 1:48pm). The price for playing this course is actually \$90; slightly cheaper than what is indicated below. I have arranged for each of your golf charges to be charged to your individual rooms. Please refer to the list below for additional charges such as, clubs & shoe charges. I'm hoping to finalize all the activity choices by the end of the week, so please confirm by COB tomorrow Thursday, October 18 that your activity choice will remain golf.

Thanks!

Ginger Dernehl Administrative Coordinator Global Government Affairs Phone# 713-853-7751 Fax# 713-646-8160

There are several changes to the Direct Report meeting in November.

First, the meeting will now conclude by 12:00 (noon) on Friday, November 9.

Second, the activities portion of the trip will not be sponsored by Enron....each individual will be responsible (personally) for payment of activity of choice. Most individuals either chose golf or horseback riding.....below is an estimate as to how much these activities will cost.

Golf: Green Fees (East/West Course) \$155.00/18 holes (Includes golf cart, use of practice balls, club care & storage)  
(East/West Course) \$85.00/9 holes (includes - same as above)

(Mountain Course) \$95.00/18 holes (includes - same as above) (Mountain Course) \$50.00/9 holes (includes - same as above) Rentals: Golf clubs with sleeve of balls \$55.00 Golf Shoes \$20.00

Horseback riding: 1hour \$25.00/person 1hour pkg \$35.00/person (pkg includes shuttle ride to stables) 2hour \$40.00/person 2hour pkg \$50.00/person (pkg includes shuttle ride to stables)

mini ride (group only) \$15.00/approximately 20 minutes

If you have an interest in the spa services that are available, please let me know and I will fax the spa list to you.

Please let me know ASAP which activity you choose so I can make the necessary arrangements.

Thanks and please call me if you have any questions.

Can't wait for the bullets to start to fly. Do we know what the total \$ amount is to EES (if they were to book the entire credit to Enron)? Thanks.

Marianne Castano@EES 09/28/2000 12:39 PM

To: Dennis Benevides/HOU/EES@EES cc: Jeff Dasovich/NA/Enron@Enron, Karen A Cordova/HOU/EES@EES, Diann Huddleson/HOU/EES@EES Subject: Re: SDG&E Credits

Dennis: Just wanted to bring this item to your attention. We've researched the terms of our residential agreements and have noted that they are silent as to the issue of credits/refunds. I've asked Jeff and Mike Day, our regulatory counsel in CA, for their input on whether we should refund these credits back to our residential customers.

Notwithstanding the fact that the language of the original decision allowing the credits does not address direct access customers, Jeff and Mike recommend, given the current climate in California, that we take action to refund these credits to our residential customers.

Just want to make sure you're "on board" with this before we direct CSC to refund the credit back to our residential accounts...Marianne

.

Enron Energy Services

From: Karen A Cordova 09/21/2000 05:00 PM Phone No: 713.853.3150 713.646.8860 - FAX No.

To: Marianne Castano/HOU/EES@EES cc: Subject: SDG&E Credits

Diane Huddelston called Lori Pinder about an issue; Here it is:

Due to the merger btw SDG&G & Sempra Energy (about a year or less ago), a savings was realized. The CPUC said these savings must be passed on to customers 1 time per year, in September. They are called Annual Merger Credits.

Pursuant to all commercial contracts, Enron is entitled to keep the savings (per Diane). What about the residential customer accounts?

Enron keeps the savings or should the residential customer receive?

Who could handle this issue for Diane?

Thanks, KC

Elliot-

Take a close look at the language in this bill regarding the RPS. On page 7, lines 29-33, the bill states that all power must be under a direct contract to a retail seller. While this does provide us potential opportunities for scheduling and commodity management as Stacey pointed out, it also prevents merchant plants from qualifying as renewable. This would eliminate our service customers such as Delano, Wheelabrator, and Shasta. The link to the bill itself is:

<[http://info.sen.ca.gov/cgi-bin/postquery?bill\\_number=sbx2\\_78&sess=CUR&house=S&site=sen](http://info.sen.ca.gov/cgi-bin/postquery?bill_number=sbx2_78&sess=CUR&house=S&site=sen)>

What do you think? Do you read it the same way?

Subject: Re: CGT Gas Accord II Team

The meetings next week conflict with workshops scheduled by the CPUC on interruptible customer issues and it is doubtful that anyone from CMTA will be in attendance. Suggest that meetings on Gas Accord be postponed till Feb when hopefully we will have a better idea whether PG&E still exists.

"Lindh, Frank (Law)" <FRL3@pge.com> 1/4/01 3:49:37 PM >>>

CONFIDENTIAL SETTLEMENT DOCUMENT PER CPUC RULE 51

ALL INTERESTED PARTIES:

This is a reminder that PG&E will hold the first Gas Accord II Workshop of the new year on Wednesday and Thursday, January 10 and 11. The workshop will be held at PG&E headquarters in San Francisco, 77 Beale Street, in Conference Room 300.

Our objective for this workshop is to review and explain PG&E's comprehensive settlement proposal, which was distributed by e-mail on December 21, 2000, to those parties who have explicitly agreed to abide by CPUC Rule 51.

If you did not receive a copy of the December 21 transmittal and would like one, please complete the attached Rule 51 form and return it by e-mail to Frank Lindh (frl3@pge.com) and Geoff Bellenger (gjb2@pge.com), or by FAX to Geoff at 415-973-0881.

Because we will be discussing the substance of PG&E's settlement proposal at next week's workshop, any party who wishes to attend will be required to have completed the Rule 51 form. (Please note, if you received our December 21 transmittal, then that means PG&E has your Rule 51 form on file, so there is no need to fill it out again.)

Also attached below is a proposed Agenda for next week's workshop. We will start the sessions at 9:30 a.m. on Wednesday and at 9:00 a.m. on Thursday. We will provide coffee and juice in the morning, and lunch each day.

If you do plan to attend next week's workshop, we request that you please confirm your attendance, so that we can get a headcount for the food and drink orders. Please e-mail a response to Darcy Morrison (D2Mr@pge.com), or telephone Darcy at (415) 973-6644.

We look forward to seeing you next week and having a productive discussion.

Frank Lindh Ray Williams 415-973-2776 415-973-3634 frl3@pge.com rdw0@pge.com

### Registration Results: Round One

|            |                                |
|------------|--------------------------------|
| Sender     | allison@haas.berkeley.edu      |
| Recipients | [eveningmba@haas.berkeley.edu] |
| File       | dasovich-j/mba_program/22.     |

Please disregard if you are not taking electives in the spring semester.

\*\*\*\*\*

We have reviewed TeleBEARS enrollments from last week's deadline and corrected your schedule in TeleBEARS to reflect the courses that you are now registered for. Please check TeleBEARS to confirm your schedule and review wait lists below.

So what's next?

1. CHECK InfoBEARS to see what you got into. You can call 510-642-9400 or go to [bearlink.berkeley.edu](http://bearlink.berkeley.edu) and use your SID and PIN to review your schedule. You can call any time of day. Use TeleBEARS for changes.
2. DROP the extra "back-ups" that you don't need by November 19 (Friday). Use TeleBEARS (510-642-3400), or call the Drop Hotline with the course control numbers of the course(s) you want to drop at 510-642-3535. Both options open 7-8 a.m. or 7 p.m. to midnight, Monday through Friday.
3. ADD extra classes if you like, by November 19 (Friday). You must use TeleBEARS during open hours to add a class. Call 510-642-3400 or go to [bearlink.berkeley.edu](http://bearlink.berkeley.edu) 7-8 a.m. or 7 p.m. to midnight, Monday through Friday.
4. We will confirm your schedule by the middle of next week. Course materials will be ordered for you based on your November 19 enrollment.

We have not completed registration for one-unit classes. I will be finalizing those enrollments this week. If you are depending on those units, be sure to sign up for a back-up just in case you don't get in to all of the one-unit courses you requested.

As always, please call or e-mail us if you have questions.

#### Oversubscribed Class Wait Lists (As of Friday, November 12)

Below are the wait lists for classes that were oversubscribed. To see if you got into the class, check InfoBEARS. Note: you are not listed below if you were not registered by the November 12 deadline listed in the registration materials. Remember, the TeleBEARS wait list number is incorrect. Positions on the wait lists are determined by seniority=0F-which we cannot adjust in TeleBEARS.

We are in the process of adding some of you to wait lists in TeleBEARS. If you are not listed there but are listed below, don't worry. The lists below are accurate.

E222: Financial Info Analysis 1 GATES, KIMBERLY 2 REILLY, KEVIN 3 ZHANG, LEI 4 KING, MICHAEL 5 LUCAS, NADINE 6 JOSHI, SUHAS 7 LIU, MICHAEL 8 SPARKS, JEREMY 9 CRAIB, BETSY 10 MOTOLA, ALEXANDER 11 KUNDU, SUMIT 12 TATLOW, KEVIN 13 GOMEZ, STEVEN 14 TAKETA, DAWN 15 MYERS, DAVID 16 BOURDON, GARY

E259-2: Leading Change 1 HOFFMAN, LAURA 2 MYERS, DAVID 3 ROY, INDRAJIT 4 SINHA, PRAKASH 5 LUCAS, NADINE 6 IDNANI, NARESH 7 BRAUN, RUSSELL 8 STACY, ANGELA 9 ALLAVARPU, SAI 10 JOSHI, SUHAS 11 REDDY, JAYARAMI 12 WINCKLER, SONJA 13 GORDON, JUSTIN 14 KAZI, AIAZ 15 SAMA, ANIL 16 YARAK, JOSEPH

E262B: New Venture Finance 1 PIESCO, CHRISTINE 2 MAZZARA, GWENDALINE

E296-3: Foundations of E-Business 1 FONTANA, MARCELLO 2 SAMA, ANIL 3 KAZI, AIAZ 4 DASOVICH, JEFFREY

E296-7: New Venture Finance 1 PIESCO, CHRISTINE 2 ANAND, VINAY 3 LAKHANI, VINOD 4 NUCCI, JAMES 5 GOMEZ, STEVEN 6 MALTZ, JEFFREY 7 PATEL, SANGITA 8 RAMARAO, RAVIKUMAR 9 DREESSEN, DAVID 10 TRAN, HUE 11 NUGEHALLY, MEGHAMALA 12 MURDTER, NALINI 13 CLAY, DOUGLAS 14 MOTOLA, ALEXANDER

These wait list numbers OVERRIDE the wait list numbers given out by TeleBEARS.

#### RE: Conference Call Advisory for SUNDAY, September 9th

|            |                               |
|------------|-------------------------------|
| Sender     | jeff.dasovich@enron.com       |
| Recipients | ['richard.shapiro@enron.com'] |
| File       | dasovich-j/sent_items/26.     |

I'm starting to get concerned about this. A) I didn't pick the time. B) I talked to Sue on Friday and she will be out of Church at 10 AM PDT and on the call shortly thereafter. Sue seemed more concerned about having a call at all then on the time. If she expressed a view that the time was set up so that she couldn't be on the call, I'd like to discuss, since that didn't factor in at all.

As you know, having gone through Sandi, I'm extremely sensitive to inter-group relations. If you feel there are issues that we should discuss, I'd really like to do it. I react very strongly to any view that I am intentionally doing anything to get in Sue's---or others---way. From my perspective, I feel strongly that I haven't behaved that way, and don't in any way intend to. I simply have no desire to "compete" with colleagues, Sue in particular. There aren't enough people to do all the work, and there's plenty of tasks, recognition, blame, etc. to go around.

These are extremely challenging times and we won't get anywhere unless it's truly a team effort. I know that the SF office has a history of challenges with respect to California leadership. I have no interest in returning to the very un-teamlike atmosphere that existed previously, particularly since the atmosphere has changed so positively in the past few months. For a variety of reasons, I have been asked to take on alot of tasks over the past year. I've tried very hard to perform well, while at the same time working hard with Paul and Sue to advance a significantly more healthy, inclusive, open and collegial working environment in California and the West.

I care alot of course about your perceptions, and if you have the preception that relations in the office is becoming an issue, I'd like to confront it head on. And if Sue is expressing any concerns about how things are going generally---which she expresses to me from time to time---I'd like to sit down with you and Sue to discuss, if you think that would be useful.

Forgive the lengthy note, but having just gotten through the experience with Sandi, I'm not anxious to repeat, in any shape or form.

Talk to you at noon your time.

Best, Jeff

Thanks, Geoff. May make sense to loop back with the woman at the PUC who contacted Jim originally about this account. Jim's been in contact with her before about some confusion with a UC account. Jim was out yesterday and today, but I think that he'll be in tomorrow. He may want to make the contact. Jim, thoughts?

Best, Jeff

From: Pollard, Geoff Sent: Tuesday, November 27, 2001 6:36 PM To: Dasovich, Jeff; Frazier, Lamar; Steffes, James D. Cc: Mara, Susan; Smith, Mike B; Huddleson, Diann; Hughes, Evan; Fite, Rebecca; Riley, Tom Subject: RE: Pac Tel - CPUC Customer Switch Complaint

All, I spoke with the customer, Mike Benson. He is not angry, but he would like his accounts returned to bundled service. He understands that we are implementing a large contract with SBC Corp Real Estate, and that it is possible more of his accounts are inadvertently on the list. He knows to contact me directly with future issues. I submitted the deal sheet to de-DASR the 2 accounts he identified to Samantha Fite a few moments ago. I have also notified the SBC contracts manager of the situation. Let me know if there are any questions or concerns. Geoff Geoff Pollard Service Manager Enron Energy Services 925-543-3763

| File       | dasovich-j/notes_inbox/535.                                                                                        |

Enron, as part of our alliance, ARM, has entered into a settlement w/ SDG&E, ORA, DGS and the Golden State Cooperative on Direct Access Service Fees. These are fees that the utility could assess on either DA customers or ESPs providing service to DA customers. This settlement has been filed with the CPUC. IT HAS NOT BEEN ADOPTED YET. I

will notify all if, and when, that happens.

SDG&E went particularly "hog-wild" on the number of fees proposed as well as the level of the fees. By our settlement, I believe, conservatively, we have eliminated about \$100 of additional charges per customer per year.

We have agreed that no fees will be assessed for services that the utility provides as part of its market facilitation function through 2002. This is in keeping with the fact that the utility is currently recovering those costs through distribution rates as part of a settlement in a separate proceeding (376). Those functions include MSP and MDMA certification, DASR processing, EDI acceptance testing, ESP and EDI agreement processing, credit establishments and on-going credit checks, processing meter change information, providing customer data.

#### POTENTIAL NEW CHARGES:

##### Special Services:

Where we ASK the utility to perform functions for us (researching data, providing administrative support, non-standard processing of information (ie. manual vs. EDI)) there will be a charge. They must specify to us that the service that we are requesting will result in a fee being assessed and what the charge will be. We must agree to the terms before the service is provided. This means we must be very clear in our communications with the utility on special requests.

##### Exception Fees:

This is where we fail to meet our obligation to the utility and they assess, essentially, a penalty. Examples include missed appointment meets, late payments, failure to provide usage data by 11th business day causing utility to estimate data, causing a rebill for failure to provide valid usage data. (More detailed description is contained within the attached documents.) We have negotiated that there be a .5% deadband before any fee is assessed for estimating data. We have negotiated that, to the extent the utility is responsible for causing US to rebill, we can accumulate banking credits to use against any charges that the utility would assess us. It provides some reciprocity.

We do have a dispute resolution process. However, if we need an internal briefing on the settlement so folks are comfortable about how it will work, I would be happy to assist with that.

Please contact me with any questions.

### Caifornia GOP Calls for Emergency Legsilative Session to Address

|            |                                |
|------------|--------------------------------|
| Sender     | jeff.dasovich@enron.com        |
| Recipients | ['mday@gmssr.com']             |
| File       | dasovich-j/all_documents/9665. |

-- FOR IMMEDIATE RELEASE CONTACT: James Fisfis March 5, 2001 (916) 319-2071

GOP MOVES NATURAL GAS TO FRONT BURNER Assembly Republicans join together once again to request Davis to call=20 special session.

(SACRAMENTO) =01) Assembly Republicans united Monday in asking Governor Gra= y=20 Davis to call a special session of the California legislature to deal with= =20 skyrocketing natural gas prices.

=01&Families and businesses are reeling every month from extraordinary gas= =20 prices. Pardon the expression, but the natural gas crisis no longer belong= s=20 on California=01,s back burner,=018 said Assembly Republican leader Bill Ca= mpbell=20 (R =01) Villa Park).

Assembly Republicans unanimously signed a letter to Governor Gray Davis=20 asking for him to convene a special session of the legislature to deal with= =20 California=01,s skyrocketing natural gas bills. Republicans delivered the= =20 letter to Davis this morning.

=01&A special session is both a symbolic and a practical necessity. It tel= ls=20 Californians that we care about their skyrocketing gas bills. It tells=20 businesses everywhere that California is going to provide for its future=20 energy needs,=018 said Campbell. =01&Practically speaking, a special sessi= on also=20 allow us to pass legislation which can take effect immediately.=018

Republicans believe the electricity and natural gas crises are inextricably= =20 linked.

=01&California=01,s natural gas crisis is completely intertwined with its= =20 electricity crisis,=018 said Campbell.

=01&Any plan to deal with our elect= ricity=20 crisis must have a natural gas component or Californians are going to pay= =20 unacceptably high prices for both.=018

Assembly Republicans believe the natural gas crisis has many fronts, all of= =20 which could be addressed comprehensively by a special session.

=01&Natural gas issues include pipeline capacity, storage, exploration,=20 alternative fuels and conservation,=018 said Campbell. =01&A special sessi= on lets=20 us put together a comprehensive solution.=018

=01&The private sector has the expertise and the capital to deal with these= =20 issues if government would just get out of the way. Republicans believe th= at=20 a legislative solution to the natural gas crisis should leave the resources= =20 and primary decision-making to the private sector,=018 said Campbell.

Let it go. Ken is PR, and PR only. There are also calls where substance is discussed. Ken can't do that.

Susan J Mara 03/12/2001 06:38 PM

To: Jeff Dasovich/NA/Enron@Enron cc: Subject: Re: Ken

Sue Mara Enron Corp. Tel: (415) 782-7802 Fax:(415) 782-7854 ----- Forwarded by Susan J Mara/NA/Enron on 03/12/2001 04:38 PM -----

Paul Kaufman@ECT 03/12/2001 04:21 PM

To: Susan J Mara/NA/Enron@ENRON cc: Janel Guerrero/Corp/Enron@Enron Subject: Re: Ken

O.K. Just received Janel's call re: Sue's concerns with utilizing Ken for PR calls.

Here are my thoughts:

(1) There are three, and only three, purposes for spending money on the IEP, ARM and Direct Access Coalition efforts and thus three, and only three reasons, for covering the IEP, ARM, and Direct Access Coalition calls. The three reasons are:

(a) to find out what these various Coalitions are doing; (b) to try and influence what they are doing so their activities advance our interests; and (c) to coordinate what they are doing with what we are doing so we aren't wasting time, money or opportunities.

If these purposes are not being met, then let's stop wasting our time and money on these efforts (and the associated phone calls).

(2) From my standpoint, to meet these four purposes we need to have:

(a) somebody on the calls consistently that can advance our interests and answer questions when asked; (b) somebody on the call that knows what we are doing in our national, California, and New York efforts; (c) somebody preparing an email explaining what was discussed on the calls; and (d) Janel coordinating what happens on the calls with what is going on in our national, California, and New York efforts.

(3) The only question given the above is: "who can meet our purposes in participating in the IEP, ARM and Direct Access Coalition efforts." Originally I thought Ken was the person, because Ken is a PR person that we can count on (because we are paying him) to participate regularly in the calls and e-mail reports. (4) Given Sue's concerns, I certainly don't object to Sue handling the calls. However, we need to be consistent in our participation or be satisfied with inconsistent coverage. It makes no sense to me to have Ken assigned sporadically to participate in calls that Sue can't participate in due to a conflict. California is moving too quickly and too unpredictably for sporadic participation to provide any value.

Susan J Mara@ENRON 03/12/2001 03:22 PM To: Paul Kaufman/PDX/ECT@ECT cc: Hgovernor@govadv.com, Janel Guerrero/Corp/Enron@Enron, Jeff Dasovich/NA/Enron@Enron, Richard Shapiro/NA/Enron@Enron, Sandra McCubbin/NA/Enron@Enron, sgovernor@govadv.com Subject: Re: Ken

That's fine. Just realize that I try to cover the same calls. There is also someone from ARM's PR firm, Edelman, covering the IEP calls.

Sue Mara Enron Corp. Tel: (415) 782-7802 Fax:(415) 782-7854

Paul Kaufman@ECT 03/12/2001 02:50 PM

To: Jeff Dasovich, Susan J Mara/NA/Enron@ENRON, Sandra McCubbin/NA/Enron@Enron, Hgovernor@govadv.com, sgovernor@govadv.com cc: Richard Shapiro/NA/Enron@Enron, Janel Guerrero/Corp/Enron@Enron Subject: Ken

I just spoke with Janel and we concluded that we need to better coordinate our use of Ken's time. We agreed that it would be a good idea for Ken to cover the IEP and Direct Access Coalition calls, meetings, etc. and report back to us about any conclusions reached.

All future assignments for Ken should be coordinated through Janel.

Bids Made For Broke NorthPoint Dick Kelsey, Newsbytes

03/06/2001 Newsbytes News Network (c) Copyright 2001 Post-Newsweek Business Information, Inc. All rights reserved. EMERYVILLE, CALIFORNIA, U.S.A., 2001 MAR 6 (NB). Bidding started today on bankrupt broadband services provider Northpoint Communications Group [NASDAQ:NPNTQ], more than three months after Verizon Communications [NYSE:VZ] killed the companies' merger plan. Northpoint did not identify bidders or discuss the amount of bids received, citing a "quiet period" that precludes disclosure of such details. "It is our hope to sell the company as a whole, but we cannot speculate on the outcome of this structured sale process," Northpoint Communications President and CEO Liz Fetter said in a news release. Bidding is scheduled to close on March 20 and the winning bid will be submitted to bankruptcy court the next day, Northpoint said. Emeryville, Calif.-based Northpoint filed for Chapter 11 bankruptcy protection on Jan. 16, six weeks after Verizon scuttled the companies' plans to merge. Northpoint has since sued Verizon for \$1 billion in damages over cancellation of the merger. Verizon on Nov. 29 pulled out of the \$800 million merger agreement, citing Northpoint's deteriorating financial condition. The companies intended to merge their digital subscriber line (DSL) businesses into a national broadband company. Northpoint spokesman Marvin Wamble told Newsbytes that the company currently employs 1,065 people, down from its peak level of 1,800 workers last year. Northpoint Communications is on the Web at <http://www.northpoint.net> Verizon can be found at <http://www.verizon.com> Reported by Newsbytes.com, <http://www.newsbytes.com> . 16:22 CST Reposted 16:23 CST

Be happy to discuss. I'm in Portland and traveling tomorrow. Monday would be better, but if it is urgent to discuss on Friday, just let me know and I can re-arrange my schedule.

From: Dirk vanUlden/Western Region/The Bentley Company@Exchange on 03/09/2000 08:11 PM CST To: Jeff Dasovich/SFO/EES@EES cc: Richard Crevelt/Western Region/The Bentley Company@Exchange, Tom Riley/Western Region/The Bentley Company@Exchange, Rob Cone/Western Region/The Bentley Company@Exchange, Geoff Pollard/Western Region/The Bentley Company@Exchange, Andrew Wu/HOU/EES@EES, Douglas Huth/HOU/EES@EES, Paul Kaufman/PDX/ECT@ECT, James Trudeau/SFO/EES@EES Subject: RE: Fresno sub Project

Jeff - This has been a textbook "nice guys finish last" experience for over one year. The project is slipping away from us as is our reputation. We need to devise an aggressive plan immediately to get those recalcitrants at PG&E and their mouthpieces to understand that Enron means business. Our record with the UC/CSU contract is already marginal, and by kowtowing to those utility-types we will blow it altogether.

Unless I am missing a bigger picture issue, you need to tell me how we can escalate this issue to the highest level at PG&E and the CPUC. I can't imagine a \$42 billion outfit being afraid of a bunch of wire and pipe guys. As a former PG&E manager I know who was given attention and it wasn't the meek. I am inclined to go with a recommendation by Jim

Trudeau that we start raising hell. CSU Fresno is ready to escalate to Sacramento (read President Welty, Chancellor Reed, Gov. Davis) upon our command. We need a parallel effort. Tom Riley and I would like to discuss with you on Friday.

Dirk A.van Ulden Director, Account and Facility Management San Ramon District (925) 543-3879 Fax (925) 543-3550

I have some ideas. We should discuss. But let's be clear on thing, there's no single, silver bullet. Please let me know when you'd like to discuss the situation. I think that if there was a case where we could break a log jam, this one's it, due to the client's background, knowledge and savvy. But it will be nonetheless quite difficult. I hope I didn't come on too strong on the call yesterday--feedback's appreciated. Andy, please call me when you get a chance. Best, Jeff

Thank you for choosing Alaska Airlines / Horizon Air! Questions? This is an auto-generated email. If you have any questions, simply call 1-800-ALASKAAIR (1-800-252-7522) for Alaska Airlines, or 1-800-547-9308 for Horizon Air. Confirmation Code: VPK QBE Name Ticket Number Base / Tax / Total

DASOVICH/JEFFREY MR 0272135010686 \$470.00 / 75.05 / 545.05 Seats: 23C, 27B, 11D SELLERS/PRENTICE MS 0272135010687 \$470.00 / 75.05 / 545.05 Seats: 24C, 27C, 11F ITINERARY March 26, 2001 Alaska Airlines #262 Depart: San Francisco, CA at 8:00 AM Arrive: Mazatlan, Mexico at 1:47 PM

April 01, 2001 Alaska Airlines #211 Depart: Mazatlan, Mexico at 2:27 PM Arrive: Los Angeles, CA at 4:13 PM

April 01, 2001 Alaska Airlines #291 Depart: Los Angeles, CA at 7:34 PM Arrive: San Francisco, CA at 8:48 PM

REMINDERS AND RESTRICTIONS This electronic ticket is not transferable. This ticket is valid for travel on Alaska Airlines flights 1 - 799 and/or Horizon Air flights 2000 - 2999 and is non-refundable. If you choose to change your itinerary, any fare increases and a change fee will be collected at that time. PAYMENT INFORMATION A total of US\$1090.10 was charged to the American Express xxxxxxxxxx4003 held by ELDON SELLERS on 02/01/01. This document is your receipt. BAGGAGE On Alaska Airlines there is a limit of two carry-on items per passenger which includes purses, briefcases and laptop computers. Each of these items must measure less than 9" high, 14" wide and 22" long. Please stow items under the seat in front of you and save the shared overhead compartment for smaller items. AT THE AIRPORT When you arrive at the airport, you may check in at an Instant Travel Machine, the ticket counter or gate to receive your boarding pass. Baggage may be checked at the ticket counter, or, where available, via an Instant Travel Machine or at curbside. Please have this document or your confirmation code available. Check in at an Instant Travel Machine and we will add 500 bonus miles to your Alaska Airlines' Mileage Plan account. It's fast and easy! For locations and to learn more visit <http://www2.alaskaair.com/it/IT.asp>.

Reserved seats will be held for you until 20 minutes before departure time (40 minutes for international flights). To accommodate everyone wishing to travel on your flight, you must be in your confirmed seat at least 10 minutes before scheduled departure (30 minutes for international flights). This will ensure that your reservations are not canceled. Picture identification, such as a drivers license or passport, is required to board the aircraft. For Canada and Mexico, proof of citizenship is required. CHANGE OF PLANS We're available 24 hours a day to assist you; simply give us a call at 1-800-ALASKAAIR (1-800-252-7522) for Alaska Airlines or at 1-800-547-9308 for Horizon Air. (If calling from Mexico, precede these telephone numbers with 001.) For all changes please refer to your confirmation code. Refunds for qualifying tickets may be obtained by calling the appropriate toll-free number listed above or by applying at any ticket counter location. Please review U.S. Department of Transportation Consumer Notices regarding your consumer rights and limitations of liability at: <http://www2.alaskaair.com/help/faqs/ConsumerNotices.asp> or simply obtain a copy when checking in.

|------------|--------------------------------------------------------------------------------------------------------------------|
| Sender     | fred.kelly@enron.com                                                                                               |
| Recipients | ['jeff.dasovich@enron.com', 'james.wright@enron.com', 'thomas.bennett@enron.com', 'chris.holmes@enron.com', 'j...] |
| File       | dasovich-j/notes_inbox/3491.                                                                                       |

Dirk/Jay - thanks for the quick response. I want to insure we have accurately portrayed the situation to you both (the real duration of our requests, and the real response time of the utilities). Don't want anyone to walk into a response of "..... we've only had that request for XX days.....". We do need help though if we want to achieve our aggressive schedule.

We are falling behind our target schedule due to a lack of pulse meter contact installations. How hard would it be to get informal org charts for the metering side of SCE, SDGE, and PGE (just simple bob works for jim who works for tom who reports to bill), and....., to identify who (within Enron/CEC/ISO) has the relationship(s) with those groups?

The execution side of the boxter effort asked Jay who they could talk to to insure we were working "smart" in California with respect to getting interval meters modified to include pulse contacts. The execution team wants to insure that we aren't standing in the wrong long line. We want to know who we could/should call to express our "appreciation" for all their cooperation, and to insure they knew our aggressive timetable. How many times have you/we heard "..... oh....., that's what you are doing....., if someone had just called me....., I could have.....".

The request for "contacts" (and to know the metering org chart inside each of these three utilities) was so we could attempt to penetrate those three org's (SCE, SDGE, PG&E) at the optimum level. Additionally - if we have acct mgmt folks that have relationships - we want to leverage those.

Tom - can you provide to those listed above the short exec summary of what we have requested from SDGE, SCE, PGE, and....., what their response has been (use the attached XLS chart). Help characterize when we officially made request, so that we provide an accurate perception of the three utility's responses.

Thx

From: Dirk vanUlden/Western Region/The Bentley Company@Exchange on 05/10/2001 11:53 AM To: Jeff Dasovich/NA/Enron@Enron cc: Chris Holmes/HOU/EES@EES, James Wright/Western Region/The Bentley Company@Exchange, Fred Kelly/HOU/EES@EES Subject: FW: Paths of influence

Jeff, we are rolling out a CEC/CALISO curtailment initiative in California that provides major benefits to our customers. Before the program can be implemented, customer facilities need to be equipped with a pulse generating meter (a modified version of a regular meter). As we are no longer the MSP we now have to rely on the UDCs to install these meters. We fully expect to pay for these installations but we are getting major push back in SCE and PG&E territory with respect to scheduling these installations. If we were to go by PG&E's schedule (12 weeks), the summer will be over and most benefits will be lost.

We are under the impression that Enron is plain dirt in the eyes of the UDC employees, and we are being singled out by the rank and file folks as the major culprit for the energy crisis. However primitive that opinion is, we are stuck with it. Please note Jay Ferry's contention below.

Is there a way for you to nudge some UDC executives and ask them to instruct their field crews to start cooperating? We could use the help.

Dirk A. van Ulden Director, Account Services Enron Energy Services, Northwest Region (925) 543-3879 2-way pager 877-680-9472 Fax (925) 543-3550 dirk\_vanulden@enron.com

Dirk,

We have been working with Mike Connaly and his boss, Mel Calais, at SCE to expedite deployment of pulse meters. Do you know the chain of command there and if there is anyone higher that we could call if work continues to move along at a snail's pace. Please call me (713-646-7086) or respond by e-mail, if you can't reach me.

Thanks, j

David - TPDBF Subject: GIR: FELLOW SIGNATORIES TO THE COMPREHENSIVE SETTLEMENT - ALTRA Importance: High Sensitivity: Confidential

Dear fellow signatories to the Comprehensive Settlement:

On Friday of last week, SoCalGas and PG&E informed ALJ Biren that Altra had definitively declined to offer the electronic trading services that both the already-approved PG&E settlement and the pending SoCalGas/SDG&E Comprehensive Settlement contemplated would be provided specifically by Altra for at least an initial period. Both SoCalGas and PG&E sent a letter and email to the full service list yesterday (Tues, 9/5) informing parties of this development.

SoCalGas believes that some modification to the Comprehensive Settlement is necessary to take this development into account, and that we then need to file the modification as soon as possible with the Commission. The ALJ has indicated to us that some formal filing with the Commission in response to this development will be necessary.

We want to work with the signatories to the Comprehensive Settlement to reach a consensus as soon as possible. Our goal is to cause little or no delay in the processing of a decision on the Comprehensive Settlement.

What SoCalGas has in mind is modifying the settlement to remove the specific naming of Altra and to insert language saying that SoCalGas will select and contract with a third-party provider for a specified period of time, without identifying in the settlement who that will be. We also need to consider whether we should address in the revision to the settlement how we will handle the possibility that the third-party provider will not be ready to operate by the April 1, 2001 date the settlement provides for the monthly imbalance trading, OFO day imbalance chip trading, and storage rights trading. SoCalGas is looking at interim arrangements that it could provide in-house starting April 1, 2001, until the third-party provider could begin service. We also might consider what would happen if no third party provider can be found.

To avoid any claims that we have not complied with the settlement rules, today we mailed and emailed to the full service list a notice of a settlement conference for Wednesday of next week. We want to file something with the Commission very promptly thereafter.

Please feel free to contact Glen Sullivan at 619-699-5027, Lad Lorenz at 213-244-3820, Bob Betonte at 213-244-3832, or June Suwara at 213-244-3504 on this subject.

For those of you who have not heard, Brian Cherry has submitted his resignation from Sempra Energy's Regulatory Affairs Dept. and will be going to work shortly for PG&E in a similar capacity.

---

Yes, based on previous notes, I'd assumed we were trying for Saturday or Sunday evening. Seems like folks had landed on Sunday. I have a "family thing" that I need to do from noon to 4 pm on Sunday (or I will be a social outcast for the rest of my life)--apologies. So anytime before 11:45 AM or after about 4:45 on Sunday works great for me. Hope that's not a problem.

Best, Jeff

Hey guys,

I think we got our wires crossed. I was talking to Jeff and Shawne last night about meeting at Jeff's office either Sunday morning or late afternoon. I'm willing to go anywhere, anytime, but I don't think this will work for Jeff.

FYI. Under the settlement with SoCal, PG&E and countless others, Altra was going to provide the platform for the (unregulated) secondary markets in intrastate storage, capacity and imbalance trading rights. Altra declined and SoCal and PG&E will now look for someone else to provide the service. ----- Forwarded by Jeff Dasovich/SFO/EES on 09/06/2000 08:52 PM -----

Dear fellow signatories to the Comprehensive Settlement:

On Friday of last week, SoCalGas and PG&E informed ALJ Biren that Altra had definitively declined to offer the electronic trading services that both the already-approved PG&E settlement and the pending SoCalGas/SDG&E Comprehensive Settlement contemplated would be provided specifically by Altra for at least an initial period.? Both SoCalGas and PG&E sent a letter and email to the full service list yesterday (Tues, 9/5) informing parties of this development.

SoCalGas believes that some modification to the Comprehensive Settlement is necessary to take this development into account, and that we then need to file the modification as soon as possible with the Commission.? The ALJ has indicated to us that some formal filing with the Commission in response to this development will be necessary.

We want to work with the signatories to the Comprehensive Settlement to reach a consensus as soon as possible.? Our goal is to cause little or no delay in the processing of a decision on the Comprehensive Settlement.

What SoCalGas has in mind is modifying the settlement to remove the specific naming of Altra and to insert language saying that SoCalGas will select and contract with a third-party provider for a specified period of time, without identifying in the settlement who that will be.?? We also need to consider whether we should address in the revision to the settlement how we will handle the possibility that the third-party provider will not be ready to operate by the April 1, 2001 date the settlement provides for the monthly imbalance trading, OFO day imbalance chip trading, and storage rights trading.? SoCalGas is looking at interim arrangements that it could provide in-house starting April 1, 2001, until the third-party provider could begin service.? We also might consider what would happen if no third party provider can be found.

To avoid any claims that we have not complied with the settlement rules, today we mailed and emailed to the full service list a notice of a settlement conference for Wednesday of next week.? We want to file something with the Commission very promptly thereafter.

Please feel free to contact Glen Sullivan at 619-699-5027, Lad Lorenz at 213-244-3820, Bob Betonte at 213-244-3832, or June Suwara at 213-244-3504 on this subject.?

For those of you who have not heard, Brian Cherry has submitted his resignation from Sempra Energy's Regulatory Affairs Dept. and will be going to work shortly for PG&E in a similar capacity.

To: 123363@WCTOPICS.djnr.com cc: Subject: Telecom Services: Broadband Services: USA: Senators renew high-speed Internet tax credit ...

USA: Senators renew high-speed Internet tax credit bill.

01/23/2001 Reuters English News Service (C) Reuters Limited 2001. WASHINGTON, Jan 23 (Reuters) - A bill that would encourage businesses to bring high-speed Internet access to underserved areas was reintroduced in the Senate on Tuesday, with the hopes that President Bush would include the item in his budget. Computers equipped with a "broadband" or high-speed Internet connection can download information at a rate of up to 1.5 megabits per second, or about 25 times faster than a standard, dial-up connection. While broadband access is currently available in many business districts and affluent residential neighborhoods, the service has not yet spread to less affluent or more sparsely populated areas. The bill would provide a five-year, 10 percent tax credit to Internet companies that extend broadband service to rural or underserved urban areas. Companies who build "next generation" networks, with download speeds of up to 22 megabits per second, would receive a 20 percent, five-year credit. The bill was introduced by Republican senators Olympia Snowe of Maine and Orrin Hatch of Utah, and Democrats Jay Rockefeller of West Virginia and John Kerry of Massachusetts. It was co-sponsored by 32 other senators. The 36 senators sent a letter to President Bush urging him to include the bill in his initial budget proposal. The bill attracted the support of 59 senators and 115 House members last year, the letter claimed.

FYI. As if we weren't having enough fun with electricity.... Note last paragraph of press release calling on government to "get out of t= he=20 way" and "let the private sector solve the problems in the gas market."

Jeff

FOR IMMEDIATE RELEASE CONTACT: James Fisfis March 5, 2001 (916) 319-2071

GOP MOVES NATURAL GAS TO FRONT BURNER Assembly Republicans join together once again to request Davis to call=20 special session.

(SACRAMENTO) =01) Assembly Republicans united Monday in asking Governor Gra= y=20 Davis to call a special session of the California legislature to deal with= 20 skyrocketing natural gas prices.

=01&Families and businesses are reeling every month from extraordinary gas= 20 prices. Pardon the expression, but the natural gas crisis no longer belong= s=20 on California=01,s back burner,=018 said Assembly Republican leader Bill Ca= mpbell=20 (R =01) Villa Park).

Assembly Republicans unanimously signed a letter to Governor Gray Davis=20 asking for him to convene a special session of the legislature to deal with= 20 California=01,s skyrocketing natural gas bills. Republicans delivered the= 20 letter to Davis this morning.

=01&A special session is both a symbolic and a practical necessity. It tel= ls=20 Californians that we care about their skyrocketing gas bills. It tells=20 businesses everywhere that California is going to provide for its future=20 energy needs,=018 said Campbell. =01&Practically speaking, a special sessi= on also=20 allow us to pass legislation which can

take effect immediately.=018

Republicans believe the electricity and natural gas crises are inextricably= =20 linked.

=01&California=01,s natural gas crisis is completely intertwined with its= =20 electricity crisis,=018 said Campbell.

=01&Any plan to deal with our elect= ricity=20 crisis must have a natural gas component or Californians are going to pay= =20 unacceptably high prices for both.=018

Assembly Republicans believe the natural gas crisis has many fronts, all of= =20 which could be addressed comprehensively by a special session.

=01&Natural gas issues include pipeline capacity, storage, exploration,=20 alternative fuels and conservation,=018 said Campbell. =01&A special sessi= on lets=20 us put together a comprehensive solution.=018

=01&The private sector has the expertise and the capital to deal with these= =20 issues if government would just get out of the way. Republicans believe th= at=20 a legislative solution to the natural gas crisis should leave the resources= =20 and primary decision-making to the private sector,=018 said Campbell.

Thanks Geoff for following up.

I do have a few questions before getting back to my contact at the CPUC.

1.You said that we "inadvertently" DASRd this account. Not sure if this is viewed as a slam. Did PacTel give EES the account number? Why shouldn't this account be on our switch list? Does he have the right to override "headquarters"? Before we de-DASR the account, let's make sure that he has the authority to say "no".

2.If SBC gave us the wrong account number, how do we know that there are not more wrong account numbers? Can we ask PacTel to confirm that all accounts are authorized to be switched?

I don't think this is a big problem, but in the earlier situation with UC/CSU, the "local" customer was wrong - he did not have the authority to override central. I just want to make sure. Also, do we have evidence that the switch request for this account came from PacTel? I may need this when I call the CPUC.

Jim

Thanks, Geoff. May make sense to loop back with the woman at the PUC who contacted Jim originally about this account. Jim's been in contact with her before about some confusion with a UC account. Jim was out yesterday and today, but I think that he'll be in tomorrow. He may want to make the contact. Jim, thoughts?

Best, Jeff

All, I spoke with the customer, Mike Benson. He is not angry, but he would like his accounts returned to bundled service. He understands that we are implementing a large contract with SBC Corp Real Estate, and that it is possible more of his accounts are inadvertently on the list. He knows to contact me directly with future issues. I submitted the deal sheet to de-DASR the 2 accounts he identified to Samantha Fite a few moments ago.

I have also notified the SBC contracts manager of the situation. Let me know if there are any questions or concerns. Geoff

Geoff Pollard is the SM for Pac Tel.

From: James D Steffes/ENRON@enronXgate on 11/21/2001 04:01 PM To: Lamar Frazier/HOU/EES@EES cc: Jeff Dasovich/ENRON@enronXgate, Susan J Mara/ENRON@enronXgate, Mike B Smith/ENRON@enronXgate, Diann Huddleson/HOU/EES@EES, Evan Hughes/ENRON@enronxgate, Rebecca Fite/ENRON@enronxgate

Subject: Pac Tel - CPUC Customer Switch Complaint

I received a call late today from the CPUC (Joyce @ 415-703-2199). Someone from Pac Tel called and said that his service was switched without authorization - Mike Benson with Payphone group @707-253-8892 or 707-292-1766.

Lamar -- who is the client rep for Pac Tel? Can they get into Pac Tel and try and find out if we have done something inappropriate? We need to call this guy back by Monday EOB. Please let Jeff Dasovich know so he can call Joyce back - I'll be out on vacation next week.

Jim

CONTENTS \* Haas Ranks Fourth Again in US News Undergraduate Rankings \* Arun Sarin and John Gage to Speak at the Leading Edge Conference \* The Second of Six New Faculty Profiles: Chris Hennessy Joins the Finance Group \* Haas in the News \* Happening at Haas \* Haas Celebrations

---

**HAAS RANKS FOURTH AGAIN IN US NEWS UNDERGRADUATE RANKINGS** The Haas School of Business ranked fourth for the second year in a row in the 2001 US News & World Report survey of undergraduate business school programs published today, September 10. In fact, the six top schools earned the same ranks they did last year.

The top ten programs and their scores (5.0 being the highest):

1. University of Pennsylvania (Wharton) 4.8 2. Massachusetts Institute of Technology (Sloan) 4.6 2. University of Michigan-Ann Arbor 4.6 4. University of California-Berkeley (Haas) 4.5 5. University of North Carolina-Chapel Hill (Kenan-Flagler) 4.3 5. University of Texas-Austin (McCombs) 4.3 7. Carnegie Mellon University 4.2 7. University of Virginia (McIntire) 4.2 9. Indiana University-Bloomington (Kelley) 4.1 9. New York University (Stern) 4.1 9. University of Illinois-Urbana-Champaign 4.1

"Once again, we are extremely pleased that the Haas undergraduate program is ranked among the top 4 undergraduate business programs by US News & World Report along with such esteemed institutions as Wharton, MIT, and Michigan," said Dan Himelstein, director of the Haas undergraduate program.

There are 350 accredited schools that offer undergraduate degrees in business, 48% of which responded to this survey. US News asked deans and senior faculty to rate the quality of all programs they are familiar with on a scale of 1 (marginal) to 5 (distinguished).

"This top-four ranking of the Haas undergraduate program means that US News & World Report recently ranked three Haas degree programs in the top ten -- Undergraduate, MBA, and Evening MBA," said Andy Shogan, associate dean of academic programs. "This is a tribute to the overall excellence of the Haas School's students, faculty, staff." The MBA program ranked 7th and the Evening MBA program ranked 8th in March of 2001.

US News also ranked several school-wide specialties or particular strengths of business programs. Here is how the Haas School fared this year:

3rd in Marketing (4th in 2000) 4th in Finance (4th in 2000) 5th in Management (3rd in 2000) 5th in E-commerce (5th in 2000) 7th in Entrepreneurship (8th in 2000) 8th in International Business (6th in 2000) 9th in Accounting (not ranked in 2000) 9th in Production/Operations Management (not ranked in 2000) 11th in Management Information Technology (not ranked in 2000) 13th in Supply Chain Management/Logistics (not ranked in 2000)

Any school that offered any courses in a particular specialty was eligible to be ranked in that area. Deans and senior faculty of business schools nominated up to 10 of the best programs in each specialty area.

For a complete listing of the rankings, visit <http://www.usnews.com/usnews/edu/college/rankings/rankindex.htm>.

ARUN SARIN AND JOHN GAGE TO SPEAK AT THE LEADING EDGE CONFERENCE The future of high tech comes to Haas in two weeks with the 4th Annual Leading Edge Technology Conference, "@ the intersection of business, technology, and leadership," which takes place on September 21 and 22.

The student-run Leading Edge Technology Conference sold out the last two years in a row and demand for this year's conference is expected to be just as high. Ticket sales are open to Haas MBA students and faculty, UC Berkeley students and faculty, alumni, and business community members. The price is \$75 for general admission. Students currently enrolled at UC Berkeley are eligible for a discounted admission price of \$50.

Please visit the conference's official website at [www.TheLeadingEdge.org](http://www.TheLeadingEdge.org) for the latest updates on ticketing and for the conference schedule.

The conference starts off on Friday, September 21, with a special evening recruiting reception for Leading Edge sponsors. Various industry players who are a vital part of the technology industry have sponsored the conference. They include, Fortune, Business 2.0, JP Morgan, Accenture, New York Stock Exchange, Broadview, Hewlett-Packard, BEA Systems Inc., and the UC Berkeley Management of Technology program.

On Saturday, September 22, the day begins with the Technology Futurists Forum, a chance to hear what some of the leading thinkers in Silicon Valley see as the next big thing for high tech. Forum participants include Bob Bauer, manager of the Advanced Systems Development Laboratory at Xerox PARC; John Gage, chief researcher and director of the Science Office at Sun Microsystems; and Robert Mittman, director of the Institute of the Future. Ned Desmond, editor and president of Business 2.0, will moderate.

Arun Sarin, MBA 78, MS 78, CEO of Accel-KKR Telecom, will give a keynote speech on the world of telecomm. Sarin is the former CEO of InfoSpace, Inc., and of the US and Asia Pacific regions of Vodafone. Keynote speaker Brian Bogosian, president and CEO of Visto Corporation, will also share his vision of technology.

After the forum, three sessions of panel discussion scheduled throughout the day will cover a broad range of topics led by some of the most outspoken and respected luminaries in their respective industries today. Topics include:

+Nanotechnology: Big Things In Small Packages? +New Frontiers: Technology in Developing Countries +Fuel Cells and a Hydrogen Economy: The Future of Energy or a Hindenburg-esque Flop? +MicroMechanical Systems (MEMS): The Giant Impact of Microscopic Devices +Energy Technology +May Day! May Day! Who Owns the Internet Anymore? +Venture Capital: Changes and New Directions +The Future of Wireless Networks: Connect Anywhere? +New High Score: The Expanding Business of Electronic Games +Technology Valuation & Strategy: Post-Bubble +Free Ain't Cheap Enough: Getting Physicians to use Information Technology +E-Learning: Can E-Learning Live Up to its Hype of Transforming Skill Acquisition in the Corporate Classroom? +Media Convergence: When Will it Really be Available to the Masses? +Data Storage: Startups and VCs on the Hype versus the Real Opportunity +Birth, Life, Death, and the Afterlife in Biotechnology

Participants will also be able to see innovation in action at the EdgeXpo Technology Fair, which will provide hands-on access to some of the newest technologies on the market today. The gadgets include the wireless technology currently being used at Giants games; MEMS technology; and interactive webcast technology. The current exhibitors list for EdgeXpo are:

+C Technologies +Candescent Technologies +Identix +Motorola +Motion Sense +Wideray +Xora, Inc.

Participants are encouraged to bring their handhelds to the event because the conference will be using WideRay's patented wireless technology to broadcast conference details to attendees.

THE SECOND OF SIX NEW FACULTY PROFILES: CHRIS HENNESSY JOINS FINANCE GROUP Christopher Hennessy joined the Finance faculty this fall fresh from Princeton University where he received his Ph.D. and served as a lecturer in Fall 2000. His research interests include how businesses are financed and how that affects decision making.

In his dissertation Hennessy discussed the way in which the choice of financing for a business (debt, equity, convertible debt, or equity warrants) affects investment policy. "I deal with two issues, the amount of investment and the riskiness of investment," says Hennessy. Businesses with higher

WASHINGTON - Their names may not appear on your electric bill, but they are the largest energy marketers in the nation, and they're cashing in on the skyrocketing electric rates in the Northwest.

As ratepayers throughout the West are socked with double-digit increases in their bills, regulators throughout the region are looking into suspicions that this new breed of energy companies has manipulated the overheated market to maximize profits. So far, there is no evidence they are doing anything illegal.

California Gov. Gray Davis has called them pirates and plunderers. The San Francisco city attorney has filed a \$1 billion lawsuit against them, saying they are playing with "marked cards" and looking to make a "quick buck" at the expense of consumers. The Federal Energy Regulatory Commission is investigating, as are state regulators in Washington, Oregon and California.

"Based on hints of manipulated energy supplies and allegations of price manipulation, I think we owe it to Washington utilities and consumers to make sure the soaring prices are not the result of illegal practices," Washington Attorney General Christine Gregoire said in announcing her office's antitrust division would investigate.

The power marketers, though, say they've done nothing wrong. The real problem, they say, is there simply isn't enough power being generated to meet demand.

The players include Enron Corp., Dynegy Inc., and Reliant Energy, all of Houston; Duke Energy of Charlotte, N.C.; Southern Energy of Atlanta; AES Inc. of Arlington, Va., and Calpine Corp. of San Jose, Calif.

Enron's profits were up 34 percent in last year's fourth quarter. Duke's fourth-quarter revenues doubled; Dynegy's earnings more than doubled in the fourth quarter.

"When we hear about these stunning profit increases, I think we need to investigate," Gregoire said.

Corporate raider Charles Hurwitz also could profit handsomely. His Maxxam Inc. owns Kaiser Aluminum Corp., which has shut down its Washington mills and, under a special contract provision, is reselling power on the open market for much more than it paid the Bonneville Power Administration, the federal agency that sells hydropower generated at dams along the Columbia and Snake rivers. Hurwitz could make half a billion dollars before the contracts expire this fall.

And the holding companies of two huge California utilities on the edge of bankruptcy have made billions of dollars off the West Coast electricity market through a financial juggling act. Audits by outside auditors hired by state regulators showed Southern California Edison and Pacific Gas & Electric turned over billions to their holding companies, money that could have been used to ease the cash crunch they now face.

The utilities say they were engaged in accepted business practices when they transferred the money, which the parent companies used for such things as stockholder dividends and stock buybacks.

"Is it capitalism or profiteering?" said Ed Mosey, a BPA spokesman. "The very complexity of these markets allows these companies to hide in the grass."

A few years ago, the energy industry was tightly regulated and utilities and generators were allowed to recover their costs and make a decent return on their investment.

But beginning with the deregulation of wholesale electricity markets in 1992, energy marketers, generators, independent power producers and others became major players. Regulated utilities opened computer-driven trading rooms as they scrambled to find the cheapest electricity available.

Now electricity is sold on spot and longer-term markets, traded for electricity available in other parts of the country or even swapped for natural gas.

"Power can pass through three or four hands before you even buy it," Tacoma Power Superintendent Steve Klein said.

The latest jolts in the Northwest market began last summer when California experienced severe shortages and prices soared.

Because the entire West Coast is connected by one power grid, the rate shocks were felt in the Northwest and grew even more as California's problems deepened and a winter drought prompted fears of a near-record low runoff in the Columbia and Snake rivers.

Some called it a "perfect storm" scenario, and BPA saw the price it paid for power in January grow sixfold over the previous year.

"We will buy from anyone who will sell to us at a reasonable price, but the problem is finding a reasonable price," said BPA Administrator Steve Wright. "The marketers are recovering a substantial amount of money."

The same companies making money in California are making money in the Northwest. "These are for-profit companies," said Mark Crisson, who heads Tacoma Power. "These folks don't answer to a (state regulatory) commission and they don't answer to ratepayers. They answer to their stockholders and I've seen no effort by them to minimize prices."

Critics say the energy marketers have manipulated the market by shutting down generating facilities in California in an effort to restrict the supply and drive prices up.

According to some utility executives, generating plants are usually off-line 5 percent of the time because of unforeseen problems and that an off-line average of 10 percent to 15 percent would be considered high. During some months, certain California generating plants have been off-line 30 percent to 50 percent of the time.

"We are seeing abnormal rates," Crisson said.

Asked whether he thought the companies were manipulating, or gaming, the market, Crisson said, "I would stop short of accusing them of that, but there is something funny going on."

The California generators and marketers say the outages have been the result of running aging plants hard in an effort to supply power in a tight market.

"We think these allegations are a little unfair," said Randy Wheelless, a spokesman for Duke Energy, which operates four power plants in California. Despite several investigations, Wheelless said, his and other companies have always been cleared.

"We're trying to feed the market, not manipulate it," he said. "There isn't any one single person or company to blame. The remedy is to get more generation on line."

Enron doesn't own any power plants in California but sells and trades energy throughout the West. Spokesman Mark Palmer agreed that the key to solving the current crisis is adding more generation and truly deregulating the California market so there is real competition. "Everyone is scrambling for power," he said. - - \* Staff writer Les Blumenthal covers Northwest issues in Congress. Reach him at 1-202-383-0008 or lblumenthal@mcclatchydc.com.

BERKELEY AND COLUMBIA ANNOUNCE JOINT EXECUTIVE MBA PROGRAM The Haas School and Columbia Business School are jointly launching their new Berkeley-Columbia Executive MBA program this fall. The new program is being marketed by both schools across the nation starting this week.

The Berkeley Columbia EMBA blends the distinctive strengths of the two schools: Wall Street and Silicon Valley, New York and California. Aimed at a select group of high-level executives, the new program will enroll its first class in June 2002.

The marketing launch of the EMBA program, which was originally scheduled for the week of September 11 was delayed due to the terrorist attacks in New York and Washington, is commencing now and will continue into spring 2002. The EBMA program places a major emphasis on drawing applicants from the west coast. Information sessions for prospective applicants across the nation start on November 7 and will continue through February.

Information sessions will be held throughout California and western states as well as New York, east coast states, and the Midwest. Upcoming information sessions in California include: Berkeley, Nov. 7, 6:00 to 7:30 pm Los Angeles, Nov. 28, 5:00 to 6:30 pm Oakland, Nov. 29, 5:00 to 6:30 pm San Francisco, Nov. 30, 8:00 to 9:00 am San Jose, Dec. 4, 5:00 to 6:30 pm Sacramento, Dec. 11, 8:00 to 9:00 am Orange County, Dec. 13, 8:00 to 9:30 am San Diego, Dec. 14, 8:00 to 9:30 am

For more detailed information on these and other events, please go to the web site at:  
<http://web.haas.berkeley.edu/embaadmissions/events/index.cfm>.

The EMBA curriculum will offer participants fresh insights into the complex forces of global, financial, technological and entrepreneurial changes that are transforming the business world. It leverages the schools' locations in two of the world's most important business centers - New York City and the San Francisco/Silicon Valley area.

"In today's turbulent business environment, executives must possess outstanding management skills and a keen understanding of the rapidly changing nature of the economy and business world," said Haas School Dean Laura Tyson. "This unique educational partnership will develop leaders with the requisite vision and skills for success."

Designed to accommodate the busy executive, the Berkeley-Columbia EMBA features a convenient schedule of 15 weeks of instruction over 19 months alternating between New York and Berkeley. The bi-coastal curriculum, taught by the faculty of these two premier institutions, will offer broad, general management courses with a strategic perspective, including a series of cutting-edge electives in areas such as IT strategy and international finance.

Companies sponsoring promising executives in the Berkeley-Columbia EMBA will see immediate benefits from the program, as participants are encouraged to apply cutting-edge concepts to their workplace.

In addition to receiving MBA degrees from both Columbia Business School and UC Berkeley, participants will benefit from a lifetime membership in the global professional networks of both schools that includes over 50,000 alumni.

To learn more about the Berkeley-Columbia EMBA program, please visit the web site at [www.berkeley.columbia.edu](http://www.berkeley.columbia.edu).

UNDERGRADUATES COMPETE IN INVESTMENT BANKING CASE FINALS ON TUESDAY, OCTOBER 30 Haas undergraduates have a chance to tackle real-world problems with creative solutions every year in the Investment Banking Case Competition. The Haas School's undergraduate program office and Goldman, Sachs & Co. are hosting the final event for the fourth annual case competition on Tuesday, October 30, from 6:00 p.m. to 9:30 p.m. in the Arthur Andersen Auditorium. The finals are free and open to the entire UC Berkeley community.

Each year this competition showcases one of Goldman Sachs' recent high-profile transactions to give interested students an opportunity to demonstrate and further develop their knowledge and skill base. This year's case focuses on the recent sale of Cobalt Networks to Sun Microsystems.

Over 30 teams submitted cases to the competition. The final four were chosen on Friday, October 23. Each of the finalist teams will make a short presentation followed by questions from a panel of judges, which will include company management, investment bankers, members of the investment community, and Haas faculty. The winner will be announced, followed by the judges' critique of the presentations, and a discussion of what actually happened during the sale of Cobalt Networks. There will be time allotted for questions from the audience. A reception will follow the event in the Helzel Boardroom.

---

LEARN THE SECRETS OF POST-BUBBLE MARKETING WITH LOUIS STERN THURSDAY, NOVEMBER 1 Kellogg School of Management Professor Louis Stern will share his vision of "21st Century Marketing" at the second annual David Aaker Distinguished Lecture Series in Marketing on Thursday, Nov. 1, at 5 p.m. in the Wells Fargo Room. Seating will be on a first-come, first-served basis.

Last year a standing-room-only crowd heard Prof. Emeritus David Aaker, one of the world's leading authorities on branding, lecture on "Brand Leadership" as the inaugural lecture in this series.

Stern is the John D. Gray Distinguished Professor of Marketing.

"Perspectives about how to use the Internet and the web must be re-assessed in light of the hard lessons learned over the past several years during the irrational exuberance era," says Stern. He focuses on issues related to designing and managing marketing channels in his research. In the lecture, he will address changes to marketing strategies and tactics that are required in order to find the right paths to profitability in the post-Internet-bubble era.

---

TOP HAAS ECONOMISTS OFFER THEIR FORECAST FOR THE US ECONOMY NOVEMBER 9 One of the many benefits of attending the Haas School and UC Berkeley is the chance to hear some of the nation's foremost economists comment on the current economy. On Friday, November 9, 2001, at 4:00 p.m., Dean Laura Tyson invites Haas students to

a forum on the US economy.

"Economic Outlook Forum 2001" will examine economic conditions in the United States in the wake of the events of September 11 and the ongoing war on terrorism. Speaking at the event will be Profs. Severin Borenstein, Jerry Engel, Rich Lyons, Ken Rosen, Hal Varian, and Janet Yellen. Dean Tyson and Associate Dean for Academic Affairs Ben Hermalin will moderate. Yellen, Lyons, and Rosen will give an overview of domestic and global macroeconomic conditions. Borenstein will speak on energy and airlines, Engel will speak on venture capital, and Varian will speak on technology.

Tickets are available in the degree program offices. They will be distributed on a first-come, first-served basis. Standing-room-only tickets will be available the day of the event.

#### E Source Teleconference Examines Ways to Solve California Power Crisis

09/25/2000 PR Newswire (Copyright (c) 2000, PR Newswire) BOULDER, Colo., Sept. 25 /PRNewswire/ -- In a teleconference held Friday afternoon, September 22, 2000, by E Source(TM), industry analysts proposed several solutions to remedy the imperfections in California's electric market and discussed ways that those lessons could be applied in other states that are considering restructuring their electric markets. No single "silver bullet" solution emerged from the panelists. Rather, they said that solving the California power situation would require a combination of supply, demand, pricing, and regulatory solutions. "It is important that we mend, not end, electric restructuring," said Ralph Cavanagh, co-director of the energy program at the Natural Resources Defense Council (NRDC). "Restructuring is a process, not an event," added Becky Kilbourne, director of market development for the California Power Exchange (CalPX). Bill LeBlanc, vice president of retail consulting at E Source, made this point: "It is very difficult to have an open market and a regulated market at the same time. And now, as additional regulations are being added to California's still-opening electric market, new and unpredictable market distortions are likely. Price volatility -- both upward and downward -- characterizes open markets. In a world of price volatility, customers need to have access to a rich portfolio of creative pricing options. Those who want price stability can pay a premium for it. Those willing to play in the dynamic, real-time pricing market will need load management capabilities that allow them to shed load quickly when prices spike." Specific solutions discussed by the panelists included: Supply Solutions

Chris Seiple, director of supply-side consulting for RDI(TM), opined that this summer's price spikes were principally the result of insufficient power plant construction in California as its electric demand grew during the 1990s. "The electricity market requires quick responses to changes in conditions and therefore it is a policy imperative that permitting of power plants be achieved more swiftly in California," said Seiple. He noted that electric demand in the western United States has grown by 14 percent during the second half of the 1990s, but generating capacity has grown by only 2 percent. Roughly 3,600 megawatts (MW) of new generation is currently under construction and is scheduled to come online next year. An additional 800 MW of capacity now under construction is slated to come online in 2002, while another 6,000 MW of capacity is in the advanced development stage, with varying in-service dates. A further 20,000 MW of capacity is in early-development stage, he added. However, Seiple cautioned that delays in construction, a possible shortfall of turbines, and the power-development process itself could cause a recurrence of this summer's price spikes by 2002. Not all supply solutions should be fossil-based, said NRDC's Cavanagh, who pointed out that the state of California is adding additional cost-effective renewables that will come online in the near future. These new resources will add to the thousands of megawatts of non-fossil generation capacity that have been installed over the past 20 years. Distributed Solutions In addition to wider use of renewable generation, several panelists agreed that increased deployment of cost-effective

energy efficiency measures would serve to dampen future electric price spikes. Consumers also need to be reminded on a regular basis about the importance of wise energy use. "What California and the West need most urgently now is more of what has worked best to relieve strained power grids in recent years: investments in energy efficiency and renewable energy resources, which together have delivered more than 15,000 megawatts to California alone over the past two decades," Cavanagh added. "We need more distributed energy resources and energy efficiency measures to cut future price spikes," said Michael Shames, executive director of the Utility Consumers' Action Network (UCAN). He added that many large commercial customers in California are now considering self-generating their electricity, because they cannot tolerate sharp price swings and they are dissatisfied with the risk-management options they have today. Regulatory and Legal Solutions Kilbourne of the CalPX advocated limited wholesale price caps and an improved interface between wholesale and retail electric markets. She also echoed other panelists when she noted that regulatory disincentives in California caused many energy service providers (ESPs) to exit that market, leaving customers with little or no alternative when prices began rising. Having a larger number of ESPs and a broader range of retail offerings in the market could help avert future price spikes, she said. Ron Davis, director of the E Source Strategic Distribution Management Series, remarked: "The still-regulated distribution companies in California are being held responsible for protecting their retail consumers against the high prices in the state's wholesale power market. But by design, they lack the tools and incentives necessary to keep the power prices they pass on to consumers low and stable. And now, SDG&E is subject to another rate cap. Extending SDG&E's performance-based ratemaking (PBR) to the commodity side of the business, much like was done to allow natural gas services to share in the savings from securing lower cost supplies, is a better solution to help insulate customers from price volatility in the future." Looking Forward UCAN's Shames concluded that "San Diego's experience is a sobering and instructive harbinger of deregulatory turmoil that will hit other regions throughout the country." E Source believes that price volatility will be part of life in retail electric and gas markets that are going through restructuring. Retailers and consumers alike need to protect themselves with hedging investments, load management capabilities, energy efficiency upgrades, and other measures. E Source believes that regulators, lawmakers, ESPs, consumers, commercial customers, and other participants in the restructuring of retail electric and gas markets should closely follow and implement the lessons from the still- evolving California market. E Source and RDI are trademarks of Financial Times Energy, Inc., which is headquartered in Boulder, Colorado. FT Energy is a leading provider of objective information and analysis on restructuring electric and gas markets, wholesale power trends, fuel prices and projections, and other vital knowledge about the electric and gas businesses. #### WPTF Friday More on That Later Burrito

|            |                                |
|------------|--------------------------------|
| Sender     | foothill@lmi.net               |
| Recipients | ['charlotte@wptf.org']         |
| File       | dasovich-j/all_documents/8795. |

THE FRIDAY BURRITO=20

Plan to be spontaneous - tomorrow.=20

No Burrito next week.? I'll be in Phoenix with the other WPTF geeks enjoyin= g=20 perfect weather, a little golf, and party time.? Those of you not attending= =20 our general meeting in Old Town Scottsdale (shame on you), please hold down=

generated= =20 by the California Procurement Adjustment, as determined by the [PUC] pursua= nt=20 to Section 360.5."? The media was reporting a \$10 billion bond bailout for= =20 the utilities, but I don't see how they derived that number.=20

Currently, PG&E and SCE are accumulating a bill for their net short positio= n=20 of \$1.2 billion per month.? The average system load is 30,000 to 33,000 MWs= ,=20 and the average purchase price for the spot energy being purchased is aroun= d=20 40?/kWh.? Assuming that long-term contracts would price the power at, say, = 8? /kWh, and at least half the net short position could be covered utilizing= =20 long-term contracts, the monthly cost for the net short position would be= =20 around \$720 million, and the annual figure would be \$8.6 billion.? Let's=20 allocate the annual cost of \$8.6 billion over the energy consumed above the= =20 "baseline" quantity.? I have heard that 78% of the energy consumed by=20 customers of the three IOUs is above the baseline quantity.? We'll assume= =20 that 66%, or 2/3, of the energy consumed is above 130% of the baseline=20 consumption level.? The annual energy delivered by the ISO is roughly 210= =20 TWh, and, therefore, 2/3 of that is 140 TWh.? The average cost per=20 "applicable" kWh of uplift in a customer's bill would be 6.1?/kWh, thereby= =20 roughly doubling the current generation component of the current frozen=20 rates.=20

Of course, the additional revenue collection isn't expected to keep up with= =20 the cost of the net short position. Electricity costs will fall off as gas= =20 prices ease, and more supply comes on line.? However, it is breathtaking to= =20 observe that for the kWh that are bearing the uplift, the ?/kWh rate increa= se=20 for residential customers is about 50%, and blended with the 130% of baseli= ne=20 energy, the rate increase is about 35%.? That's a lot of math to get to the= =20 same percent increase the utilities were claiming they needed to satisfy th= e=20 revenue shortfall!? A thirty- percent increase in my PG&E electric bill wou= ld=20 add between \$50 to \$80 to the monthly tab.? I am beginning to wonder why we= =20 Californians are making such a fuss.? Falling interest rates on my=20 variable-rate home mortgage will probably boost my after-tax income \$300 to= =20 \$400 per month. Hell, I gladly would pay a higher electric bill pl

USA: Enron shares in stay in doldrums after downgrade.

10/29/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW YORK, Oct 29 (Reuters) - Enron Corp.'s share price hovered above seven-year lows touched in earlier trade Monday after Moody's Investor Service cut the credit status of its senior unsecured debt of North America's largest energy trader to two ratings above junk status. Enron, the largest electricity and natural gas trader in North America, also on Monday said it was in talks with banks to expand its credit lines to ease financial concerns that have sent its stock slumping more than 50 percent in the past two weeks. Enron shares were down \$1.40, or 9.03 percent, to \$14.10 on the New York Stock Exchange, after earlier in the session trading below \$14 for the first time since December 1994. Moody's also warned that it could cut the debt rating again, now downgraded to Baa2, as well as its rating for the Enron's

commercial paper. Enron's credit-worthiness will have a direct affect on its day-to-day trading operations and its trading partners' perception of making good on trades. With a credit rating hovering above junk status, the cost of doing business will soar as trading partners look for increased collateral to back trades. Last week Enron shares lost almost \$14 billion in market value as a series of piecemeal disclosures about the company's involvement in complex partnerships began to trickle out. Investors have fled Enron's stock in droves following disclosures that the company did off-the-balance sheet transactions with two limited partnerships run by former chief financial officer Andrew Fastow in deals the U.S. Securities and Exchange Commission is now looking into for possible conflict of interest. Enron compensated its partners in this off-balance sheet structure with the promise of Enron shares, if the value of private investments in several of its units fell below a certain level. Many industry observers see Enron's request for additional credit, after the company tapped its banks for \$3.3 billion last week, as a sign a weakness. "We are not of the opinion that drawing down all of one's backup bank lines is a demonstration of financial strength, but instead ... it's an act of desperation," said Carol Levenson, an analyst with independent research firm gimmecredit.com.

USA: US companies' credit quality to worsen-Moody's. By Jonathan Stempel

10/29/2001 Reuters English News Service (C) Reuters Limited 2001.

NEW YORK, Oct 29 (Reuters) - U.S. corporate credit quality is likely to grow much worse before it gets better, a leading credit rating agency said in a report issued on Monday. Moody's Investors Service said that in the third quarter, it put on review for downgrade its credit ratings for 122 U.S. companies. At the same time, it put on review for upgrade its ratings for just 22 companies. That 5.5-to-1 ratio is far greater than the 1.3-to-1 ratio in the second quarter. In dollar terms, the situation looks more dire. Moody's warned it may downgrade \$543 billion of debt, dwarfing the \$66 billion Moody's said it may upgrade by 8.2-to-1. "Particularly in light of September 11, the fourth quarter will be particularly weak for credit rating changes," said John Puchalla, Moody's senior economist. "A wide excess of rating reviews for downgrade over upgrades in the third quarter suggests credit deterioration will persist at least into early next year." Rating reviews are significant because, unlike actual rating changes, they are not a "lagging" indicator, and suggest the future direction of corporate credit. Moody's normally wraps up its reviews within three months. U.S. corporate credit quality is falling for many reasons. These include the weakening U.S. economy, an inability of marginal companies to raise cash, debt-financed merger activity and fallout from the Sept. 11 attacks on such industries as airlines, insurance, and travel. For example, Moody's in July warned it may cut Comcast Corp.'s ratings after the Philadelphia-based company bid \$44.5 billion for AT&T Corp.'s cable TV operations. Then last month, Moody's warned it may cut Chicago-based Boeing Co.'s ratings because of the attacks' potential impact on demand for commercial airplanes. In the third quarter, Moody's warned it may cut its ratings of 54 speculative-grade, or "junk"-rated, companies, and raise the ratings of just 11. For investment-grade companies, the gap was even more yawning: 68-to-11. And in the fourth quarter? Through Friday, Moody's warned it may downgrade 47 companies and raise a mere four. On Monday, it downgraded embattled energy trading giant Enron Corp., and put all of its ratings on review for another downgrade. Puchalla, however, said the decline could slow next year, in part because interest rates are low and companies are managing their balance sheets more conservatively. "Lower borrowing costs and slowing debt growth should reduce debt servicing costs, and fiscal stimulus from the federal government should boost business revenues," he said. "That is a positive for credit quality." The third quarter was the 14th in a row when corporate rating downgrades outpaced upgrades. The record is 19 quarters, set between 1988 and 1993.

Enron's Lenders to Demand Harsher Terms, Analysts Say (Update1) 2001-10-29 12:16 (New York)

Enron's Lenders to Demand Harsher Terms, Analysts Say (Update1)

(Updates with analyst comment in fifth paragraph.)

Houston, Oct. 29 (Bloomberg) -- Enron Corp., which can't get low-interest, short-term loans, faces skeptical lenders who will demand increasingly harsher terms as the largest energy trader tries to get cash in the bank, credit analysts said.

"Anyone providing new funding is going to be nervous," said Sean Egan, managing director at Egan-Jones Ratings Co.

"It's likely that lenders are going to demand collateral."

Enron is trying to get \$1 billion to \$2 billion in loans from Citigroup Inc., J.P. Morgan Chase & Co. and other banks to calm investors after a 52 percent drop in the company's stock since Oct. 17, the Wall Street Journal reported. The company needs cash every day to settle commodities transactions and to keep trading partners.

The company on Thursday tapped \$3.3 billion in bank credit lines last week to pay off about \$2 billion in commercial paper, or short-term corporate loans. A week ago, the Enron said the U.S. Securities and Exchange Commission had began an inquiry into related-party transactions. They cost the company \$35 million and \$1.2 billion in lost shareholder equity.

``Banks are in the driver's seat, and Enron is a little desperate," said

US Power, Gas Companies Restrict Dealings With Enron By Jon Kamp, Kristen McNamara and Mark Golden Of DOW JONES NEWSWIRES

11/08/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.) (This article was originally published Wednesday.)

NEW YORK -(Dow Jones)- Trading companies in Enron Corp.'s (ENE) key North American power and gas markets are restricting their dealings with the ailing Houston-based giant, people at those companies said Wednesday. Concerns have mounted because Enron, which accounts for about a quarter of the trade in the country's power and gas markets and which makes a market for those commodities on its Internet-based system EnronOnline, has seen its share price fall by about 75% and its credit ratings downgraded since mid-October due to uncertainties about its extremely complex financial structure. "We've restricted our business with them," said Mike Smith, chief financial officer for Mirant Corp. (MIR) unit Mirant Americas Group, a Top 10 trader of power and gas in the U.S. Smith wouldn't be more specific, but his comments echoed those of others in the business. "Our exposure to Enron is insignificant compared with the previous exposure," said Al Butkus, spokesman for Aquila Inc. (ILA), a Top 5 U.S. power and gas trader. Tractebel Energy Marketing, the North American subsidiary of the Belgian company Tractebel S.A., has limited the term of transactions with Enron to three years or less, a person at the company said. And a power broker said some medium sized western utilities have stopped trading with Enron even for near-term delivery. Enron didn't return calls seeking comment. The Wall Street Journal reported Wednesday that Enron was in talks for a capital infusion and possible acquisition by competitor Dynegy Inc. (DYN). Also, Enron said Thursday it was restating its financial statements from 1997 through the second quarter of 2001, saying its financial and audit reports are unreliable for all those periods. The company fired its treasurer and general counsel. Key Markets

Enron's ability to transact in its core markets - North American wholesale gas and power - is essential if the company maintain the earnings and cash flow needed to emerge from its current credit crisis, Wall Street analysts and ratings agencies have said. Standard & Poor's and Moody's Investors Service downgraded Enron's credit to within two steps of junk-bond status last week and have it on watch for further downgrade. Enron still has its supporters. Exelon Corp. (EXC) is monitoring its own risk management, but hasn't changed its relationship with Enron, said Chief Financial Officer Ruth Ann M. Gillis.

"We haven't changed our relationship," Gillis said. Enron is a very important factor in the vitality of the wholesale energy markets, she said. They're still the "largest, best" of the companies out there, she said. Likewise, a trading floor manager at one energy company said Enron called earlier in the week and asked that the company increase its trading on EnronOnline. The company's EOL volumes had fallen, but it honored Enron's request out of respect for Enron's still market-making power. PPL Corp. (PPL) moved to mitigate its exposure to Enron following the downgrades, a person in the marketing organization at PPL EnergyPlus said. "Enron would not be a first choice to do long-term transactions," the person said. "For shorter terms, deals, they wouldn't be considered equally with everyone else. There's just too much risk there." Since Enron's troubles began several weeks ago, energy trading partners had stood by the company in ways that stock and bond traders hadn't. Until this week, "business as usual" was an almost constant refrain. Energy companies' immediate exposure to Enron was limited to a maximum of seven weeks of receivables, and Enron was paying its bills. But for some of those companies, business as usual also meant not changing value-at-risk formulas, even though the formulas were generating ever lower allowable volumes of business with Enron as the company's credit quality deteriorated, one risk manager said Wednesday. Lower value-at-risk limits got most trading companies to flatten their portfolios by taking positions to offset currently profitable long-term positions with Enron. PPL, for example, is still following its credit policy and as a result has limited its dealings with Enron, which has seen its credit quality fall, the person at PPL EnergyPlus said. "We've taken a look at our book," the person said. "Based on the events of this and last week, we've taken some action to mitigate the risk based on their ratings downgrade." Trading companies constantly evaluate their counterparties' credit and adjust their dealings accordingly, but rarely have been required to address problems on the scale of Enron's recent difficulties. "It certainly ranks just behind California," the person at PPL said. Enron Claims Trading Normal

An Enron spokesman, reached later, said the company continues to see a normal range of transactions, including long-term deals. "We've not seen closing out of positions," spokesman Eric Thode said. Susan Abbott, a managing director in corporate finance at Moody's, said the ratings agency wasn't aware of significant changes in trading companies' dealings with Enron. The agency continues to watch for new restrictions, in particular margin calls, which could quickly strain Enron's liquidity. A drop in new business with Enron isn't as much of a concern, she said. "If you're restricting new business with the company, what you're doing is moving the company out of the market in an orderly way," Abbott said. PPL is shying away from doing deals with Enron and is limiting the dollar amount and terms of the deals it will do with the company, but hasn't yet imposed margin calls or required additional collateral, the person in the marketing organization

said. "Neither the credit thresholds nor our exposure threshold have been breached," the person said. PPL said it's limiting exposure to Enron for shorter-term deals too, the person said. "Their liquidity just isn't there anymore," the person said. No large company can afford to

Size does matter when it comes to bandwidth. In the online economy, the bigger the pipe the better. Which is why The Wall Street Journal Technology Summit is featuring keynotes by CEOs of three companies that help the Internet handle more data in less time:

--David Huber of Corvis, the optical communications startup that recently set a Wall Street record for new issues by companies without revenues, raising \$1.1 billion in its IPO at a market capitalization of \$11 billion. --Scott Kriens of Juniper Networks, the young maker of high-speed Internet equipment whose shares have risen tenfold since IPO. --David Peterschmidt of Inktomi, the network-caching company with revenue growth of more than 25% for 10 consecutive quarters.

===== Top Stories =====

o Internet Network Frim Interxion Raises \$173 Million Series B

AMSTERDAM -- Interxion Holding, which provides carrier neutral Internet exchange centers, raised EUR 200 million (\$173 million) in a Series B financing round. New investors, including GS Capital Partners 2000 and Whitehall Real Estate Funds, both sponsored by Goldman Sachs; DLJ Real Estate Capital Partners II; CSFB Private Equity; CSFB Real Estate Investment Banking; CSFB Technology Group; Enron Broadband Services, a subsidiary of Enron; Continuum Group; and Aman Ventures participated in the round. Previous investors including Baker Communications Fund, Navis Partners V, Morgan Stanley Dean Witter, and Bear Stearns Merchant Banking also contributed. The company said it will use the capital to continue to develop its Internet exchange centers across Europe and new service offerings and to increase staffing. <http://www.interxion.com/>

o Government Rejects One Argument in Napster Appeal

NEW YORK -- The United States Copyright Office and the Department of Justice have rejected one facet of Napster's defense that claims it is protected by the Home Audio Recording Act. Record labels and music industry organizations have charged Napster, operator of a site for sharing copyrighted music files in MP3 format, with copyright infringement. In an advisory brief filed with the United States District Court for the Northern District of California, the Copyright Office stated the "Audio Home Recording Act does not protect Napster from the plaintiff's claims of copyright infringement." The U.S. Copyright Office and the Justice Department argue that the Audio Home Recording Act addresses a different phenomenon, specifically the use of DAT recorders used for home taping. "We have great respect for the Department of Justice, but in this instance we believe their position is incorrect," said Napster's attorney David Boies. In a statement Mr. Boies also noted that the government did not address Napster's liability and the precedents cited in Napster's appeal. A&M

Records and other record labels, the Recording Industry Association of America, and the National Music Publishers Association have filed the suit against Napster. The company is backed by Hummer Winblad

Attached are the resumes of the three witnesses that the commission intends to call next week (Tuesday) to testify on the rate design proposals put in by all the parties. The idea is that these witnesses will not submit anything in writing. They will just testify on the stand and then be subject to cross examination.

Hello Jeff,

Please see attached, my attempt at questions 1 and 2 of the next case. Feel free to use the set up in question 1 to answer question 3. 1 and 3 are very similar - 1 compares what Global Industries does compared to German GAAP, 3 compares it to US GAAP. There is not much information on German GAAP so I used a little artistic licence.

Let me know if any of this doesn't make sense - I am a little cloudy right now with this cold.

Cheers,

- Case 26-1 Global Industries.doc

Hey team,

If anyone has any parts of the project, please send them to me. We are still missing the following:

1. CAPM - complete analysis - there were some missing portions to the one Chris sent over
2. Sensitivity analysis - the numbers
3. Paragraph on cash flow
4. Final Executive summary
5. Exhibit G (elasticity) - needs to be finished and discussion of sensitivity analysis in exhibit A

Let's get together at the break and crank this out since we are running out of time.

See you in class

Attached is an Assigned Commissioner's Ruling establishing a prehearing conference in the baseline proceeding and calling for optional PHC statements. The prehearing conference is scheduled for Friday, June 21st. I will be unable to attend as I will be out of town, but can get someone else to cover it, if Enron is interested in participating in the proceeding. Let me know as soon as possible.

Jeanne

Here is your chance to land a broadside on the issue of the gas PD. Why don't you call O'Donnell.

-----Original Message-----

From: Arthur O'Donnell [mailto:aod@newsdata.com] Sent: Wednesday, November 29, 2000 1:44 PM To: mday@gmssr.com Subject: Bilas PD

Mike, I cannot find a phone number for you, but wanted to see if you had a comment on the Bilas PD in the gas industry restructuring case. Is there some element of the comprehensive settlement worth fighting for? Do you see any of the issues gravitating to the Semptra OII?

Any response appreciated. Thursday is deadline day. 415-824-3222

Thanks, Arthur O'Donnell California Energy Markets (415) 824-3222, (415) 824-3223 [fax]

Jeff--my number changed last August, so it should be changed on your lists.....#612-339-4599 (office) #612-929-7669 (home) #1-888-916-2264 (pager)

I am traveling tonight and will be crazy tomorrow so if you could leave me the info via voice mail I'd appreciate it. As I think I said in my message to you, I haven't been totally enthusiastic about anybody that I've interviewed in Chicago yet, so I wondered if the firm that you are using in California has an office in Chicago and if so, do they have a telecom/communications practice?

Thanks a bunch.

Jeff Dasovich on 04/08/2000 07:08:18 PM To: Susan M Landwehr/HOU/EES@EES cc: Subject:

Hi Sue: Believe it or not. I am alive. Can get you the info on the outside legal counsel I have. Can you call me Monday morning, since your new phone number is NOWHERE to be found. Best, Jeff

Good Afternoon Liaison Representatives and Energy Committee Members,

The next meeting of the SVMG Energy Committee is scheduled for Wednesday, August 22 at 3:00pm. We will be hosted by Exodus, located at 2831 Mission College Blvd. in Santa Clara, Training Room MC1.

We expect an informative and thought provoking presentation from Tal Finney, Senior Policy Advisor to Governor Gray Davis. We hope to gain a more intimate understanding of energy policy activities in Sacramento as well to influence future activity by relaying the needs and concerns of Bay Area business. This is a great opportunity. We hope to see you there.

Please remember to confirm your attendance by replying to this e-mail or calling 408-501-7870. Thank you very much and have a pleasant week.

Regards,

Laura M. Goldseth Associate, SVMG Energy Programs Tel: 408-501-7870 Fax: 408-501-7861

Hi Jeff,

I am going to call this done and print it all out.

Thanks for refining the docs.

At 12:12 AM 12/5/00, Jeff.Dasovich@enron.com wrote:

*Ok. Here they are. On exhibit A, I didn't touch numbers are exhibit #s. Also, I deleted CAPM, since we ain't got anything yet. And I deleted the part that said "ticket sales taxes don't matter much," because now that we have the numbers they could matter, cuz it's really tight between bond payments and tax revs. Anyway, that's it. I checked and doubled checked the numbers and exhibit #s in the exec sum, but you may want to give one last peek. Thanks SO much for pulling it together. Best, Jeff(See attached file: Finance exec sum 1204.doc)(See attached file: Exhibit A\_assumptions and model.doc)*

Hi Jeff,

Actually, I totally agree with the analysis. The company is within the bounds of the accounting rules. It is up to the analysts to figure out the details.

At 09:10 AM 9/17/00, jdasovic@enron.com wrote:

*Greetings. Here's the case with 1,3 and 4 compiled. I took some editorial license with 1 and 4--hope I didn't butcher what you were conveying Jimmie and Dylan. Check it out. Still need to determine if folks are comfortable with my conclusion in #3, i.e., look, the biz model and the info provided in the 10K may be crap, but from a strictly technical perspective, Patten's justified in using the sales as opposed to the installment method. Let me know. Kim's up and running on #2. Best, Jeff (See attached file: Patten case 1and3and4.doc)*

Julee Malinowski-Ball is out of town till Monday April 16, 2001. However, the IEP company lobbyist conference call is scheduled for April 12, 2001 at 2:00 PM. Julee thinks someone should lead the call and that it extremely important and valuable for everyone to touch base before we get bogged down again with hearings next week. On the agenda should definitely be a discussion of AB 60x lobbying strategy and update, SB 28x update and the proposed changes to SB 6x (heard from Brian Kelly, he submitted language on the eminent domain provisions of the bill).

Call In Date ~ April 12, 2001

Call In Time ~ 2:00 PM

Call In Number ~ (800) 403-2013

Code ~ 207814

If you have any questions, please call me or email me.

Thank you,

Karen Baker (916) 552-7070 kebaker@ns.net

PARTIES in I.99-07-003

This is a reminder that PG&E is holding the first Gas OFO Forum on Tuesday, August 29, 2000. Attached is our proposed agenda for this meeting. We will have extra copies of both the July 31, 2000 OFO Report and the March 7, 2000 Balancing Report available at the meeting.

The Forum will be held in San Francisco at PG&E's Pacific Energy Center, 851 Howard Street (between 4th and 5th Streets). There are a number of parking lots in the area, including a very large lot also between 4th and 5th Streets with entrances on 5th Street and Mission Street. The meeting will start at 9:30 a.m. and end around 4:00 p.m. A continental breakfast will be available at 9:00 a.m. We will also provide lunch.

Please RSVP to Belinda Bates at bdb9@pge.com or 415-973-6626, if you have not already done so. We look forward to seeing you next week.

Hi Scott:

Thanks for the note. Hope things are well. I'd like to call the El Paso person if that works for you. Yep, moratorium's still in place (at least to build your own---you can always get someone who previously received authority to do it for you). I'll keep you posted.

Best, Jeff

Scott\_Pleus@enron.net 09/28/2000 11:17 AM

To: jdasovic@enron.com cc: Subject: California

If you are still trying to pull utilities and such together to approach the California regulatory bodies, El Paso would be interested in joining the effort. I work with Bryan Neskora and Bruce Northcutt with El Paso Global Networks. El Paso is trying to install fiber along their pipeline ROW starting in Los Angeles through Phoenix, Tucson, El Paso, Houston. I believe they are having difficulties on the regulatory side. Bryan gave me the following name in the regulatory group:

Kim Corley 713-420-5610 Houston

Bryan said to feel free to give her a call. Hope this helps.

I also understand we still haven't received permitting build. Is moratorium still in place?

Tom Chapman@ECT 08/21/2000 07:19 PM To: Jeff Dasovich/SFO/EES@EES cc: Subject: California

Jeff-

This is a guy from South Carolina who works with a bunch of industrial customers there. At the last GridSouth meeting, he cornered Joe Connor and I and asked us about California and the price spikes there. I told him a bunch of reasons why the price spikes happened, but it appears that he wants more information.

I would appreciate it if you would call him or if you could find someone else out there in CA to give him a call. He is not super sophisticated, but he is the representative of some big clients, so I try to keep him happy. [I think he represents Michelin and Nucor steel--two huge energy users in South Carolina.]

Thank you very much.

#### STUDENT TO STUDENT (STS) AND HAAS ALUMNI JOB FAIR

When: 11/27 and 11/28 from 6:00 to 8:30 Where: B of A forum

If you or someone in your company has current openings that you think your peers in the Evening MBA program and Haas MBA alumni would be interested in, please plan on participating.

You can use this opportunity to earn a finders fee, if your company pays for employee referrals. The job fair will be held on both Tuesday and Wednesday nights. Ideally we would like you to participate both nights, if you can only attend one night that will be OK. If you will be in class, I will set up your table and you can come during the break and be available to answer questions. Other companies will be at their tables from 6-8:30.

There is no charge. You or your companies' representative will staff the information table, disseminate company literature along with a list of current openings and be available to answer questions about the jobs/company.

If you are interested in hosting a table, please send all inquiries to John Morel at morel@haas.berkeley.edu or give me a call (510) 642-7731. The deadline for signing up is 11/21 at 12:00 noon.

John Morel Associate Director of Career Services for Evening and Weekend MBA and MBA Alumni Ph# 510-642-7731

From: Capitol Connection [mailto:capcon@gmu.edu] Sent: Sunday, October 07, 2001 8:43 PM Subject: FERC RTO Workshop the week of October 15, 2001 will be made available via Internet and Phone Bridge Only

The Federal Energy Regulatory Commission (FERC) is holding a series of commissioner-led workshops (RM01-12-000) on Electricity Market Design and Structure to be held October 15 through October 19, 2001, beginning at 10:00 a.m. ET each day.

The Capitol Connection, George Mason University Television, will make available this series of FERC RTO workshops via the Internet and Phone Bridge Only. Pricing and further broadcast details on this workshop series will be available early this week on our website at [www.capitolconnection.org](http://www.capitolconnection.org) by clicking on the FERC link on the sidebar.

If you have any further questions, please contact our office at [capcon@gmu.edu](mailto:capcon@gmu.edu) or 703-993-3100.

Thank you,

The Capitol Connection George Mason University Television [capcon@gmu.edu](mailto:capcon@gmu.edu) PH: 703-993-3100 FAX: 703-993-3115 [www.capitolconnection.org](http://www.capitolconnection.org)

Hey All-

Please read the following email and let me know if you have any questions.

Thanks, April Hrach Administrative Coordinator Phone: 415-782-7825 Fax: 415-782-7851 ----- Forwarded by April Hrach/SF/ECT on 07/19/2001 01:55 PM -----

Wilma Blesman/ENRON@enronXgate 07/19/2001 12:41 PM To: April Hrach/SF/ECT@ECT, Gary Bode/ENRON@enronxgate, Dalak Malik/ENRON@enronxgate, Deborah Kelly/ENRON@enronxgate, Christina

Albers/ENRON@enronXgate, Jason Chumley/ENRON@enronXgate cc: Cyndi Wulfson/ENRON@enronXgate Subject: San Francisco's Outlook Migration

April,

My plans are to visit your office the week of July 30th. We have 20 people that need to be migrated. I would like to migrate 10 people on Monday and 10 people on Tuesday. Migrations are done at night, therefore, Tuesday and Wednesday morning I will configure everyone's Outlook. The rest of the time I'll be training everyone and setting everything up to best fit people's needs.

A copy of the NA Email Retention / Policy is attached.

However, due to legal issues we are currently experiencing with the San Francisco office, this will not go into affect yet. We will not purge anyone's Lotus Notes mailboxes. Notes will be available to you for referencing.

Only 30 days worth of information will be transferred from Notes to Outlook. Once on Outlook, we will still hold off on purging. Nevertheless, when the legal issues clear, we will reinforce our policy.

Thank you for your time,

Wilma Bleshman Enron Networks 713-853-1562

#### Who To See For Izio Infopier Support

|            |                                                                                                                    |
|------------|--------------------------------------------------------------------------------------------------------------------|
| Sender     | owner-eveningmba@haas.berkeley.edu                                                                                 |
| Recipients | ['ugstaff@haas.berkeley.edu', 'eveningmba@haas.berkeley.edu', 'mba01@haas.berkeley.edu', 'evstaff@haas.berkele...] |
| File       | dasovich-j/notes_inbox/5341.                                                                                       |

Many of you are using Izio Infopier, the learning management software used in a pilot we are conducting this semester.? As with any pilot study, we are in a "discovery" phase and we will encounter bugs and process issues that require correction.? For example, regarding accounts or access to courses, some persons may still have some related issues to resolve.? Because of this, some problem routing bottlenecks have occurred, which have introduced delays in service in resolving those problems.? HCS wants to ensure the fastest response possible for you, our customers.

Here are your (most efficient) support options:

- 1) FOR FASTEST SERVICE AND ACCESS TO THE FIRST-AVAILABLE PERSON, CONTACT THE HCS HELP DESK (510) 642-0434, <mailto:helpdesk@haas.berkeley.edu>, or at <https://helpdesk.haas.berkeley.edu>.
- 2) SEE YOUR GRADUATE STUDENT INSTRUCTOR OR TEACHING ASSISTANT FOR THE COURSE.
- 3) SEE PHIL MAHONEY, KRISTINA VERA, PAZ MELENDEZ, OR JESSE PARAISO IN THE STUDENT COMPUTING GROUP, S300A, S300B, S300S.

Haas Computing Services appreciates your participation, cooperation, and patience in this pilot of Izio.? We are working with you and with the Izio application service provider to resolve issues and to continually improve both the product and the user experience as we move forward.

Best, Zane

---

Zane Cooper Chief Technology Officer and Director of Computing and Information Services Walter A. Haas School of Business U. C. Berkeley (510) 642-4436???????? (510) 642-4769 FAX

FYI: On the call today with Jeremy Blachman & Co. today, we decided to the do the following:

Sue will make sure that EES legal (Mike Smith) reviews ARMs petition to modify the Commission's order suspending DA. Sue will send Jeremy a one-page summary of the petition and Jeremy will use it to solicit participation from Enron customers (i.e., see if any are willing to sign the petition). Jeff will work with Karen Denne to start drafting a couple of one-page letters that customers would sign and send to Legislators in the event Davis is successful in calling them back in October to work on energy matters.

Let us know if you have any questions.

Gas OII/OFO Settlement Parties:

Attached please find PG&E's OFO Report for the Third Quarter 2000. This is provided to you in accordance with the Operational Flow Order ("OFO") Settlement Agreement between PG&E and many other parties, filed in the CPUC's Gas Strategy OII 99-07-003, and approved by the CPUC by Decision 00-02-050. Section C.1.f. of that Agreement requires PG&E to prepare a Quarterly OFO Report concerning the number and causes of OFO events within the prior three months.

The attachments consist of the Report (in Word) and two Appendices (in Excel). Should you have any trouble opening either document, please contact my secretary, Darcy Morrison, at telephone (415) 973-6644, or e-mail her at D2Mr@pge.com.

At the OFO Forum on August 29, 2000, the parties decided not to hold another Forum meeting to discuss this Third Quarter 2000 OFO Report, unless there were other significant developments. Based on the results shown in the attached Report, we see no current need for an OFO Forum meeting in the near term. We suggest evaluating the events of the final

quarter of 2000 to determine whether or not to hold a Forum meeting in early 2001.

If you have any questions on this report, please call Rich Hall at (415) 972-5115.

Frank Lindh Attorney Pacific Gas and Electric Company 415-973-2776 frl3@pge.com

Hi all,

I hope the Financial Times has been working with you to get the paper delivered to you. For those of you who are still having trouble, I have arranged for 20 papers a day to come to the Evening MBA Program office as a work-around for the rest of the term. We will keep a few days worth as space allows.

Please follow a couple of ground rules so that this will work for everyone: \*Please be considerate and only take a paper if you are sure that you did not receive one at home. Do not take one just because you left yours at home. If you want to

review the paper at Haas before class, please use the Web or the Long Library copies. \*In the event of a delivery problem, please call or e-mail the Financial Times (see below), unless they have just told you that they cannot get the paper to you. In this case, ask FT to mail the paper to you instead of reluctantly trying to get a carrier to go to your house. \*Be patient if you come to the office and we have run out of papers. We will try to increase the number of back-ups if necessary. \*When you come to the office to pick up a paper we will have a list for you to record the missed delivery. Please help us to track the problems.

We received our first papers today and have last Friday's as well.

For contacting the Financial Times in the event of problems or address changes, please ask for Gayle at: FT Education [fteducation@etcddata.com] or (800) 628-8088.

I hope this is helpful to those of you who have had severe problems with the paper.

Have a great SHORT week and a happy Thanksgiving.

-Shawn

| File       | dasovich-j/all_documents/600.                          |

Brian/Jeff

I reviewed the articles on Global Photon for more detail, and found references to the following contracts:

6/7/00 \$100 million contract with Alcatel to build a fully integrated submarine and terrestrial Dense Wavelength Division Multiplexing network in California (a 2000 km network called the Global West Network)

4/19/99 Tyco International Ltd.'s Tyco Submarine Systems Ltd. unit signed a \$93 million supply contract for Global West, a five segment fiber optic undersea cable system that will connect major cities along the California coast. TYC said an operations, administration and maintenance contract will bring another \$50 million, and two optional segments could increase the value by an add'l \$25 million

The permits obtained to begin the project are referenced in a press release on the company website. There is no other supporting evidence of these contracts or any other, nor further mention of Global Photon's Global West Network project.

To: Ethan Schultz/Enron Communications, Jeff Dasovich/SFO/EES@EES cc: Subject: Re: Global Photon Systems, Inc.

Ethan,

Thanks for the research. My cursory review of the articles turned up one interesting fact: they claim that GP has signed a \$100 mm contract with Alcatel - a euro telecom company. Please: Re-review the articles to see if that is correct and any other contracts you can find. Try to double check the press releases by looking at alcatel's published financials if any.

This is a pretty low priority thing. Try to have it done by Friday afternoon.

Thanks,

Brian

PS: How is it going with Matt J?

Dow Jones Energy Service Nevada Governor To Decide On Deregulation By Next Week ? 09/25/2000 Dow Jones Energy Service (Copyright (c) 2000, Dow Jones&Company, Inc.)

LOS ANGELES -(Dow Jones)- Nevada governor Kenny Guinn will decide by early next week on whether to implement electricity deregulation by November, as recommended by the state's Public Utilities Commission, a spokesman for the governor said Monday.

Deregulation was set to become law March 1, 2000, but was stalled due to a lawsuit brought by Sierra Pacific Resources (SRP) Co. unit Nevada power that challenged deregulation as unconstitutional. Nevada Power withdrew the lawsuit after the state approved a \$110 million rate increase for the utility's customers.

Guinn's spokesman would not say why the governor was considering a delay in deregulation.

"All those details will be discussed when the decision is announced," said spokesman Jack Finn.

The PUC's proposed deregulation schedule calls for competition to begin with large commercial customers on Nov. 1, 2000, followed by medium commercial customers April 1, 2001, and residential customers Sept. 1, 2001.

CONFIDENTIAL SETTLEMENT DOCUMENT PER CPUC RULE 51

All Parties -

We are re-sending this message from yesterday, regarding the February 7 meeting. I apparently did something wrong with the addressing, and many of the messages were "returned to sender."

I am re-sending it, just to be sure that everyone receives notice of the February 7 meeting.

Thank you.

Frank Lindh Pacific Gas and Electric Company (415) 973-2776

CONFIDENTIAL SETTLEMENT DOCUMENT PER CPUC RULE 51

INTERESTED PARTIES:

Based on discussions with a number of parties, we have determined that there is general support for a one-day informational Gas Accord II Workshop on Wednesday, February 7, 2001.

Accordingly, PG&E will host an informational meeting on February 7, in San Francisco. We have shortened the workshop, from two days to one very full day, and will focus on the major issues and proposals. Attached is our suggested agenda with topics listed by their associated section in our December 2000 comprehensive Settlement Proposal.

The February 7 Workshop will start at 9:00 a.m. and end around 5:00 p.m. We will be meeting at PG&E headquarters, in Conference Room 300, 77 Beale Street, San Francisco. We will not be providing lunch at this workshop due to spending restrictions. However, we hope to provide coffee and water.

At this point, we also would request that all parties to reserve February 21 and 22, 2001, on their calendars, for the next workshop and feedback discussion on PG&E's December 2000 Settlement Proposal.

We look forward to meeting with those of you who can attend on February 7. Also, we continue to be available at any Party's request to meet individually to go over the December Settlement Proposal in detail. Please feel free to contact either of us, and we can make the necessary arrangements.

Frank Lindh Ray Williams 415-973-2776 415-973-3634 frl3@pge.com rdw0@pge.com

**Trade Application**

The final version of the trade application for the launch of State 6.7 will be posted behind the Participants only section in the folder entitled "Inter-SC Trades" on Monday, September 18th. We anticipate this will be the final version of the trade application prior to launch. We will send a market message when the trade application is ready for download.

**Market Simulation**

This is our final week of market simulation. As of late Friday afternoon, we had not been given any information regarding additional testing with the ISO direct, however they have made the emmunlator available to us to turn schedules around.

NOTE: If you have not taken the opportunity to test your systems against the trade application during previous market simulation days, we encourage you to test with the trade application being posted today sometime this week.

**Inter-SC Resource**

All Inter-SC Resources must be entered into PowerBase prior to 5:00 PM on Friday, September 22, 2000. Please forward all requests for resources to Steven Sweet at stsweet@calpx.com prior to Friday. Steven can be reached at (626) 537-3264.

**DATA FREEZE**

In preparation for the launch of Stage 6.7, there will be a data freeze effective September 24th through October 11th. To ensure the stability of our system, we will not be able to effect any changes to your resources during that time. If you have any questions regarding the freeze, you can contact me at (626) 537-3263.

**Conference Call**

We will have a conference call on Wednesday, September 27, 2000 to discuss launch status and to review the changeover schedule for the new environment. Call information is as follows:

Date: Wednesday, September 27, 2000

Time: 1:00 PM

Duration: 1/2 hour

Phone #: (888) 452-9851

Passcode: Release 6.7

Leader: Cleo Center

Materials for the call will be forwarded to you for your review prior to the call.

We look forward to your participation and to a smooth and successful launch.

We appreciate your continued support.

Thank you.

PR01:065 FOR IMMEDIATE RELEASE 02/23/2001 02:05 PM

GOVERNOR DAVIS ANNOUNCES PRINCIPLES OF AGREEMENT WITH SOUTHERN CALIFORNIA EDISON  
LOS ANGELES

Governor Gray Davis today announced an agreement in principle with Southern California Edison to keep the utility solvent.

"This is the framework of a good, balanced deal," said Governor Davis. "It's not a final deal. There's a lot of work to be done. But we're making progress.

"This is a complex transaction with a lot of moving parts. With these terms in place, I'm confident we'll be able to hammer out a final agreement shortly."

The State has agreed to purchase the utility's transmission lines for an estimated \$2.76 billion (2.3 times estimated book value) and allow Edison to issue bonds for a substantial portion of its undercollection.

In exchange, Southern California Edison has agreed to:

- \* Make payments from its parent company, Edison International, to the utility of approximately \$420 million; \*
- Commit the entire output of the parent company's Sunrise Mission power project at low "cost-based" rates for 10 years (a value to ratepayers of \$500 million over the next two years); \*
- Provide cost-based rates from the generating facilities they own for another 10 years; \*
- Conservation easements on 20,000 acres of watershed lands for 99 years; and \*
- Drop their pending litigation against the Public Utilities Commission that would have resulted in immediate higher electric rates for consumers if they had prevailed in court.

Negotiations will continue during the next several days with the utility.

| Recipients | [cummins@haas.berkeley.edu', 'sonnen@haas.berkeley.edu', 'brodie@haas.berkeley.edu'] |
| File       | dasovich-j/notes_inbox/5737.                                                         |

Hi,

This is from Bill Sonnenschein, the instructor for E291B-1 Speaking for Management.

Hello all.

And welcome in advance.

I want to pass on some information to you to prepare you for the first class session. Class will meet on February 3 & 24, 2001, from 9:00 a.m. to 6:00 p.m. The time is very short for a speech course. I am asking you to prepare a little before the first session, to assure you get as much as you can out of the course.

Please come to the first day of class with a prepared persuasive speech (a speech that moves the audience to action). The speech should be three to five minutes in length, and on a topic you feel very strongly about. I do not care if the topic concerns business. It could be political, social, moral, or even spiritual. The most important thing is that you believe strongly in the message. Leaders must learn to speak "from the heart." The focus of the course will be on speaking in a business context, but it is important to speak with feeling first, and learn to transfer that skill to a business context. I do not care if you write the speech out, or create an outline and rehearse giving the speech extemporaneously. The idea is to be prepared. I will talk about delivering from a manuscript as well as the advantages of extemporaneous speaking as part of one lecture.

You may also want to buy a blank video tape. You will not need it till the second Saturday, and even then using it will be optional. Videotaping speeches is an excellent learning tool, but can be counter-productive if students get too nervous doing it. I never use tape the first class session, and you choose if you want to be taped the second session.

If you have any questions, please feel free to call me at 510-336-1239, or e-mail me at [sonnen@haas.berkeley.edu](mailto:sonnen@haas.berkeley.edu).

Thanks. I am looking forward to working with you.

Bill

Geoff Pollard is the SM for Pac Tel.

From: James D Steffes/ENRON@enronXgate on 11/21/2001 04:01 PM To: Lamar Frazier/HOU/EES@EES cc: Jeff Dasovich/ENRON@enronXgate, Susan J Mara/ENRON@enronXgate, Mike B Smith/ENRON@enronXgate, Diann Huddleson/HOU/EES@EES, Evan Hughes/ENRON@enronxgate, Rebecca Fite/ENRON@enronxgate Subject: Pac Tel - CPUC Customer Switch Complaint

I received a call late today from the CPUC (Joyce @ 415-703-2199). Someone from Pac Tel called and said that his service was switched without authorization - Mike Benson with Payphone group @707-253-8892 or 707-292-1766.

Lamar -- who is the client rep for Pac Tel? Can they get into Pac Tel and try and find out if we have done something inappropriate? We need to call this guy back by Monday EOB. Please let Jeff Dasovich know so he can call Joyce back - I'll be out on vacation next week.

Jim

Tracy,

I'm doing just swell thank you. I'm attaching the most recent list that I have.....of course, this is always to be viewed as a living document since things change so quickly in terms of personnel here. Don't know that they need every single name on the attached list, so feel free to cut and paste as needed. thks,

Kris Caldwell Enron Communications, Inc. Public Relations Manager (503) 886-0269

Tracy McLaughlin 05/02/00 09:12 AM

To: Kris Caldwell/Enron Communications@Enron Communications cc: Subject: Electronic Copy of Bios of EBS Management

Hey KC

What's up? How are you today? Kris, can u help me out with this bio question -- do we have them in a database? Or do you have the readily available version? If so, would you mind terribly forwarding to me and/or Jeff Dasovich at the address below -- I know that we have the hard copy available and where to get that, but I don't know where the e version is. thanks KC

T.:)

### California PUC Orders

|            |                                                                                                          |
|------------|----------------------------------------------------------------------------------------------------------|
| Sender     | eric.letke@enron.com                                                                                     |
| Recipients | ['harry.kingerski@enron.com', 'scott.gahn@enron.com', 'greg.sharp@enron.com', 'jeff.dasovich@enron.com'] |
| File       | dasovich-j/notes_inbox/4643.                                                                             |

Is there any language that tells us that the surcharges are not applicable to future DA customers? Obviously it should not since they would be paying for generation twice but the other surcharge did apply. Please let me know ASAP.

----- Forwarded by Eric Letke/DUB/EES on 03/29/2001 07:17 PM

From: Harry Kingerski@ENRON on 03/28/2001 03:41 PM To: Vicki Sharp/HOU/EES@EES, Mike D Smith/HOU/EES@EES, Don Black/HOU/EES@EES, James W Lewis/HOU/EES@EES, Scott Stoness/HOU/EES@EES, Eric Letke/DUB/EES@EES, Scott Gahn/HOU/EES@EES, Janet R Dietrich/HOU/EES@EES, Tamara Johnson/HOU/EES@EES cc: James D Steffes/NA/Enron@Enron, Jennifer Thome/NA/Enron@Enron Subject: California PUC Orders

Orders the CPUC voted out yesterday:

1) March 27 decision on California Procurement Adjustment:

- CPUC01-#93704-v1-D0103081\_A0011038\_et\_al\_.doc This tells the utilities to start paying DWR an amount per kwh equal to the utilities' average cost of generation for all power provided by DWR, and asks for additional comment on how the California Procurement Adjustment is calculated.

2) March 27 decision on rate increase is not yet available but is largely unchanged from proposed decision:

[http://www.cpuc.ca.gov/cyberdocs/tcquickstart.asp?DOC\\_ID=93630&docType=LEGAL\\_P](http://www.cpuc.ca.gov/cyberdocs/tcquickstart.asp?DOC_ID=93630&docType=LEGAL_P) ROCEED This is the order that allows the rate increase to take effect.

3) March 27 decision on rate design is not yet available but also is not likely to change from proposed decision:

[http://www.cpuc.ca.gov/cyberdocs/tcquickstart.asp?DOC\\_ID=93589&docType=LEGAL\\_P](http://www.cpuc.ca.gov/cyberdocs/tcquickstart.asp?DOC_ID=93589&docType=LEGAL_P) ROCEED This is the order that says the rate increase will not be a uniform across the board increase, but rather will achieve conservation and equity goals.

Regarding the rate increase of 3 cents, it is effective yesterday but the Commission did not describe exactly how it will be implemented. For example, they could a) allow a 3 cent surcharge until the rate design phase is complete, and then switch over to the new rate design around, say, May 15; or b) allow a 3 cent surcharge to be billed and then retroactively adjust the billing based on the new rate design, once it is known.

Jeff --

Can you try and call Seabron today to discuss. See if his understanding helps with California issues.

Jim

----- Forwarded by James D Steffes/NA/Enron on 10/02/2000 02:49 PM -----

"Seabron Adamson" <seabron.adamson@frontier-economics.com> 10/02/2000 09:43 AM

To: <James.D.Steffes@enron.com> cc: Subject: RE: Auction of Default Supplier Obligation

Jim:

*Have you ever seen a model for a bid process like this? Any auctions (in any commodity) that would work? We are trying to get back to key policy makers mid-day on Monday.*

Yes, there are numerous default service auction models in operation or proposed, both in electricity and other utilities. The government of New South Wales in Australia is implementing a model similar to this. In Georgia, I think they recently had an auction to serve customers served by a gas retailer that went bust. Similar mechanisms have been used for years in the telecoms business for serving specific client bases, such as rural customers. Examples have been in Chile, and even in the U.S. (auctions for "universal service obligations").

We proposed a model for "third-party" default service standard supply for Ontario (working for Aleck Dadson of Enron Canada). This allowed the standard supply provider to meet its obligation by competitive means, including holding an auction. The idea was to provide customers hedging in a framework that allowed for competition in default service.

Let me know if you want a briefing or further info. I'll be in the office until 4:00 or so (I'm then heading to the airport for Portland). My office number is (617) 354-0060, or (617) 513-5904 (mobile).

No, I don't think I'd make a better accountant. But I did ask a few questions of my accountant brother-in-law. You did a great job. I don't know how much time I'll have, but I'll see if I can throw in a bit of text and raise the issues. See you tonite.

Kimberly Kupiecki <kkupiecki@arpartners.com> on 09/18/2000 09:53:30 AM To: jdasovic@enron.com cc: dwindham@uclink4.berkeley.edu, jjackson@haas.berkeley.edu, jcjal02@aol.com Subject: Re: Q2 for Patten Case

Hi Jeff,

I guess you would make a better accountant than me. Your analysis sounds right. Feel free to make changes as fit.

My apologies for missing out on these items.

At 06:18 PM 9/17/00, jdasovic@enron.com wrote:

*Hey, nice spreadsheet. Two minor questions: 1) Isn't the provision for taxes on the income statement actually the taxes on the 'income' they made from using the sales method (equal to 46%), rather than what they pay will actually pay the IRS under the installment method? I think the notes show how instead of paying the 4.1\$ based on their recognized income, they pay some itty bitty amount based on installment. If so, I think they actually get a 46% tax break on the 1 million and change that they lose using a cash basis. Still a loss, just not so big. Anyway, I'm not sure if I'm thinking straight on this, but that's how I read the numbers. 2) Does the balance sheet have to change a little? For example, does shareholder equity change since the income that goes to retained earnings is now a loss, rather than a gain? Also, if revenue is recognized on a cash basis and is now much smaller, there needs to be another liability to equal out the decrease in revenues with the still large notes receivables on the asset side (as you note in the answer the notes recievables stays the same). Seems like they might need a liability like "deferred profits" or some such thing, such that the ["deferred profits" + revenues (recognized on cash basis)] = notes receivables. Anyway, I may not have this right, but thought I'd bring it up to see what you think. Best, Jeff*

Dear Colleague:

Need information on retail energy markets?

Retail Energy Foresight, a bimonthly publication with switch rate predictions and thoughtful analysis, is what you need to understand today's volatile retail energy markets.

Download FREE trial issues from XENERGY's web site at <http://www.xenergy.com/foresight>

Every issue of Retail Energy Foresight presents:

--> Switch rates by utility service territory and customer class from around the nation;

--> Predictions of switch rates for Pennsylvania, Illinois, and other markets;

--> An intimate look at markets and related topics; in the August/September issue, read about Market Backwaters and potential for revival;

--> All of the above served up with our own brand of humor to make retail energy markets actually fun to read about.

Take a look at what Retail Energy Foresight has to offer. We think you'll agree it's a valuable and unique analysis publication, and hope that you're tempted to subscribe. To do so, print out and fax back the order form on the last page of any issue (from our Web site) or call me at 781.273.5700 x387.

Regards,

Susan Weber Editor - Retail Energy Foresight [sweber@xenergy.com](mailto:sweber@xenergy.com) Tel. 781.273.5700 x387 Fax 781.273.9368

About Us: Retail Energy Foresight is published by XENERGY, an energy consulting firm with 25 years experience, specializes in understanding the retail energy markets. With the help of our clients, we have invested over \$8 million studying retail energy markets, making us uniquely qualified to provide the analysis and predictions you need to thrive in this new arena.

If you would like to have your e-mail address removed from this mailing list, please reply with "remove name" in the subject field.

## XMS - Expense Management System

|            |                                                                                  |
|------------|----------------------------------------------------------------------------------|
| Sender     | <a href="mailto:enron.announcements@enron.com">enron.announcements@enron.com</a> |
| Recipients | [ <a href="mailto:enron.employees@enron.com">enron.employees@enron.com</a> ]     |
| File       | <a href="#">dasovich-j/notes_inbox/6108</a> .                                    |

Concur Technologies=01, Expense Management System (XMS) is now available to= all=20 Enron Corp (Co 0011) employees. You can prepare your expense report, send = it=20 for approval, and transmit it for payment using the Intranet. It is far mo= re=20 user-friendly than the previous Excel-based form and efficiently integrates= =20 with the SAP accounting system. We are excited about this new system and= =20 encourage you to start using it.

To access the system go to the Enron Home Page and type <http://xms.enron.co>= m=20 in the address field.

LOGON ID Enter your personnel number (P number). HR information is loaded=20 automatically into XMS, but an incomplete load may mean that some people's= =20 IDs are not updated. If your P number doesn't work, try using your first= =20 initial and last name (lower case). If you can't log in to the system, go = to=20 the IT Central web page from the Enron home page and select Services>Securi= ty=20 Requests>eRequest or call (713) 853-5536.

PASSWORD The first time you log in, the password is upper case ENRON. The system will guide you through confirming your personal information and changing your password. The Enron Code of Ethics prohibits the sharing of passwords and logging on as another person. Please observe Enron's policy. If you have forgotten your password, call the Resolution Center at (713) 853-1411.

TRAINING Go to the IT Central web page. Select Services>Training. Click on "Schedules" in the North America column, and go to the XMS Workshop schedule to choose your class. If no classes are listed, call the training department and place your request at (713) 853-1816. Those in outlying locations and those who prefer on-line training can use LEAP by signing on to isc.enron.com and clicking on "training and education," then LEAP (shown as a link). Use xms (lower case) as the User ID and Password.

DOCUMENTATION Step by Step documentation is also available from IT Central web page. Select Services>Training. Click on "Documentation" in the North America column and choose XMS User's Guide from the list.

APPLICATION SUPPORT SERVICES Call the ISC help desk at (713) 345-4SAP (4727). Do not call Accounts Payable with questions about how to use the system or with issues regarding electronic pre-populated data.

"Katie Kaplan" <kaplan@iepa.com> 03/08/2001 12:17 PM

To: <Jeff.Dasovich@enron.com> cc: Subject: RE: FW: CAISO Notice - Draft Market Stabilization Plan

ISO Market Participants: The ISO has developed a market stabilization plan, designed to stabilize operations and control costs in California, to be implemented in the next two months. It would remain in place for the near term (through Summer, 2001 and beyond) and includes changes to existing ISO practices as well as an expansion of the ISO's responsibilities. Because of the need to move quickly so that the plan can be implemented by this summer, we will be unable to hold a full stakeholder review process. But, we do want to discuss the plan with you so that you can understand the proposal and the reasoning behind it. The ISO will post this plan on the ISO web site at <http://www.caiso.com/stakeholders/> , by COB tomorrow. In addition, we will host a conference call from 10:00 a.m. to 2:00 p.m. PST this Friday, March 9, to discuss the plan with you and clarify any outstanding issues. We then plan to request the Board's approval for this plan on March 15th in order to be able to implement the plan by summer. The call information is as follows: Market Stabilization Conference Call Friday, March 9, 10:00 a.m. - 2:00 p.m. PST Call-In Number: 877-381-6005 Conference ID #: 760357 Leader Name: Byron Woertz Following the call, you may submit any comments on the plan to us by close of business on Tuesday, March 13. You may send your comments to [bwoertz@caiso.com](mailto:bwoertz@caiso.com). We will do our best to summarize your comments and present them to the Board at their March 15 meeting. In addition, there will be a public comment period on the 15th. Please contact me if you have any further questions. Byron B. Woertz, Jr. Director, Client Relations (916) 608-7066

**REMINDER: Come Meet the Recruitment Center Account Managers on**

|            |                                                                                                                     |
|------------|---------------------------------------------------------------------------------------------------------------------|
| Sender     | sfalbie@msn.com                                                                                                     |
| Recipients | ['eveningmba@haas.berkeley.edu', 'friedfel@haas.berkeley.edu', 'rwong@haas.berkeley.edu', 'rowe@haas.berkeley....'] |
| File       | dasovich-j/inbox/973.                                                                                               |

This is just a friendly reminder for the following event (and if you plan to attend, please respond to me directly): Who are these so called account managers, Rich, Jenny and Mark? What do they do? How can we leverage off their expertise and they, ours? Do they have specific company contacts? Where can they be found? Will the ubiquitous pizza be served to entice you to attend? Strong possibility. Will I have to sign up on Bear Tracks? No. How can attending benefit me? It's up to you.

To answer these questions and many more, we will be scheduling during -

Thu, Dec. 6 during the break as well in the Career Center Conference Room (S420)

an informational session with the account managers.

Here's a description that Rich Wong, the financial services account manager prepared:

"The Haas Career Center staff includes 3 account managers that can be a valuable resource to those that are exploring job or career direction changes. Their role is to be the primary liaison for recruiters in their specific industry sectors, being the one-stop shop point person for companies interested in connecting with Haas MBA students. They cover a full spectrum of responsibilities from the logistics of setting up presentations and interviews to establishing contacts and providing strategic guidance to recruiters (including both hiring managers as well as University Recruiting reps within human resource departments). Through this activity, they gain insights into their company/industry focus that they are happy to share with Haas students, John Morel, and the other career advisors in the Haas Career Center."

Feel free to contact them regarding questions on companies and industries that they represent. Conversely, please provide them with any valuable contacts that you have in current/former employers that might help them aid your schoolmates to find employment opportunities. They are located in the Recruitment Center (S330 by the ATM machine) and their contact information is as follows:

Mark Friedfeld - Financial Services (Investment and Commercial Banking, Real Estate, Venture Capital)  
friedfel@haas.berkeley.edu/510-642-6588

Jenny Rowe - Consulting, Consumer Products, Healthcare/Biotech/Medical Devices, Educations, Not-for-Profit  
rowe@haas.berkeley.edu/510-643-4212

Rich Wong - Technology, Entertainment - rwong@haas.berkeley.edu/510-643-4211

Regards, Albert Demery demery@haas.berkeley.edu

Team --

My initial response is that this is not a key issue for Enron (given everything else). I'd rather simply know how the process is to work going forward, than make a big case either way.

Jim

Subject: Comments on ACR re SCE's MOU

About ten days ago, I sent the attached E-mail containing an Assigned Cmmr.'s Ruling pertaining to the SCE MOU. The ACR set forth a "model" for determining revenue requirements for SCE's retained generation. On Friday, SCE, as directed, filed comments on the Ruling. Comments from other parties are due this Friday, the 11th.

Of primary importance is that SCE used its comments to promote the methodology for recovery of retained generation costs it had set forth in Advice 1534-E-A (forwarded to you last week). This method provides for an annual rate true-up mechanism and trigger mechanism. Such mechanisms allow for rate increases (or decreases) with the filing of an advice letter.

If we are opposed to such trigger / true-up mechanisms we need to submit comments on Friday and/or a protest of the Advice Filing (also due on the 11th).

Jeanne Bennett

#### Diesel Fuel Storage Tanks in Los Angeles

I pieced together some initial information on the prospect of installing diesel fuel storage tanks in the Los Angeles area. Much depends on the location of the storage facility as well as on the type (i.e. above or below ground) and size of the facility. Listed below are a few agencies that have a hand in overseeing fuel storage tanks.

Fire Department The Fire Department requires permits and review of plans for fuel storage facilities. One of three permits applies - division 4, division 5 or special permit - depending on the facility (above ground, below ground, quantity stored, area of storage facilities, etc). The permit paperwork looks quite comprehensive including a range of information from ownership to geological/groundwater measurements. However, once the application is complete, the Los Angeles Fire Department said they usually turn the permit around in a day. The proper fire department to contact depends on the location of the site. [LAFD - 213-485-7543]

Los Angeles County Industrial Waste permits are only required for tanks that discharge waste, so for storage, no permit is required. However, the County approves fuel storage for either a spill containment plan or double walled + leak sensor construction. Underground storage of hazardous materials is of concern to the County, but it is unclear where the fire department leaves off and the county picks up. In cities where the fire department does not process permits for fuel storage, the County plays a larger role. [LA County Environmental Programs - 626-458-3517]

California EPA License/permit processes seem to have been passed down to local levels, though I believe that EPA has installation and/or engineering requirements for fuel tanks. I was not able to reach a contact, but I was advised to speak with the Engineering Unit - 916-341-5775.

Zoning & Building Requirements Zoning restrictions exist in Los Angeles and building permits are required as in any facility. Narrowing the location or locations under consideration for the tanks will help the information search.

My initial impression is that this is a comprehensive process, but not necessarily any worse than other cities. The process is unlikely to change - for better or worse - any time real soon.

Please contact me with any questions or if you need more in-depth information - x5-2431 or Margaret.Huson@enron.com.

Regards, Maggy Huson Government Affairs

Please respond to Hello all,

I made a reservation at Cleone Gardens Inn, just across the street from the ranch. I reserved a room for Pat, Cal and myself, but was unsure what other reservations to make for the rest of the group because some of you are still tentative and I'm not sure who is bringing SOs/dates.

The inn has one room called the Blue Iris room with two double beds that might work for Jeff W. and Jeff D. if going up single; most of their other rooms have a queen or king bed (the Meadow View king room sounded nice for a couple if we have any going up). Both of those are still available for the weekend we are planning to be there. I think there may be some cottages available also for multiple people, but I'm not sure what the configurations of those are. A full breakfast can be ordered from some of the rooms for \$14.00 extra. They serve breakfast at 8:00 a.m. Pat, Cal and I have a suite with a small kitchen, so we may also be able to host some minimal meals/snacks/drinks.

The phone number of Cleone Gardens is 1-800-400-2189. Their website, which has pictures and descriptions of their rooms, is cleonegardensinn.com. If the Cleone Gardens Inn does not have the room configuration you want, Lari's website (horse-vacations.com) has links to numerous other hotels and B&Bs.

Tally ho!

Amy

Confidential Settlement Document CPUC Rule 51

ALL PARTIES:

Thanks to the many parties who attended our Gas Accord II kick-off meeting on September 14. We thought it was a good start toward a collaborative settlement process. This e-mail summarizes the next steps identified at the meeting.

First, the list of the issues identified by the parties is being sent by a separate e-mail transmittal today to those parties who have agreed to abide by Rule 51. We are continuing to assemble the issues list, and would like any more issues that parties wish to raise sent to us by this Friday, September 22. This is not to limit issues, but rather to build our workshop presentations and discussions, and ultimately our settlement proposal. If you are not on the Rule 51 list and wish to be added, please complete the Mailing List Information form below. Also attached is a copy of CPUC Rule 51.

Second, attached is an updated schedule for the Gas Accord II workshops. Please note, the November workshop has been moved to November 7-8 (which is Tuesday and Wednesday), instead of the week following as we had originally proposed. We request that you please hold the attached dates on your calendars if you plan to be active in the settlement discussions.

Based on the issues list, we suggest the following topics for the first three workshops:

\* September 27: Reliability, for both facilities and supply. \* October 11-12: Market, cost and rate data. \* November 8-9: Market operations, including core issues, balancing, open season rules, and information disclosure.

Please let us know if this workshop plan does not work for you.

Third, PG&E will provide a basic set of market data and preliminary cost data to all of the Rule 51 parties in advance of the October 11-12 Workshop. This will help parties to identify and analyze their issues. After seeing this data, to the extent there are other information requests, please send them to Frank Lindh (e-mail to frl3@pge.com or Fax to 415-973-5520).

Again thank you for your participation in the Gas Accord II Settlement Process. We look forward to our upcoming workshops and discussions. Please feel free to call us if you have questions.

Frank Lindh Ray Williams 415-973-2776 415-973-3634 frl3@pge.com rdw0@pge.com

Harris, Wiltshire Names New Partners

12/04/2000 Satellite News (c) 2000 Phillips Business Information, Inc. Harris, Wiltshire&Grannis LLP, a Washington communications and information technology law firm, has promoted Karen Gulick, Kent Bressie and Jonathan Mirsky to partner, effective Jan. 1. The firm, which emphasizes emerging technology and international issues, has grown rapidly partly due to its hiring of FCC attorneys. A prime example is Gulick, who joined the firm as "of counsel" on her departure from the FCC last year. She advises clients on domestic and international regulatory and legal matters, focusing on wireless telecommunications. Gulick concluded her FCC career as legal advisor to Commissioner Gloria Tristani and took a key role in spectrum issues and emerging technology, as well as international telecommunications matters. Bressie specializes in proceedings before U.S. and foreign regulators and in international proceedings and negotiations. He also advises companies on legal and policy problems associated with emerging technologies and international business. Mirsky advises telecommunications service providers, investors, lenders and investment banks on communications and regulation. He has worked on acquisitions and sales of FCC-regulated communications companies and on their debt and lending arrangements, as well as on spectrum leasing. The law firm's managing partner is Scott Blake Harris, once chief of the FCC International Bureau.

| Recipients | ['christine.piesco@oracle.com', 'kkupiecki@arpartners.com', 'dwindham@uclink4.berkeley.edu', 'jcjal02@aol.com...] |
| File       | dasovich-j/all_documents/3643.                                                                                    |

I'm adding my two cents. Here's 3, but not 4. Few things.

1) I considered that everything was "material." That reasonable?

2) Dylan, I struggled with the ban on preservatives, but ultimately decided it was unusual, not extraordinary, since the book sez that any write down of inventory is unusual, as opposed to extra. But a case for extra can still, be made I think.

3) I did not include the 1994 litigation expense associated with the ban, since it seems to me that it's merely an expense that they would have taken in 1994, as opposed to a "potential litigation outcome" that they'd make an allowance for---I could be wrong, though.

4) Finally, I assumed that the depreciation-related gain was already included in the 1995 "income from continuing operations" number, and consequently included it as a footnote on my spreadsheet, rather than make it an explicit line item in the income statement.

I'll look at Kim's #4 and if I have any comments, I'll add them to hers and circulate.

Best, Jeff

Kimberly Kupiecki <kkupiecki@arpartners.com> 11/18/2000 06:54 PM

To: dwindham@uclink4.berkeley.edu cc: jjackson@haas.berkeley.edu, jdasovic@enron.com, jcjal02@aol.com, christine.piesco@oracle.com Subject: Agro - Q3,4

Questions

1. Litigation - how should we account for the 1994 bill of 500,000 in 1994 - I assume this was not accounted for in the 1994 income statement - we could include a note on pro forma numbers for the 1994 statement or we could just include this cost in 1995 - I am including it in the 1995 recalculated income statement, but I don't think this is totally accurate.

Thoughts anyone?

2. In the text, page 354, Other gains or losses from the sale or abandonment of PP&E used in a business is not supposed to be reported under extraordinary items. This means the two sites Agro sold for \$750,000 (after tax gain) should not be counted under extraordinary items. In this case - we could 1) assume this is accounted for already in the 9.5 million number given to us or 2) add it in after "income from continuing operations" and before "discontinued operations." I went with option 2.

Let me know if you have any issues with this treatment.

3. Are we supposed to do anything with the 30,411,380 of retained earnings? I did not include pay out of dividends in the income statement.

Cheers, - Agro.doc - Agro.xls

#### Reminder: MEET THE RECRUITMENT CENTER ACCOUNT MANAGERS

|            |                                |
|------------|--------------------------------|
| Sender     | sfalbie@msn.com                |
| Recipients | [eveningmba@haas.berkeley.edu] |
| File       | dasovich-j/deleted_items/2064. |

Hi everyone,

Hope you're having a nice Thanksgiving break. Just a friendly reminder on the following (again, if you plan to attend, please respond to me directly and indicate which evening):

Fellow Evening Haasians,

Who are these so called account managers, Rich, Jenny and Mark? What do they do? How can we leverage off their expertise and they, ours? Do they have specific company contacts? Where can they be found? Will the ubiquitous pizza be served to entice you to attend? Strong possibility. Will I have to sign up on Bear Tracks? No. How can attending benefit me? It's up to you.

To answer these questions and many more, we will be scheduling during -

Mon, Nov. 26 during the break (i.e., 7:30 - 8:15) in C125 and Thu, Dec. 6 during the break as well in the Career Center Conference Room (S420)

an informational session with the account managers.

Here's a description that Rich Wong, the financial services account manager prepared:

"The Haas Career Center staff includes 3 account managers that can be a valuable resource to those that are exploring job or career direction changes. Their role is to be the primary liaison for recruiters in their specific industry sectors, being the one-stop shop point person for companies interested in connecting with Haas MBA students. They cover a full spectrum of responsibilities from the logistics of setting up presentations and interviews to establishing contacts and providing strategic guidance to recruiters (including both hiring managers as well as University Recruiting reps within human resource departments). Through this activity, they gain insights into their company/industry focus that they are happy to share with Haas students, John Morel, and the other career advisors in the Haas Career Center."

Feel free to contact them regarding questions on companies and industries that they represent. Conversely, please provide them with any valuable contacts that you have in current/former employers that might help them aid your schoolmates to find employment opportunities. They are located in the Recruitment Center (S330 by the ATM machine) and their contact information is as follows:

Mark Friedfeld - Financial Services (Investment and Commercial Banking, Real Estate, Venture Capital)  
friedfel@haas.berkeley.edu/510-642-6588

Jenny Rowe - Consulting, Consumer Products, Healthcare/Biotech/Medical Devices, Educations, Not-for-Profit  
rowe@haas.berkeley.edu/510-643-4212

Rich Wong - Technology, Entertainment - rwong@haas.berkeley.edu/510-643-4211

If you plan to attend, please respond to me directly and indicate which evening.

Best regards, Albert Demery demery@haas.berkeley.edu

PR01: 057 FOR IMMEDIATE RELEASE 02/16/2001 2:20 pm

GOVERNOR DAVIS ANNOUNCES RECOVERY PLAN FOR STATE'S UTILITIES

SACRAMENTO

Governor Gray Davis today unveiled the framework of a recovery plan for the California's investor-owned utilities that includes the purchase of their power lines and targeted revenue from the existing rate structure to help pay their back debt.

"Today we have begun serious negotiations with the utilities on a balanced recovery plan," said Governor Davis. "This is a balanced business transaction. It provides real benefits of real value to consumers and allows the utilities to get back on their feet."

Elements of the plan include:

\* State purchase of the transmission grid owned by the state's three investor-owned utilities; \* Benefits to ratepayers and taxpayers including:

1. A significant contribution by the parent companies to their utility subsidiaries to satisfy their creditors and return to financial viability; 2. The extension of cost-based rates from the utilities generating facilities from five to 10 years and a ban on their sale; 3. Conservation easements on utility-owned land in prime watershed areas; and 4. Dismissal of all pending litigation.

The Governor's plan directs the Public Utilities Commission to establish a "dedicated rate component" from the existing rate structure (not a new charge on consumer bills). This would allow the utilities to make payments to their creditors, including banks, generators, and renewable energy producers. Utilities would be allowed to sell revenue bonds secured by the dedicated rate component.

Governor Davis said he is working closely with the legislative leadership on legislative components necessary to carry out negotiations.

Governor Davis also noted that he sent a letter to President George W. Bush thanking him for his order today to expedite the review and licensing of new power generation facilities in California.

"I am extremely gratified that President Bush has acted to put the federal government on the same path as I have in California to cut red tape and get new power plants on line," said the Governor.

Fellow Evening Haasians,

Who are these so called account managers, Rich, Jenny and Mark? What do they do? How can we leverage off their expertise and they, ours? Do they have specific company contacts? Where can they be found? Will the ubiquitous pizza be served to entice you to attend? Strong possibility. Will I have to sign up on Bear Tracks? No. How can attending benefit me? It's up to you.

To answer these questions and many more, we will be scheduling during -

Mon, Nov. 26 during the break (i.e., 7:30 - 8:15) in C125 and Thu, Dec. 6 during the break as well in the Career Center Conference Room (S420)

an informational session with the account managers.

Here's a description that Rich Wong, the financial services account manager prepared:

"The Haas Career Center staff includes 3 account managers that can be a valuable resource to those that are exploring job or career direction changes. Their role is to be the primary liaison for recruiters in their specific industry sectors, being the one-stop shop point person for companies interested in connecting with Haas MBA students. They cover a full spectrum of responsibilities from the logistics of setting up presentations and interviews to establishing contacts and providing strategic guidance to recruiters (including both hiring managers as well as University Recruiting reps within human resource departments). Through this activity, they gain insights into their company/industry focus that they are happy to share with Haas students, John Morel, and the other career advisors in the Haas Career Center."

Feel free to contact them regarding questions on companies and industries that they represent. Conversely, please provide them with any valuable contacts that you have in current/former employers that might help them aid your schoolmates to find employment opportunities. They are located in the Recruitment Center (S330 by the ATM machine) and their contact information is as follows:

Mark Friedfeld - Financial Services (Investment and Commercial Banking, Real Estate, Venture Capital)  
friedfel@haas.berkeley.edu/510-642-6588

Jenny Rowe - Consulting, Consumer Products, Healthcare/Biotech/Medical Devices, Educations, Not-for-Profit  
rowe@haas.berkeley.edu/510-643-4212

Rich Wong - Technology, Entertainment - rwong@haas.berkeley.edu/510-643-4211

If you plan to attend, please respond to me directly and indicate which evening.

Furthermore, by a unanimous vote of the EvMBAA, Jon Bain will be your new Career Center Liaison starting Spr02. Many of you already have had the pleasure of interacting with Jon in your classes, as well as in John Morel's Life-Work Balance seminars, which Jon helped organize.

Best regards, Albert Demery demery@haas.berkeley.edu

correction following further discussion with Amy: i have booked the blue iris room (apologies to the Jeffs) and Amy has booked a separate room for herself and Cal (i think the meadow view room). -----Original Message----- From: Amy Gustafson Finch [mailto:afinch@iasco.com] Sent: Wednesday, July 11, 2001 7:49 AM To: Jeff\_Walker@i2.com; 'Scatena, Pat' Cc: 1gr8coach@home.com; cwfinch@flash.net; Jeff.Dasovich@enron.com; 'Jeff Walker (E-mail)'; 'Kari Ontko (E-mail)'; 'Lori Hom (E-mail)'; 'Madeleine Todd'; 'Nora McGee (E-mail)'; pmurray@ccac-art.edu Subject: RE: Mendocino Hello all,

I made a reservation at Cleone Gardens Inn, just across the street from the ranch. I reserved a room for Pat, Cal and myself, but was unsure what other reservations to make for the rest of the group because some of you are still tentative and I'm not sure who is bringing SOs/dates.

The inn has one room called the Blue Iris room with two double beds that might work for Jeff W. and Jeff D. if going up single; most of their other rooms have a queen or king bed (the Meadow View king room sounded nice for a couple if we have any going up). Both of those are still available for the weekend we are planning to be there. I think there may be some cottages available also for multiple people, but I'm not sure what the configurations of those are. A full breakfast can be ordered from some of the rooms for \$14.00 extra. They serve breakfast at 8:00 a.m. Pat, Cal and I have a suite with a

small kitchen, so we may also be able to host some minimal meals/snacks/drinks.

The phone number of Cleone Gardens is 1-800-400-2189. Their website, which has pictures and descriptions of their rooms, is cleonegardensinn.com. If the Cleone Gardens Inn does not have the room configuration you want, Lari's website (horse-vacations.com) has links to numerous other hotels and B&Bs.

Tally ho!

Amy

To: 123363@WCTOPICS.djnr.com cc: Subject: Telecom Services: Broadband Services: CWA Urges FCC to Set 'Open Access' Broadband Policy

#### CWA Urges FCC to Set 'Open Access' Broadband Policy

12/01/2000 PR Newswire (Copyright (c) 2000, PR Newswire) WASHINGTON, Dec. 1 /PRNewswire/ -- The Communications Workers of America told the Federal Communications Commission that an "open access" broadband cable policy is the best way to stimulate competition and promote the growth of jobs and the industry. Such a national policy framework is necessary, CWA said in its filing to the FCC, to ensure that fair competition, innovation and growth continue as broadband networks further advance. CWA called on the FCC to establish a national policy that would treat all providers of broadband Internet access as common carriers, and therefore subject to the interconnection, non-discrimination and unbundling requirements of federal communications law. CWA pointed out that a strong legal basis already exists for considering cable modem service a "telecommunications service" and therefore subject to the obligations of common carriers. This policy would not necessarily lead to regulatory oversight of the wholesale pricing of cable modem service, but it would remedy the current situation whereby the same service, broadband Internet access, is regulated differently depending on whether access is provided over cable or telephone lines, CWA stressed. This current disparate treatment "serves to favor one technology over another in the marketplace, which runs counter to the mandates of the Telecommunications Act," the union added. Open access cable also would provide real benefits to consumers, by giving consumers access to new and diverse sources of information, products and services. This will only result in greater consumer demand for broadband transport services, fueling both network investment and job growth, CWA noted. "The open architecture of the Internet has fostered an explosion in democratic communications," an achievement the Commission must preserve "as we transition to the ever-widening possibilities of broadband," the union stressed. However, "this openness is threatened by a closed cable Internet access network which would give preferable treatment to

affiliated Internet service providers of cable operators," CWA cautioned. The FCC should act quickly to establish rules that will protect an open Internet, not rely on market forces and vague voluntary agreements by cable providers to open access at some future date, CWA said.

| Recipients | ['susan.mara@enron.com', 'karen.denne@enron.com', 'harry.kingerski@enron.com', 'james.steffes@enron.com'] |
| File       | dasovich-j/sent_items/847.                                                                                |

Thanks, Sue. FYI--this new schedule was discussed a lot last week, and apparently was a big part of the meeting that occurred with Davis' people and Angelides last Thursday nite. It was a move to buy time to try and get a comprehensive settlement in place in the legislature (i.e., core/noncore).

In addition to buying time to save Direct Access, it also gives Angelides more time to get the bonds lined up, which seems to be an increasingly challenging task---there's growing speculation that the issuance will be much more difficult than Angelides has thus far let on.

That said, I need to check around, but there is some chance that the plan/agreement is that the PUC decisions would go out well in advance of August (with effective date being August), which would then provide enough time to let the expedited "appeals process" under (SB37?) run its course in time for the issuance in Sept/Oct. In short, we'll need to remain vigilant energized because there's a chance that the decisions to which Angelides refers in the memo could be up at the Commission sooner rather than later. This is what I was hearing last Friday, but perhaps things have changed and now there's more time. I'll check and report back.

Finally, simultaneous with those actions, folks are supposed to be putting the core/noncore agreement into legislative language. I'll report back as soon as I have more information on that.

Best, Jeff

Susan J Mara 07/03/2001 11:27 AM To: Michael Tribolet/ENRON@enronXgate, James D Steffes/NA/Enron@Enron, Richard Shapiro/NA/Enron@Enron, Harry Kingerski/NA/Enron@Enron, Jeff Dasovich/NA/Enron@Enron, Paul Kaufman/Enron@EnronXGate, Karen Denne/Corp/Enron@ENRON cc: Subject: Angelides Investor Memo - Timetable Update -- says CPUC vote not needed until mid August

The memo to investors says that a new law will take effect on Aug 13 that puts in place shortened appeal times at the CPUC. The memo says that the CPUC does not need to act on the key issues, including suspension of DA, until Aug 13 or later. It also says the bonds are now to be sold in Sept-Oct. The memo states that the CPUC, Governor, Treasurer, etc. have agreed with the new timetable.

## Re: Label Calculation

|            |                                                                                          |
|------------|------------------------------------------------------------------------------------------|
| Sender     | stacey.bolton@enron.com                                                                  |
| Recipients | [djohnson@energy.state.ca.us', 'rgrow@energy.state.ca.us', 'cholmes@energy.state.ca.us'] |
| File       | dasovich-j/notes_inbox/3.                                                                |

Bob:

We appreciate your counsel's review of our proposal, and will proceed either with your recommendation below (2 product labels - one for commercial customers receiving 100% renewable energy and the other label for our larger users comprised of a percentage renewable and fossil fuels) or, as was discussed with Drake Johnson, distributing one aggregated label with a percentage renewable resources and fossil fuel.

Thank you for taking into account our timing constraints and responding to our request so promptly.

Best regards, Stacey Bolton Manager, Environmental Strategies Enron 713-853-9916

"Robert Grow" <Rgrow@energy.state.ca.us> on 08/18/2000 11:15:28 AM To: <sbolton@enron.com> cc: <Cholmes@energy.state.ca.us>, <DJohnson@energy.state.ca.us>, <Kgriffin@energy.state.ca.us>, <Mjones@energy.state.ca.us> Subject: Re: Label Calculation

Stacey:

Our counsel has reviewed your proposal. We find that it doesn't meet our regulations, but it appears to represent a good faith effort to comply. We cannot give official approval to labeling that is not in accord with the regs, but counsel says we will not consider any sanction or punitive action in this case.

The problem with your proposal is that the product is represented by two labels, not one. You could consider splitting the product into multiple products, only one of which is 100% renewable. Even so, we think consumers should be able to understand the product as you have described it.

I hope this response is timely for your September billing.

Bob Grow Program Manager Power Source Disclosure CA Energy Commission (916) 654-5180

"Stacey Bolton" <sbolton@enron.com> 08/15/00 04:58PM >>>

Bob:

Pursuant to our phone discussion today, outlined below is Enron Energy Service's (EESI) proposed label calculation for review by your counsel. EESI's product is a 100% renewable product for the first 5,000 kilowatt hours per month. (The renewable energy in this product may exceed the 5,000 kwh per month depending upon available renewable supply and the level at which the customer credit is set.) For any customer that exceeds 5,000 kilowatt hours of renewable energy per month, the remainder of their product would be comprised of the California System Mix. Because the percentage of renewable energy that the end use customer receives is dependent upon their size, (i.e. smaller commercial customer might actually be receiving 100% renewable energy whereas larger customers might be receiving only a little more renewable energy than is contained in the CA system mix), this makes the label calculation difficult. It is EESI's proposal to have two separate labels for this one product. The first label (label A) would be 100% renewable energy (representing the first 5,000 kwhs per month). The second label (label B) would be the California System Mix. EESI would explain to customers that depending upon the customer size, some customers would be receiving "label A", provided they are 5000 kwhs per month in usage or less. For those customers that exceed 5,000 kwhs per month, the power they receive would look closer to "label b" (the California System Mix).

EESI is under a tight deadline and is intending to notify customers of this product in the September billing. We would like to confirm with your counsel if this arrangement is agreeable to the CEC and meets the standards set forth in SB 1305. Please feel free to contact me with any questions regarding the label calculation.

We greatly appreciate your assistance in this endeavor.

Sincerely, Stacey Bolton Manager, Environmental Strategies Enron 713-853-9916

-----Original Message-----

From: Linnell, Elizabeth Sent: Friday, December 21, 2001 10:51 AM To: Dernehl, Ginger; Glenn, Laura; Lilienthal, Sybille; Killey, Sharon; Hiltabrand, Leslie Subject: FW: Message 5 - expense reports

Please forward to your existing groups. Thanks! -----Original Message----- From: Linnell, Elizabeth Sent: Thursday, December 20, 2001 5:31 PM To: Subject: Message 5 - expense reports

I'm not going to attach the old messages because the file is getting so big. Ginger, Laura, Sybille, Sharon and Leslie - Please forward this message to your existing groups.

I know that lots of you are frustrated by the expense process, and I've spent the afternoon tracking things down and participated in some conversations this afternoon that answered a few of our questions. However, it seems like things change as the whole process evolves, so bear with me - I'm sending it to you as I learn it.

- The expense run that was processed on Friday afternoon for outstanding expenses had some error in it, and the expenses weren't paid. Apparently, the error detection systems didn't kick in, so until people started calling to say that they didn't receive their payments the problem wasn't caught. I wasn't given a good answer for why this happened. But - here is what's happening now:

- The current outstanding expense reports and voided expense checks up to \$5,000 will be reprocessed tomorrow. The bank takes two business days to process, so direct deposit funds will be available on Thursday and checks will be mailed as usual (presumably also Thursday). Direct deposits will continue if you had them set up before, whether or not you have

been laid off.

- If you have more than \$5,000 submitted in pre-petition expenses, there is a manual process to get you a payment for \$5,000. This will also take two business days to process. Payments to people with outstanding expenses over the \$5,000 but under the \$15,000 per employee cap have not yet been released, and outstanding balances of over \$15,000 are also still at issue. I'll get back to affected individuals with more info about this issue as I learn it. These thresholds also apply to cases where a check was issued and then voided. Because of the cap, if you can identify any outstanding medical claims, not your co-pay, it might help to get some of this cleared up. As I mentioned in an earlier message, we've filed with the court to ask that expenses be excluded from the cap, and the issue is on the court's calendar for January 7 (but we might not get a ruling that day).

- There are expense reports in the system that have not been fully processed - either they weren't completely entered or the approval was not granted. The XMS team is working to identify these reports and find out who should authorize them for payment. I'll do my best to get hold of that list and get any of ours completed and processed.

- And lastly, the instructions I got yesterday for the reimbursement of things like November cellular bills was wrong for severed employees. Please use the attached form to claim the expense. Once you've filled out the form, please feel free to fax it to me (713-646-8160) with any necessary backup and we'll get it into the system. Don't worry about the coding, we'll handle that part, but it would be helpful if you know what your P number is/was.

I'm sorry this has been so frustrating for everyone! I can't make any promises, but this is the latest information I have and I'll continue to update you as I learn things.

Take care, Elizabeth

Sagging Telecommunications Sector Leads Nasdaq Down By Johnathan Burns

04/03/2001 Dow Jones News Service (Copyright (c) 2001, Dow Jones&Company, Inc.) NEW YORK -(Dow Jones)- The telecommunications sector led the Nasdaq Composite Index down Tuesday, as investors worrying about the earnings season and a slowdown in carrier spending hammered many stocks to new lows. The selloff of telecommunications carriers and equipment makers was widespread, with all of the big-name companies trading negatively. Shares of optical component maker JDS Uniphase Corp. (JDSU) earlier hit a 52-week low, recently trading down 11% to \$14.88. Optical systems market leader Nortel Networks Corp. (NT) also hit a 52-week low, recently trading down 7% to \$13. The day's

biggest loser in the equipment space was optical systems maker Ciena Corp. (CIEN), which hit a new low and was recently trading down 16.5% to \$35.50. The bloodshed was so widespread that a host of other equipment companies also hit new lows: Lucent Technologies Inc. (LU) recently traded down 11% to \$7.88 while Corvis Corp. (CORV) was recently down 14.4% to \$5.19. A rash of earnings warnings by software companies like Redback Networks Inc. (RBAK) and fiber optic equipment maker Harmonic Inc. (HLIT) after the bell Monday, coupled with continued funding concerns for start-up phone companies, served as a one-two punch for the sector. Start-up phone company Winstar Communications Inc. (WCII) recently traded down almost 54% to 41 cents, while peers Teligent Inc. (TGNT) dropped 31% to 28 cents and XO Communications Inc. fell 38% to \$3.22. Investors have become increasingly nervous that those companies will face bankruptcy, as the capital markets have dried up. Even well-funded carriers weren't exempt from Tuesday's selling pressure. Shares of Qwest Communications International Inc. (Q) barely stayed above its 52-week low of \$32.13, recently dropping 6.2% to \$33.50, while shares of AT&T Corp. (T) were off 5.1% to \$20 and WorldCom Inc. (WCOM) fell 6.4% to \$17.50. -By Johnathan Burns, Dow Jones Newswires; 201-938-2020; johnathan.burns@dowjones.com

FCC May Phase Out Phone Fees Paid by Local Telephone Companies

12/04/2000 Dow Jones Business News (Copyright (c) 2000, Dow Jones&Company, Inc.) WASHINGTON -- In a boost for the Baby Bells, the head of the Federal Communications Commission said he hopes his agency soon will approve a plan to gradually eliminate the billions of dollars of fees local telephone companies pay each other to complete calls, The Wall Street Journal reported on Monday. FCC Chairman William Kennard is circulating among the other four commissioners a plan to phase out the fees over three years. He said details are being negotiated, but the plan would set a formula to determine if call traffic -- and therefore the fees -- is going disproportionately from some local phone companies to others, in particular those carrying many calls to an Internet services provider. The phaseout plan would cap temporarily the number of calls one phone company must pay when another completes calls from the first company's customers, the Journal reported. After the phaseout period, the fees would be eliminated. Companies competing with the Bells that carry a lot of traffic to Internet services providers include Pac-West Telecomm Inc., Stockton, Calif., and Focal Communications Corp., of Chicago. Baby Bells would prefer an immediate elimination of the fees, since the Bells pay a disproportionate amount of them, but officials say they could live with the fees being phased out. Mr. Kennard told the Journal that the plan to eliminate the fees was prompted by the explosion of competitive local phone companies living off the fees by carrying calls to Internet services providers. States would be given flexibility in adopting the fee elimination, if the FCC approves it, he said. They wouldn't be obligated to accept it if they already had a fee system that worked well. Originally, the fees,

known as reciprocal compensation, were adopted at the behest of the Bells and other incumbents. They were supposed to benefit the incumbent phone companies, because customers of competing local phone companies were calling their customers and therefore increasing the traffic on the incumbent's phone network, the Journal reported. But then competing phone companies were set up, and their business included serving Internet services providers, which accept calls but don't make them. Under the fee system, that one-way traffic tends to work against the Baby Bells. The competing companies have said that if the fees were cut, it would cause a hike in Internet access costs, because they would have to charge more to carry the calls. Mr. Kennard said he hopes for a decision on the plan before year end. Copyright (c) 2000 Dow Jones&Company, Inc. All Rights Reserved.

Now that I know that Anthony and George Cluff are organizing the event, I would stay far, far away. Maybe it would be good for them to talk to Gray Davis, just to clear up this energy thing for him.

I certainly don't see why this is confidential. Distribution wheeling has been "my baby" at Enron for years but I don't see Anthony Mazy contributing anything to the effort. We don't need a big conference, or 150 people, or the Governor. We just need the CPUC and the FERC to say "Stop the Madness and Open the System." So, I won't be participating. Thanks for asking.

Subject: FW: Urgent/Confidential to ALL ON 'BLIND' LIST: Speaker(s) Neede d to brief Governor's Office

Here is something you don't see every day. An invitation to talk to Gray Davis (maybe) about distribution wheeling. Has Enron got a candidate to offer? I would act quickly. Mike Day

From: Mazy, Anthony [mailto:am1@cpuc.ca.gov] Sent: Friday, September 22, 2000 9:01 PM Subject: Urgent/Confidential to ALL ON 'BLIND' LIST: Speaker(s) Needed to brief Governor's Office Importance: High Sensitivity: Confidential

To all persons BCC'd:

There is an urgent need to identify at least one, and possibly two, persons to sit on a discussion panel to discuss Distribution Wheeling\* at a conference October 21-22, at UC Berkeley. The conference/symposium will be limited to approximately 150 persons, to allow close and interactive Q&A between panelists and the key audience of California's executive, legislative, and regulatory officers, and their key staff. We have been told that Governor Davis himself is expected to participate.

Please respond ASAP, nominating one individual per message (suitable for public viewing), identifying the individual together with that person's relevant interests and affiliations. Add approximately 1/4- to 1/2 page of details of the person's issue, point-of-view, or proposal, together with their relevant qualifications to address such.

If there are any questions, please call me at my office number and leave a message or reply to this e-mail. Due to the urgency of this need, and the short turn-around requested, you are welcomed to call me at home, 925-855-0554, from 7:00 AM to 9:00 PM Sat-Sun, or 5:30 to 7:30 AM Mon-Fri, Pacific time.

\*Distribution Wheeling is the practice of relieving certain local, distribution-level energy transactions from some or all of the regulations, including tariff responsibilities, pertaining to interstate transmission transactions. This issue has been addressed at some length in the CPUC proceeding R.99-10-025.

For quick reference, a copy of ORA's testimony in that proceeding (which, admittedly, does not equally cover all possible interpretations of DW) is provided for your convenience.

The language relating to negative CTC we need taken out of the Bilas draft begins on page 9 with the paragraph beginning with "We note . . ." through the first two sentences of the next paragraph to the sentence beginning "As proclaimed . . ."

-----Original Message-----

From: JBennett <JBennett@GMSSR.com>@ENRON  
[mailto:IMCEANOTES-JBennett+20+3CJBennett+40GMSSR+2Ecom+3E+40ENRON@ENRON.com] Sent: Monday, June 18, 2001 3:22 PM To: Kingerski, Harry; Jeff Dasovich (E-mail); Jim Steffes (E-mail); Smith, Martin; Williams, Robert C.; Sue Mara (E-mail); Frank, Robert Cc: MDay Subject: Draft and Alternate Decisions re PX Credit and Suspension of Direct Access Importance: High

On Friday, June 15th, a Draft Decision (by ALJ Barnett) and an Alternate Decision (by Commissioner Bilas) were released addressing the suspension of the PX credit and the suspension of direct access. In short, both the Draft and the Alternate granted SCE's Petition to suspend payment of the PX credit as of January 5, 2001. The Draft Decision continues by invoking Section 80110 of the Water Code (enacted under ABX1 1) and suspending new Direct Access transactions as of July 1, 2001. The Alternate does not suspend direct access but requests comments on how the Commission can accommodate the concerns of DWR with respect to continuation of direct access (besides suspension) without violating Section 80110.

#### Barnett Draft Decision

The Barnett draft goes through an illustration of the PX credit with the intent of showing that during the rate freeze period "should a direct access customer pay less than the PX energy price to its ESP, the direct access customer is being subsidized by the public utility and, perhaps the utility's ratepayers." The decision goes on to say, that "we note in the stipulation between SCE, Enron and WPTF, there is no mention of a cash refund to direct access customers -- the reference is to a credit." There is no provision in the stipulation which would require SCE to make a cash payment in lieu of a credit. "Utility cash which is in short supply, should be conserved to provide reliable service, not subsidize direct access." The draft decision continues by suspending DA as of July 1, 2001 and applying the order to PG&E as well.

#### Bilas Alternate

The Bilas Alternate goes through a similar analysis with respect to the PX credit payments (without as much verbiage as to the subsidization of DA customers). Bilas also makes it clear that while payment of cash is suspended, "SCE must continue to track and accrue credits for DA customers."

With respect to the suspension of direct access, the Bilas Alternate holds off. It appends a letter from DWR to the Commission as to its concerns about the impact of the continuation of Direct Access on the issuance of the bonds and asks parties to comment thereon. It is letter, DWR has set forth what it believes will be required in the way of exit fees by DA customers to allow the issuance of long term bonds with investment grade.

In addition, Bilas is looking for comments on getting away from the PX credit and going to a bottoms up calculation of DA customer bills.

#### Comments

Comments on Both the Draft and Alternate are due on Monday the 25th.

Comments on moving to a bottoms up approach are due on July 6th.

Copies of the decisions have been faxed to Sue Mara in SF and Jim Steffes in Houston. They are also available on the commission's web site under the "currently open for comment" section. If anyone would like me to fax them a copy directly, let me know.

Jeanne Bennett

I received a call from Jack in the Box this morning regarding Commissioner Wood's ruling requiring that copies of Direct Access Contracts be submitted by 12-3-01. They would like to know what our position is regarding this ruling? Are we submitting them? If we are submitting the contracts, are we deleting the names or specific information? What are our thoughts on the risks of being "uncooperative".

Steve Brigandi at JBX would like a response by early next week.

See the note below. Please call to discuss.

Subject: FW: Assigned Commissioner's Ruling Requiring That Direct Access C ontr acts And Agreements Be submitted in A.98-07-003 et al.

Steve -- The attached ruling by Commissioner Wood -- just received late today -- puts Jack in the Box at significant risk of being placed in a category of "uncooperative" direct access customers whom the CPUC might seek to deprive of the entitlement to their direct access contracts -- unless Jack provides a copy of its contract (initially under seal) for consideration as evidence in the CPUC proceeding. The "protection" contemplated by the Assigned Commissioner is comparable to that accorded utility documents submitted to the CPUC, which are protected unless and until the Commission or a presiding Commissioner or ALJ decides public disclosure is warranted. An earlier ruling indicated a willingness to allow redaction of customer identifying information and that would be easier to make effective if the contract were to be submitted by our ESP (is it Enron?) rather than by us. Maybe we should try to get the ALJ or the Assigned Commissioner to agree that if an ESP submits a customer's contract (with identifying information redacted) and includes the customer's name on a list of all customers whose contracts have been submitted, then the customer need not do so.

Is confidentiality important to Jack in the Box? If so, what information in the contract would need to be redacted to provide adequate confidentiality protection (e.g., addresses, phone numbers, etc.)? Is Jack's ESP willing to cooperate in seeking a solution such as I've suggested above?

I'm leaving town Wednesday at noon and will be in hearing in LA Monday through Thursday of next week. But I'll be checking e-mail and voice mail regularly.

Regards,

Marty

Confidential Settlement Document Under CPUC Rule 51

**PARTIES:**

This is a reminder that PG&E is initiating "Gas Accord II" settlement discussions under CPUC Rule 51, at a meeting to be held in San Francisco on Thursday, September 14. We plan to start at 9:30 a.m. and end around 3:30 p.m. We will provide lunch. The meeting is now at PG&E headquarters in Conference Room A, 245 Market Street (on the ground floor), and not at the PG&E Energy Center as first announced.

Our objectives for this first meeting are to develop a list of all the major issues that parties would like to have addressed, and also to agree on a process for resolving the issues. Attached is our proposed agenda for this kick-off meeting.

You can also help us prepare for this meeting and make it a success by providing us a list of the issues you would like to have addressed in Gas Accord II. We would like to put together a preliminary list of issues for discussion at the meeting. The following issues were deferred to Gas Accord II as part of the PG&E's Comprehensive Gas OII Settlement:

\* o4.1 Develop Clear Procedures for Allocating Firm Capacity, i.e. Open-Season Procedures \* o4.2 Transmission Interconnection Policy, Terms and Conditions \* o4.4 Local Transmission Reliability, Design Standards and Curtailment Provisions \* o4.5 Mechanisms to Reduce Costs to Noncore Customers Connecting To or Close To PG&E's Backbone Transmission Facilities, including "Direct Connect" issues \* o2.6 Costs and Rates for Utility Core Procurement Services, including cost allocations and brokerage fee

Additionally, the OFO Forum recommended the issue of adding more storage to support balancing be made part of Gas Accord II.

Please provide us with your own preliminary list of issues by midday, Wednesday, September 13. We will compile all the identified issues into a single list and distribute them at the meeting as a first step in building a working issues list.

Also, please note that we are continuing to compile our new Gas Accord II mailing list. We will maintain two lists: one for general notices of meetings and settlement conferences, and another for those who have expressly agreed to abide by the terms of CPUC Rule 51 (attached). Since Rule 51 protects the confidentiality of settlement negotiations, those on this list will be able to receive settlement documents and other related settlement materials. Everyone on the Rule 51 list will be automatically included on the general notice list. If you have not already done so, please complete and return the attached form so we can put you on the appropriate lists and include your up-to-date information.

Please send your list of issues, as well as mailing list information, by e-mail to Geoff Bellenger at gjb2@pge.com, and to Frank Lindh at frl3@pge.com, or by FAX to Geoff Bellenger at 415-973-0881.

Next, we have attached a list of our suggested dates for Gas Accord II workshops and meetings. We would like to agree on these dates at our September 14 meeting. Our prior settlement experience suggests that setting aside dates early makes it easier on all parties to make necessary arrangements.

Lastly, we will send by separate e-mail transmittal, for your information, the original Gas Accord Settlement, the OFO Settlement, and the OII Settlement. Each settlement expires as of December 31, 2002, or March 31, 2003, for certain provisions which relate to storage. We believe these settlements form the foundation for our Gas Accord II settlement discussions.

We look forward to meeting with you and starting the Gas Accord II settlement process. Please call or e-mail us if you have any questions or concerns.

Best regards,

Frank Lindh Ray Williams Attorney Director 415-973-2776 415-973-3634 frl3@pge.com rdw0@pge.com

If you are not a current or former subscriber, and you believe you received this message in error, please forward this message to [members@thestreet.com](mailto:members@thestreet.com), or call our customer service department at 1-800-562-9571. Please be assured that we respect the privacy of you, our subscribers, and that we have not disclosed your name or any other information about you to the advertiser or any other third party.

Dear Investor:

My name is Ken Fisher. I write the "Portfolio Strategy" Column for Forbes magazine and serve as Chairman and Chief Investment Officer of Fisher Investments, Inc. My firm manages over \$7.5 billion for institutions and high-net-worth individuals.

I recognize you may not be considering doing anything differently with your investments right now. Regardless, I'd like to send you a kit of useful insights you can't get anywhere else free and without obligation.

As soon as you fill out the online-request form, I'll email you the latest version of my Quarterly Report. It's designed to be interesting to investors whether they are interested in the full service we specialize in or not. The report, which I update with my latest thinking, highlights my viewpoint on:

- Which stocks to select for investment now
- The right balance between equities, fixed income securities and cash in this volatile market
- The role mutual funds play in the portfolios of high-net-worth individuals
- The impact of the Federal Reserve's actions on your investment strategy

Fisher Investments' latest private Quarterly Report normally is given, along with their investment results, only to our clients. Each one has at least \$500,000 in our care. After you have requested the Report, you will have the chance to review my Seminar on Money Management. I strongly encourage you to visit the Seminar. It reveals the strengths and weaknesses of management options available to people like yourself.

The reason I'm offering you this extensive intellectual capital at my expense: I've found educating high-net-worth investors is good for our investment management business, whether any individual becomes a client or not.

Some, for whom our outstanding client service and strong results are attractive, become clients. Others simply listen, learn and use our advice to inform their own management. But they tell their friends, some of whom prefer to have the details taken care of for them.

Whichever group you fall into, please allow me to give you the benefit of my firm's original research and my thinking. I'm certain you'll find it interesting and useful. And, of course, FREE and without obligation.

Thanks for your attention. I look forward to hearing from you.

Sincerely,

Kenneth L. Fisher Chairman and Chief Investment Officer

### NASA SAYS SATELLITE INTERNET SYSTEM COULD HAVE EARTH ROLE

12/04/2000 Satellite Week (c) Copyright 2000 Warren Communications News, Inc. All Rights Reserved. NASA-Veridian Internet-based satellite control project could have implications beyond space industry, and much sooner than 10-year time frame for system's launch, developers say. NASA and Veridian have developed Internet-based virtual private network and firewall that allows engineers on ground to control functions in space, freeing astronauts for other jobs. It was demonstrated Nov. 2 at Johnson Space Center in Houston. Ground industries, including banking, have expressed interest in implementing version of system for their use. Such a system "depends on what they want to do. It depends on the robustness of the controls," said James Light, Veridian deputy dir. of space and network systems. He told us "we could roll out a security solution within 3 months." System could save time and money across the board, said Phillip Paulsen, project mgr. for NASA Glenn Research Center in Cleveland. Among those interested in new technology, "satellite vendors are very interested because they look at it as a way to reduce time to build" and validate spacecraft, Paulsen said. System also would allow problems to be detected earlier, giving engineers opportunity to fix them before launch. He said data from Goddard-supplied module that communicated with active satellite in test were "extremely good." Paulsen said Veridian supplied its own money for project from its internal development fund. Company developed virtual private network (VPN) that acts as firewall that protects user as well as data by setting up encrypted 2-way communication. Authentication validates user name and password and uses biometric technology that takes thumbprint and body temperature. System

"can detect if someone attempts to break in or if someone on the inside attempts to do something they shouldn't do," Paulsen said. Employees would need thumbprint to access system, and users could leave desk and others with less access couldn't send commands on active user's log-in. System also can detect hacking attempts by finding IP addresses and locations of hackers. During demonstration, "we brought one of our professional hackers to show some security layers," Light said. Probes also came from Europe, Japan and U. of Cincinnati. "We could see how deep they got and they didn't get any information from the probe," Light said. System also was set up to provide electronic certificates that grant access for specific times, denying access to people if they try to log on out of time. Secure Missions Operations Control Center (SMOCC) has database built in with information on which individuals have access and extent of access. System also can prioritize access, giving it at specific time to one researcher and denying it at same time to another. It's configured so that "worst thing" unauthorized user can do is "run a controlled experiment," Paulsen said. Security system leaves no traces of software used to run it; if a researcher had computer stolen, thief could not access experiments.

Bob, AS you can see from the e-mail I sent you, I believe it has already been circulated to customers -- by today, if not yesterday. This is the same draft that you received from me on Monday. Bob, we have to move fast -- we have to be prepared to file within a few hours of any CPUC action. Believe me, chaos will begin if the CPUC votes for retroactive DA suspension

Others, Given Bob's request, please do not circulate to any more of our customers until further notice.

Sue -----Original Message----- From: Williams, Robert C. Sent: Thursday, September 13, 2001 9:05 AM To: Mara, Susan Cc: Sharp, Vicki; Smith, Mike Subject: RE: Preparing for Legal Action against a retroactive DA suspension

Sue, there are some statements in the brief that would be contrary to positions we would take in arbitration on ouu unwind rights. For now, please don't circulate to any customers. I will take a look at the language more closely.

-----Original Message-----

From: Mara, Susan Sent: Wednesday, September 12, 2001 6:17 PM To: Mann, Michael; Sharp, Greg; Frazier, Lamar; Schwarz, Angela; Keeney, Kevin Cc: Blachman, Jeremy; Steffes, James D.; Dasovich, Jeff; Kaufman, Paul; Williams, Robert C. Subject: Preparing for Legal Action against a retroactive DA suspension Importance: High

As of this point in time, the CPUC is NOT expected to vote tomorrow. The CPUC has not said when a new meeting would be held. Although we continue to keep the pressure on, the CPUC vote could be for DA suspension as of July 1. We need

to be prepared to take immediate legal action in that event. Here is the plan and what we'd like from customers.

Within a few hours of a CPUC vote, we plan to file at the CPUC for an emergency stay and request for rehearing. As part of that filing, we would need to include all of the points we would raise in the court and declarations from each individual aggrieved party. The declarations would be held completely confidential by the attorney, transmitted directly through our outside attorney and would be filed under protective seal at the Commission. The attorneys are preparing a pro-forma declaration that each party can use to prepare their own. I will e-mail that as soon as I have it. The draft court case is attached. It will form the basis for our CPUC filing. We would expect the CPUC to ignore the filing. If the Commission failed to act on our request by the next regularly scheduled meeting, we would file in court immediately. We would use the same declarations and much of the same filing info in the court case. To the extent we have customers on our filings, we have a much better shot at winning. I have gotten agreements from a number of other ESPs who will join with us. They are: APSES, Strategic Energy, AES/New Energy, American Utility Network, and perhaps Commonwealth. Each of these, in turn, is working to get some of their customers to sign on. I am working with UC's attorney to see if they will join. Our strategy is similar if the Legislature enacts a law with a retroactive date. The major differences are that we would go directly to court and we would have to wait until the bill was signed by the Governor. Some of our ESP and customer friends would likely drop off at that point, because they have less financial harm from an Aug 25 date. If you have customers interested in signing on, please let me know. The customer may contact me or the attorneys directly. Here is contact info: Sue Mara, Enron Government Affairs, (415) 782-7802 Dan Douglass, outside attorney (formerly with Arter & Hadden), preparing CPUC filing (818) 596-2201 Ed Duncan, Arter & Hadden, preparing court case (818) 596-2291

Subject: Information Update on Perix Date: Mon, 05 Feb 2001 20:02:33 -0500 (EST) From: MarkRsea@aol.com To: ROB-GRETCHEN-DAVIS@email.msn.com, moryak@worldnet.att.net, anchoraweigh@caltel.com, zaverukha@worldnet.att.net, akoola@juno.com, KKKobe@kh.rim.or.jp, MNJC@home.com, SUMMITEERS@worldnet.net, lgo2c@aol.com, JOJOLA7@aol.com, charryl@pacbell.net, sakae\_yamamoto@ccgate.apl.com, skuwada\_ilms@msn.com, SAUTNERS@pacbell.net, CAPTPWF@aol.com, jimbo@pacifier.com, CatRsea@aol.com, merahma@boracap.i-next.net, SeaBaggg@aol.com, ICEAXXE@aol.com, cregan@juno.com, jules@shasta.com, LADAIR@directcon.net, ADAIR6@prodigy.net, jer@oregon.uoregon.edu

Good day all: I want to update you on some events regarding Perix. I have tried to contact them today via telephone, web site and email and I'm not having any luck. I presently don't know if they are in business or been bought out by another firm or what. The Web Site I tried: perixindustries.com connects me to another firm SRS Consulting. Email address: perixgroup@aol.com gives the following error "This is not a known member" Telephone number 714-923-2612 and fax number 714-923-2601 are continuously busy. If you have the correct contact numbers, please let me know.

Some history: Oct 4, 2000, Chairman of the Board for Perix Industries, Mr. James E. Reinmuth stated in an email, "I will personally commit to the preparation of a Perix newsletter within the next 60 days which summarizes the results of negotiations with several potential joint venture partners, and our plans for Year 2001." I have received no information. Mr. Reinmuth's letter was in direct response to the concern raised by several shareholders on the lack of information on our investment. If anyone has received the newsletter, please email me and I'll forward a check to you to mail me a copy.

Nov 8, 2000: Letter sent to Perix Industries by attorney Zachary A. Wright of Short, Cressman & Burgess, PLLC on behalf of myself requesting financial information of Perix. As per Mr. Wright, I quote the following, which was sent to Perix in the letter: QUOTE California corporations are required by law to make certain information available to shareholders. First, an

annual report must be provided to shareholders within 120 days of the end of the corporation's fiscal year, unless this requirement is waived by the corporation's bylaws. Cal.CorpCode 1501(a). Even if the requirement is waived, the corporation must provide a year-end financial report to a shareholder within (30) days of the shareholder's request for it. Cal.CorpCode 1501(c). This year-end financial report must contain a balance sheet and an income statement, as well as a statement of changes in financial position for the fiscal year. It must be accompanied by a report of the corporation's independent accountants or, of there is no such report, a certificate signed by an authorized officer of the corporation that the statements were prepared accurately and completely from the books and records of the corporation. Second, California law requires that corporations make available to shareholders "accounting books and records" of the corporation, as well as the minutes of any proceedings of shareholders, the board of directors or committees of the board of the corporation. Cal.CorpCode 1601. This definition encompasses all books of account, accounting journals, share registers or duplicate share registers. We hereby demand that you copy and mail to us the information that must be made available to Mr. Remijan under California law no later than thirty (30) days from the date of this letter. UNQUOTE My attorney or I have not received any word or information from Perix regarding this request for financial information. Mr Wright advises that I could file a lawsuit for a writ of mandamus or other order to obtain this information from Perix. California law Cal.Corp.Code 1603 and other applicable law also provides for payment of all costs and attorneys' fees by the corporation in the event that the shareholder is required to file suit to obtain the information.

If anyone has further information about whether Perix is still in business, I would appreciate an email. Something tells me that it doesn't look good for us. I hope that I am wrong. Thanks and best regards, Mark Remijan MarkRsea@aol.com 206-782-3278

From: Dasovich, Jeff Sent: Friday, October 05, 2001 11:46 AM To: Tycholiz, Barry; Miller, Stephanie; Dyer, Laird; Belden, Tim Subject: FW: CEC Report on Natural Gas Supplies Adopted

FYI.

-----Original Message-----

From: Schoen, Mary Sent: Thursday, October 04, 2001 11:58 AM To: Parquet, David; Wehn, Samuel; Comnes, Alan; Swain, Steve; Brodbeck, Kelly Cc: Keeler, Jeff; Dasovich, Jeff; Mara, Susan Subject: CEC Report on Natural Gas Supplies Adopted

The CEC just approved a report drafted by staff that states there will be adequate natural gas supply this winter for electricity generation needs. It does qualify this statement by discussing where potential bottlenecks in delivery might occur and recommends actions to address the bottlenecks. See below for a link to the report.

Mary Schoen Environmental Strategies Enron Corp 415.782.7803 (phone) 415.782.7854 (fax)

For immediate release: October 3, 2001 Contact: Claudia Chandler : 916-654-4989

Energy Commission Report Projects Improved Natural Gas Supplies For the State

Sacramento -While current natural gas prices in California have dropped to approximately half of 2000's average price, the specter remains of last December, when tight supplies caused prices to spike to 25 times their present rates. Now, as winter approaches, industry watchers wonder if the State has enough of the clean-burning fuel for the upcoming heating season, even as new gas-fired electricity generators come on line.

The Natural Gas Infrastructure Issues Report , adopted today by a 4-to-0 vote of the California Energy Commission, gives a qualified "yes" to the question of adequate supplies this winter. It identifies sufficient storage as a critical factor, and notes that utilities have substantially increased natural gas storage, largely because conservation and efficiency have dampened summer electricity demand.

Nearly 85 percent of the natural gas used by Californians comes by pipeline from gas fields located outside the State. Since California typically uses more natural gas in the winter than interstate pipelines can provide, additional supplies must be set aside in summer months to help balance supply and demand. For this reason, the report recommends that the Energy Commission continuously assess storage levels and monitor infrastructure improvements throughout the year.

The newly adopted report points out that California's natural gas supply system was designed years ago to provide enough gas for winter's peak heating demand. An increasing reliance on natural gas for generating electricity, however, has strained the system and revised old patterns of consumption.

"This report helps Californians understand what we have to do to assure that we have a reliable and reasonably priced electricity and natural gas system in the future," said Energy Commissioner Michal (spelling correct) Moore, Presiding Member of the Electricity and Natural Gas Committee that developed the document.

To help resolve possible supply problems, the document analyzes not only natural gas storage requirements but the interstate pipelines that bring the fuel from distant gas fields to the California border. These pipelines can deliver slightly more natural gas than intra-state gas pipelines ? those within our State's borders ? can receive. As a result, there are bottlenecks in getting some supplies to gas consumers that the report says must be improved.

Pacific Gas and Electric Company (PG&E) and Southern California Gas Company (SoCal Gas) are improving and expanding their intra-state pipeline systems to help eliminate these constraints. According to the report, planned expansions of the interstate pipeline network should increase natural gas delivery to the State beginning next year, and additional improvements to the natural gas system should help prevent higher-than-normal prices that plagued California last winter.

Natural gas supplies in North America appear to be sufficient to meet demand in California and the rest of the United States for the next 50 years. The report recommends that the Energy Commission continue to monitor drilling rig activity and production levels for the long-term outlook. It also suggests that the Energy Commission, along with the Public Utilities Commission, should find ways to encourage and increase the in-state supply of natural gas.

The just adopted Natural Gas Infrastructure Issues Report can be found on the Energy Commission's Web Site at:

To: Scott Stoness/HOU/EES@EES cc: Harry Kingerski/NA/Enron@ENRON, JBennett <JBennett@GMSSR.com>, Leslie Lawner/HOU/EES@EES, Tamara Johnson/HOU/EES@EES, Susan J Mara/NA/Enron@ENRON, MDay@GMSSR.com  
Subject: Re: SCE Advice Filing on PX Credit -- Protest

Looks good, Scott. One thing: I admit I'm not a lawyer, so someone needs to show me the precise language in AB 1890 that 1) requires the credit (which, I believe was created by the PUC, not the legislature) to be based on market and 2) requires DA customers to be indifferent to be from DA suppliers.

Mike Day: Do you concur with Scott's interpretation in AB 1890?

Like your arguments, Scott. Just want to clarify that we're on solid legal ground before putting the arguments forward in a brief and/or protest.

Best, Jeff

Scott Stoness@EES 04/20/2001 10:46 AM

To: JBennett <JBennett@GMSSR.com> @ ENRON cc: Harry Kingerski/NA/Enron@Enron, Tamara Johnson/HOU/EES@EES, Leslie Lawner/HOU/EES@EES, Jeff Dasovich/NA/Enron@Enron Subject: Re: SCE Advice Filing on PX Credit -- Protest

We should protest this issue and argue that nothing should change but that the Px credit should be based on DJ-NP15 and DJ-SP15 rather than the defunct Px because AB1890 requires it to be based on market (not costs). Changing to procured energy is inconsistent with the law AB1890 which requires DA customers to be indifferent to buying from DA suppliers. And since DA suppliers face costs close to DJ-NP15/SP15, that is the only appropriate available method.

Further, the issue of how to calculate Px is interrelated to whether DA customers should be charged the generation surcharges (\$10 +\$30). DA customers should be given market based Px credits (based on DJNP15/SP15) because its the law. There are 2 possible interpretations resulting from the combination of AB1890 and the new law. The DA customers should get a market based Px credit and not pay any surcharge. The DA customers should get a market based Px credit and pay the \$30 + \$10 surcharges Interpretation 1 results in DA customers getting lower rates than all other customers. It seems unlikely that the legislation would have this intent. Interpretation 2 results in DA customers getting the same rate as all other customers until the end of AB1890. This seems like the likely interpretation since otherwise the new legislation would have repealed AB1890. Thus given that the DA customers are being held indifferent to frozen rates plus \$40, they should get a Px market based credit plus pay the surcharge until the rate freeze ends.

Once the Px credit ends (Mar 2002), the surcharge should end because the law (AB1890) no longer requires them to be held at frozen rates and because: Any customer that is being served by a supplier other than DWR and the utility is not causing any costs for DWR or the utility therefore they should not be charged for them.

In the event that Px credit is not set based on market value (if the courts interpret the law differently than Enron) then there should be no generation surcharge for DA customers.

This is the same argument we should make in our brief on rate setting Scott

JBennett <JBennett@GMSSR.com> on 04/20/2001 09:03:06 AM To: "Harry Kingerski (E-mail)" <Harry.Kingerski@enron.com>, "Robert Neustaedter (E-mail)" <Robert.Neustaedter@enron.com>, "Scott Stoness (E-mail)" <sstoness@enron.com>, "Tamara Johnson (Business Fax)" <IMCEAFAX-Tamara+20Johnson+40+2B1+20+28713+29+20345-7374@GMSSR.com> cc: "Jeff Dasovich (E-mail)" <jdasovic@enron.com>, "Sue Mara (E-mail)" <smara@enron.com> Subject: SCE Advice Filing on PX Credit -- Protest

As you are aware, SCE made an advice filing on April 5th to eradicate the PX Rate Schedule and Replace it with Schedule PE --Procured Energy. As part of the filing, SCE proposes to set "on an interim basis" the cost of energy procurement, for bundled service customers for billing purposes and in the calculation of the energy credit for direct access customers equal to the Generation rate component of the Customer's otherwise applicable tariff.

Two primary issues arise from SCE's statement. First what does "interim basis" mean -- how long will this be in effect. It starts on January 19th, but it is unclear as to when it would end. Second, and most important, is what is meant by the Generation rate component. While there is not much explanation in the April 5 advice letter, in a subsequent advice letter filed on April 11 (1533-E), SCE set forth "Rate Schedule Specific Generation Related Rates" which range between five and nine cents.

I have forwarded both the referenced advice letters to you earlier. We need to protest the change in the PX credit by Wednesday, April 25th. All thoughts on the matter are welcome.

Jeanne

From: Schoen, Mary Sent: Thursday, October 04, 2001 11:58 AM To: Parquet, David; Wehn, Samuel; Comnes, Alan; Swain, Steve; Brodbeck, Kelly Cc: Keeler, Jeff; Dasovich, Jeff; Mara, Susan Subject: CEC Report on Natural Gas Supplies Adopted

The CEC just approved a report drafted by staff that states there will be adequate natural gas supply this winter for electricity generation needs. It does qualify this statement by discussing where potential bottlenecks in delivery might occur and recommends actions to address the bottlenecks. See below for a link to the report.

Energy Commission Report Projects Improved Natural Gas Supplies For the State

Sacramento -While current natural gas prices in California have dropped to approximately half of 2000's average price, the specter remains of last December, when tight supplies caused prices to spike to 25 times their present rates. Now, as winter approaches, industry watchers wonder if the State has enough of the clean-burning fuel for the upcoming heating season, even as new gas-fired electricity generators come on line.

The Natural Gas Infrastructure Issues Report , adopted today by a 4-to-0 vote of the California Energy Commission, gives a qualified "yes" to the question of adequate supplies this winter. It identifies sufficient storage as a critical factor, and notes that utilities have substantially increased natural gas storage, largely because conservation and efficiency have dampened summer electricity demand.

Nearly 85 percent of the natural gas used by Californians comes by pipeline from gas fields located outside the State. Since California typically uses more natural gas in the winter than interstate pipelines can provide, additional supplies must be set aside in summer months to help balance supply and demand. For this reason, the report recommends that the Energy Commission continuously assess storage levels and monitor infrastructure improvements throughout the year.

The newly adopted report points out that California's natural gas supply system was designed years ago to provide enough gas for winter's peak heating demand. An increasing reliance on natural gas for generating electricity, however, has strained the system and revised old patterns of consumption.

"This report helps Californians understand what we have to do to assure that we have a reliable and reasonably priced electricity and natural gas system in the future," said Energy Commissioner Michal (spelling correct) Moore, Presiding Member of the Electricity and Natural Gas Committee that developed the document.

To help resolve possible supply problems, the document analyzes not only natural gas storage requirements but the interstate pipelines that bring the fuel from distant gas fields to the California border. These pipelines can deliver slightly more natural gas than intra-state gas pipelines ? those within our State's borders ? can receive. As a result, there are bottlenecks in getting some supplies to gas consumers that the report says must be improved.

Pacific Gas and Electric Company (PG&E) and Southern California Gas Company (SoCal Gas) are improving and expanding their intra-state pipeline systems to help eliminate these constraints. According to the report, planned expansions of the interstate pipeline network should increase natural gas delivery to the State beginning next year, and additional improvements to the natural gas system should help prevent higher-than-normal prices that plagued California last winter.

Natural gas supplies in North America appear to be sufficient to meet demand in California and the rest of the United States for the next 50 years. The report recommends that the Energy Commission continue to monitor drilling rig activity and production levels for the long-term outlook. It also suggests that the Energy Commission, along with the Public Utilities Commission, should find ways to encourage and increase the in-state supply of natural gas.

The just adopted Natural Gas Infrastructure Issues Report can be found on the Energy Commission's Web Site at:

FCC'S 5TH SET OF OPEN ACCESS COMMENTS LOOKS FAMILIAR

12/04/2000 Communications Daily (c) Copyright 2000 Warren Communications News, Inc. All Rights Reserved. Familiar lines were drawn in comments on FCC's inquiry into broadband access (00-185). "Four times in two years the Commission has investigated the questions of whether or how it should regulate cable operators that offer cable Internet services," AT&T began its filing, and many participants appeared to have drawn liberally from their previous remarks. AT&T and Comcast were joined by predictable group including Competition Policy Institute and Information Technology Industry Council in opposing access rules, citing growing competition from other broadband providers and existing access agreements with ISPs. Consumer groups and OpenNet Coalition took other side, questioning commitments cable has made so far. In war that has featured creative semantics for years, CompTel rolled out new weapon, calling for "minimum cable open access rules" that would require full unbundling of cable transmission platforms for telecom as well as ISP service. In filing that chided FCC for its inaction and "inadequate" step in ordering inquiry rather than rulemaking, consumer groups led by Consumers Union asked FCC to ignore recent federal court decision in Broward County, Fla.,

which struck down local access ordinance. Groups said ruling was "fundamentally flawed and does not bind the Commissions's First Amendment analysis. It is not supported by law or fact, and unlikely to be adopted by other courts." They said absence of open access has already allowed "harm" to set in as corporate actors make business plans and cement technology decisions through purchase and installation of equipment and infrastructure. Open access plans that have been announced have "not occurred because the marketplace is forcing that outcome," the groups said, but because various regulatory agencies "have been involved in unnecessary and time-consuming proceedings while the FCC remained on the sidelines." Opponents of open access warned of consequences should FCC begin access rulemaking. Comcast said rulemaking "would enmesh the Commission in extraordinarily complex matters that would require years of rulemaking and a mis-allocation of govt. resources that should be deployed in true competition-enhancing efforts." AT&T said enhanced regulation of broadband services isn't necessary because of competitive alternatives to cable broadband, including DSL, wireless services and satellite services. It also highlighted Canada's efforts to require open access to broadband cable, which AT&T said have been "mired in complex proceedings ever since, and despite these proceedings, Canada is no closer than is the United States to the development of the arrangements required for multiple ISPs to access customers over cable systems." Both operators celebrated cable's foray into open access. Noting its recent agreement with Juno, Comcast said it "expects to forge business relationships with other Internet service providers, and is already taking steps necessary to prepare for such developments." Meanwhile, cable companies dismissed lightly USTA's petition to require them to pay into telephone universal service fund on revenue from cable Internet services. FCC "ought not to concern itself with the petition," Comcast said, devoting less than page to topic in its 45-page filing. It said USTA's petition is based on assessment that cable Internet is telecom service, which is far from settled: "That, of course, is the open question." Even if cable Internet is telecom, Comcast said, there would be "no universal service issue that requires Commission clarification." It said FCC's policy has been not to apply universal service requirements to ISPs that "self-provide" underlying telecom service. OPASTCO disagreed, saying requiring universal service contributions would "be consistent with the Commission's commitment to competitive and technological neutrality." It said allowing cable companies to escape contributing increases burden on other industries. -- Terry Lane, Sasha Samberg-Champion

USA: Senators renew high-speed Internet tax credit bill.

01/23/2001 Reuters English News Service (C) Reuters Limited 2001. WASHINGTON, Jan 23 (Reuters) - A bill that would encourage businesses to bring high-speed Internet access to underserved areas was reintroduced in the Senate on Tuesday, with the hopes that President Bush would include the item in his budget. Computers equipped with a "broadband" or high-speed Internet connection can download information at a rate of up to 1.5 megabits per second, or about 25 times faster than a standard, dial-up connection. While broadband access is currently available in many business districts and affluent residential neighborhoods, the service has not yet spread to less affluent or more sparsely populated areas. The bill would provide a five-year, 10 percent tax credit to Internet companies that extend broadband service to rural or underserved urban areas. Companies who build "next generation" networks, with download speeds of up to 22 megabits per second, would receive a 20 percent, five-year credit. The bill was introduced by Republican senators Olympia Snowe of Maine and Orrin Hatch of Utah, and Democrats Jay Rockefeller of West Virginia and John Kerry of Massachusetts. It was co-sponsored by 32 other senators. The 36 senators sent a letter to President Bush urging him to include the bill in his initial budget proposal. The bill attracted the support of 59 senators and 115 House members last year, the letter claimed.

The Environmental Strategies group invites you to attend a company-wide, Enron Environmental Strategy Meeting on September 15th from 9-2 (including lunch & snacks). The purpose of the meeting is to start an internal dialogue about the growing environmental market and ways in which Enron can capture associated business opportunities. As many of you are aware, the environmental market is quickly changing and expanding with a growing correlation between energy efficiency, renewable energy, air emissions, and new technology developments. Given our vast industry expertise and comprehensive service, Enron has a significant advantage to meet these market demands, which present both wholesale and retail opportunities.

For those of you that can attend, please RSVP by sending in a short description of what you do, and any suggestions to the below tentative agenda by Friday, September 8th. I'll circulate these descriptions to those who have RSVPd along with

a finalized agenda. The location is TBD.

If you have any questions, please feel free to contact me at 3-9916. Stacey Bolton

TENTATIVE AGENDA Introductions Brief introductions including what you do for Enron and its related environmental issues Update on what each of the Enron groups are doing related to environmental market opportunities State of the Environmental Market, updates on: Size of the market Emission and Green Premiums Customer demand for environmental products Mandates and Incentive Funds Credit trading programs Utility and competitors renewable product offerings Governments' efforts to "go green" Current and pending air regulatory compliance issues Concepts for discussion Upcoming bids/commercial partnering opportunities Trading Renewable Credits and Emissions Nationwide/Worldwide Regulatory issues - Hot spots Launching Environmental Product Offerings Potential products: -synthetic green energy product -100% wind green credits -new regulatory/compliance/risk management products -bundled environmental performance improvement products

COMPANIES & FINANCE INTERNATIONAL - Enron to axe 500 in attempt to boost profits. By JULIE EARLE.

10/11/2001 Financial Times (U.K. edition) (c) 2001 Financial Times Limited . All Rights Reserved

Enron, the US energy group and trader, yesterday confirmed it would cut 500 jobs, or 10 per cent of its European workforce, in an attempt to improve profits. Ken Lay, Enron's chairman, is under pressure to restore the company's share price, which has slid more than 60 per cent in the past 12 months. The cuts, flagged last week, will scale back operations Mr Lay had previously said would be critical to the company's future growth. John Sherriff, Enron Europe's president, said business continued to grow in Europe in terms of traded volumes and numbers of transactions, but the company was "seeking ways to do more with less in order to maintain earnings growth". Enron Europe has 5000 employees. Mr Sherriff said the headcount would be cut by between 5 and 10 per cent, and the company hoped to achieve this through voluntary severance. Gordon Howald, an energy analyst at Credit Lyonnais Securities in New York, said Enron had been criticised over its strategy to increase cash flows. "They are trying to slash their workforce and are selling Portland General Electric. This is good timing. When financials are under pressure, it probably makes good sense," he said, adding there had been rumours of US job cuts, outside of the previously announced Broadband division job cuts in July. Enron yesterday denied there were further job cuts planned in the US. Last week Enron said it had agreed to sell the electricity utility Portland General Electric to Northwest Natural Gas for \$1.8bn, a disposal it had been planning for some time. Enron shares closed \$1.81, or 5.4 per cent, higher at \$35.20 in New York yesterday. (c) Copyright Financial Times Ltd. All rights reserved. <http://www.ft.com>.

In college, they call it grading on the curve. In business, it's known as forced ranking. In both cases, regardless of performance, someone's going to fail. The practices reward those who perform better than their peers. That's the American way. But they also can punish those doing good work -- just not as good as others. In college, grading on the curve means failing a course despite learning the material and either being forced to repeat it or flunking out. In business, forced ranking means that every year some arbitrary number -- often 10 percent -- get put on notice that they must improve. Or sometimes they get fired. Traditionally, business has used competency-based evaluations of employees. That is, can they do the work? Forced ranking sets up a totem pole. Everyone has a place on that pole, from the top to the bottom. And the pole gets chopped off from the bottom. About 20 percent of American companies use forced ranking, according to an article on the subject in the Harvard Management Update, a newsletter from the publishing arm of the business school. Some companies used forced ranking only for top managers. Others use the system for all managers, or all exempt employees who are not on hourly wages. Some of the most admired companies use the process -- General Electric, for example. Here in Houston, Enron uses a five-point scale with 15 percent in the bottom ranking. Proponents of forced ranking say it makes managers confront a perennial problem: that of low-performing managers and employees. Not only do the low performers cause problems now. If they neither improve nor leave, they block promotion for people who might do a better job. Productivity and morale sag. Fewer top people want to join the company. The best performers leave. In what seems to be the endless American cycle of hiring and layoffs, forced ranking also gives managers some objective criteria to use when it's once again time to let people go. But forced ranking also can raise the usual cries of discrimination that any ranking system brings. At Microsoft, an African-American plaintiff sued, claiming his low ranking came because of his race. At Ford Motor Co., which has dropped forced ranking, the charges of discrimination came from middle-aged white males. Forced ranking has provided a much-needed boost at some companies -- ones that have not confronted performance problems of managers over the years. Still, after a few cycles of forced ranking, companies must decide what's next. So you've weeded out the slackers. You've helped those who needed help to improve their performance. Overall, the company is doing a much better job of getting the products or services out the door. Inevitably, companies will reach a point of diminishing returns. If every manager or exempt employee is at least competent at his or her job, is it really worth it to rate and arbitrarily fire 10 percent or so of them every year? Sure, that's going to keep everyone on their toes as they scramble to keep their jobs. But it may not be all that good in encouraging teamwork. And, as France's army found in World War I, the practice of decimation -- arbitrarily shooting 10 percent of your own troops to encourage the others to fight harder -- does not tend to raise morale. Forced ranking also seems to me to be based on the wrong premise -- that is, that companies need to be filled with high-performance people from top to bottom to succeed. That may not necessarily be true. Every organization really needs a mix of people. For example, organizations need a leavening of malcontents. They stir up things, get people thinking, challenge assumptions. Yet an organization composed of nothing but malcontents won't work. Sure, every company needs top performers. They are the yeast that causes the organization to rise. But companies also need the steady and the sturdy and people with limited imagination to take care of the millions of details that must be faced every day. It's the equivalent of taking out the trash. It's not inspiring work, but unless it gets done, it gets smelly. Comments? Telephone 713-220-2000 and touch code 1000. India: Greenfield Shipping rejects German bailout offer

10/11/2001 Business Line (The Hindu) Fin. Times Info Ltd-Asia Africa Intel Wire. Business Line (The Hindu) Copyright (C) 2001 Kasturi & Sons Ltd. All Rights Res'd

NEW DELHI, Oct. 10 IN a fresh twist to the crisis facing the \$220-million LNG shipping deal for Dabhol Power Company, German-based KG Finance Group has made a proposal to the promoters of Greenfield Shipping Company to bail out the project. "The promoters of Greenfield Shipping Company, however, rejected the proposal ab initio," sources familiar with the developments told Business Line. The bailout proposal was made by the German agency during discussions held in London recently between the representatives of the three promoters (Mitsui O.S.K. Lines, SCI and Atlantic Commercial Inc) and the len

Power Online Newsletter -- <http://www.poweronline.com> Volume 3 Issue 81 Monday, August 28, 2000

Welcome to this issue of Power Online's (<http://www.poweronline.com>) electronic newsletter brought to you by VerticalNet. We've got some big shows coming up for the power generation industry. Texas A&M University Turbomachinery Laboratory is sponsoring the 29th Turbomachinery Symposium Sept. 18-21 at the George R. Brown Convention Center in Houston. For registration info, check out the story in Power Online's Latest Headlines, and don't forget to visit the lab's new Power Online Storefront. All kinds of shows are scheduled for October, including Powersystems World 2000, Oct. 1-5, in Boston. For more info on that show and others, check out Power Online's Events Calendar (under Resources on the home page). Until next time, take care. ACM

\*\*\*\*\* 3M SOLUTIONS \*\*\*\*\*

In response to customer requests, 3M has introduced a web-based version of its popular 3M Service Life Software. This software offers an easy method for estimating the service life of 3M gas and vapor respirator cartridges--for many organic as well as some inorganic contaminants. See <http://www.poweronline.com/ecommcneters/3m.html> for more details.

Power Online Newsletter -- <http://www.poweronline.com> Volume 3 Issue 84 Friday, September 08, 2000

Welcome to this issue of Power Online's (<http://www.poweronline.com>) electronic newsletter. David Wojick's new Power Vision adds some interesting growth to his NOx issue tree, and considering the EPA's plan for even tougher regulations, it certainly is worth tuning into the discussion. For those of you who have had trouble downloading or getting to the tree in the past, have no fear. We've worked it out, so you should click on the link and be taken directly into the tree. Cathy Swirbul adds another part to her series on fuel cells, with "Fuel cell reliability versus grid-delivered central station power" in Power Online's Features & Case Studies section. So check it all out, and until next time, take care. ACM

Fort Peck Indians File \$3 Million Suit Against Northern Border Pipeline

08/01/2001 PR Newswire (Copyright (c) 2001, PR Newswire)

Outcome Could Have National Implications POPLAR, Mont., Aug. 1 /PRNewswire/ -- In a move that could have significant national implications, the Fort Peck Assiniboine and Sioux Tribal Nation has filed suit in the Fort Peck Tribal Court against Northern Border Pipeline Company, a unit of Northern Border Partners, L.P. (NYSE: NBP), to collect more than \$3 million in back taxes. Northern Border, a partnership of Enron (NYSE: ENE), Williams Energy Partners (NYSE: WEG) and TransCanada Pipelines (NYSE: TRP), owns and operates a natural gas pipeline and compression station on the 2.3 million-acre Ft. Peck Reservation in northeast Montana. The 1,214-mile large diameter natural gas line, which has 15 compressor stations stretches from the vast Western Canadian Sedimentary Basin near Monchy, Saskatchewan to Manhattan, Ill. It has a delivery capacity of 2.3 billion cubic feet per day (Bcf/d). Northern Border's gross investment in 1999 was listed at \$2.4 billion. Tribal Chairman Arlyn Headdress said Northern Border officials "negotiated with us for two years" before the Tribes gave permission to begin construction to cross their land in 1980. "From the pipeline completion until recently, Northern Border honored all of its obligations. In fact, the lease has been fully paid, but the company has refused to honor its tax obligations for the past two years," Headdress said. "We have tried repeatedly to negotiate a resolution of all issues, but have failed." Headdress said he is "baffled" by the pipeline company's refusal to work out a settlement of the tribal taxes. "We have had a great relationship since 1980. In fact, Northern Border contracted us to help build the pipeline and compressor stations that are on and just off of the reservation. Yet now, they refuse to deal reasonably. Northern Border's lease to use our tribal homelands expires in 2011, and its payment of tribal taxes is the major value the Tribes receive from the Company. If these taxes are not paid, the Tribes would have little reason to renew the lease when it expires." Headdress said the tax that Northern Border is refusing to pay represents approximately 25 percent of the Tribes' total annual revenue. The value of the tax until the lease ends is approximately \$13.8 million. The

Northern Border suit is the second court action taken by the Tribes to collect back taxes. Currently before the 9th Circuit Court of Appeals is a suit against Burlington Northern Santa Fe Corp. (NYSE: BNI) which operates 80 miles of railway on the reservation. The suit seeks to collect approximately \$1.2 million in taxes a year. Tribal attorney Reid Peyton Chambers of the Washington, D.C. law firm Sonosky, Chambers, Sachse, Endreson & Perry, said the outcome of these suits could establish a precedent for commercial operations on reservations across the country. "For the past 30 years, Congress and the executive branch have encouraged tribes to govern their own reservations and become economically self-sufficient," Chambers said. "An important part of that process involves the right of the tribes to assess reasonable taxes on non-Indian businesses operating within the boundaries of their reservations. Yet, today we are seeing court rulings that some companies interpret as setting aside these rights. Clearly, much more decisive and definitive action is needed if the tribes are to meet the goal of self-sufficiency desired by Congress and the President." Under current law, tribes are allowed to collect taxes on non-Indian businesses if any of four conditions exist. "If there is a consensual relationship with contracts and agreements over time, if a company's activities threaten public safety and welfare, if the enterprise's activity is on trust land, or if Congress has authorized the tax, the tribes are legally entitled to assess and collect taxes," Chambers said. "For both Northern Border and Burlington Northern Santa Fe, these conditions exist." Headdress said the suit was filed in Tribal Court because the courts have held that issues concerning Native Americans that occur on tribal land should first be heard in Tribal Court. The Ft. Peck Assiniboiné Sioux Tribal Nation consists of two related Indian tribes that have existed before Columbus came to America. The tribes settled on the Ft. Peck Reservation in the early 1870's and today have approximately 11,000 members. The reservation has a two-year college, health care center and industrial park along with cattle and buffalo ranching operations. Only a small part of their revenues come from gaming operations because of their isolated location. CONTACT: Peggy Striegel Public Relations Representative Ft. USA: Scramble for Caribs tankers forces rates skywards.

08/01/2001 Reuters English News Service (C) Reuters Limited 2001.

LONDON, Aug 1 (Reuters) - The cost of transporting crude from Mexico and Venezuela to the U.S. is spiralling rapidly skywards as cargo owners scramble to lock in tankers from a fast-dwindling fleet, brokers said on Wednesday. "You won't find a ship available now until August 12, so the ship owners are getting very bullish on rates," said one U.S. broker. He pegged the upcoast trade on Aframaxes (70,000 tonners) at W165 (\$1.17 per barrel), but other brokers said W170-180 was likely today. This represents a rise of at least 29 cents per barrel in the course of a week. "People are fixing further and further out, say two to three weeks, just to secure tonnage," said a broker. "If you're in the chartering department of an oil major it's embarrassing to pay too much, but it's even more embarrassing to be caught without a ship for your cargo," he added. The market has gained as much as 10 points a day since last Wednesday when it stood at W125 (\$0.88 per barrel), brokers said. Oslo brokers reported on Wednesday morning that Enron had paid W165 for the 70,000 tonner Nordgulf, loading in the Caribbean in the first week of August. Valero paid W167 for the Aegean Pride, loading August 13 in Mexico. There has so far been little knock-on effect on the smaller Panamax ships (50,000 tonners), which have laboured around W130 since demand slackened off during the U.S. Independence day holidays. Clean tanker trades are also moving upwards, with brokers pegging the 30,000 tonne upcoast trade at "W265 and rising" (\$10.34 per tonne).

Hey there team,

Now that the mid term is over, I actually read Chapter 20 - confusing stuff. Just to clarify, the SF group will take the first three questions and the east bay group will take the last two?

Also, we need to make a correction to the original assignments, some of these have dates and some refer to the case chapters, please see clarification below:

I will do my best to have something coherent for the SF group by Thursday or Friday for the Ch 20 case.

*Christine--11.6--Teltronica*

Case 20-1, due 11/6

*Dylan--11.13--Nutra*

Case 22-1, due 11/13

*Kim--11.1--Agro Feed*

Case 11-1, due 11/20

*Jeff--11.27--Global Industries*

Case 26-1, due 11/27

*Jimmie--12.4--Daimler-Benz*

Case27-1, due 12/4

Capitalists and environmentalists - now on a converging path.....

Don't miss=20 Bill Coors and David Brower, both in their 80s Weyerhaeuser with Rainforest Action Network=20 Shell Oil with Global Exchange

The Haas School of Business is pleased to announce

Industrial Ecology 2000:=20 Maximizing Shareholder Value, Lessons from the Natural World October 5 - 8 here at Haas

Industrial Ecology 200 will explore business as a living ecosystem in the= =20 rapidly changing new economy of information.? Industrial Ecology uses=20 principles of biology, ecology and systems thinking to maximize business=20 performance and profits by all measures? economic, social and environmental= .?=20 By adapting nature=01,s principles to business, companies such as Nike, Coo= rs=20 Brewing, Hewlett-Packard, Xerox, Mitsubishi Electric and Pitney Bowes are= =20 increasing efficiency, boosting innovation and brand loyalty and promoting= =20 long-term sustainability in today=01,s rapidly changing economic landscape.

YOU'LL HEAR FROM EXECUTIVES AND EXPERTS: William Coors, President & Chairman, Coors Brewing Co. Tachi Kiuchi, CEO & Chairman Emeritus, Mitsubishi Electric America Mac Bridger, CEO, Collins & Aikman Janine Benyus, author, Biomimicry Ervin Laszlo, founder & President, Club of Budapest Jane Pratt, President, Mountain Institute Bill Shireman, founder & President, Global Futures Anita Burke, global industrial ecologist, Royal Dutch Shell Noel Brown, former Director, United Nations Environmental Program Lynn Scarlett, Executive Director, RPPI Craig Newmark, founder, Craigslist.org Joe Romm, Executive Director, Center for Energy & Climate Solutions Winston Hickox, Secretary of Environmental Protection, Cal EPA Linda Coady, Vice President, MacMillan Bloedel Duane Elgin, author, Promise Ahead Gil Friend, CEO, Natural Logic Nevin Cohen, Senior Analyst, eMarketer Tom Hurley, Executive Director, Chaordic Alliance Ab Stevens, Philips Consumer Electronics, the Netherlands

YOU'LL LEARN ABOUT: Business As a Living System Product Stewardship: Computer & Electronics EPR Environmental Mgt. Systems: Sustainable CA - Sustainable Silicon Valley Metrics & Management: Indicators for Sustainability Socially Responsible Investing Extended Producer Responsibility Implementation Corporate Social Responsibility in Global Economy Approaching Climate Neutrality Sustainable Business Practices: New Regulatory Models Sustainability Legislation: "Performance Plus" Management Accounting & Ecological Accounting Implementing Ethical Leadership in the Corporate Environment Product Life-Cycle Management E-commerce: Affects on Energy & Transportation The Future of Forestry Sustainable Learning Organizations Internet Impacts on Society The Future of Energy How To Profit Through Paper Use Reduction The Future of Activism in the Internet Economy Globalization: The Industrial & Ecological Path

COMPUTER & ELECTRONICS PRODUCT STEWARDSHIP As technology continues to outpace our satiation with new gadgets and increasing connectivity leads to increasing amounts of waste material, producers must continue to refine strategies for effectively taking responsibility for the entire life-cycle of their products. Challenged to meet ever-more stringent demands from environmentally concerned stakeholders, leading thinkers from Xerox, Philips, Mitsubishi Electric and Pitney Bowes will share their innovative solutions to high tech product stewardship, providing models which can be used broadly across many industries.

THE NATURAL STEP The Natural Step framework is a guide to thinking and acting in harmony with the earth's cyclical processes. It provides a pragmatic framework that can be used to guide social, environmental, and economic actions. It acts like a compass that can point individuals and organizations in the direction they want to go. Based on systems thinking, it recognizes that what happens in one part of a system affects every other part, often in unexpected ways.

THE FUTURE OF ENERGY Fuel cell technology and renewables are being developed to meet consumer demand for more sustainable energy sources. Which are most valuable and cost effective? How have these new technologies been implemented in corporate campuses? What direction will the future of energy take? Hear responses to these questions from leading scientists and energy managers.

BIOMIMICRY "Biomimicry", coined by best-selling author, Janine Benyus, is created from the Greek bios, (life), and mimesis, (imitation). Nature becomes a model for designs and processes which can provide for more efficient, adaptable, creative and resilient enterprise. Nature is viewed as a mentor we can learn from, and as a measure of our innovations: what works, what is appropriate, what lasts.

CLIMATE NEUTRALITY Global climate change has emerged on the environmental radar screen as a potentially devastating consequence of economic and industrial expansion. Today there is perhaps greater interest in the inventorying of greenhouse gas emissions by corporations than there has ever been for a voluntary environmental initiative. Hear how companies have successfully addressed this topic with initiatives such as emissions trading, climate neutral certification and increased resource efficiency.

CORPORATE ACCOUNTABILITY PRACTICE (C.A.P.) Today, you serve not just shareholders, but a diverse community of stakeholders as well. You don't just add value to products. You add values. You're held responsible not just for your own actions, but for the actions of your suppliers and your customers, your entire supply chain, anywhere in the world. The objective of Manning Selvage & Lee's CAP is to protect and enhance the value of your brand. Not through spin, but substance.

THE FOUR SEASONS OF BUSINESS Spring is a time of planting many varieties of seeds. Summer's climate encourages rapid growth of these new organisms. Fall is the season for the development of a select few of those organisms creating more elaborate interconnections. And winter is the time for reflection and creative destruction and renewal, opening space

for a new generation of seedlings. So go the seasons of nature's ecosystems and the seasons of business. Learn how to identify the different seasons of your enterprise and apply the appropriate management practices for optimal productivity.

**SOCIALLY RESPONSIBLE INVESTING** For the first time ever, assets under management in socially responsible portfolios have exceeded \$2 trillion, linking almost one in every eight dollars under management in the U.S. with screened portfolios, shareholder advocacy and community investing. As the financial marketplace expands to meet SRI potential, traditional social screens are being re-evaluated, new criteria are being created and the overall screening, activism and investment impacts of SRI are being examined. Hear examples and approaches from leading investment managers in the field.

**BUSINESS ETHICS** Businesses now face a constellation of interests - market, social, and environmental - for which the ability to continue adapting and regenerating has become the central issue. From local communities to global financial markets, from entire industries to the quality of air and water, executives are influencing the sustainability of their operating environment. Learn how an emerging new ethical code encompassing a company's responsibility for society and the environment is closely linked with profitability and long term organizational sustainability.

**IMPLEMENTATION OF SUSTAINABILITY INITIATIVES** There is no shortage of theoretical solutions to current questions of environmental and social sustainability for business. But what happens when organizations move toward implementation? Hear practical case studies and stories

Under the Radar: Enron's Only White Knight Is Itself TheStreet.com, 11/02/01 BANDWIDTH BEAT: Playing '20 Questions' With Enron Execs Dow Jones Energy Service, 11/02/01 USA: Stung Californians not crowing at Enron's troubles. Reuters English News Service, 11/02/01 Enron Portland Genl Sale Seen Going Smoothly This Time Dow Jones Energy Service, 11/02/01 Nymex/Lowers Costs -2: Retroactive To Thurs Transactions Dow Jones Commodities Service, 11/02/01

Under the Radar: Enron's Only White Knight Is Itself By Christopher Edmonds <mailto:cedmonds@thestreet.com> Special to TheStreet.com 11/02/2001 03:15 PM EST URL: <<http://www.thestreet.com/comment/chriedmonds/10003396.html>>

There is no suitor-in-waiting for Enron (ENE:NYSE - news - commentary) .=20 Despite a speculation-filled week, Warren Buffett's Berkshire Hathaway (BRK= A:NYSE - news - commentary) probably isn't waiting in the wings to gobble up the troubled energy giant. The risk profile doesn't fit Royal Dutch Shell= (RD:NYSE - news - commentary) , and it's unlikely General Electric (GE:NYSE= E - news - commentary) is ready to jump at the chance to rescue the Houston= energy firm from its troubles with the SEC and disgruntled investors. ?And= while the recent slide in Enron's stock price might seem to make it an attractive target, it's implausible that an Enron competitor would step up to = the plate and make an offer to acquire its troubled peer. ?"We do not believe there is a high probability of a bailout offer at a price significantly = above the current price, as there is too much uncertainty about the capital= structure and shareholder lawsuits," says Jeff Dietert, independent power = analyst at Simmons & Co., a Houston energy investment firm and a member of = the TSC Energy Roundtable. ?Many metrics suggest the stock is inexpensive. = Merrill Lynch analyst Donato Eassey recently calculated Enron's asset value= to be between \$16 and \$24 per share, which may make Enron's current price = of less than \$12 look cheap. But in nearly the same breath, Eassey downgraded Enron stock to neutral from "accumulate." Merrill Lynch has provided banking services for Enron. ?"While we have not altered our view of Enron's fundamentals or its ability to weather this long-term storm, from a practical= standpoint we believe noise surrounding the SEC's move to a formal investment will outweigh any [earnings] analysis or net asset value calculation= ," Eassey told clients in a report Thursday. ?For Buffett: Intriguing But . = ..?Reports that famed value investor Warren Buffett is looking at Enron may= be correct. He is an opportunistic investor and has an interest in the power business. And, Berkshire's ownership of

Mid-American Energy provides a platform for an Enron deal. However, interest and action are two different things. While Buffett has said he wants additional power holdings, he seems more focused on the traditional, regulated utilities rather than the more aggressive opportunities represented by Enron. Buffett's track record shows he craves certainty and that is something Enron can't provide, especially now. There are also pragmatic issues. If Enron considered a deal, it would have to be one that was both rich and immediate, something Buffett can't offer. Constrained by the Public Utility Holding Company Act, or PUHCA, Berkshire might not be able to purchase Enron until the sale of Portland General, the Oregon utility, is completed sometime next year. The Enron culture could also keep Buffett away. Enron is well known for its employee stock option program that made millions of dollars for people like ex-CEO Jeffrey Skilling while creating little value for shareholders. Buffett is a tireless critic of such shenanigans. Buffett also generally looks for companies with a management team committed to remaining in place, and Ken Lay has no desire to remain at the helm of Enron for the long haul, and future leadership is uncertain. And while Buffett still may take a look, price could be the ultimate stumbling block. "I think he understands the derivative trading business better than most," says Robert Hagstrom, portfolio manager of the Legg Mason Focus Trust and author of *The Essential Buffett: Timeless Principles for the New Economy*. "I wouldn't be surprised if it's caught his eye, but I don't think he would get his price. He won't pay a premium for Enron." As for Buffett, he won't comment on anything, let alone rumors like this. Shell: Burned Out on Gas? Another rumored suitor is Royal Dutch Shell (RD: NYSE - news - commentary). Speculation has escalated to the point of suggesting that Shell and Enron have signed a confidentiality agreement to allow for exchange of privileged financial data. A Shell spokeswoman in London would not comment on the speculation. An Enron spokesman also declined to comment. Shell wants to expand its gas business and in its bid for Barrett Resources, showed it will pay a premium for the right assets. But Enron is more an energy trading company than an exploration and production company. Shell's problems growing both its Coral trading subsidiary and its Tejas Gas unit -- a costly acquisition -- probably would make it shy away from going there again, Dietert says. Shell and Enron are very different companies, he adds. "Culturally, it's a tough deal to imagine." GE Capital: Enlightened Investor? The final name bandied about is GE Capital. This one is more difficult to figure, but an investment in Enron by the finance unit of General Electric isn't out of the question. However, sources tell me an outright bid is unlikely. "They are a potential investor," says Dietert. "If push comes to shove, Enron would be willing to issue 30% to 40% more equity rather than face bankruptcy. And, GE Capital could participate in such a deal." However, any move is just speculation at this point. And General Electric won't comment on speculation. Even if an offer for Enron emerged, price would clearly be an issue. Current uncertainty suggests any offer would be well below a price Enron would consider reasonable. Hence, while a bid for Enron isn't out of the question, it's likely Enron will stand to fight its current battles alone. **BANDWIDTH BEAT: Playing '20 Questions' With Enron Execs** By Michael Rieke 11/02/2001 Dow Jones Energy Service (Copyright (c) 2001, Dow Jones & Company, Inc.) A Dow Jones Newswires Column **HOUSTON** - (Dow Jones) - Since Enron Corp. (ENE) is such a hot topic these days, here's a suggestion for a new game. If you worked for the Securities and Exchange Commission, with its subpoena powers, what questions would you ask in your current investigation of Enron? You could even break it down into categories, like the game show "Jeopardy." The first category is Enron trading counterparties run by Enron executives. How many of those counterparties were run by Enron employees such as former Chief Financial Officer Andrew Fastow and Michael Kopper, a former managing director of Enron's Global Equity Markets Group? We know that Fastow ran two private investment companies that Enron traded with - LJM Cayman and LJM2 Cayman. Kopper ran one called Chewco Investments. What does LJM stand for? (If you know that answer to that one, you're ahead of an Enron spokeswoman who told Bandwidth Beat that she didn't know what the letters stood for.) Sometimes companies use letters that are actually initials of investors names. Are any of the investors in the LJM partnerships an Enron executive whose last name starts with L, J or M? (The Enron spokeswoman hasn't called back with an answer to that one either.) Who was meant to profit and who was meant to lose in Enron's complicated financial transactions?

Enron CEO: Calif. Law To Delay Portland General Sale By Christina Cheddar Of DOW JONES NEWSWIRE

02/15/2001 Dow Jones News Service=20

NEW YORK -(Dow Jones)- Enron Corp. (ENE) Chief Executive Kenneth Lay said a= =20 California law has had the unintended effect of delaying Enron's sale of it= s=20 Portland General unit to Sierra Pacific Resources (SRP).=20

At the end of January, California legislators ordered the state's utilities= =20 not to sell power plants before January 2006. The new law might prevent=20 Sierra Pacific Power, a unit of Sierra Pacific Resources, from selling its= =20 power plants because it serves 40,000 customers in California's Lake Tahoe= =20 area.

Sierra Pacific was trying to sell the assets to finance its acquisition of= =20 Portland General, Lay said. Sierra Pacific is attempting to get a=20 clarification of the legislation from California authorities, he said.=20

Lay's confidence level regarding the company's ability to close the Portlan= d=20 General sale remains "pretty high, but it's not 98 percent," he said.=20

Lay said the delayed sale will not hurt the company's earnings performance.= =20 In fact, Lay expects Portland General to add to its earnings.=20 Lay was speaking at the UBS Warburg Energy Conference here Thursday.=20

When asked if credit risks in California could affect Enron's earnings, Lay= =20 responded there is no scenario in the state that would make the company=20 unable to reach its \$1.70 to \$1.75 a share earnings estimate for 2001.=20

Lay explained that the company is taking measures to mitigate its credit=20 risk. California's two largest utilities, Southern California Edison Co. an= d=20 Pacific Gas and Electric Co., have been heading toward insolvency after=20 purchasing power in the state's deregulated markets at higher prices than t= he=20 utilities could charge their customers.=20

Most of Enron's credit risk in California comes from the selling of gas and= =20 electric power in the state through its wholesale services operation.=20

"There's quite a mess out there, and we hope that eventually, that mess wil= l=20 get worked out," Lay said.=20

During his presentation, Lay also discussed the success of EnronOnline. He said EnronOnline has reduced the average cost per trading transaction by 75% as well as help the company increase its trading volumes. Enron, of Houston, trades a variety of commodities, including gas, electric, pulp and paper, and broadband capacity through EnronOnline.

Crt Postpones Hearing On CalPX Back-Billing Suppliers

02/15/2001 Dow Jones Energy Service

LOS ANGELES -(Dow Jones)- A U.S. District Court Judge has postponed until Tuesday hearing arguments in a case involving Enron Corp.'s (ENE) request that the California Power Exchange not be able to charge the company for electricity bills defaulted on by the state's two largest utilities, a spokesperson for the CalPX said Thursday.

The judge also extended until Tuesday a temporary order barring the CalPX from billing Enron for the utilities' defaults until the case is heard.

Other power marketers and generators have similar lawsuits filed in federal court and with the Federal Energy Regulatory Commission.

At issue is a "chargeback" insurance mechanism that is meant to maintain participants' confidence in the exchange. Under the mechanism, defaults by CalPX debtors are proportionally "charged back" to creditors based on their level of participation in the exchange in the three months prior to the default.

Sources close to the case said they believed the court was waiting for action from the FERC before continuing with the case. However, this couldn't be immediately confirmed.

FERC has received a complaint about chargebacks from nine power suppliers.

Judge Resets Enron Hearing, Cites Expected Federal Decision Bloomberg News, 02/15/2001

Judge Resets Enron Hearing, Cites Expected Federal Decision

Los Angeles, Feb. 15 (Bloomberg) -- A federal judge rescheduled a hearing on whether California's power market should be kept from billing its members, mostly energy suppliers, because utilities owned by PG&E Corp. and Edison International have defaulted on payments.

U.S. District Judge Carlos Moreno continued the hearing to Feb. 20 at 4 p.m. A temporary order issued last week to prevent the California Power Exchange electricity market from billing members such as Enron Corp. will be extended until the hearing.

PG&E and Edison International have defaulted on at least \$789 million in debts; under exchange rules, all members can be charged when one defaults.

Enron sued in Los Angeles federal court Jan. 31. Other generators -- Avista Corp., Enova Corp.'s San Diego Gas & Electric, Sempra Energy, British Columbia Hydro & Power Authority's Powerex Corp. and ScottishPower Plc also went to court. Moreno indicated last week he will consolidate all of the claims into Enron's complaint.

Moreno extended his order to give the Federal Energy Regulatory Commission more time to issue its own ruling on whether the Power Exchange can charge all its members when one defaults. Nine generators filed their complaint with the agency Feb. 8.

--Joyzelle Davis in Los Angeles (213) 617-3855, or joydavis@bloomberg.net, through the San Francisco newsroom/gcb

Texas Pilot Project for Electricity Competition Begins Today Terry Maxon

02/15/2001 KRTBN Knight-Ridder Tribune Business News: The Dallas Morning News - Texas Copyright (C) 2001 KRTBN Knight Ridder Tribune Business News; Source: World Reporter (TM)

So, you're mad about your electricity bill and wish you could change to another electricity company? Starting Thursday, a lot of Texans can tell their current electric company to get lost, and the customers probably will lower

their electric rates as well.

The state is kicking off a pilot program to see how competition in its=20 electricity markets will work. Thursday is the first day that 19 companies= =20 will be allowed to begin signing up customers.=20

June 1 is the first day that these power companies can begin providing=20 electricity to customers who decide to switch. The three and a half months= =20 until then will be used to market their services and sign up customers.=20

The limited test will allow 5 percent of all utility customers to pick thei= r=20 electricity company -- either their current company or one of many others= =20 that have signed up to sell electricity in Texas.=20

The test is a dress rehearsal fo

Enron Asks Citigroup for \$750 Mln Loan, People Say (Update1)

(Adds comment from CFO Fastow in fourth paragraph, Enron's short-term borrowing rates in seventh paragraph.)

New York, Oct. 23 (Bloomberg) -- Enron Corp., the biggest energy trader, has asked Citigroup Inc. to arrange a \$750 million loan, ensuring access to credit if the embattled company is cut off from money markets, say people familiar with the matter.

Enron's shares and bonds plunged yesterday after the company said the Securities and Exchange Commission was probing its finances. The Houston-based business, whose stock has fallen 75 percent this year amid concerns about failed investments, depends on a \$3 billion commercial paper, or short-term debt, program to finance day-to-day operations.

Earlier this month, Moody's Investors Service placed all \$13 billion of the company's long-term debt securities on watch for possible downgrade. As a second-tier commercial paper borrower, any drop in its rating may cut off Enron from the commercial paper market and raise the costs of short-term debt.

"We understand that our credit rating is critical to both the capital markets and our counterparties," Enron's Chief Financial Officer Andrew Fastow said on a conference call today. He said Enron has \$3.5 billion available on bank credit lines, giving it enough cash to operate normally.

Enron shares rose as much as 12.6 percent during the call to \$23.25. They pared the gain to \$21.80, up \$1.15.

Dan Noonan, a spokesman for Citigroup's Citibank NA unit, declined to comment. Mark Palmer, a spokesman for Enron, declined to comment.

Commercial Paper Rates

Enron was paying 3.15 percent to issue commercial paper until Oct. 31, which is as much as 15 basis points more than companies with the same "A2/P2" short-term credit ratings that are not on credit watch. Enron's short-term debt is not on review for a possible downgrade.

Enron has previously turned to Citigroup for finance and advice. In 1999, Citigroup's Salomon Smith Barney unit advised the company on its \$1.45 billion acquisition of three natural gas-fired power plants from Cogen Technologies Inc. Citibank, along with J.P. Morgan Chase & Co., this year arranged a \$1.75 billion loan.

Earlier this week, an investor sued Enron, saying two partnerships cost the company \$35 million and Fastow's leadership of them was a conflict of interest.

The SEC has asked Enron about partnerships and affiliated companies headed by Fastow. Dismantling some of the partnerships would cost Enron or its shareholders as much as \$3 billion, Ray Niles, a Salomon Smith Barney analyst, wrote in a report to investors.

Enron created partnerships and affiliated companies to buy and sell assets such as power plants to lower the debt on its books.

Investors said they were concerned that Enron may be forced to dismantle the affiliated companies by paying off the owners in cash or stock. Chief Executive Ken Lay said last week he may have to "unravel" agreements that created the companies if Enron's debt ratings fall too far.

Enron CFO: Company Has Sufficient Liquidity By Christina Cheddar Of DOW JONES NEWSWIRES

10/23/2001 Dow Jones News Service (Copyright (c) 2001, Dow Jones & Company, Inc.)

NEW YORK -(Dow Jones)- Enron Corp. (ENE) Chairman and Chief Executive Kenneth Lay said the company had procedures in place to avoid conflicts of interest in dealings between Enron and partnerships that were set up and run by its chief financial officer, Andrew Fastow. Last week, the Securities and Exchange Commission asked the Houston energy trading company to provide additional information about the partnerships, which Enron said were off-balance sheet financing vehicles used to hedge against fluctuations in the market. In a conference call held Monday to discuss investor concerns about the SEC investigation and related matters, Lay said there was a "Chinese wall" in place to protect the interest of Enron shareholders. The procedures were "rigorously followed," Lay said. In previous filings with the SEC, Enron said the terms of the transactions with the partnerships were "reasonable compared to those which could have been negotiated with unrelated third parties." Fastow resigned from the partnerships, which were known as LJM Cayman LP and LJM2 Co-Investments LP in late July. The company also is involved in other off-balance sheet financing vehicles, including Marlin Water Trust II and Whitewing. During the conference call, investors said they were frustrated by the complex nature of the trusts, and asked for more information. Lay said the company would be providing a list of "Frequently Asked Questions" on its Web site later Tuesday that may provide more details. After Enron disclosed the SEC investigation Monday, the company's stock sunk to its lowest level in 52 weeks, \$19.67. Enron shares were recently trading up 47 cents, or 2.3%, at \$21.12, in brisk volume that has already surpassed its average daily turnover of 6.3 million shares. Lay said he was "extremely disappointed" in the current stock price. "Our businesses are performing very well and we are continuing to conduct business," he said.

During the conference call, Enron officials declined to specify Fastow's role in the partnership, citing the ongoing SEC investigation and a derivative lawsuit filed against Enron that alleges its board breached its fiduciary duties by allowing Fastow to create and run the partnerships. Enron officials also addressed concerns that investors had about the potential need to issue additional Enron stock. Under certain circumstances, for example, if both Enron's stock and credit rating fall to certain levels, the company would need to issue additional shares to the partnerships, diluting the holdings of current shareholders. Enron officials declined to say how much dilution would occur under a "worst-case scenario." However, the

officials said they doubted there would be a need to issue the additional stock because the company plans to work with the credit-rating agencies to prevent such an event. Moody's put Enron on watch for a downgrade of its long-term debt last week after the company announced a \$1 billion third-quarter write-off that produced a \$618 million loss. According to Lay, Enron's debt rating would need to fall several notches to below investment grade in order to trigger the need to issue more stock. "We are committed to maintaining our ratings," Lay said. "Moody's said they would work with us," he added. Furthermore, Fastow said, Enron expects to have "sufficient liquidit

Did Enron use partnerships to artificially boost earnings? Lawyers are rubbing their hands. If the truth sets you free, the top echelon at Enron Corp., present and past, should be feeling positively footloose these days. Just in time to get shackled by a slew of shareholder suits.

Private securities lawyers and the Securities & Exchange Commission are looking into the Houston energy trading firm's complex relationships with outside partnerships it used to hedge against fluctuations in the value of its investments. Where Enron sees 21st-century financial engineering, lawyers see possible earnings inflation. (Chairman Kenneth Lay says Enron is cooperating with the SEC inquiry.)

One partnership, run by Enron Chief Financial Officer Andrew Fastow, added \$236 million in revenue in the first quarter of 2001, boosting Enron's \$425 million in net income in that period. The partnership's contribution plunged to \$5 million in the second quarter ended June 30, but investors only found out Aug. 14--when Enron filed its quarterly 10-Q with the SEC. Oddly enough, that was the day Chief Executive Jeffrey Skilling unexpectedly resigned.

Expect class-action lawyers to go after the profits Skilling and other insiders made by selling \$660 million in stock when shares were flying high. (They're down 78% from August 2000.) Since Skilling left, Enron has taken a \$1.2 billion hit to shareholders' equity to unwind partnerships.

"They certainly misled the market as to the size of [partnership losses]," says Thomas Shapiro, one of several lawyers filing shareholder suits against Enron. Who knows what will emerge from some of the other partnerships?

Enron Shares Rise, Rebounding From Nine-Year Low (Update1) 2001-10-31 11:56 (New York)

Enron Shares Rise, Rebounding From Nine-Year Low (Update1)

(Adds analyst comment in sixth paragraph.)

Houston, Oct. 31 (Bloomberg) -- Enron Corp. shares rose as much as 19 percent, one day after falling to their lowest level in more than nine years, amid speculation the company may be a takeover target.

Shares of the top energy trader rose \$1.58, or 14 percent, to \$12.74 in midday trading of 19.9 million shares, compared with the three-month daily average of 10.4 million shares. Earlier, the shares hit \$13.25.

Shares of Houston-based Enron have fallen 84 percent this year. They have lost more than half their value this month amid a U.S. Securities and Exchange Commission inquiry into partnerships headed by Andrew Fastow, Enron's former chief financial officer. Fastow was ousted last week in an attempt to restore confidence in the stock.

"There are rumors out there that they are a potential takeover target, but I think it's very unlikely that anyone will buy them out at this point," said Zach Wagner, an analyst at Edward Jones & Co. "There are too many uncertainties."

Enron is more likely to get a large cash infusion from an investor, Wagner said. He has a "reduce" rating on Enron shares. He doesn't own the stock.

The Wall Street Journal today said General Electric Co.'s GE Capital, Warren Buffett's Berkshire Hathaway Inc. and Royal Dutch Petroleum Co. are "among the names bandied about" as potential buyers for all or part of Enron.

Enron Shares Rise as Analysts Cite Bargain-Hunting, Financing Speculation By Christina Cheddar

10/31/2001 Dow Jones Business News (Copyright (c) 2001, Dow Jones & Company, Inc.)

Dow Jones Newswires NEW YORK -- After losing nearly two-thirds of their value over the past two weeks, Enron Corp. shares regained some lost ground Wednesday. Bargain-hunting and speculation were said to be behind the buying, with some suggesting that Enron is nearing a deal for additional financing, while others are said to be mulling the possibility the company may be acquired. In afternoon trading on New York Stock Exchange, Enron shares (ENE) were up \$1.49, or 13%, to \$12.65 on volume of 24.9 million shares. Earlier, the stock traded as high as \$13.25. Enron, which typically trades an average of 10 million shares a day, was again one of the most actively traded stocks on the Big Board. On Tuesday, Enron shares set a 52-week low of \$10.90, which was the stock's lowest level in a decade. Commerzbank Securities analyst Andre Meade attributed the jump in Enron's stock to investors attracted by its low price. Those buyers, he said, are hoping not to be hit by the "double swords" hanging over the Houston energy trader -- a Securities and Exchange Commission investigation of the financial dealings of its former Chief Financial Officer Andrew Fastow, with an off-balance sheet financing vehicle and the possibility of another credit-rating downgrade by Moody's, which could trigger the need to issue additional stock and thereby dilute the holdings of existing investors. In addition, there is speculation "through the Houston circuit" that Enron may be close to securing additional financing, said Prudential Securities analyst Carol Coale. If the speculation proves true, the financing would help Enron to shore up its financial condition and improve confidence among investors as well as its business partners. Investors also may be placing their bets on the belief that Enron shares have eroded enough in value to make the company a takeover candidate. A report in The Wall Street Journal Wednesday said several companies including General Electric Co.'s (GE) GE Capital unit, Warren Buffett's Berkshire Hathaway Inc. (BRKA, BRKB) and Royal Dutch/Shell Group (RD) have been named as potential buyers for Enron. Ms. Coale said the takeover speculation was "unwarranted" and has surfaced each time Enron shares faltered. "It would be very unusual ... for a company to be interested in a takeover (of Enron) given the uncertainty of the SEC inquiry. Why add that uncertainty to your portfolio?" she said. Furthermore, Ms. Coale said, it might be difficult for a company such as Shell to clear regulatory hurdles because it already operates a substantial energy trading business. Commerzbank's Mr. Meade also discounted the takeover speculation. He likened such a deal to the acquisition of a financial-service company. "You are buying a human-capital-based business. You have to make sure you're not going to lose all your people," he said. "It's a trickier acquisition." But not everyone thinks the takeover speculation is implausible. Roger Hamilton, an analyst at John Hancock Value Funds, said Shell and Enron are "neighbors", and Shell has looked at Enron "on and off." Still, he said that if there is a buyer for Enron, the company would want to do it sooner rather than later in order not to risk damaging Enron's leading market position. Some marketwatchers said at least some of the pressure on Enron shares in recent trading sessions has come from mutual funds liquidating their positions to avoid having the company's name appear among their holdings in their annual reports. Despite the rise in Enron shares Wednesday, there remains a significant amount of uncertainty about the stock. In addition to

o BlueStream Ventures Raises \$250 Million for First Fund

MINNEAPOLIS -- BlueStream Ventures said it raised \$250 million for a new venture capital fund. More than one-third of the fund's capital was provided by infrastructure industry executives. The fund is focusing on next-generation infrastructure and networking technology companies in the U.S. BlueStream hopes to complete a second closing in the fall that will increase the fund to \$300 million. BlueStream hopes to invest in about 20 companies over the next two years, with earlier-stage investments of \$3 million to \$5 million and later-stage investments of \$5 million to \$10 million. BlueStream recently invested \$10 million in the Series B financing of Santa Clara, Calif.-based Metro-Optix, an optical technology firm. Telephone 651-292-8900.

o VCs Rescue Drkoop.com With \$20 Million, Clear Out Management

AUSTIN, Texas -- Publicly traded drkoop.com, which provides users with health information online, said it received \$20 million in funding from a group of investors including Prime Ventures, JF Shea Ventures, Cramer-Rosenthal-McGlynn, and RMC Capital. The company was on the verge of running out of cash. The leadership of Prime Ventures also took over the top management posts at drkoop.com. Richard M. Rosenblatt replaced Donald Hackett as the company's chief executive officer. Edward A. Cespedes was named president and Stephen Plutsky now serves as chief financial officer. Dr. C. Everett Koop, former U.S. Surgeon General and a founder of the company, will continue to serve as chairman of the board. <http://www.drkoop.com/>

o Online Bill Payment Rivals Paytrust and PayMyBills.com Merge

PASADENA, Calif. -- Paytrust, a service that enables consumers to receive, review, pay, and organize all of their bills online, said it entered into a definitive purchase agreement for an all-stock acquisition of personal bill management services company PayMyBills.com. The companies did not disclose financial terms of the deal. Both co-founders of Paytrust, CEO Edward G. McLaughlin and chairman and president Flint Lane, will retain their positions in the newly

combined company. Pay

SEA POWER & ASSOCIATES WIN HAAS SOCIAL VENTURE COMPETITION Sea Power &=20 Associates, which converts ocean wave energy into electricity, emerged as t= he=20 grand-prize winner of the second annual Haas Social Venture Competition on= =20 Saturday, April 14. The nationwide competition is organized entirely by Haa= s=20 MBA students.

To compete successfully, participating teams had to demonstrate sustainable= =20 profit potential, have a quantifiable social or environmental bottom line= =20 incorporated into its mission, and show a demonstrably greater impact of it= s=20 social return on investment (SROI) than existing firms in the industry.=20

Sea Power & Associates, which won the \$10,000 first prize, aims to provide= =20 renewable energy for the emerging economies of the island communities in th= e=20 Pacific as well as Hawaii, thus offering a cost-competitive non-polluting= =20 alternative to diesel generation.=20

"Electricity generated from ocean wave energy will reduce the greenhouse ga= s=20 emissions that contribute to global warming," said Mirko Previsic, CEO of S= ea=20 Power & Associates, whose patented system consists of a buoy driven by the= =20 up-and-down motion of the waves, which converts the ocean wave energy into= =20 electricity. "For each yard of coastline in Northern California we could=20 power 20 American homes."

Aprotea Biochips, which has developed technology to provide a rapid and=20 easy-to-use protein measurement system to enhance drug discovery, won a=20 \$2,000 prize for best management team. The team includes individuals with= =20 extensive experience in business, law, biology, biochemistry, and=20 engineering, and has the winning combination of deep domain experience,=20 passion for the business, and the wherewithal to execute.=20

Prisma Microfinance, Inc., garnered a \$2,000 prize for best SROI analysis.= =20 The venture provides micro loans to entrepreneurs in the developing world.= =20 Its business plan quantified a positive social impact in terms of job=20 creation, income generation, and community development.

In addition to the cash prizes, all three winners will have their plans=20 circulated in the Investors' Circle, a national network of 150 social=20 investors. Business schools represented on this year's winning teams includ= e=20 Haas, University of Washington, and Thunderbird.

"The competition is a lens that broadens our view of the bottom line," said= =20 Jerome Engel, executive director of the Haas School's Lester Center for=20 Entrepreneurship & Innovation, who advised the organizing committee of Haas= =20 MBA students. "It includes social and environmental values as well as=20 shareholder value."

In its second year, the competition attracted 33 participating teams from 1= 5=20 business schools, including Cornell, Columbia, Kellogg, Michigan, Stanford,= =20 and Yale for its nationwide contest of social ventures. All teams were judg=

ed=20 by a group of 17 leading social venture investors, venture capitalists, and= =20 social venture practitioners.

Several participants in last year's competition have made great strides=20 toward becoming sustainable businesses. Ripple Effects and Xtracycle, who= =20 shared last year's second prize, are in business. Ripple Effects develops= =20 award-winning learning software, while Xtracycle sells super-cargo size=20 sport-utility bicycles.

WILLIAM HAMBRECHT TO RECEIVE LESTER CENTER LIFETIME ACHIEVEMENT AWARD=20 William Hambrecht, the legendary investment banker who brought us Apple=20 Computer, Genentech, and the OpenIPO, is the 2001 recipient of the Lester= =20 Center Lifetime Achievement Award at UC Berkeley's Haas School of Business.= =20

The award will be presented by the Lester Center for Entrepreneurship &=20 Innovation at the UC Berkeley Entrepreneurs Forum on Thursday, April 26, in= =20 Arthur Andersen Auditorium.

Hambrecht is best known as the co-founder of the firm Hambrecht & Quist who= se=20 west-coast style investment banking helped launch some of Silicon Valley's= =20 greatest success stories. In 1981, the firm managed the initial public=20 offerings of Apple, Genentech, and People Express. By 1997, Hambrecht & Qui= st=20 had worked with over 700 companies, including Adobe Systems, Advanced Fiber= =20 Communications, Apollo Computer, Convergent Technologies, Evans & Sutherlan= d,=20 Read-Rite, Sybase, VLSI Technologies, and Xilinx.=20

In 1996, Hambrecht & Quist managed the IPO of Boston Beer, maker of Samuel= =20 Adams Boston Lager, that inspired Hambrecht to brainstorm the possibility o= f=20 IPOs that are open to the public. Boston Beer CEO Jim Koch insisted on maki= ng=20 25 percent of the IPO shares available to his market, the people who drank= =20 his beer. The idea meant taking a significant portion of the shares away fr= om=20 institutional investors, the industry's mainstay. In addition, opening the= =20 IPO to individuals required shipping six-packs to the stores with little=20 forms attached that allowed consumers to make a bid to buy a piece of Bosto= n=20 Beer.

However, the new approach demonstrated its business potential when the \$10= =20 million IPO in 1996 was oversubscribed by \$30 million - all from individual= =20 investors. The question was how to streamline the process. Answer: the=20 Internet.

In 1997, Bill Hambrecht decided to start a new firm WR Hambrecht + Co. that= =20 uses the Internet to create an open system for all investors -- from=20 individual consumers to the largest institutional investors -- to have equa= l=20 opportunities to make bids for IPO stocks, thus the name OpenIPO. OpenIPOs= =20 are not only open to small investors but are built on a Dutch auction model= =20 where the investors, not the investment bank, set the price.=20

WR Hambrecht + Co.'s most recent IPO included Peet's Coffee and Tea, a smal= l=20 Berkeley coffeehouse. Peet's was the 5th Internet-based public stock offeri= ng=20 led by WR Hambrecht & Co. in the past 3 years.

In awarding the Lifetime Achievement Award, the Lester Center for=20 Entrepreneurship and Innovation is able to bring outstanding innovators and= =20 entrepreneurs to the Berkeley campus. The Lester Center hopes that this kin= d=20 of interaction among academics, students, and practitioners will foster=20 entrepreneurial success for individuals and the community as a whole.

Previous winners of the Lester Center Lifetime Achievement Award include: = =20 +Gordon Moore, one of the original founders of Intel, in 2000;=20

+Arthur Rock, the original venture capitalist behind Silicon Valley's very= =20 first semiconductor company, Fairchild Semiconductor, and Intel, in 1999; a= nd=20

+Dr. Alejandro Zaffaroni who founded Alza Corp. and a series of other biote= ch=20 companies, in 1998.

SIX TEAMS ADVANCE TO FINAL ROUND OF UC BERKELEY BUSINESS PLAN COMPETITION = =20 The Haas School of Business today announced the selection of six teams to= =20 compete in the final round of the UC Berkeley Business Plan Competition. Th= e=20 finalist teams have developed ideas ranging from biotech to medical devices= =20 to software and wireless technology. They will compete for more than? \$90,0= 00=20 in cash and prizes, including a \$50,

Metro Desk California and the West Panel OKs Bills on State Purchase of Power Grid Energy: Senate measures would authorize takeover of transmission lines and construction of generating plants. Backers say the plan is not a bailout of utilities. CARL INGRAM MITCHELL LANDSBERG; JENIFER WARREN TIMES STAFF WRITERS

02/14/2001 Los Angeles Times Home Edition A-3 Copyright 2001 / The Times Mirror Company

SACRAMENTO -- Nudging government toward an expanded role in the energy business, a Senate committee Tuesday approved two far-reaching bills paving the way for the state to buy California's sprawling electrical transmission grid and build and operate its own power plants.

The legislation aims to protect California from the crisis it faces today, a nightmare of supply shortages and sky-high power prices, said the bills' author, Senate leader John L. Burton (D-San Francisco).

"What we're trying to do here is give the state some influence and control over its own destiny," Burton said. "The idea is to provide affordable, reliable energy at times we need it most."

One of the bills authorizes Gov. Gray Davis to negotiate with California's beleaguered utilities about a state takeover of the transmission system, a transaction that could help them avoid bankruptcy. By paying anywhere from \$3 billion to \$9 billion for the 32,000 miles of electric wires, the state would provide the utilities with cash to help relieve their mushrooming debt.

"Some would call it a bailout," Burton said. "I would prefer to call it an infusion of capital."

Davis prefers the term buyout and said any state takeover of the grid "should be a moneymaker." Talking with reporters after a speech in Los Angeles, Davis said he hopes to announce a proposal Friday under which the state would receive the transmission system, a financial stake in the utility companies and some other asset--possibly some of the utilities' hydroelectric facilities--in exchange for billions of dollars in state cash.

"We will insist upon receiving commensurate, equivalent value for any value we confer on the utilities," Davis said.

The governor added that the utilities' parent companies--which have received, among other assets, billions of dollars in tax overpayments from Southern California Edison and Pacific Gas & Electric--should help bring the utilities back to fiscal health.

Tuesday marked the 29th straight day in which California endured a Stage 3 power alert, with energy reserves critically low on the grid serving most of the state. Grid operators came closer than usual to triggering rotating blackouts, but by the evening hours of peak demand, officials at the California Independent System Operator were optimistic that conservation and power purchases would help them dodge outages.

Cal-ISO spokesman Patrick Dorinson blamed the power shortfall on a cold snap that boosted electricity consumption and on the shutdown of power plants capable of generating one-third of the state's winter peak demand.

Four years after electric utilities were partially deregulated in California, the state is caught in a tangle of skyrocketing energy prices, booming demand and short supplies. Battered by debt, the state's largest investor-owned utilities lack the cash and credit to buy power themselves, forcing the state to step into the electricity market.

For more than three weeks, the state Department of Water Resources has spent an average of \$45 million a day purchasing power, as negotiators work to nail down long-term power contracts under a \$10-billion program authorized by the Legislature.

Davis maintains that in recent weeks the state has made major progress toward solving the electricity crisis. Officials have signed four "very good contracts" with electricity providers, begun an \$800-million conservation program and embarked upon an aggressive drive to get power plants built, he said.

In other developments Tuesday, the precarious financial condition of Edison and PG&E remained a top concern of utility-watchers as a grace period granted by banks that are owed money by Edison expired.

"We are now on a daily involuntary-bankruptcy filing watch," said Steven Fleishman, a utility analyst with Merrill Lynch & Co. "We believe that creditors will wait to see what plan the [governor] proposes, but time is short."

Edison formally asked a group of 23 banks for an extension of a 30-day period of forbearance on a \$230-million default, Ted Craver, Edison International's chief financial officer, said in a conference call with debt holders. The banks had not yet responded, he said.

Several electricity generators have said they are willing to wait for the utility debt-relief plan that Davis and legislators have promised in the coming days, the governor's spokesman, Steve Maviglio, said Tuesday. "They have signaled to us that they have patience," he said.

Most of the action in the Capitol on Tuesday centered on Burton's two bills, both of which cleared the Senate Energy Committee and will go next to the Appropriations Committee. A third measure, SB 5X by Sen. Byron Sher (D-Stanford), which would provide \$1.2 billion in taxpayer subsidies to consumers, government entities and businesses to help pay for conservation measures, also passed.

Burton said his bill paving the way for the purchase of the transmission grid, SB 3

===== Top Stories =====

o Broadcom Buys Chip Maker Element 14 for About \$640 Million

IRVINE, Calif. -- Broadcom, a publicly traded company which provides integrated circuits for broadband communications, said it will acquire Cambridge, U.K.-based Element 14, which develops digital subscriber line chipsets, software, and communications processor technology, for 2.65 million shares of stock, or about \$640 million, in an all-stock transaction. Following the acquisition, Broadcom will establish a new DSL business unit to be headed by Stan Boland, Element 14's president and CEO. Element 14 is backed by Bessemer Venture Partners, Atlas Venture, Amadeus Capital Partners, NIF Ventures, TTP Ventures, and Sofinnova Venture Partners. <http://www.broadcom.com/> <http://www.element-14.com/>

o Sony Broadband Launches Incubator 550 Digital Media Ventures

NEW YORK -- Sony Broadband Entertainment said it formed a subsidiary, 550 Digital Media Ventures, that will incubate, fund, and acquire digital media companies. Sony has contributed several hundred million to the venture. Working with Sony Corp. of America (SCA), Sony Music Entertainment (SME), and Sony Pictures Entertainment (SPE), 550 Digital Media Ventures will develop and manage a network of digital media companies. Initially, the network will consist of about 35 companies. 550 Digital Media Ventures will focus on broadband services, wireless, personal broadcasting, e-mail and direct marketing, digital asset management, e-commerce facilitation, and professional Internet services. 550 Digital Media Ventures will target companies based in the U.S. Howard Stringer, chairman and CEO of SCA and president of SBE, will be chairman of 550 Digital Media Ventures. Fred Ehrlich will serve as president and CEO of the new subsidiary, and continue to act as president of new technology and business development for SME. The company will be headquartered in New York, with offices in San Francisco, Los Angeles, and London. <http://www.550dmv.com/>

o Business Incubator GameChange Launches with \$100 Million

PALO ALTO, Calif. -- Andersen Consulting's venture capital unit AC Ventures and Softbank Venture Capital said they have launched GameChange, a network of incubators and seed investment centers, with investments totaling up to \$100 million. GameChange opened its first incubation center in Palo Alto, and will establish a total of ten incubation centers in

areas with high technology development and focus on technology companies in high-growth markets such as Internet commerce, software, and infrastructure. AC Ventures and Softbank will provide services to portfolio companies of GameChange, which will also work with companies independently. The new firm will invest up to \$2 million in its companies and will incubate them for an average of six months. Barry W. Carter and Scott Killips of AC Ventures and Rex Golding and Gary E. Rieschel of Softbank will sit on the company's board of directors. GameChange's founding managing directors are Par Arvidsson, a former partner with consulting firm Strategic Decisions Group, and Mark Lockareff, former vice president of corporate development with Excite@Home. <http://www.gamech>

Dreaming of an Overseas Retirement?

Many Americans dream of retiring to an exotic locale overseas. The dream can come true for those "expats" who plan their retirement wisely. Here's a look at retiring abroad, with links to valuable online resources and a guide to some of the decisions you'll make on such issues as health, taxes, voting status and Internet access.

Internet Scams

Pump and dump. Virtual stocks. Pyramid schemes. These are just a few of the online frauds, scams and swindles that tempt the unwary investor. Remember, if an alleged investment sounds too good to be true, it probably isn't legitimate. Another hint: beware of an e-mail that announces that you're on the "friends and family" list of an IPO you've never heard of. Protect yourself from these deceptions, and others, by reading this article, which describes each scam and also refers you to links at the SEC and other regulators for more information.

#### Is Trading Stocks "Just Like Gambling?"

There are certain parallels between investing in stocks and gambling on games such as roulette and blackjack. But it's important to know where these similarities end, and how the practices of an astute investor are much different than those of a casino gambler. This article explains how the Las Vegas odds favor the house, and why gambling is not the same as intelligent, long-term investing.

#### Election 2000 - An Investor's Guide

The Presidential campaign is heading into its stretch run, and the Republican and Democratic candidates have staked out positions on the issues that most concern investors. Where do they differ - and where do they agree? This analysis from the Schwab Washington Research Group\* summarizes where the candidates stand on taxes, the Federal budget, health care, education, and retirement savings. If you think there's hardly any difference between the two platforms, you're in for a surprise.

\*Schwab's Washington Research Group and Technical Analysis Group are part of Capital Markets & Trading, a division of Charles Schwab & Co., Inc.

#### Financial Services: The Urge of the Merge?

The once staid world of financial services appears to be undergoing tremendous change, as commercial banks, insurers, brokers and others grapple with new technologies and deregulation. Recent legislation by Congress was expected to trigger a wave of cross-industry mergers and acquisitions. Yet this feeding frenzy has been slow to begin, due to Y2K concerns, rising interest rates and lower stock prices. What's the outlook now for a convergence? Will bankers gobble insurers, or vice versa? Where are some of the opportunities for investors? Read this analysis from the Washington Research Group.\*

\*Schwab's Washington Research Group and Technical Analysis Group are part of Capital Markets & Trading, a division of Charles Schwab & Co., Inc.

#### Come Walk the Boards

Check out our new streamlined message boards at <http://schwab.ed4.net/go/1sigserv7t/sept/boards/>. Since July, we've added eight boards on popular topics such as mortgages and margin investing. If you haven't registered, do so today!

#### After Hours Trading Becomes Extended Hours Trading

Here's an update on new trading times and policies: - Pre-Market session: Order entry begins at 7:45am ET, Execution between 8:00am - 9:15am ET - After Hours session extended: Order entry begins at 4:05pm ET, Execution between 4:15pm - 8:00pm ET - Ability to trade odd and mixed lots - Most Listed and Nasdaq securities are available

Remember that Extended Hours Trading poses certain risks and may not be for everyone. Schwab reserves the right to change or modify hours of operation for extended hours trading at any time.

To learn more go to <http://schwab.ed4.net/go/1sigserv8t/sept/extendedhrs/>

Due to limited liquidity in extended hours trading sessions, there are no assurances that an investor's stock order will be executed.

---

**Decimalization: What is It?**

Decimalization is the process of converting the pricing of equities from fractions to decimals. Currently, U.S. markets quote and price stocks (and their underlying options) in fractions, while most foreign markets use decimal pricing. The conversion process will take place gradually, with the first phase on August 28.

To find out more about this conversion and how it might affect your trades and investments, check out <http://schwab.ed4.net/go/1sigserv9t/sept/decimal/>

---

**Price Alerts: Faster Than Ever**

Now Signature Services clients who subscribe to Schwab's Price Alert service can receive their Price Alerts even more rapidly. We are accelerating the delivery of Price Alerts, which can be delivered to you via e-mail or pager.

Price Alerts are triggered by criteria you select for securities you request. If one of your stocks rises above or drops below the market price you've set in advance, you will know right away.

To subscribe to Price Alerts, click here: <http://schwab.ed4.net/go/1sigserv10t/sept/alerts/>

Politics & Policy Democrats Prepare to Duel Bush Over Energy Price Caps in West By John Harwood and Jeanne Cummings Staff Reporters of The Wall Street Journal

06/01/2001 The Wall Street Journal A16 (Copyright (c) 2001, Dow Jones & Company, Inc.)

WASHINGTON -- If you talk to economists, many will say President Bush is on solid ground in opposing caps on soaring electricity prices in California and elsewhere. But if you talk to voters, many will suggest he has political problems. And now that Democrats control the U.S. Senate, they are poised to make those problems a lot worse. Mr. Bush got a taste of what is coming in his widely touted showdown with California Gov. Gray Davis in Los Angeles this week. The Republican president repeated his familiar argument that capping wholesale electricity prices would do nothing to curb demand or increase the supply of power for California. But the Democrats' Mr. Davis, fortified by polls showing that 70% of Californians favor price caps, managed to get equal billing during Mr. Bush's visit for his argument that they are needed to keep the state from slipping into recession and threatening the national economy in the process. Because Sen. Jim Jeffords of Vermont left the Republican Party last week and changed control of the Senate, Democrats now have a more effective national platform to press the same arguments -- and to threaten Mr. Bush's political standing beyond the already hostile turf of California. The incoming chairman of the Senate Energy and Natural Resources Committee, Democratic Sen. Jeff Bingaman of New Mexico, says he plans to move soon on legislation capping prices for California and other Western states, a bill that has attracted some GOP support as well. "I think it's clear to anybody that the prices being charged for wholesale power are excessive," said Sen. Bingaman, in an interview while he was heading toward California on a fact-finding mission. "I don't believe it's going to be adequate to get us through this summer, to just continue saying that eventually supply will come into line with demand and the problems will be resolved." Meantime, the incoming chairman of the Permanent Subcommittee on Investigations, Democratic Sen. Carl Levin of Michigan, plans to investigate the role of oil companies in higher gas prices. "This is the manipulation of prices, and we've got to investigate it because our people in Michigan are absolutely furious," Sen. Levin says. Just as Republicans once used the machinery of Congress to probe then-President Clinton's problems, Democrats see ripe opportunities for embarrassing an ex-oilman president with strong links to Texas energy-producing companies that are profiting from today's supply squeeze. During the 2000 presidential campaign, five of the major companies now supplying power to California -- Duke Energy Corp., Dynegy Inc., Enron Corp., Reliant Energy Inc., and Williams Cos. -- gave some \$3.6 million to Mr. Bush and the GOP, more than triple the amount donated to Democrats. Three of those companies are based in Mr. Bush's home state of Texas, which only adds to the political tensions. The Democratic offensive has the GOP worried. Price caps amount to "terrible policy, but good politics," frets Republican pollster Neil Newhouse. Mr. Bush now faces "a difficult job" overcoming the Democratic arguments for caps, he adds, because "control of the Senate has given them a megaphone on issues that they just didn't have before." That doesn't necessarily mean Mr. Bush ultimately will suffer grave damage. As congressional Republicans learned to their chagrin in battles with Mr. Clinton, the presidential bully pulpit remains the most potent weapon in American politics for framing policy debates. Even with that advantage, though, the Clinton administration found that the initial appeal of arguments on issues such as tobacco regulation and prescription drugs faded under sustained counterattack by Republicans and affected industries. And so far, polls are showing that Mr. Davis also is paying a political price in California for the crisis. Still, Mr. Davis, who faces re-election next year and may later seek the 2004 Democratic presidential nomination, believes he can limit the damage by emphasizing his efforts to expand supply and spotlighting the actions of energy companies in Texas and elsewhere. On CNN's "Larry King Live" this week, he complained that "money sucked out of this state" amounts to "a massive transfer of wealth" from Californians to the industry. Whatever the political ramifications, they aren't limited to California. Consumers in Washington, Idaho and Montana that are serviced by the same electric grid have seen 30% increases in their utility rates. That is why Mr. Davis, with support from some GOP governors in the West, is asking the Federal Energy Regulatory Commission to impose short-term wholesale price caps to help protect electricity consumers from soaring rates until new power plants approved for construction in California increase supply enough to bring prices down through market forces. California Democratic Sen. Dianne Feinstein and Oregon Republican Sen. Gordon Smith are offering legislation to accomplish that in the

committee that Mr. Bingaman now will chair. As a matter of policy, most economists probably would agree with Mr. Bush's free-market position on price caps, though that sentiment is hardly unanimous. As he met with the president this week, Mr. Davis released a letter from 10 prominent economists backing price caps as a temporary remedy for a market "not characterized by effective competition." One of the signatories was Alfred Kahn, architect of airline deregulation under President Carter. But Bush economic advisers, heeding the free-market arguments that have held the high ground in regulatory policy debates since the Reagan era, insist that such caps would distort the energy market and be difficult to abandon even when market conditions turn more favorable for consumers. "Price caps do nothing to reduce demand, and they do nothing to increase supply," Mr. Bush said in California this week. Mr. Davis says the Federal Energy Regulatory Commission is obliged under law to assure "just and reasonable" prices, and he says he will sue the agency to force it to act despite the dismissal earlier this week of a similar lawsuit filed by California's Democratic legislati

**SOCIAL VENTURE COMPETITION EXPANDS INTO NEW NATIONAL PARTNERSHIP** The Haas School of Business and Columbia Business School have formed a joint partnership with The Goldman Sachs Foundation to expand the Haas Social Venture Competition into the National Social Venture Competition. The competition invites aspiring entrepreneurs to develop plans for businesses that have a clear, quantifiable social return as well as a healthy financial bottom line.

The National Social Venture Competition originated in 1999 as a student-organized social venture competition at the Haas School of Business. In the past few years, the competition has attracted more than 100 teams from business schools across the United States and Europe. The new partnership with Columbia Business School and The Goldman Sachs Foundation will expand the competition's reach and scale.

The Goldman Sachs Foundation will underwrite the competition with a gift of \$1.5 million to help build a national platform for social entrepreneurship. "This innovative program is an important milestone in the social enterprise field and presents a unique opportunity to advocate high quality entrepreneurship education on a national scale," said Stephanie Bell-Rose, president of The Goldman Sachs Foundation. "The program underscores the Foundation's mission of supporting educational excellence by encouraging outstanding students to develop the tools that help them become the global leaders of tomorrow."

"The National Social Venture Competition reflects the growing commitment of business leaders and entrepreneurs to foster profitable activities that address major social challenges, such as protecting the environment, preventing disease, and improving educational outcomes," said Laura Tyson, dean of the Haas School of Business. "Haas MBA students have done an outstanding job in launching a business plan competition to promote socially responsible business ventures. Our new partnership with Columbia University's business school and The Goldman Sachs Foundation will increase public awareness of these issues and encourage business students to employ the tools of business to create positive social change."

Throughout the year, the entrepreneurship centers of the two business schools will coordinate with The Goldman Sachs Foundation to organize and promote national events in the San Francisco Bay Area and New York. The Eugene M. Lang Center for Entrepreneurship at Columbia Business School will host an inaugural symposium on October 5 in New York City. The symposium will feature a public dialogue with leaders in the social entrepreneurship arena to explore the growing demand and marketplace expectations for social ventures.

Throughout the year, both schools will host additional events to encourage participation and evaluate submissions. Mentoring workshops will take place at Columbia Business School and the Haas School with prominent investors and alumni helping teams to perfect their business plans and presentations. The teams' executive summaries are due on January 18, 2002.

The 2001/2002 national competition finals, hosted by the Haas School's Lester Center for Entrepreneurship and Innovation, will take place at UC Berkeley on April 5-6, 2002.

"This unique and powerful partnership reflects Columbia's commitment to supporting entrepreneurship as a vehicle for social change," remarked Meyer Feldberg, dean of Columbia Business School. "Tomorrow's business leaders must grasp more than convention; they must also be prepared to develop and steer businesses of all sizes and types through a global economy that demands consideration not only of profit and shareholder value, but also of broader human interests."

Teams in this year's competition can look to past participants in the Haas Social Venture Competition for inspiration in launching social ventures. Previous participants who have gone on to establish businesses include:

+ Sea Power & Associates ([www.seapower.cc](http://www.seapower.cc)), winner of the 2001 Haas Social Venture Competition, harnesses ocean wave power to produce electricity for coastal communities in the Pacific.

+Aprotea ([www.aprotea.com](http://www.aprotea.com)) makes biochips to enhance drug discovery and won a prize for best management team in 2001.

+Prisma Microfinance ([www.prismamicrofinance.com](http://www.prismamicrofinance.com)) provides investor-funded micro-loans in developing countries and won a prize for the best analysis of its social return on investment.

+Ripple Effects ([www.rippleeffects.com](http://www.rippleeffects.com)), a winner of the 2000 competition, has already won nine major national product awards for its learning software.

BLUE MARTINI CEO ZWEBEN TO GIVE KEYNOTE AT 2001 KNOWLEDGE FORUM The fifth annual UC Berkeley Forum on Knowledge and the Firm will explore "New Patterns of Management in the Knowledge Economy" in the Arthur Andersen Auditorium on September 21. Leading thinkers and practitioners in the field of knowledge management will discuss the new patterns of management that are emerging as companies experiment and adapt different ways to beat their competition.

The Knowledge Forum is organized annually by the Institute of Management, Organization, and Innovation (IMIO) at the Haas School. This event is open to faculty, students, staff, alumni, and members of the public. The registration fee will be waived for faculty and UC Berkeley students. Students need to register by September 14.

The keynote address will be given by Monte Zweben, chairman, president, and CEO of Blue Martini Software, which helps companies understand, target, and interact with their customers and business partners. Prior to founding Blue Martini, Zweben was vice president and general manager of PeopleSoft's manufacturing industry unit. In 1992 he co-founded Red Pepper Software Company, and was CEO, president, and chairman.

Dean Laura Tyson will give the opening remarks, followed by three sessions of panelists featuring Ikujiro Nonaka, Xerox Distinguished Professor in Knowledge; David Teece, Mitsubishi Bank Professor of International Business and Finance and director of IMIO; Susan DeSanti, director, Office of Policy Planning, FTC; Seiji Horibuchi, president, VIZ Communications (Pokeman USA); and Saburo Kobayashi, general manager, Corporate Planning, Honda.

For registration information, please visit <http://groups.haas.berkeley.edu/imio/knowledge/index2001.htm>.

MICHAEL KATZ TO SERVE AS DEPUTY ASSISTANT ATTORNEY GENERAL FOR ECONOMIC ANALYSIS Michael Katz, the Edward J. and Mollie Arnold Professor of Business Administration, has been appointed the deputy assistant attorney general for economic analysis in the Antitrust Division of the Department of Justice. As deputy assistant attorney

general, Katz will supervise all economic analysis within the Antitrust Division and direct the division's Economic Analysis Group.

"Like the stereotypical economist, I look at Michael's appointment from two perspectives," says Ben Hermalin, associate
